With new possibilities of unlimited evil, as in the use of disease germs in war, as in the future use of atomic bombs capable, we are told, of destroying our very civilization.

Not less than 850,000,000 human beings have been under the shadow of war since the surrenders—not frays, or melees, or guerrilla engagements—wars of religion, wars between races, as in India; wars of contest for rule, as in China; wars of strategy in statecraft of capitals hundreds of miles distant,

as in Greece; wars of desperate need for living space, as in Palestine.

Half the people of the earth have for years lived on insufficient food. Today nine-tenths of them are doing so. The entire population of Europe, the Continent that gave name to our civilization, lack for food enough to maintain physical effectiveness. And more than 400,000,000 children are enfeebled for want of food to eat and warmth in their homes.

So low a living scale has slowed down all the decent labors of the unfortunate communities. While our American schools and colleges are disturbed by the crowding into their doorways of unprecedented numbers, the classrooms of Britain, France, and the countries east of them are partially or wholly empty for need of coal to heat them.

A MAGNIFICENT CREDIT FOR AMERICA

Jolted out of the complacent self-assurance we felt after the First World War, we Americans after the Second have led in the establishment of a second association of nations. It has served us and the rest of the nations for 2 years.

Herein is one of the magnificent credits of our life as a nation. We have supported it out of our larger loyalty to the good of mankind, disregarding our lesser loyalty to political party.

In the 2 years United Nations has wrought enormous gains. The Netherland East Indies, Burma, Siam, Palestine, all have turned to it as none of them would have dared hope to do 20 years ago. In economics, education, public health, the cultural studies, United Nations has outstripped the League of Nations.

Yet the will of the majority has been blocked, frustrated 24 times by one power employing a device which could hardly have been written into the San Francisco Charter unless our America had been as afraid as Russia to trust the majority.

Here at home, as in all other countries, license, fostered by world-wide war, has marked 1948 for its own. Sex stalks through the novels we read, unashamed, uncloaked. A world makes the American cocktail party its one means of formal entertainment. In America, rather more than anywhere else, juvenile delinquency multiplies arrests and judicial hearings.

The democracies resound with protests against bigotry and intolerance. Other races are by law assured relief from old discriminations. Yet we have taken to trying American citizens for their political opinions, trying them without confronting them with their accusers, sometimes without so much as letting them know of what they are accused.

Tardily, to be sure, but yet unmistakably, the American people, reverent, generous, sound of heart, are making felt their sense that the postwar era is losing godliness. A quickening is discernible in our houses of worship. A readier and more practical charity is obscuring the old, old lines of rigid prejudice between denominations. America is awakening to the realization that there can never be a godless happiness, never a godless peace.

COLD WAR CENTERS ON MARSHALL PLAN

These are lights and shadows playing upon the international scene of 1948. What do they presage as to world peace in 1948?

The question lifts high above all other considerations the relations, the attitudes, the present diplomatic maneuverings of Russia and the United States of America.

Both Governments look far into the future. For the present, however, they are battling in what is termed "a cold war" over the rehabilitation of Europe.

Russia believes that as the people of Europe suffer they will incline more and more to support her economic system of communism.

America believes that as the people of Europe make their way back to self-support under political systems chosen by them in all freedom they will safeguard the cause of democracy.

I think we should be forewarned that, whatever may develop, the "cold war" will not be ended in this year. Indeed, it appears to me to be clear that it may not end for a full generation of 30 years.

If the leadership of the democracies does not fail, I believe we may count upon a steady and productive improvement in normal living, normal trade, normal international atmosphere after the second year or thereabouts. After about 5 years it may be American aid and help can become secondary.

This is a contest which is not to be won save by an America and her democratic allies, strong in the ideals of democracy, strong financially, strong in military organization, strong above all else in purpose.

COMMUNISM NOT THE RUSSIAN CHIEF CONCERN

The ground for that caution is that the foe is of an ancient stubbornness. Communism is not the chief motive of Russia. The chief concern of that other one of the two powers is Russia. Communism is one of its dearest objectives. But for communism the present government, and every Russian Government for generations to come, could wait without any sinking of the heart if that were needed to advance Russia to further greatness.

A distinguished social scientist is Louis Gottschalk of the University of Chicago. He believes "the Communists are not idealists so much as pro-Russians. We must expect deliberate aggression from them. They look to see the capitalistic world collapse. We of America have no choice but to do all we can to prove they are mistaken."

In his mind, as he spoke the other day over the air, was the plan for self-help in western Europe put forward by the American Secretary of State. That plan has come to be the prize, the stake of the "cold war." If it succeeds, Russia must then make concessions. If it fails, the democracies must draw in their belts and return to the arena as Britain returned to the fighting after Dunkirk.

PURSUING AN OLD AIM

A sharp, clear light is thrown upon Russia under Stalin by that extraordinary find of German diplomatic correspondence from which our Department of State quoted in a recent bulletin. As the Voice of America said:

"The documents tell a tale of secret intrigue and rival skullduggery, of naked conquest, and cynical disregard for world opinion and the rights of other nations, in which Russia was not only a participant but a driving force. * * *

"They provide evidence that Russian expansion of today is nothing new in itself but only a rigid pursuit of the same aims on which Stalin embarked before the last war, and which he sought to realize first with Hitler, then against Hitler, then with the Western Allies, and now against them.

"At their very beginning with the Nazis, the Russians made it plain that ideology had little to do with Russian foreign policy. * * * To the very moment when Hitler turned on his partner, Moscow continued to applaud German conquests in Scandinavia, Holland, Belgium, and France, backing up Russian words of cheer with massive shipments of grain and a naval base on the Murman coast."

GIVEN THE RUN-AROUND

It was an uneasy and mistrustful partnership. Russia demanded German withdrawal from Finland, a free hand in Bulgaria, bases within reach of the Dardanelles, if necessary war between the partners and Turkey, a penetration into Iran, and the coal and oil of southern Sakhalin.

Only 8 months were required to reveal to Hitler that he had a bear by the tail. One of the memoranda of Count von der Schulenburg, dated April 11, 1940, reports:

"For some time we have observed in the Soviet Government a distinct shift which was unfavorable to us. In all fields we suddenly came up against obstacles which were, in many cases, completely unnecessary; even in little things like visas they started to create difficulties.

"The release of Germans imprisoned by the Poles could not be achieved. The deportation of the German citizens long imprisoned in Soviet jails suddenly stopped. The Soviet Government suddenly withdrew its promises already given with regard to the north base.

"These obstacles, which were apparent everywhere, reached their climax in the suspension of petroleum and grain shipments."

Americans, whom the Hitlerbund regarded as so naive, can read that memorandum with a broad smile. There is something wickedly enjoyable in seeing brutal sophisticates get the run-around. Let us enjoy it while we can.

For in the 8 months following San Francisco the Russians gave the rest of the world the same kind of run-around. They annexed outright 240,000 square miles. Stopped by the meeting of the General Assembly in London, they entered upon a typically Hitlerian proceeding in setting up puppet governments in Czechoslovakia, Poland, Rumania, Bulgaria, Hungary, Yugoslavia, Albania, and began the infiltration of Greece.

BLOCKING UNITED NATIONS

That which the Third Reich had to endure took the form of confusion in United Nations sessions. Prof. Harold Laski, of the University of London, writing in the hope that America might, even so, cajole the good will of Russia by investments in its future, has provided us with a catalog of Russian obstructions. It is too long to quote in entirety; it is enough for us to know that he cites:

"She has never given an adequate reason for rejecting the Lilienthal plan for the control of atomic energy. She has not joined any of the UN food and agricultural organizations. She has not supported the International Monetary Fund.

"Her Iranian adventure is beyond defense. She has stripped Manchuria. The part of her agents in the inter-Allied control of Germany and Austria has been often perverse, sometimes wanton, even brutal.

"In the United Nations her delegates have driven honest men to fury, clinging to the letter of the Charter. Twenty-four times she has blocked the majority with vetoes. Wherever there is a group of Communists in other nations, no matter how small, she has kept them posted and active."

RUSSIA AFRAID OF WAR

You will be interested to hear that Professor Laski accounts for all this on the ground that Russia is afraid of war.

"Stalin now realizes," says this chairman of the British Labor Executive, "that for her own protection Russia must be kept aroused to passionate nationalism and therefore he paints every possible enemy action in far blacker color than it warrants."

Laski says, as well he may, that it is an old Russian tradition to bargain hard. Her leaders feel that by our policies after the Bolshevik rebellion she has become a pariah nation. She suffers a critical shortage of men who are competent to look ahead reliably. There are no younger men available with the knowledge and acumen of Litvinov and Maisky.

This is the foe with whom America must grapple for the cause of democracy. Be-

tween these two giant nations gapes an impassible difference. The logical fruitage of Russian communism is the welfare of the mass of men as determined by a small committee of superiors. The logical fruitage of American democracy is the upbuilding of human personality, subject to all the errors of judgment and mean motives of which humans are everywhere capable.

DEMOCRACY ON TRIAL

Is it not astonishing that such a contest should have come when resort to armed hostilities is quite improbable, if not impossible?

So long as one of them does not possess the secret trigger to atomic explosion, so long as it cannot construct the huge paraphernalia requisite to the fission of the atom, so long as it looks upon the ruins of 1,600 cities and large towns to be reconstructed, so long as its people bend and mutter at the mere suggestion of another war, in short, until a new generation has come to adult development knowing nothing of World War II the other power has only to keep so strong as not to invite an insanely reckless assault.

What all this imports for America is well understood by you in its right proportions, I am confident. Democracy, particularly democracy in the United States and Canada, is on trial before the afflicted countries of Europe.

By our charity, by sympathetic cooperation, by harmony in our own councils—even in the year of a Presidential campaign—by steadiness, by determination not to yield to bad temper, by patience, patience, patience, we of the greatest democracy can command peace through 1948 and years after.

That is the outlook for world peace in 1948.

Proposed Southern Democratic Convention

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith an editorial which appeared in the McComb (Miss.) Enterprise-Journal, on Thursday, February 5, 1948:

OUR SOLIDITY MUST BE FREE FROM SENILITY

(By Oliver Emmerich)

The South should push the current plans for a Southern Democratic Convention to its brutal completion.

There are those who say that nothing permanent can be accomplished. Well, what's wrong with this plan:

First, hold our own southern convention and there reach an agreement upon what the South will demand. Second, go to the national convention with the South's 127 electoral votes all wrapped up in one package, sealed by definite commitments that cannot be broken. Thus far this idea has not been discussed in the press. Thus far only talk of a southern convention with a southern candidate has been ventured. But the second step should be pursued. Go to that national convention with the South's vote solid—but this time solid for the South, not solid for the East and North to use at their will.

But let us have no more of those courageous stands to be followed by a cowardly fall.

Four years ago we took a stand in Mississippi, a courageous, noble stand. Then the National Democratic Party put the heat on Mississippi. That heat was put upon the Mississippi Legislature—and the State wilted, wilted shamefully. With the choice of southern traditions and pork-barrel politics before us, Mississippi turned down southern traditions and accepted cheap pork-barrel promises. Thus, the "pink lady" ballot was enacted by a legislature that went one more shameful step. It not only turned its back upon southern traditions but upon the State constitution as well. This time we must have the character to stand hitched.

But the Nation should know this: That southern political rebellion was the force that blocked Henry Wallace for Vice President. Harry Truman is President today because of that southern rebellion—and he knows it. And this editor was one of the delegates to that convention and can personally testify to this truth.

For many years the political solidarity of the South has reflected the political stupidity of the South. In the last national Democratic convention—and the one before that—the big city bosses of the North and East used this solidarity at will. Thus, the CIO, which had so much to say in the convention, actually used the South's solidarity to its advantage. The party big-wigs recognized that southern solidity meant southern senility. It was when the South was snubbed, rebuked to the point of disgrace, that Mississippi delegates saw that Henry Wallace needed a small handful of votes to get him over the majority hump, and then joined with Virginia delegates and gained sufficient other southern votes to break up the Vice-Presidential playhouse of the CIO and Henry Wallace. The coalition defeated Wallace.

So let's go through with the southern Democratic convention, and this time let's make it stick. The Nation reads about the "solid South" and laughs. It should be painful laughter to all who live in Dixie. And remember one thing more: The challenge of State rights is not the only need for solidity that is free from senility. Many issues are at stake. The remedy depends upon whether the South will be spinelessly solid or solidly secure.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

CITY OF BUFFALO,
OFFICE OF THE CITY CLERK,
February 7, 1948.

Hon. JOHN C. BUTLER,
House of Representatives,
Washington, D. C.

DEAR SIR: Pursuant to directions of the common council, I enclose to you herewith copy of resolution adopted by that body on February 3, 1948, in opposition to the St. Lawrence seaway and power project.

Very truly yours,

Dr. J. J. TRONOLONE,
City Clerk.

It is the sense of the Common Council of the city of Buffalo that the proposed agreement between the United States of America and Canada for the construction of the St. Lawrence seaway will be most inimicable to the welfare of Buffalo and will destroy industrial values, create widespread unemployment and compel the removal of much of the grain elevating and flour and feed milling industry to seaport areas.

The city of Buffalo has been and continues to be unalterably opposed to this extravagant waste of public funds.

Commerce of the Great Lakes, which now has its eastern terminus at Buffalo and which has made Buffalo the greatest inland port in the world, will be diverted through the Welland Canal at a point approximately 30 miles before reaching the entrance of Buffalo Harbor.

No benefits from ocean cargoes through the seaway to the Port of Buffalo are considered probable and the Port of Buffalo cannot be used for ocean ships without deepening the harbor, Buffalo River and the city ship canal, at an expense of not less than $20,000,000.

The claimed benefits of the St. Lawrence seaway for military purposes have not been established and the limited period of time during which the seaway would be open discounts any real benefit of the seaway as an element of national defense.

The city of Buffalo protests against the sacrifice of its port, its facilities, and its industry to a scheme of untold cost and conjectural benefits.

The following resolution is therefore presented for adoption:

"GREAT LAKES-ST. LAWRENCE SEAWAY PROJECT

"*Resolved*, That this Common Council of the City of Buffalo, of the State of New York:

"1. Reaffirms its opposition to Senate Joint Resolution No. 111 now being considered by the Senate of the United States, and to House Joint Resolution No. 192, hearings upon which are scheduled before the House of Representatives, Committee on Public Works, or any other similar legislation which, if passed, would authorize the construction of the St. Lawrence Seaway and Power Project.

"2. Directs that copies of this resolution be sent to the Governor of the State of New York; to all assemblymen and senators from western New York; to the United States Senate; to the two New York State Senators; to the chairman and each member of the Committee on Public Works, House of Representatives; and to each Member of the House from the western New York area.

"3. Hereby authorizes and directs the corporation counsel of the city of Buffalo to prepare a brief presenting the case of the city of Buffalo in opposition to this unwarranted expenditure of public funds for a Great Lakes-St. Lawrence seaway.

"4. That members of this council as may be designated by the council president, the commissioner of public works, and the corporation counsel be authorized and directed to appear before the appropriate House committee hearing to oppose the St. Lawrence seaway and power project on behalf of the city of Buffalo."

Mr. Rybka moved that the foregoing resolution be amended by adding thereto the following:

"5. That the city clerk be directed to wire the Members of the United States Senate, Washington, D. C., and the majority and minority leaders of the State senate and assembly of the passage by this council of a resolution in opposition to the St. Lawrence seaway."

Needed: A National Policy on Communism in America

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. MUNDT. Mr. Speaker, in my opinion, the time has come to declare and define a national policy with regard to communism in America. In the following radio address, which I am attaching as a part of these remarks, I have outlined some of the reasons why I believe my proposed legislation, H. R. 4422, will serve our national interest at this time:

My fellow Americans, congressional hearings are now under way before a subcommittee of the House Committee on Un-American Activities, which have as their purpose the establishment of a legislative basis for doing something definite to curtail the menace of communism in the United States.

As the ranking Republican member of the House Committee on Un-American Activities, I want to talk with you tonight about the reasons why many of us in Congress feel that the time has come to circumvent the treacherous activities of Communists here at home. In an attempt to limit communism abroad to its present conquests and to protect friendly countries against Communist aggression, the Congress and the country are now contemplating the expenditure of many billions of dollars under the so-called Marshall plan. The purpose of the Marshall plan stated in three short words is simply to stop communism abroad. Our State Department and our Department of National Defense tell us that unless we can stop communism abroad, our security is in danger and war will become inevitable. If their position is correct and there is convincing evidence to support it, then, my fellow Americans, we would be penny-wise and pound-foolish indeed if we did not at this time take effective steps to stop communism at home. Uncontrolled communism abroad may well invite war with all of its disastrous consequences. Uncontrolled communism at home is certain to invite chaos and disaster with a dictatorial government resulting as its consequence.

Most Americans abominate communism, either at home or abroad. Most Americans are God-fearing and religious people and denounce the atheistic materialism which is part of the Communist concept. Most Americans love freedom and value our private-enterprise system, so they abhor the tyranny of communism and the economic idiocy of collectivism either at home or abroad. But most Americans, unfortunately, have limited their dislike and distrust of communism to condemning it with unkind adjectives, or to denouncing it from the press or from the platform, or to voting billions of dollars for the purpose of stopping it in some foreign country or on some distant continent. Very few Americans—indeed surprisingly and disappointingly few, in fact, since so vast a majority of our citizens oppose communism—very few Americans indeed have done anything definite or positive to curtail the menace of communism here at home. Perhaps this is because Americans generally have been waiting for Congress to declare a national policy with regard to the Communists in this country. In all events, I am one of those who believes that the time has come when Congress should speak out definitely, clearly, emphatically, and effectively, on this matter of communism. We can no longer afford to ignore the vipers attempting to poison our body politic within its own citadel of freedom.

Consequently, our Committee on Un-American Activities is now conducting hearings on a bill which I introduced in Congress a few months ago. This bill, H. R. 4422, spells out in specific language the three definite positive steps which I believe we should take at this time to circumvent the secret plots and plans of the American Communists.

In the first place, my bill includes the following language: "The Communist Party, any organization carrying out the principles and policies of the Communist Party, regardless of what name or title it assumes, or any organization, association, or other combination of individuals which is dominated, directed, or controlled by the Communist Party or whose origin can be traced to the Communist Party shall be required to register with the Department of Justice as an agent of a foreign principle." Not only does H. R. 4422 provide for this registration, but it requires as a part of such registration that there must be included the correct names and the last known addresses of the officers and the members of the organization, be it the Communist Party itself or one of the many front organizations engaged in advancing the Communist Party line in this country.

The second provision of my bill would require that all printed matter distributed by such organizations or any members thereof through interstate commerce must be clearly labeled in bold face type with the following identification label: "This is published in compliance with the laws of the United States governing the activities of agents of foreign principals."

The third provision of my bill establishes a penalty of not less than $1,000 and a prison sentence of not less than 12 months in one of the Federal penitentiaries operated by the United States Government.

In other words, the legislation I propose would strip the dark mantle of secrecy from the Communist Party in this country and compel it to operate in the open, under its own name and using its own label precisely as in the case of the Republican and Democratic parties of the United States. It would disclose to full view the officers and the objectives of the Communist organizations; it would disclose their source of income; it would make public their membership lists just as Republicans and Democrats have their party references registered in the auditor's offices of many American court houses and city halls. In short, it would deprive the Communists in America of the unique privilege which they now enjoy and which they seek to perpetuate in this country whereby they alone of the political organizations—if they can be dignified by being called a political organization, which I doubt because communism is in fact an international conspiracy rather than a political party—but in all events, my legislation would deprive Communists of their existing unique privilege of operating under cover and in secret and without registering or reporting their membership lists and financial statements for public inspection.

Many of you have written to our Committee on Un-American Activities to inquire why we do not write legislation to outlaw the Communist Party, since it is so obviously an un-American enterprise. Frankly, friends, we on the committee feel that outlawing the Communist Party would not achieve the desired results. Outlawing the party would simply serve to drive further underground activities which are already shrouded in secrecy. Outlawing the party would also snap shut or obscure certain open activities which now serve as important leads to the FBI and to the investigators of our Committee on Un-American Activities. Outlawing the party would also be to adopt a tactic of the Communists themselves, since wherever communism controls a government, it immediately suppresses and outlaws and persecutes all parties of opposition. The American method is not to suppress opposition, but rather to strip from it the secrecy and deceptive covering under which it operates. Outlawing communism was tried in Russia before 1917, and communism took over the country while it was an outlaw party, just as the outlawed Nazi party seized control of Germany and the Fascists usurped power in Italy. What we need in America is legislation which will drive out of the ground and into the open the purposes, the personalities, and the pagan affiliation of the Communist Party.

So long as the Communist Party can remain all things to all men and hide its identity and program from public inspection, it is certain to make inroads among Americans who are either duped or deceived or distracted into working with it. While appealing to the Negroes of America for support of the Communist Party, these would-be tyrants of a new dictatorial regime hide the ugly fact wherever communism has gained control, not only Negroes but men of every other race, as well are reduced to political and economic slavery. While trying to appeal to the Jews in America on the basis of racial arguments, the Communists camouflage the fact that anti-Semitism is a handmaiden of communism in many areas of the world. While appealing to American laboring classes for cooperation with the Communists, they conceal the fact that the best paid laborers of the Communist countries enjoy less prosperity, lower standards of living, and less freedom than the most poorly paid laborers in America. While trying to weasel their way into American farm organizations, these Communist comrades of catastrophe carefully hide the fact that in Communist lands the farmer is chained to the soil and becomes the unhappy creature of the state, which treats him with the cold commercial unconcern that it shows to its cattle and its swine. Only by denying the truth and by functioning through fiction are the Communists able to deceive or dragoon Americans of any race or color or line of occupation into following these false prophets of despair. Only then, by disguising the fact that American Communists are in fact the selfish, self-serving agents of the Soviet Government are these Communists and their fellow travelers and fellow wanderers able to fatten their purses and advance their cause through luring gullible Americans into their Red spider web of potential tyranny.

The evidence to support my legislative proposal to require Communists to register with the Department of Justice as agents of a foreign power is volumes high and monotonously long. As far back as 1924 Chief Justice Charles Evans Hughes, at that time Secretary of State, forwarded to the then Senator Borah a 530-page document which stated in conclusion: "The subversive and pernicious activities of the American Communist Party and the Workers' Party and their subordinate and allied organs in the United States are activities resulting from and flowing out of the program elaborated for them by the Moscow group."

That finding was made in 1924. From that day until this the Communist Party in the United States has been the willing creature of the men of Moscow. In 1947 William C. Bullitt, our former American Ambassador to Russia, said in sworn testimony before our committee: "Here our Communist Party, like all other Communist Parties, is subject to orders from Moscow. It follows the party line laid down in Moscow with extreme care."

The research staff of our Committee on Un-American Activities has found conclusive evidence that the party line laid down by Pravda and Izvestia in Moscow is followed by Political Affairs, the Daily Worker, and other Communist publications in America. During last December, for example, the Daily Worker in the United States carried 115 articles attacking American foreign policy along precisely the same lines as the Soviet attacks of Vyshinsky and Molotov. During the same month the Daily Worker carried 76 articles defending or supporting Communist activities in countries outside of the Soviet Union; it carried 43 articles supporting outright the attacks of the Soviet Union on American policies and purposes. On such items as the following the Communist command in Russia and their captive creatures in America see eye to eye: They comment as though in unison on the Marshall plan—on our American position in China—on Henry A. Wallace—on General MacArthur—on our American defense program—on Greece and Turkey, and on at least a dozen other American personalities or policies.

If further proof were needed that the Communist Party in America is in fact and in function the agent of the Russian Communists, it can be found in the sworn testimony of Louis F. Budenz, former editor of the Daily Worker itself, when he said on November 22, 1946. "The Communist Party is as much a Quisling organization under the heel of the Kremlin as the Nazi bund was the agent of Hitler's Germany."

Fellow Americans, since the evidence shows the Communits Party in this country to be the agent of a foreign power, my legislation proposes to require it to register as such together with the names of all its members. Once that is done I have confidence enough in the capacity and determination of patriotic Americans everywhere to curtail the activities of communism—and to defeat its seditious plots to destroy our American way of life. If you agree with me that the time has come to declare and define a national policy on communism, I suggest you write to your own Congressman urging his active and articulate support of my bill to require Communists to register with the Department of Justice as the agents of a foreign principal and to identify their propaganda and their so-called literature as being in the interests of a foreign government.

Girl Scouting in the United States

EXTENSION OF REMARKS

OF

HON. PRINCE H. PRESTON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. PRESTON. Mr. Speaker, in cooperation with the movement sponsored by the national executive committee of the Girl Scouts of America and with a desire to honor a great and glorious Georgian, who was born in my district in the city of Savannah, Ga., I have today introduced a joint resolution in the House of Representatives authorizing and directing the Postmaster General to issue a series of 3-cent stamps commemorating Juliette Low, founder and organizer of Girl Scouting in the United States of America. Juliette Low was born in 1860 in a typical southern city, Savannah, Ga. She had a very early and intimate acquaintance with war and privation. During Sherman's occupation of the city of Savannah he called at the home of Juliette Low's mother, with whom he was acquainted, and while there held Juliette Low, who was then a very small child, on his lap. Juliette Low was able to recall her reaction to seeing the Yankee soldiers invade and occupy the city of Savannah.

Leaving with her mother during the occupation of the city of Savannah, she went to the home of her maternal grandparents in Chicago and remained there until it was considered safe to return to Georgia.

After receiving her education in a boarding school in Virginia and a finishing school in New York, she met and married an Englishman, Mr. William Low, and moved to Warwickshire, England, where she traveled extensively throughout the British Empire and into the Far East with her husband.

It was while living in England that she met Lord Robert Badden-Powell, who was the founder of the Girl Guides in England. Through intimate association with this altruistic nobleman she caught a spark of his enthusiasm and conceived the idea of creating a similar organization in America.

She then returned to Savannah, low in funds but high in enthusiasm, and firm in the faith that a girls' organization similar to the Girl Guides of England could prove to be a great force for moral and social uplift in America. The first troop was organized in Savannah, Ga., in 1912, and in 1913, Juliette Low bravely came to Washington, D. C., where she opened national headquarters for this newly born organization. In 1915 she incorporated her project, and from this point on the organization grew by leaps and bounds.

Mrs. Low has been honored on many occasions for her altruistic service to American society. Her interest never waned in this organization which completely occupied her life after returning to America. Until the very last she maintained great enthusiasm and active interest in its growth and development.

And with it all there was an underlying sweetness of character which showed itself in constant helpfulness to the less fortunate. Her kindness went out to the sick and underprivileged, and many daily visitations were made which no one knew about, but which brought health and cheer to the unfortunate and unhappy.

Although intensely interested in the growth of the Girl Scouts and extremely proud of her part in it, she was big enough to sink her own personality and turn the work over to others when she found it was going beyond her own capacity to manage. No suffering could turn her, no faintness make her falter, no obstacle daunt her.

She knew and understood girls. She loved and trusted them in every problem. She had an extraordinary intuition. Whatever she believed correct or incorrect she believed it vehemently and maintained it vigorously. Her character and personality was the nucleus around which this great organization was built.

It is fitting and proper that the Congress pass the joint resolution which I have offered commemorating this great American. Few women have left their names so indelibly stamped upon the social structure of our country as has Juliette Low.

Great philatelic interest has been exhibited in this movement to issue a commemorative stamp, and in my opinion it will prove to be one of the most popular issues made in recent years.

Not only will it be an honor to the sacred memory of Juliette Low and to the great organization she fostered, but it will be a distinct tribute to the city of her nativity, Savannah, Ga. This coastal city, which I have the honor to represent, can truly claim a large portion of the early American colonial history. It will likewise be a tribute to the sovereign State of Georgia, and lastly, it will be an act in keeping with that great American custom to pay greater tribute to those Americans who have contributed to the moral, social, and spiritual development of our Nation by unselfish sacrifice.

It's Your Money

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. DAWSON of Utah. Mr. Speaker, those who have more money than they can use, who have all their bills paid, including taxes, who are not afraid of inflation and the high cost of living, and who have no interest in the debt-bondage future of their children and grandchildren, will not be interested in the following report and comments.

But in fairness to all of my constituents, who are folks that have to worry about where their money is coming from, I have had prepared some facts which may give them a better understanding as to what their share will be in financing the Marshall plan and the Truman administration's estimated budget for the fiscal year of 1948–49, if passed.

From July 1, 1940, to July 1, 1945, according to the Library of Congress Legislative Reference and other sources, the United States advanced the huge sum of $73,092,058,013—billions, not millions—to foreign governments. Since some might say this should all be charged to World War II, let's see the picture since VJ-day.

From the end of the war through June 30, 1947, the United States has assisted foreign countries to the tremendous amount of $24,099,211,087, which, according to the last official census, would

amount to $183.03 for every man, woman, and child in the United States.

Now it is proposed that we give to foreign countries, under the Marshall plan, an additional $17,000,000,000. To add to the sorry picture, President Truman has proposed a Federal budget for the coming fiscal year of nearly $40,000,000,000—to be exact, $39,669,000,000, as compared to nine billion spent by the Federal Government in 1940, which was the largest sum ever spent by the Government in peacetime.

I got to wondering just what effect this huge outlay would have on my people at home. To assist me, I have had the figures broken down so as to show just what it would mean in the four counties and their county seats in Utah's Second Congressional District. This is the sad news:

Cost of foreign aid (1945–47, 1948–52) and Federal expenditures (1949) to the Second Congressional District of Utah, by counties and county seats

Counties and county seats	Population, 1940	Foreign aid July 1, 1945, to June 30, 1947 (population multiplied by $183.03), based on $24,099,211,087	Foreign aid proposed by Marshall plan, 1948–52 (population multiplied by $129.11), based on $17,000,000,000	Total foreign aid provided and proposed, 1945–47, 1948–52 (column II plus column III), based on $41,099,211,087	Estimated Federal expenditures for fiscal year ending June 30, 1949 (population multiplied by $301.28), based on $39,669,000,000
Davis County	15,784	$2,888,946	$2,037,872	$4,926,818	$4,755,404
Farmington City	1,211	221,649	156,352	378,001	364,850
Salt Lake County	211,623	38,733,358	27,322,646	66,056,004	63,757,777
Salt Lake City	149,934	27,442,420	19,357,979	46,800,399	45,172,116
Tooele County	9,133	1,671,613	1,179,162	2,850,775	2,751,590
Tooele City	5,001	915,333	645,679	1,561,012	1,506,701
Utah County	57,382	10,502,627	7,408,590	17,911,217	17,288,049
Provo City	18,071	3,307,535	2,333,147	5,640,682	5,444,431
Total for counties	293,922	53,796,544	37,948,270	91,744,814	88,552,820

It should be noted that these population figures are based on our 1940 census. With our present increased population in Utah's Second District the picture is even worse.

On the basis of the average United States family of four persons, the Truman budget for this year alone would be $1,205.12 for each American household.

Taxes and expenditures are inevitably tied together. Over 30 percent of our national income is eaten up in local, State, and Federal taxes. The average American works 3 days out of 10 for the Government. Taxes are an important factor in every family budget. They are reflected not only in the individual's income-tax return, but they are reflected in the price of everything we buy. Here again is another factor that has caused the recent price rises.

Some may say corporations will bear the bulk of these taxes, but never forget—corporations do not pay taxes—they collect them. John Q. Public is the man who pays. The high cost of living and high taxes go hand in hand. If we are to curb inflation and prevent suffering among our own people we must reduce these costs and do it now.

In the last 14 years the Federal Government has expanded from 521 agencies and bureaus to 1,141, and the number of employees has increased from 582,000 to 2,000,000. The administration insists on keeping these 2,000,000 employees on the pay roll. Now is the time to trim down this expanding bureaucracy and examine with the utmost caution further gifts to foreign lands.

Our people are demanding that by courageous, honest, statesmanlike, and careful action we trim these expenses both at home and abroad, all to the accomplishment of our full strength and security, our peace, happiness, and prosperity, and the preservation of our cherished way of life.

Palestine

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 4, 1948.

President HARRY S. TRUMAN,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: I wish to call to your attention remarks which I have received in a letter from Mr. Alex Lowenthal, chairman of the Pittsburgh Zionist Emergency Council, said council consisting of about 11,000 adult members of the Jewish families in the city of Pittsburgh, wherein he has written to me, calling again to my attention the serious situation existing in Palestine today, and the deterioration of Palestine.

Mr. Lowenthal states this deterioration has been due mainly to the uncooperation and obstruction of the British Government to the UN decision; also, it is believed the policy of the United States has encouraged both the Arabs in Palestine and the Arab states surrounding Palestine to violate and disobey the UN decision, even though our Government took a strong position in bringing about the UN decision, although its actions since then have tended to undermine the decision.

He further states that (1) the embargo on the shipment of arms to Palestine, (2) failure to warn Arab states about the consequences of their interference in Palestine, (3) statements of high officials of our Government questioning the soundness of the American policy in advocating partition, (4) failure to take any action within the UN toward the establishment of an international police force, (5) permitting a general atmosphere of alarm which may have disastrous effects on American public opinion, which in turn may undermine the entire structure and effectiveness of the UN.

May I have an expression from you regarding this situation so I might inform Mr. Lowenthal and the other members of the Zionists organization accordingly?

With kindest personal regards, I am,

Sincerely yours,

FRANK BUCHANAN,
Member of Congress.

THE WHITE HOUSE,
Washington, February 9, 1948.

Hon. FRANK BUCHANAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BUCHANAN: I appreciated your letter of the 4th in regard to Palestine.

Palestine has been a matter of considerable disturbance to me ever since the Japanese surrender, and I've been endeavoring to get the matter worked out. It's now in the hands of the United Nations, and this Government is backing the United Nations in the settlement they have suggested.

Sincerely yours,

HARRY S. TRUMAN.

Tax Reduction

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "A Point of View," from the January 1948 issue of the Michigan Teacher:

A POINT OF VIEW

Citizens should have a clear understanding of the essential difference in the tax adjustment proposals outlined in President Truman's message as contrasted with the tax reduction features embodied in the Knutson-sponsored H. R. 4790 tax cut measure.

The Knutson proposals would establish a number of precedents which appear to be dangerous. In the first place, they suggest over-all tax cuts of approximately $6,000,000,000 in a period of prosperity when economists generally are agreed that every effort should be made to keep Federal revenue at the highest possible level.

General tax reduction of the nature proposed by Representative KNUTSON could not operate otherwise than to feed inflationary forces at a time when our interests at home and abroad emphasize the need for controlling prices and using scarce materials and commodities to the best possible advantage.

Moreover, even though a general tax reduction were justified, the Knutson plan is not equitable. Concentration of the tax cuts in the income-tax field under the Knutson proposal is certainly to be criticized. Excise taxes adopted as emergency measures were scheduled for elimination 6 months after the end of the war; Representative KNUTSON'S failure to make any provision for some cut in these taxes as part of a general reduction such as he is proposing is inexcusable.

The several Knutson proposals if adopted would operate together to give the low-income taxpayer insufficient relief, but would

give thousands of taxpayers in the $5,000 to $30,000 groups reductions ranging from 25 to 39 percent in their tax bills.

The Truman proposals, on the other hand, would not establish precedents as the Knutson bill does, but are frankly emergency proposals. The President's suggestion that a $40 cost-of-living tax rebate allowed for all taxpayers would be very simple to administer. Moreover, it would give the low-income taxpayer more relief than he would receive under the Knutson plan, yet would not feed inflation by giving upper-bracket taxpayers the large reduction proposed by Representative KNUTSON.

Under the President's plan, the further proposal to offset personal income-tax revenue losses by a temporary increase in taxes on corporate profits appears to be in accord with current need for checking inflation.

The Knutson proposals appear to be premature and would tend to establish a tax pattern in a period of uncertainty which might have unfortunate economic consequences. The President's proposals are sounder because designed as emergency measures to meet an emergency situation. The Truman plan has the merit of concentrating the tax cuts where they are most needed, without the possibility that they will contribute either to loss of Federal revenue or to feeding current inflationary forces that might be anticipated through the adoption of the Knutson proposals.

Transfer of American Ships

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. BRADLEY. Mr. Speaker, on several occasions in the past I have brought to the attention of the House the fact that the proposed European recovery program indicates the transfer of some 500 American-flag vessels to foreign nations either through sale or charter. I have stated emphatically that I do not believe that such a transfer of American ships is either necessary or advisable. In view of this, I am very much pleased to insert here an article by Mr. George Horne, maritime editor of the New York Times and one of the outstanding maritime authorities of the Nation, in which he discusses this proposed ship transfer at length. I recommend the reading of this article by all who are interested in shipping matters:

REDUCTION IS SEEN IN SHIP AID FIGURE—BELIEF SPREADS THAT MARITIME PHASE OF MARSHALL PLAN HAS BEEN OVERESTIMATED

(By George Horne)

A conviction that the ship transfer features of the European recovery program, or Marshall plan, have been grossly overestimated is spreading among private shipping operators and Government authorities concerned with the aid program.

Shipping executives in New York freely predict that the State Department, the outstanding advocate of the transfer by sale and charter of 500 American vessels to the 16 Marshall plan nations, is re-examining the proposal and may withdraw or amend it. Indications are that this view is based on much more than mere hope on the part of shipping companies who have vigorously opposed the sales and charters as inimical to American maritime interests.

An independent study of the Harriman report on aid, and of figures that were a part of the original European request, made by the so-called Paris committee, shows that the need for American tonnage of this character has been exaggerated.

Experts on the program say it is questionable whether more than a few specialized types of vessels will be needed by the participating nations beyond the tonnage they already have received.

SALE OF 200 SHIPS SOUGHT

Under the proposed transfer plan, 200 of the carriers would be sold to foreign interests, and the additional 300 would be ticketed for temporary charters, which American companies describe as a permanent give away. The State Department has maintained that the savings in transport costs under the rehabilitation plan, by making it possible for aided nations to carry home their own goods, would aggregate $650,000,000.

The National Federation of American Shipping, representing the opposition, used its own figures in scaling the potential saving of $200,000,000. Its spokesman say this relatively small economy will not justify removing from the active American fleet a body of 500 ships—the equivalent of one-fourth of the national reserve tonnage.

Public expressions of concern over the transfer phase of the aid plan consistently have failed to point out that by the time the program gets under way the need for transfers will have been well dissipated.

The Paris committee estimated the needs from the United States at 3,000,000 deadweight tons. Confusion on the actual need was admitted at the time, and the Harriman committee of experts, in its report, suggested plainly that the figure was a shot in the dark and not a firm or reliable estimate.

The figure was based on existing applications by the 16 nations to the Maritime Commission for vessel purchases. And it is well known that the applications were inflated; that the prospective buyers applied for more ships than they expected to get. The inflation amounted in some cases to 4 to 1.

NORWEGIANS QUESTION FIGURES

Shipping men here say it is apparent to them that the State Department accepted the 3,000,000 figure. Later calculations by no means support it, and reports from shipping interests abroad indicate that those who would benefit from the plan believe the original estimate could be and should be substantially reduced.

In fact, practical shipping men in Norway, one of the principal maritime nations among the 16, have questioned the necessity of wholesale ship transfers, and other foreigners have expressed doubt privately.

Regardless of the fair figure at the time of the Paris meeting, tanker needs were included, and the recipient nations already have received more than a million tons of vessels in this category. They also have obtained surplus American Liberty and Victory vessels and a few freighters of higher quality, not to mention numerous smaller craft that would not be engaged in the relief-carrying trade and would not enter into the transfer calculations.

In comparing the different approaches of the State Department and the Harriman committee, it appears that the Department took the 3,000,000-ton figure at its face value, subtracted the 1,000,000 tanker-tons and then formulated the 200-ship-sale request. The Harriman committee did not take the Paris estimates seriously and made its own study of ship needs.

HARRIMAN REPORT CUTS ESTIMATE

The report of the Harriman experts on this phase of the shipping program said:

"In the original Paris report the program of United States war-built vessel purchases for delivery subsequent to June 30, 1947, was placed at 3,000,000 dead-weight tons. After a series of adjustments in Washington this figure was finally expanded to 4,000,000 dead-weight tons, but, for various practical reasons, we have adhered to the original estimate.

"In relating either of these figures to the foreign sales policy of the Maritime Commission it is important to note that purchase applications have already been approved on many of the vessels included in the forward purchase program. Consequently, additional Maritime Commission approvals on the sale of 100 to 200 ships would probably be sufficient to enable the 16 nations to accomplish their entire vessel-purchase targets. A narrower range of estimate is impossible at this time in view of the confusion in the European vessel purchase plans as related to us."

In general, the transfers already accomplished, particularly the tankers, have been made since that report was compiled.

The other group slated for transfer, the 300 under charter, would be bulk or tramp vessels. The Paris nations asked for $585,000,000 in United States tramp shipping for the whole Marshall-plan period, with most of it during 1948. Thereafter, a tapering-off schedule called for $167,000,000 in 1949, $89,000,000 in 1950 and none in 1951.

TRANSFERS WOULD TAKE TIME

Shipping authorities who now reason that transfers in quantity will not be needed, point out that a good part of 1948 will have slipped into history before the aid program can get moving. Meanwhile, interim aid continues, with grain and coal moving, much of it in American bottoms. If the Marshall plan is approved by midyear, it would take some months to transfer the American tonnage from its current operators.

The talk is of laid-up ships, but it is generally accepted that the vessels, if ordered transferred, will come from the active fleet; American crews will simply walk off and foreign crews walk on.

Other factors deflating the ship needs would be the steady increase of new tonnage available to recipient nations from their own yards, and the anticipated rise in the availability of coal from the United Kingdom, Poland, and the Ruhr.

The 16 nations have a 15,700,000-ton shipbuilding program for the 4-year period and are building 4,500,000 tons now. These bottoms will come along as coal imports from European nations increase, as interim aid from the United States continues, and as the period of usefulness of American transfer tonnage declines.

Sam Hardy

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. HESELTON. Mr. Speaker, on Monday of this week, the fortieth anniversary of an employee of the Ways and Means Committee, I had an opportunity to pay tribute only briefly to that man, Sam Hardy. Our colleague the gentleman from New York [Mr. REED], long

associated with that committee, and who has known Sam for many years, expressed his admiration and true affection for Sam—admiration and affection shared by many of us.

My predecessor, Hon. Allen T. Treadway, and long a member of the Ways and Means Committee, knew Sam as did Mr. REED. He appreciated his fine character and intense loyalty. Sam was devoted to Mr. Treadway, and their close friendship continued even after Congressman Treadway retired. Sam was a frequent caller at the Treadway home on Tracy Place, always faithful and anxious to be of service. He has those excellent qualities of character—trustworthiness, friendliness, and loyalty—which we all so much admire.

This day, Lincoln's Birthday, would seem to be a fitting day to pay tribute to this gentleman, of whom we in the House are so justly proud.

Time for Action on Mine Safety

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch:

DEATH ON CONGRESS' CONSCIENCE

"Should there be another horrible loss of life in a coal mine, a large share of the guilt would come down squarely on this Congress." (Post-Dispatch editorial, February 7.)

These words had hardly been printed before eight men were killed in a mine explosion near Greenwood, Ark., Sunday afternoon. A check of the last report on the mine by a Federal mine inspector shows that there were more than 30 violations of the Federal mine safety code. This report said that while many previous violations had been corrected, many other violations were allowed to continue.

For example, explosives were fired by cap and fuse instead of by electical detonators. Weekly tests for methane and other hazards were not made. Air measurements were not made. Rock dust was not kept to within 80 feet of working face. Safety posts were not used close to the face. The entry roof was not adequately timbered. The hoist was not equipped with safety controls. Escapeway from active workings to escape shaft was blocked. Explosives were transported in a manner not permissible. Blower fans were not of permissible type.

And so on through a list of many more breaches in the Federal safety regulations. The trouble is that the Federal inspector can do no more than say what is wrong. That is all the law permits him to do. He cannot close an unsafe mine. And that is why it is so urgent that Congress pass the mine safety bills of Representative LANDIS and Senator KILGORE. For almost a year these bills have been tied up in committee.

This tragedy in their State should be enough to enlist the help of Senators FULBRIGHT and MCCLELLAN and all seven Arkansas Representatives to get these slumbering bills out on the floor. If there is any honest opposition, let it declare itself in the open.

The Eightieth Congress was warned by the Centralia disaster. Is it as callous as the Green administration in Illinois? How many ghastly reminders does Congress require?

Margarine Versus Butter

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pathfinder of February 11, 1948:

MARGARINE VERSUS BUTTER

On Tuesday afternoon, bald, sixtyish bovinephile Representative REID MURRAY asked permission to speak from the floor of the House. As he rose to orate he pulled from under his chair a 2-foot-long plaster-of-paris cow.

With the cow, Rebecca, under his arm, MURRAY proceeded to lecture Congress. When he finished, not a Congressman present doubted that (1) butter is rich, creamy, and nourishing, or (2) the dairy industry will fight repeal of Federal oleomargarine taxes.

If MURRAY seemed alarmed, it was only because margarine makers have marked 1948 as the year to repeal 62-year-old laws restraining its free competition with butter.

Repeatedly, Congress has rebuffed margarine makers' pleas for equality with untaxed butter—partly because in 1886 it had good reason to crimp oleo's style. Then meat packers made oleomargarine from the original beef-fat recipe France's Napoleon III got from a nation-wide chemists' contest. Farmers feared for their butter business, saw little profit in byproduct beef fat. More alarming, dishonest peddlers passed off yellow-dyed oleo as butter. After the law was passed, honest manufacturers strove to compete with butter, switched from a beef-fat base to imported coconut oil. Then when home-grown vegetable oils became abundant—and the need for political allies grew desperate—they turned to soybean and cottonseed oils. Their product became tastier, their farmer friends more numerous.

With new margarine strength on Capitol Hill, the dairymen must wage their greatest fight to halt tax repeal. Certain to come out are these arguments:

MARGARINE ARGUMENTS

1. There's a $250,000,000 yearly business in margarine, a table spread made from cottonseed oil, soybean oil, and other farm products. It benefits farmers in 44 States.

2. Margarine costs less than half as much as butter. Yet it tastes like butter because it contains skim milk and often diacetyl, butter's flavor element. It has the same caloric content as butter. Margarine is fortified with 9,000 to 15,000 units of vitamins per pound to give it approximately butter's nourishment.

3. Margarine cannot compete freely with butter because of a 10-cents-a-pound coloring tax on the colored product.

4. Soybean oil gives margarine a naturally yellow color, without using chemical dyes. But to avoid the 10 cents coloring tax, this oil must be bleached.

5. If Congress repeals Federal penalty taxes, yellow margarine would cost the same as white.

BUTTER ARGUMENTS

1. There's about a $1,000,000,000-a-year butter business. Its sale is the balance wheel of the 5,000,000-farmer dairy industry.

2. Nobody has ever proved margarine is as nutritious as butter, it is only a cheap imitation.

3. If Congress repeals the tax on colored margarine, it would also steal butter's prized yellow hue.

4. Margarine makers use skim milk in their product, forget farmers would butcher the cows that produce it if the butter market fizzled.

5. Uncolored margarine carries a mere one-fourth cent per pound Federal tax. It is easy today to dye margarine at home.

6. Despite makers' vow that colored oleo would be sold as margarine, clerks and restaurants will try to pass it off as butter.

7. The 26 margarine firms could form a dangerous monopoly, hike the price of their product.

As opposing forces gird for the fight in Congress, both sides are wooing the housewife's support. Smack in the middle of the controversy, she must decide between 88-cents-a-pound butter and 39-cents-a-pound margarine.

Probably four out of five families have at least tried margarine. Whether they will pressure for tax repeal hangs on (1) how much they know about margarine restrictions, and (2) how much they care.

Few know that grocers must foot $48-a-year Federal licenses to sell margarine colored, $6 uncolored. In 23 States yellow margarine sale is banned. Idaho, North Dakota, Tennessee, and Utah tax it 10 cents a pound. In Wisconsin the purchase price of even white oleo includes a 15-cents-a-pound State tax and a share of $15–$500 dealer-license fees.

But if these facts are alarming, United States Patent No. 2347640—the oleo bean-bag—soothes. Chicago inventor Leo Peters' brainchild, it lets the housewife dodge both coloring taxes and the home-coloring chore. The margarine and a dye capsule are packed in a bag of transparent, pliable plastic. Without opening it, she breaks the capsule, kneads it into the margarine. Already four firms have adopted the new package. As its use increases, say butter men, it should end all talk that the margarine color tax inconveniences the housewife.

The Oleo Situation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, the oleo bills with all the implied benefits to consumers are entitled to factual consideration.

First. There is nothing in these oleo bills that will have an appreciable effect on the cost of living.

Second. The oleo bills will allow oleo to be sold in place of butter.

Third. The oleo bills are just an attempt to get the camel's head under the dairy tent. The next step will be to substitute vegetable oils for animal fat in evaporated milk, and claim it is as desirable as evaporated milk made from natural normal cow's milk. If a vegetable oil is equal to an animal fat as a substitute for butterfat in a pound of butter, will it not be claimed that the vegetable oil is equal to the animal fat not only in evaporated milk but also in bottled fluid milk? Do you know of any pseudo-scientist that wishes at this hour to state that 100 pounds of milk containing 96 pounds of skim milk and 4 percent vegetable oil is equal in food value to a 100 pounds of natural milk?

Fourth. The whole oleo industry has not an economic leg to stand on. With-

out the dairy cow oleo is not produced. Where are you going to obtain the oleo when the dairy cows are hanging in the coolers in packing houses?

Fifth. The experiments on the use of oleo and butter should recognize the fact that oleo cannot be made without dairy products. Oleo, then, itself depends on the dairy cow. Whether or not the 15.6 percent of the oleo, which is a dairy product, is a sufficient amount of dairy products to give good results in tests and experiments is another question.

Sixth. Animal fats are absorbed at lower temperatures than vegetable oils.

Seventh. Over 2,000,000 more milk cows would have been needed to have produced the oleo manufactured in 1947. Could the consumers not have efficiently used the veal and meat that would have been produced by these 2,000,000 cows?

Eighth. If the oleo bill is passed the dairyman might as well reduce the milk cow numbers of the United States another 2,000,000 head.

Ninth. Milk cow numbers have already been reduced over a million within the last year. The United States milk production in December 1947 was the lowest it has been since 1940, even though the population of the United States has increased by 11,000,000. Do you wish to encourage a further reduction in dairy cattle numbers?

Tenth. Stockyards located in sections like Chicago, St. Paul, Milwaukee, New York State, New England, and Pennsylvania have large calf and dairy-cow receipts. Do you want to see a 10-percent reduction in receipts of cattle in these yards? We must remember that 40 percent of the beef and veal of the Nation is derived from the dairy industry. Before the war there were more milk cattle in the United States than nonmilk cattle.

Eleventh. If these promoters of vegetable oils are to succeed, it will be necessary to develop a cow that produces nothing but skim milk. Or do you subscribe to a thesis of cream for a few and skim milk for the many?

Twelfth. The dairy cow on a given amount of feed will produce twice as much human food as any other farm animal and four times as much as some other farm animals will yield. We should be able to efficiently use the products of the dairy cow without any question whatsoever. The issue then is between vegetable oils and animal fats. Great damage can be done not only to the dairy industry but to the general welfare and public health of our Nation if vegetable oils are to be sold as animal fats. Some real experiments should be conducted comparing the two products. One never reads of that kind of an experiment. The ones we read about are where vegetable oils and dairy products are fed in comparison to dairy products. Let us have just one experiment, please, without dairy products added to bolster up the vegetable oil and see what happens.

Thirteenth. The oleo consumption is now about one-half the butter consumption. Any time the byproducts of butter are provided their proper legislative support in the dairy field butter interests will not be asked to carry the burden of showing up the falsity of the oleo propaganda.

Fourteenth. So, I repeat, let no one be misled about the true values of vegetable oils and animal fats until science really tells the story. No experiment yet wherever it was conducted has butterfat. Dried skim milk has 1 per- shown that a vegetable oil can replace cent butterfat in it. Where does this leave most of the oleo experiments? This 1 percent of butterfat may be enough of this "magic food" to give the results shown in the experiments. How about the calf experiment at Minnesota College when vegetable oil was compared with butterfat?

Fifteenth. The oleo people, I repeat, do not have an economic leg to stand on. They cannot make oleo acceptable to the public without using dairy products as a base. No milk, no oleo. No cows, no milk. Do you advocate a drink made of 96 percent skim milk and 4 percent vegetable oil and contend it is equal to natural milk? Even if you do, where are you going to get the skim milk?

Sixteenth. There are huge appropriations made in the name of public health. Why listen to groups that would relegate the greatest producer of protective foods to the coolers in the packing plants? Why talk about public health, oleo, and protective foods at the same time? There is no correlation in the consideration.

Seventeenth. Since the dairy cow—the foster mother of the human race—produces twice as much human food as any other farm animal and four times as much as some farm animals from a given amount of feed, steps must be taken not to allow cheap propaganda to decrease her numbers. Enough is being done to the dairy industry without adding this one.

Eighteenth. If anyone wants less dairy products, less dairy byproducts, less leather, less beef and veal, less soil fertility—get on the oleo band wagon.

Nineteenth. We have fewer milk cows in the United States on January 1, 1948, than we had on January 1, 1933, or 15 years ago.

Admiral Sellers Knows Retired Officers

EXTENSION OF REMARKS
OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. BRADLEY. Mr. Speaker, in connection with the many comments published in the press concerning the retirement of officers of the armed forces, I take pleasure in inviting the attention of the House to the following remarks of Admiral David Foote Sellers, United States Navy, retired, president of the Retired Officers Association, who speaks after a lifetime of public service, during which he demonstrated his integrity and love of country time after time, both in war and peace:

In the wake of the disclosure that Major General Meyers had been retired from the Army for physical disability has come a deluge of criticism of the whole system of retirement of military personnel for physical disabilities. Coincidentally there have been initiated, both in the executive and legislative branches of the Government, inquiries as to the manner in which the system has been administered in individual cases and as to whether changes in the system as presently established should be made. Complete review of the cases of officers heretofore retired for physical disability appears to be in prospect—at least with reference to those who were retired for disabilities subsequent to World War II. Suggestions for basic changes in the whole system are being made.

Many of those who have heretofore been retired for physical disabilities—including some who were retired years prior to World War II—are now apprehensive lest, through administrative review or a change in the laws under which they were retired, their economic situations may now be readjusted with consequent hardships to their dependents and themselves. Some of them, although their original retirements were brought about as administrative determinations by competent and conscientious boards of medical officers, properly constituted under existing laws, later experienced a measure of physical rehabilitation through perseverence and medical care. They fear that their good fortune in this respect may now result in economic hardship through reduced income. They have molded their lives, as have their dependents, upon the reasonable expectation that they would be left undisturbed in the circumstances which premature retirement from service to their country has placed them.

While no clear cases of actual maladministration can be defended or condoned, and if such there be they should be corrected, it must be assumed that in the vast majority of cases, administrative determinations have been properly made in accordance with well-known and long-established standards, under laws enacted by the Congress—standards which were established for the purpose of eliminating the physically unfit from active military service to enhance its efficiency. These standards, originally applicable to career military personnel, have been made equally applicable to the reserve components with the mandate by Congress that they be equally and impartially applied.

Administrative determinations under those standards, if proper at the time they were made, should be left undisturbed even though in some cases there has been a measure of recovery from the physical disabilities upon which they were based.

Likewise, while a study of the present system may well, under changing concepts, suggest the necessity for the establishment of new standards, changes in the system should be for prospective application and not retroactive.

Over the years, to career military officers of the regular services, enforced retirement for physical disabilities has brought with it bitter disappointment. It has meant the sudden and premature termination of their ambition to serve their country. The standards of physical fitness for active military service are necessarily high. They are not comparable to the standards of physical fitness applicable in other fields.

Failure to meet the exacting standards of physical fitness throughout a military career, during which physical fitness is constantly under scrutiny, results in premature retirement after varying amounts of active service. In such cases, as a general rule, the greater the devotion to duty by the individual the less prepared he is to readjust his life to the totally different demands of civilian occupation in order to support his family and himself. Certainly it cannot be expected that he could make provision for that purpose by savings from his inadequate active-duty pay. The compensation, whether for active duty or

for inactive duty in retirement, never can be adequate due to the large numbers of military personnel necessary to a proper protection of the country in the interest of a preservation of peace.

Years of military service leave their mark upon those who perform it with a devotion to duty which must in large measure be its own reward. It is therefore not unreasonable to expect that the rigors of such service will inevitably result in a larger proportion of career personnel in the higher ranks being placed on the retired list for physical disabilities which have been incurred incident to military service, particularly at the close of a war during which physical strain was very great.

The essence of some of the criticism being voiced today of the system of disability retirements is that the retired pay of those so retired is exempt from Federal income tax. That is no new principle, nor is it confined to the military services. In my judgment it is a wise provision of law which might well be extended to military personnel who attain the statutory age of retirement for they are in effect retired for want of adequate physical condition to continue in active service.

Finally it must be emphasized that doubts which are being expressed in many ways today concerning the fairness of the application of the laws for retirement for physical disabilities should be resolved in favor of the individual, and basic changes should not be applied to those who have served under different rules. To change the rules in the middle of the game would create grave dangers to our national defense by undermining morale. Underpaid at best, and not undergoing preparation for business careers, it would inevitably create among those in the services a feeling of insecurity and result in their eyeing the outside as a more promising way of life rather than to keep their eye on the military ball. If it were now established as a precedent that expected emoluments of office might be at any time taken away or substantially reduced after the service has been embarked upon or performed, young men of high attainments could not reasonably be expected to choose an honorable career in the military service with a feeling that during the closing years of their lives they and their dependents might be reduced to penury.

Betrayal of Poland

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1948

Mr. REED of New York. Mr. Speaker, I hope that every American citizen will read I Saw Poland Betrayed. Ambassador Arthur Bliss Lane, the author of the book, has rendered a patriotic service to his countrymen. What he has disclosed ought to put the people on the alert as to the danger inherent in our present foreign policy. It is a foreign policy that, if continued, will pauperize our thrifty citizens, weaken our Republic, and endanger the very existence of our free institutions.

When existing undisclosed commitments are all made public, our humiliation as a nation will be complete. The word "honor" is apparently unknown to the New Deal administration.

As a part of my remarks, I am inserting an article by George E. Sokolsky which appeared in the Times-Herald Wednesday, February 11, 1948:

THESE DAYS

(By George E. Sokolsky)

Ambassador Arthur Bliss Lane has contributed immensely to the American people by publishing I Saw Poland Betrayed. It is a report to his fellow countrymen on his mission to Poland between 1944 and 1947.

I wonder whether the title should not be: I Saw America Betrayed? for when the officials of a country forsake its honor and lower its dignity for whatever expediency, do they not disclose that its spirit has been fouled, its national morality abandoned?

The tale really begins at Tehran when Great Britain, which went to war with Germany over Poland, abandoned principle upon demand of Stalin and at the instigation of Roosevelt. Lane says:

"The discussions at the conference at Tehran in December 1943 among Roosevelt, Churchill, and Stalin remained an official secret * * * even within the Department of State the truth of what happened at this momentous conference was probably not known, except perhaps to two or three.

"Some key officials, indeed, who had the responsibility of making important recommendations on matters dealing with the United Nations organization, in conversations with me shortly after President Roosevelt's death in April 1945, deplored the fact that no records of the Tehran meeting were available even to them. Perhaps none had been made."

For page after page, following this quotation, Lane records the deceptions pursued by President Roosevelt. He recounts in detail the relations between the President and Charles Rozmarek, president of the Polish-American Congress. Rozmarek wrote to Lane:

"President Roosevelt in his talk with me expressed distrust of Stalin, having been fooled by him, as he stated, on a number of occasions. He plainly indicated that he was fearful that Stalin might again collaborate with Hitler as he did in the initial stages of the war, and the President wanted at all costs to prevent such an alliance.

"He kept on repeating to me: 'Let us win the war with Germany first.' The President let it be understood that once Hitler was defeated, he would know how to handle Stalin."

Stalin actually got a better deal in Poland from Roosevelt and Churchill than he got out of Hitler by the Stalin-Hitler alliance. Apparently Roosevelt was so sure that he could outfox Stalin after the war that he complacently permitted Stalin to outfox him while the war was on.

Lane went to Poland as our Ambassador after the peace and after we had recognized that country's puppet government. Our mission to Poland was treated cavalierly. It was improperly and even humiliatingly housed.

Its diplomatic telegrams to its own Government were delayed or not sent at all. Members of the mission and other Americans were arrested. The Russians established the fact in the minds of the Polish people that the United States did not count.

Did we do anything about it? Of course. Ambassador Lane reports:

"Over my personal protest, Director General Herbert H. Lehman had appointed as director of the first UNRRA mission to Poland the Soviet member of the UNRRA council, Mr. Menshikov. * * * It was no surprise to me when in August the agreement concluded in Warsaw provided that the Polish Government, and not UNRRA, should have complete jurisdiction over the distribution of UNRRA supplies in Poland."

Also, we granted a $90,000,000 loan to the Polish government. Lane telegraphed the State Department:

"With the greatest earnestness of which I am capable I beg the department not to approve the extension of any credits at this time. When the terroristic activities of the security police come to an end, when freedow of the press is restored, and when American citizens are released from Polish prisons—not until then should United States public funds be used to assist the Polish provisional government of national unity."

He ends his chapter:

"In my opinion, these minor gains in no way compensated for the loss of prestige suffered by the United States when we granted credits to a government which had not kept its word to us and which seized on our leniency as warrant for proceeding to even greater attacks on the freedom of its own citizens—and of our citizens."

The book should be read by every American in humility and shame.

Brownie Boultinghouse Won First Place State Sons-Daughter Contest

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. SMITH of Kansas. Mr. Speaker, Under leave to revise and extend my remarks in the RECORD, I include the following article published in the Osborne County Farmer-Journal of January 29, 1948:

BROWNIE BOULTINGHOUSE WON FIRST PLACE STATE SONS-DAUGHTER CONTEST

In a communication received Monday from Mrs. Frank Boyd, State chairman of the Native Sons and Daughters essay contest, the local high school was informed that Brownie Boultinghouse, one of the school's popular juniors, received first place in the State with her essay on Americanism. The essay not only won first place among the entries on the particular subject but also won the sweepstake award covering all the various subject divisions which this contest included.

Mrs. Boyd's letter to the local superintendent of schools stated, in part: "It is a real pleasure to notify you that one of your students, Brownie Boultinghouse, received first prize on her essay on Americanism and will received the $25 award from the Robinson Milling Co. of Salina. * * * In addition to the prize from the Robinson Co., she was awarded the sweepstake prize, being chosen first among the "firsts" in the various classifications. * * * You please notify Brownie that she is to get the free trip to Topeka given by the Native Sons and Daughters of Kansas, be their honor guest at the annual banquet meeting in Topeka, Wednesday 28. Your school will receive the $25 given by the State chamber of commerce."

In a telephone conversation on Tuesday Mrs. Boyd informed Brownie that both she and her instructor, Miss Florence Deeble, would be Mrs. Boyd's guests at the Jayhawk Hotel and that following the banquet on Wednesday evening they were invited to be among the guests at the Governor's reception.

This is the third time that Osborne High students have won this coveted award. Several years ago Elizabeth Bell brought this honor to Osborne. And in 1944 Dean Gregory

was State sweepstake winner. The fact that Osborne has had two State winners within the past 4 years is a genuine tribute to the splendid services given by Miss Deeble, head of the English department in the high school. Moreover, it testifies to the fact that our high school youth are appreciative of basic values of life as expressed in their essay writing.

The entire community joins the school in congratulating Brownie Boultinghouse upon her splendid achievement.

"AMERICANISM

"(By Brownie Boultinghouse)

"Americanism was born as an ideal; an ideal which has developed and still continues to develop as an 'American way of life.' This ideal was first expressed to the world in the immortal words of Jefferson, 'that all men are created equal, that they are endowed by their Creator with certain unalienable rights—and among these are life, liberty, and the pursuit of happiness.' It was made clear that these rights are not granted to men by some benevolent government, but that they are rights with which all men are endowed by a Supreme Being, and which are sacred to the individual.

"Later, when the Constitution was drafted, the founding fathers, keeping the words of the Declaration in mind, decided that it was precisely to secure these rights that governments were made, in the first place. They believed that governments were instituted to do good, not evil; they were made to protect men, not to injure them.

"But early Americanism meant not only the Constitution and the Declaration. When we speak of early Americanism we also think of how the documents were written and of the great men that backed them; we think of men who could not have repeated them, but whose lives were the incarnation of these principles and whose spirit has breathed life into these immortal documents. It is because of the ideal of Americanism we had men who were willing to suffer, to die, to venture, to sacrifice. It was because of the spirit of Americanism that we have a country, and it is only by that spirit that we will ever be able to keep a country.

"The democratic ideals and the theories of Americanism took practical form with the development of the West. It was the spirit of Americanism that led the pioneers to the West and far West; it was the same spirit which in every part of our land has accounted for the development of democracy as 'a way of life.'

"Americanism has grown in the minds of men until it is ever greater than the ideas and hopes of the founding fathers who stood before us to teach us the meaning of Americanism. Today, these rights and benefits are not only very precious but also very rare. Nowhere else on the face of this earth are so many of the good things of life within reach of the common man, and nowhere else are the people so free to improve conditions; so free to engage in the effort to shape the future according to their heart's desires. The suffering and the hardships of two World Wars have taught us these things and many more about the true meaning of Americanism.

"But we must not take all of these for granted. Today America is challenged with many problems. Our appreciation should not be merely passive. We should actively determine to maintain the strength, the spirit, and the greatness of America. Today, the challenge of Americanism is to rise above selfishness and serve not only the people of our own community, but also those of other communities the world over, regardless of race, prejudice, or color, and I believe that Americanism is meeting this challenge.

"Today, the hearts of Americans have been touched as never before by the needs of those in distant lands. Americans have given generously to the Friendship Train and to the Freedom Train. They are giving generously to the many other worthy and efficient relief agencies which are doing so much to help the people of the war-torn areas. In other words, Americans are voluntarily extending the hand of friendship and freedom to all the peoples of the world.

"Americanism continues to grow in the minds of men. It will find a solution to the problems which stand in the way of world stability and a permanent peace."

Pricing Policies of Tire Manufacturers

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

George J. Burger, director of the Washington office of the National Federation of Small Business, Inc., declared today that the action of the Federal Trade Commission calling on the big four tire manufacturers to supply the Commission with their pricing schedules "will no doubt unearth secret and special deals in violation of section 2 of the Robinson-Patman Act."

The FTC's action will reveal secret pricing policies extended by the big four tire manufacturers through direct selling to local and national fleets, through their own retail company-owned stores, and mass distributor purchasers, all of which tend to reduce independent retailers' position in the tire-distributing fields, Mr. Burger declared.

This action of the FTC may further disclose overriding commissions paid to major oil companies—a privilege denied to independent retailers—which in turn prevents them from securing business from independent filling stations. More important, it closes the door to small tire manufacturers in getting business from independent filling stations.

The House Small Business Committee, through its chairman, Representative WALTER C. PLOESER, Republican, of Missouri, instituted this action with the FTC early in 1947 and this action of the FTC, Mr. Burger said, represents "a long and major step to solve this problem of hidden price discounts given to the few and not to all of the customers of the big tire companies."

Mr. Burger has been an active member of the rubber-tire industry for nearly 40 years. He said independent tire dealers have the right to petition Congress for legislative action through the so-called rubber-tire bill that was sponsored by both the House and Senate Small Business Committees in the Seventy-seventh and Seventy-eighth Congresses.

Mr. Burger further stated that Congress must approve such legislation unless Federal agencies can bring into line rubber manufacturers who, Burger declared, have figured the present Robinson-Patman law was just another eighteenth amendment insofar as they were concerned, and today's action of the FTC will dispel that thinking and planning in the minds of the big four tire manufacturers.

Small business of this Nation will welcome this news, and it is a major accomplishment for the present House Small Business Committee, Burger stated.

National Foundation Fund for Cancer Research

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. HUBER. Mr. Speaker, one of the outstanding patriotic veterans' organizations of the United States, the Military Order of the Cootie, has just inaugurated a campaign to raise $25,000,000 for the establishment of a National Foundation Fund for Cancer Research.

Mr. Speaker, I am especially proud of the fact that the national headquarters of this foundation, dedicated to suffering humanity, is located in my congressional district at Akron, Ohio, and that one of my constituents, Paul R. Couch, of that city, is the chairman of the supreme cancer committee.

When the Military Order of the Cootie was first organized in Washington, D. C., on October 23, 1920, it was designated as the honor degree of the Veterans of Foreign Wars.

Twenty-eight years ago, Mr. Speaker, even as you and I, the members were much younger and emphasis was given to their social activities. However, with the passing of the years, sobered by the thinning ranks of their departed comrades, they have rededicated themselves to a life of service in behalf of their more unfortunate brothers in arms.

Mr. Speaker, I want to point out to this House that this endeavor on the part of this great veterans' organization is not only in behalf of veterans, no, not only in behalf of Americans, but in behalf of all suffering humanity.

Mr. Speaker, Members of Congress within reach of my voice and loved ones of their families are destined to die of the searing ravages of tortuous cancer.

As an honorary member of the supreme cancer committee, I suggest that this Congress, many Members of which voted billions of dollars to win the war through maiming and killing, appropriate the funds to match the $25,000,000 contribution being made by the Military Order of the Cootie.

NATIONAL FOUNDATION FUND FOR CANCER RESEARCH

MILITARY ORDER OF THE COOTIE,
Akron, Ohio, January 24, 1948.

Hon. WALTER B. HUBER,
Member of Congress,
Washington, D. C.

DEAR SIR: Because of your known sympathetic inclination toward the veterans of this Nation, as shown by your efforts to help enact beneficial legislation and further the ends of their welfare, this letter is addressed to you.

It is written with the hope that after you have read it and digested its contents, you will be imbued with the great desire to lend your influence and support to the great humanitarian project which is set forth herein.

In order to get a comprehensive picture of the events leading up to, and including, the ultimate plan, it will be necessary to give you some historical data.

There exists within the Veterans of Foreign Wars of the United States, a subordinate organization known as The Military Order of the Cooties of the United States. This title has been generally shortened to the extent that it has become popular to refer to it as the Cooties.

When first organized in Washington, D. C., on October 23, 1920, the by-title was adopted as being, "the honor degree of the Veterans of Foreign Wars, because the members must be picked from members of the VFW."

At the beginning the honor degree was more social in character, and fun and pranks seemed to be predominant in the organization. But the years passed and left their mark upon the membership and the spirit of fun and frolic exhibited itself with diminishing intensity each and every year. As this condition became more and more pronounced there came a change-over toward the other extreme and many of the older members gradually came to wonder if the Cooties should not endeavor to stress the honor degree instead of the social degree. As a result of this change, the Cooties requested of the Veterans of Foreign Wars that they be allowed to take over the hospital-visitation program of that order. Permission was granted by the parent body and a new era opened for the Cooties.

A slogan was adopted, "Keep 'em Smiling in Beds of White" and with this as an ideal the Cooties have for the past 8 or 9 years made it their paramount ambition to make life a little more pleasant for their comrades and buddies in the various hospitals throughout this country and its outlying Territories and protectorates.

Many thousands of presents have been distributed, many hundreds of visits have been made, and thousands of dollars have been freely given in order that their unfortunate comrades might have a few hours of pleasure to help them to forget the other monotonous hours that they were compelled to spend in their "beds of white." The rewards have been great. A smile brought to the face of a boy or man who ordinarily is wracked with pain, is enough to reimburse the Cooties for all of the time, effort, and money spent throughout the time since this work was started. The feeling of something done which was worth while in making a comrade happy for a few hours is something that cannot be forgotten by a Cootie who has made a hospital visitation.

It also must not be forgotten or lightly passed over, that the Cooties made it possible to present to the VFW National Home at Eaton Rapids, Mich., an athletic field, for the recreation of the boys and girls who are residents of the home. Cootie Field is its name, and it stands as a fully equipped memorial to those who believe in making someone else happy.

At Christmas of each year the Cooties sponsor the Christmas party to the boys and girls of the National Home and every resident of the home becomes the recipient of presents galore, the yuletide greetings and bushels of joy and happiness. Cooties from all over the country journey to that Christmas party and take part in the festivities. Their only reward is to observe the unbounded joy and happiness that is radiated from the faces of those children.

Now, it so happens, that these same Cooties who have, over the years, done so much to alleviate the lonesomeness and suffering among their comrades, have also observed that in the hospitals that they have visited, both veterans and civilian, one of the most prevalent sources of hospitalization is the dreadful scourge of medical science—cancer.

So, with the idea that perhaps an opportunity lay within the scope of Cootie activities to not only do good amid the restricted area of veteranism but also to benefit humanity in general, the great idea has been fostered to take up the fight against cancer.

The purpose and aim is expressed in the title which has been adopted—"The National Foundation Fund for Cancer"—or at least help in the work of ascertaining its cause and cure.

Briefly, it is a campaign to acquaint every Cootie and the American public with the need of raising money to fight cancer. Every Cootie in the national organization will work and do his part and the results will show that for every Cootie member there will be $1 contributed to the cause. Not only will the Cooties contribute but they will endeavor to bring the program to the attention of the public and hope to acquire additional contributions from that source. It is the plan of our committee to make this program of national scope and the hope is that 1 week of each year may become known as the Cootie cancer-fund week. We hope to have the President's approval and cooperation.

The program was first initiated by the action of Pup Tent No. 3, of Akron, Ohio, and by that body was proposed to the meeting of the grand council of administration of Ohio on February 26, 1946. The plan was enthusiastically received and it was proposed that it be presented to the department at its convention of that year. The adoption of the plan was voted on favorably by the department of Ohio. Plans were then made to secure favorable action at the national encampment of the Veterans of Foreign Wars, held in Boston, Mass., in 1946. Again the plan was received with great enthusiasm and the "go ahead" sign was given to the Cooties by that national encampment.

A committee was appointed and began its work immediately upon the adjournment of the convention and for over a year the work of perfecting the program has gone on.

Mr. HUBER, can you not feel that such a noble and worthy cause should be brought to the attention of the Congress of the United States?

The Cooties have proved themselves capable of high esteem in the past and we hope to continue to merit that esteem in the future. May we count upon you to help?

Let us all adopt the slogan which is to be used in this undertaking and "get in on the kill." Cancer must be eliminated.

We hope you will do what you can to make the Cooties' national foundation fund for cancer research a byword in the minds of every man, woman, and child in the United States.

Respectfully yours,

THE NATIONAL COMMITTEE,
PAUL R. COUCH, *Chairman.*
GERALD LYNCH, *Secretary.*

Dr. Horace G. Smithy, Jr., Saves Girl by Heart Operation

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. BRYSON. Mr. Speaker, as revealed in the Evening Star of February 10, 1948, and through other newspapers throughout the country, young Dr. Horace G. Smithy, Jr., formerly of the District of Columbia, has performed a miraculous operation at the Medical College of South Carolina, in the city of Charleston.

As a tribute to the untiring efforts on the part of members of the medical profession, I take pleasure in calling attention to the outstanding service of Dr. Smithy.

We are proud of our State medical college, which has been in existence more than a hundred years. Great physicians have gone out from this institution to minister to suffering humanity.

As a part of my remarks, I include herewith the newspaper account of this great surgeon's work:

SURGEON SON OF DISTRICT OF COLUMBIA REALTY MAN SAVES GIRL BY HEART OPERATION—KNIFE ON SLENDER ROD INSERTED TO OPEN CLOGGED VALVES

Dr. Horace G. Smithy, Jr., son of a well-known Washington real-estate man, has succeeded in inserting a blade in the tubes of the heart and cutting away tissue to relieve clogged valves, the frequent after effect of rheumatic fever, it was learned today.

Dr. Smithy is assistant professor of surgery at the Medical College of South Carolina. The operation was on an 18-year-old girl, a victim of rheumatic fever who had been given a year to live. The operation occurred in Charleston, S. C., 10 days ago, according to the Associated Press. The girl, Betty Lee Woolridge, of Canton, Ohio, is now up, walking around and apparently nearly well.

Dr. Smithy has been performing this delicate operation—in which the heart is held in the hand while a knife at the end of a slender rod trims away valve tissue within—for several months on animals. The Woolridge girl in Canton read a newspaper account of the work in September. She appealed to Dr. Smithy by mail to try the technique on her.

PARENTS KNEW OF WORK

The doctor's parents, who live at 2721 Thirty-first Place NW., knew from his letters about the work and that his first operation on a human being was imminent.

Dr. Smithy, who is 33, went to Friends School here and to Episcopal High School in Alexandria. His medical practice, since his graduation from the University of Virginia Medical School, has been in Charleston.

"The good Lord was with us," his mother said today in telling about this critical operation of his career.

The 85-pound girl was flown to Charleston on January 18. Dr. Smithy said her condition was such his first impulse was to send her home.

Scar tissue in the heart valve interfered with flow of blood from one main heart chamber to the other. She had to be propped on three pillows to breathe. Veins in her neck stood out like cords.

Dr. Smithy said the operation was performed by opening the chest, and baring the heart. He used a long instrument, a slender rod, in the end of which was a movable blade to be used in cutting the scarred valve. The cutting blade is manipulated by the surgeon through the handle of the rod.

HEART HELD IN DOCTOR'S HAND

First the surgeon made a purse-string suture, or sewing, on the heart muscle. This was so that when the rod was thrust through into the heart the string could be pulled to tighten the outer heart tissues all around the rod to minimize bleeding.

The heart was held in the surgeon's hand while this purse-string suture was put in place.

The valve-cutting instrument was designed by Dr. Smithy and associates. It was made by the college machinists. When the instrument was inserted into the heart Dr. Smithy worked it by feel, and by experience gained on animals' hearts, until the point was on or in the valve.

Heart valves are openings fringed with flaps of tissue, called cusps. When the heart contracts these leaves come together, closing the

valve. When the heart expands they separate, leaving an opening. The scarring fastens the edges of cusps together, so that they no longer open freely. Dr. Smithy's probe cut away these adhesions, or part of them.

Abraham Lincoln Favored Constructive Aid for the South in Its Recovery From War—His Principles Should Be Applied Today in the European Recovery Program

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. HAYS. Mr. Speaker, it has been my practice since coming to Congress to extend in the RECORD on the anniversary of Lincoln's birth a statement on his great service, particularly his interest in the South's recovery. The day belongs to our colleagues on the Republican side, so I shall not consume the time of the House in speechmaking. However, as a humble Democrat I wish to express some thoughts on Lincoln's efforts to hasten recovery from the effects of war.

Abraham Lincoln died in the hour of success, a week after the South laid down her arms. Victory in war is far easier to achieve than justice and tranquillity in peace; the goal is far simpler, the problems are more straightforward. But, although Lincoln did not survive to struggle with the complexities of peace, he has a right to be regarded as more than a victorious leader in war, for he has left evidence of the policy that he intended to pursue when the conflict was over.

In his annual message to Congress in December 1863 he offended many by advocating a moderate policy toward the South. In February of 1865 when the end of the war still did not seem to be in sight, he drafted a message to Congress calling for $400,000,000 as compensation for the loss of property caused by abolition of slavery; only the united opposition of his Cabinet led him to shelve the proposal for the time being. Nicolay tells us that aid to the stricken South was dear to Lincoln's heart and that he was very sad at the rebuff which his purpose met at the hands of his Cabinet. A month later in his second inaugural address—which he considered to be as great a speech as any he ever delivered—he spoke of "malice toward none," of "justice toward all," and of "binding up the Nation's wounds." His last speech, made 3 days before his death, was devoted to answering those who attacked him for overgreat leniency in his attitude toward the new government in Louisiana.

History is full of might-have-been and it is idle to speculate on exactly what might have happened if Abraham Lincoln had been spared to complete his second term as President. Yet we can hardly doubt that, had he survived to translate into action that mild and conciliatory attitude of which he had given such evidence, had he, with all the weight of his great reputation behind him, attempted the harmonious reconstruction of our national life, then the country as a whole would have been spared much of the bitterness that so long outlasted the war; we cannot doubt that the history of the United States would have been one of even greater progress and prosperity than it has been.

The thought of this possibility, the wistful regret that we must all feel that Lincoln perished at the very hour when his greatest opportunity lay before him, has a moral for today. As in 1865 the United States had been ravaged and impoverished by a great conflict, so today the world has been ravaged and impoverished. In the years after the War Between the States the word "reconstruction" acquired an unpleasant flavor. Today we are waiting to see if it can recover its hopeful sound, for today Europe is in the direst need of reconstruction. There are some who try to draw a strange lesson from the parallel circumstances. The South, they say, recovered from the War Between the States without any aid; why cannot Europe do the same? The contrast is inexact; the conclusion is wrong.

First, in the last century, the United States lay in no serious danger of attack. It could recover from its wounds unperturbed by the threat of war. That is not true of western Europe today. The weakness of her war-shattered economy is an immediate temptation to the forces of disorder to the east. The South may not have been aided in recovery but at all times it had the protection of the United States flag. Without aid western Europe is more than likely to fall victim to foreign aggression.

Second, the South was comparatively self-sufficient. It contained within its borders most of the staple necessities of life. Its wealth lay in its fields and not, as in western Europe today, in its factories. The South did not have to face the problem which confronts western Europe today; it did not have to restore an elaborate industrial economy and to recreate markets—in a world in which the entire framework of trade had been shattered by war—in order to pay for food enough to survive. The South was impoverished indeed by the war but it had an agricultural economy and it was left with long years of peace in which to rebuild; it was left in a stable world with open markets and low custom barriers.

Third, the parallel breaks down because, after the War Between the States, both North and South were left the poorer for their struggle. Today the United States has emerged from the war with her productive capacity 50 percent greater than when it began. All her allies have paid the price of victory with severe loss of capital wealth.

But even were the parallel between the unaided recovery of the South after 1865 and that of Europe in the coming years perfect, it would scarcely serve as an argument against aiding Europe. If Lincoln's policies had been followed, if reconstruction had been constructive, who can doubt that the South would have been more prosperous, both in the past and today? Who can doubt that much bitterness and much hardship could have been avoided? And who can doubt that in the long run the North giving the aid would have benefited from it almost as much as the South receiving it?

I am not unaware of the great private charities extended to the South by the people of Northern States, and these acts of benevolence were a major influence in "binding the Nation's wounds," but the Government itself failed to seize the great opportunity which Lincoln pictured.

Lincoln died, and the opportunity was missed. Today an even greater opportunity lies open. The one country whose prosperity has increased during the war can, with a limited outlay, do much to give her allies a chance to restore their own and world prosperity, prosperity without which peace cannot be assured. Lincoln strove for the unity of his country and for domestic tranquillity. We know that he planned to apply in peace principles of conciliation and mutual cooperation to foster the welfare of his fellow countrymen. Today there is a chance to follow Lincoln's ideals in fostering the unity, the tranquillity, and the welfare of all the world.

Abraham Lincoln Would Be Engaged in the Same Work as the Fraternal Order of Eagles, if He Were Alive Today

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, this is Lincoln's birthday and if Abraham Lincoln were living today I believe he would want to be a member of the Eagles. I believe that because the Eagles are so actively engaged in truly humanitarian and social work for those of our citizens who really need it. In the Look magazine for February 17, 1948, is an excellent article on the Eagles who are this year celebrating 50 years of service to our country. In connection with the article are a series of pictures all of which I am proud to say, were taken in my home town, Milwaukee, Wis., showing, in a concrete way, just how the Eagles in Milwaukee operate. They show one group of community leaders working out traffic problems; another shows the boys' boxing tournament, an activity to combat juvenile delinquency. Another shows how housing for young offenders is being given attention by Governor Rennebohm and John Kenny, probation head, under auspices of the Eagles; another shows the interest of the Eagles in the juvenile court, with Judge Walter Schinz presiding; next is sponsorship of a baby clinic. Then there is one showing Ray Markey and Bob Hansen taking food to a needy

family—one of the Eagles' oldest traditions.

I am very happy to include the article in Look, as follows:

THE EAGLES, NATION'S LARGEST BENEFIT FRATERNAL ORDER, CELEBRATES 50 YEARS OF SERVICE TO COUNTRY AND FUN FOR MEMBERS

The largest benefit fraternal organization in the world is the Fraternal Order of Eagles. It has 1,391,437 dues-paying "brothers" in 1,548 "aeries" or lodge homes. A benefit fraternal society is one which makes cash payments to its members for illness, death, or disability. Money for this comes from the dues, which, in the case of the Eagles, averages $13 a year. Among Eagles, no club is better known than the one in Milwaukee, Wis. There 16,528 members pay $16 per year and, as shown on these pages, work or play in a fine clubhouse that cost more than $1,000,000 to build in 1926.

The FOE was organized February 6, 1898. Six men who were in the theatrical business in Seattle during the gold-rush days decided at a lunch-hour gabfest to form a club and call it the Order of Good Things. They changed the name to Eagles at their next meeting. Because theatrical people travel widely, it was not long before other clubs were organized in cities across the country. Early Eagle members thus were predominantly theater folk. Their pay was uncertain at best. They knew the value of the helping hand. The Eagles have a deserved reputation for taking the workingman's part, and the late John Considine, one of the founders, explained it this way: "From the start we had sick and funeral benefits and provisions for a club physician to tend our ill. Being in the theatrical business, I had seen how stage hands used to chip in and hire a doctor. We took the idea into the Eagles."

The idea stuck. The Eagles, by working that theme to the utmost for the next 50 years have grown and prospered. They point with pride to their record. The first workmen's compensation law was passed in Wisconsin in 1908. It was an Eagle project. The bill was drafted by Dan Hoan, for many years mayor of Milwaukee and an active Eagle. Eagles were back of the first mother's pension law enacted in Missouri in 1911. Montana's old-age pension law in 1923, trail blazer among such laws, climaxed an Eagle crusade. Wisconsin's 1947 Youth Service act and similar legislation in California, Oregon, and Minnesota in the field of juvenile delinquency had Eagle sponsorship.

DUES ARE LOW

The order pays members $7 per week for illness. Death of a member brings a prompt $100 to his family. The prosperous Milwaukee club pays a $200 death benefit. The payments are low. But so are the dues. Benefits total about $2,000,000 yearly to the whole membership. The funeral payment has its roots in the organization's start. Many early members were immigrants working alone in the United States for enough money to pay passage here for the rest of the family. The $100 assured a decent burial if the member died with no relatives near to see to his funeral.

THEY ARE WAGE EARNERS

The Eagles direct their appeal to the wage earner, to give him a place where he can belong and feel important. "Get a man a job, watch out for his family, help him improve his community where he lives, make him feel secure and you've got an Eagle for life," one Eagle bigwig said.

The Eagles try to do this on a big scale. National Eagle conventions establish policies and programs and urge each local club to plug away at community-improvement projects, prevention of juvenile delinquency, stimulation of employment, aid for veterans, promotion of child health and the teaching of American democratic traditions to check communism.

THEY BACK SOCIAL SECURITY

On the national policy level, the Eagles are busily advocating more and more social-security legislation. This is their platform for the future:

1. Extension of social security to include all employed workers not now protected by a retirement plan.
2. Expansion of social security to include protection of wage earners from loss of earnings through illness and reimbursements for major medical expenses.
3. Passage of State youth service acts to make juvenile delinquency a State responsibility.
4. Encouragement of city, State, and Federal planning for full employment.
5. Guaranteed annual wage and profit sharing by industry.

Palestine Freedom

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MADDEN. Mr. Speaker, the United Nations today must solve the problems and exercise the power which its member nations have bestowed upon it. Today a situation exists in Palestine that may lead to another World War. It is the duty of the United Nations to use its force to see that justice is meted out to the Jewish people who are today living in Palestine with the thought that they would receive the protection of the great nations who believe in justice.

Great Britain, America, and the United Nations are responsible for thousands of people immigrating and settling in this Jewish homeland. It is our inescapable obligation to protect these helpless pioneers who are now being subjected to torment and unjust attacks. The situation is doubly unthinkable because the helpless people of Palestine are prohibited from securing arms and weapons to defend themselves from unjust attacks.

The time for action on the part of the United Nations and our State Department is now.

I wish to incorporate in my remarks a resolution unanimously adopted by the Gary Jewish Welfare Federation, Inc.:

RESOLUTION UNANIMOUSLY ADOPTED AT MASS MEETING OF ALL JEWISH ORGANIZATIONS OF THE CITY OF GARY, IND.

To the HONORABLE HARRY S. TRUMAN, PRESIDENT OF THE UNITED STATES.

SIR: Whereas Americans of Jewish faith are greatly alarmed and distressed at the reports of rioting, violence, death, and destruction in Palestine; and

Whereas our State Department has placed an embargo on the sale of arms in Palestine, and the British have openly supplied arms to the Arabs and confiscated the arms and defense weapons of the Jews, thus leaving them helpless before the attack of the Nazi-inspired mercenary Arabs brought in from beyond Palestine's borders; and

Whereas the United Nations Committee has been delayed and hampered in its effort to create an international police force to keep order in Palestine by the diplomatic maneuvers of opponents of the partition plan; and

Whereas the results of these policies have caused death and destruction and threaten the success of the United Nations policy and the peace of the world: Now, therefore, be it

Resolved, That we in mass meeting here assembled respectfully urge you to immediately lift the embargo on the sale of arms and munitions to Palestine, so that Jews can acquire weapons to protect themselves against aggression and violence; that our representatives at the United Nations conference be urged to seek at once establishment of an international police force to keep order in Palestine and protect its inhabitants against Arab aggression; that our Government take such steps as are possible to implement effectively the partition plan for Palestine without delay, all in order to defend the helpless victims of the Holy Land, rebuff the attack of the Arab Federation on the United Nations Organization and to preserve the peace of the world.

Respectfully submitted,

GARY JEWISH WELFARE ASSOCIATION,
CYRUS WECHSLER, *President*.
HERBERT ROSENBLOOM,
Chairman of Mass Meeting Committee.

Cut Government Expenses and Reduce Taxes

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. VURSELL. Mr. Speaker, in 1947, the Republican leadership in the Congress with the aid of a number of good Democrats, passed a tax bill in this House and in the Senate which would have given the American taxpayers a reduction in taxes in the amount of $4,500,000,000.

President Truman opposed the passage of that bill with all the power at his command. Nevertheless, it passed the House and Senate by big majorities. He vetoed the bill, and inasmuch as it requires a two-thirds majority to pass a bill over the President's veto, he was able to deny the taxpayers any relief last year.

Mr. Speaker, we came back again this year in an effort to keep our pledge to the people to reduce taxes, presenting a bill to the House of Representatives that would give the people something over $6,000,000,000 in tax relief. Again, the President attempted with all the power at his command to defeat this bill. Notwithstanding his opposition, every Republican except one, voted for the bill and 63 Democrats joined with us Republicans passing the bill by over a 2-to-1 majority in the House. The bill has gone to the Senate. It is hoped it will soon be passed by the Senate so that the American taxpayer in the third year after the winning of the war may get some relief from the biggest tax load he has ever been compelled to carry.

Mr. Speaker, we can give the people a $6,000,000,000 tax reduction, balance the budget and have $3,000,000,000 left over to pay on the Nation's debt. If we can

cut the $40,000,000,000 request the President is asking for the running expenses of the Government for the next year by $3,000,000,000, we can pay $6,000,000,000 on the national debt. If the President would cooperate with the Republican House and Senate instead of opposing us, we could reduce his budget by $5,000,000,000, making it possible to give a $6,000,000,000 tax reduction and pay more billions on the national debt.

Mr. Speaker, 1 year ago when we attempted to cut the running expenses of the Government by $5,000,000,000 he and his entrenched administrative bureaucrats opposed every reduction we sought to make at that time.

He is opposed to any reduction in his $40,000,000,000 budget this time which is $2,000,000,000 more than it was last year. He insists on refusing the taxpayers of our country any tax relief by saying that it would be inflationary, and at the same time he insists on taking more than the $6,000,000,000 tax relief from our own people and giving it to European countries, or spending it for merchandise in this country to give to the people of western Europe. He takes the position that the American citizen and taxpayer shall not have tax relief and spend his own money for clothing, dental, and doctor bills or for payments for the repairs of his home, or for any other purpose because he says that would be inflationary.

On the other hand, he says if his administration takes the money away from them in taxes and spends it on other nations, or allows them to spend it here, that will not be inflationary.

No President in the history of this Nation has ever before sought to so penalize and call upon the American people to make such a sacrifice.

Mr. Speaker, the $40,000,000,000 budget he requests to pay the running expenses of the Government for the coming year amounts to an average of $1,000 per family. There are 40,000,000 families in the United States. When he asked for a $40,000,000,000 budget, he asks to sell the average family a year's service of the Federal Government at a cost of $1,000. His $40,000,000,000 budget request is more than the total 1946 income of all individuals in all States west of the Mississippi River except Texas.

It is more than the amount invested in all of our railroads, street railways, oil pipe lines, and telegraph and telephone systems representing the investment of 100 years. You will see this is a terrible drain on the economy of our country. Such a constant drain out of the financial bloodstream will soon wreck the country. They now in the Nation are paying more for taxes than they are for food. Their food bill is less than their total tax bill, when State, county, city, and all taxes are totaled.

Think of it. It is more than the value of all assets of all life-insurance companies in 1943, which was the chief nest egg of 70,000,000 people. The President ought to be asking for less billions instead of $2,000,000,000 more than he asked for last year.

Mr. Speaker, while the people are demanding a reduction in the cost of government, the President insists on keeping 500,000 more people on the Federal pay rolls than are needed at an expense of over $1,000,000,000 a year. This Congress has done and will continue to do its best in the face of the opposition of the President and this administration to reduce the cost of government and to pass a tax bill over his veto if necessary.

WHAT THE TAX BILL DOES

Mr. Speaker, this bill we passed raises the exemption on every taxpayer and his dependents from the present exemption of $500 to $600. The man with a wife and two children will get an extra $100 exemption on each of the four. While this will benefit every taxpayer, over 90 percent of the benefit in this exemption raise will go to those whose net incomes are $5,000 or less.

The raising of these exemptions alone will free 6,000,000 small taxpayers from paying any taxes whatsoever.

The taxpayer who, after taking these exemptions, has a net of $1,000 or less on which he must pay taxes will then get a 30-percent tax reduction.

First. He gets a large percentage in relief by the $100 extra exemption and then he gets a 30-percent relief in the amount upon which he must pay. This will give probably a general 40-percent relief to the little taxpayers who pay on any amount up to $1,000. There are 25,000,000 taxpayers in this group in the low-income brackets who will get this big reduction in addition to over 7,000,000 in the lowest-income group who will pay no taxes whatsoever. This high percentage rate of reduction for those in the low-income bracket is an attempt to give them much greater relief because we realize that they need greater relief to help meet the present rise in the cost of living.

Second. The taxpayer, after exemptions, who pays on a net of from $1,000 to $1,396 will receive in addition to his added $100 exemption a reduction of 20 percent. There are 7,000,000 taxpayers in this group.

Third. Taxpayers who, after exemptions, pay in excess of $4,000 will receive a reduction of 20 percent on the first $4,000, and above that in earnings, only 10 percent.

This bill also gives great relief to those over 65 years of age, as follows: Those 65 years of age will get an added exemption of $600, making a total exemption of $1,200.

This should wipe out the tax on many of the school teachers of the Nation who are now paying either taxes on their salaries, or taxes on their annuities.

Mr. Speaker, it practically wipes out all tax against the blind of the Nation by raising exemptions higher for them than any others.

It provides for married people to divide their incomes and will give relief to a great many married couples.

Mr. Speaker, yet, when the figures prove that those in the lower brackets get 72 percent of the reduction, yet the President when he gets ready to veto this bill will most likely make the same charge that he made against a similar bill a year ago, that this bill benefits the rich and penalizes the low-income group. Of course, there was no truth in his statement a year ago, and will be none if he repeats it as to this bill.

Those in the highest brackets are allowed a 10-percent reduction because we Members of the Congress and everyone who has thought tax legislation through realizes that you cannot take 50 to 75 percent in taxes away from those who must replace worn-out machinery and keep their machinery repaired and in good condition year after year, without finally throwing millions of laboring men out of employment. They must have this encouragement now to renew equipment and expand plants if we are to keep 60,000,000 people employed.

Mr. Speaker, this is not a political tax bill like the $40-a-vote bill offered by the President, which is so worthless that neither the Democrat Members of the House nor Senate have attempted to substitute it for this bill. This is an American equity tax bill seeking to push the economy of the United States Government forward for continued employment and greater production. This is not an inflationary tax bill. It is a tax bill to combat inflation. Greater production is the only real cure for inflation. This bill will greatly increase production. And, as we greatly increase production, more wealth is made against which these lower tax rates will operate, and by the expansion and creation of greater production and greater wealth the passage of this tax bill will not likely cut $1,000,000,000 out of the revenue of the Government, while at the same time it will give $6,000,000,000 relief from these high wartime taxes to the taxpayers who are carrying this terrific load.

Mr. Speaker, after the last World War when the Republicans came into power they passed a tax-reduction bill each year for three successive years. Every time they reduced the tax levies business expanded so much that they collected more money, with the result that they balanced the budget and reduced the national debt by a billion dollars a year for 10 successive years. Sound policies written into this tax bill will not only give the people the relief they seek, but will continue employment at a high peak; the production of wealth at a high peak, will expand business and probably bring in more extra revenue at these lower rates than the $6,000,000,000 in relief we insist the American people shall have in 1948.

French Monetary Plan

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert a letter from Hon. A. N. Overby, United States Executive Director of the

International Monetary Fund, and certain releases and statements in connection with the change in the par value of the French franc:

INTERNATIONAL MONETARY FUND,
Washington, D. C., January 28, 1948.

Hon. BRENT SPENCE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I am glad I had an opportunity to discuss with you on the phone this morning the recent changes in the French monetary system, regarding which there has been so much discussion in the public press and not a little confusion.

As I indicated to you, the International Monetary Fund heartily agreed with the French Government that a change in the par value of the French franc was necessary, and indicated that it was prepared to concur in a devaluation of the franc to a realistic rate. I think I can fairly say that officials of the International Monetary Fund, including myself, have for several months indicated to the French Government officials that a change in the value of the franc was necessary and desirable. We have all indicated for several months that this action should be preceded and accompanied by budgetary and fiscal measures directed at internal monetary stabilization, without which a devaluation of the franc would prove ineffective, if it did not actually contribute to further inflationary forces. In all of our discussions with the French authorities over the past several months we have urged them to take measures to balance their budget, to improve and strengthen their tax-collection measures, to control inflationary expansion of credit, to reduce wherever possible their capital-investment program, and to take all other measures necessary to bring under control and reduce inflationary factors at work in France. We have noted with satisfaction that the French authorities, despite the fact that such measures are often unpopular, at least temporarily, have in recent months taken budgetary and fiscal measures directed at internal monetary stabilization.

You will note that the attached press release by the International Monetary Fund emphasizes the foregoing considerations, and I should like to reemphasize that we were all prepared to concur in a devaluation of the franc to a realistic rate. This was not the point at issue.

I think I might elaborate somewhat on the description of the French monetary plan which is contained in the attached press release. The French proposed to reduce the official par value of the franc by 44.444 percent. This would result in a change of the rate from approximately 119 francs per United States dollar to approximately 214 francs per United States dollar, from 480 francs per pound sterling to 864 francs per pound sterling, etc. At the same time, the French proposed to introduce a so-called free market in which the United States dollar, the Portuguese escudo, and ultimately certain other currencies would be bought and sold in a market inside France at fluctuating rates which would differ considerably from the new official par value.

This new free market would not be a free market in the orthodox, classical sense, because it would be subject to the control of the French authorities in the granting of import licenses, in authorizing capital transfers, etc.

French exporters to the dollar area, for example, would be required to sell one-half of their export proceeds to the French monetary authorities at the new official par value of 214 francs to the dollar. They would be permitted to sell the other one-half of their export proceeds in the free market. Assuming this free market would be established in the neighborhood of recent quotations in the black market of, say, 340 francs to the dollar, the French exporter to the dollar area, selling one-half of his export proceeds at the official par value of 214 and one-half at the free rate of 340, would average 277 francs per dollar of export proceeds.

The French authorities proposed that so-called basic commodities, such as wheat, coal, fertilizer, and petroleum products, would enter France at the official par value of 214 francs to the dollar. These commodities are the basic commodities which are being supplied under the interim-aid program and would presumably continue to be supplied under the European recovery program. Importers of so-called nonbasic commodities would be required to purchase their dollar exchange in the free market at a rate of, say, 340 francs to the dollar.

The free market would also be used for various invisible transactions which would be authorized to take place in this market, including exchange transactions of tourists, capital transfers, and other noncommercial remittances. It was the hope of the French authorities that the free rate would encourage a substantial repatriation to France of French capital held abroad.

As I have said, the fund was more than prepared to agree to a change in the par value of the franc to a realistic rate, and the fund did its utmost, in view of the special circumstances prevailing in France, to go along with the French proposal. Despite certain misgivings regarding a system involving fluctuating rates, the fund was prepared to accept the fluctuating free market for invisible transactions and even for the import of nonbasic commodities from the dollar area.

The one point on which the fund was unable to approve the French proposal was the inclusion in a market with fluctuating rates of any part of the proceeds of exports, as in its judgment this entailed the risk of serious adverse effects on other members of the fund without being necessary to achieve the trade objectives sought by the French authorities. As stated in the press release, "The fund felt that there would be scope for competitive depreciation in the application by one country of a fluctuating rate on exports to one area while other rates remained stable and other countries maintained the parities agreed with the fund. Such a system, operating in an important trading country, would encourage trade distortions and might cast unwarranted doubt on the real strength of many currencies through the apparent discount applied to them in the French system. The fund feared that the widespread adoption of such a system would result in exchange uncertainty and instability and produce a disorderly exchange situation from which all members of the fund would suffer."

Granting permission to France to sell the proceeds of exports to certain areas (e. g., the dollar area) at a fluctuating premium with respect to the cross rates based on fund parities, which other members would be required to observe, would make it possible for the French to engage in competitive depreciation at the expense of other members of the fund and without control by the fund. One of the basic purposes of the fund is to prevent such competitive depreciation.

It was felt that if export proceeds were sold in this manner serious trade distortions might result, either from the price effects of the fluctuating exchange differentials or from the actual diversion of trade from its customary channels through commodity arbitrage. For example, French importers might purchase goods in the sterling area or in other currency areas which could then be reshipped to the dollar area and sold at a substantial profit, thus in effect, depriving the sterling and other areas of the dollar proceeds of the sales that they might otherwise normally make in the dollar area. Although the French indicated that they would use their best efforts to prevent this, question existed in the minds of the members of the fund as to whether they could in fact do so. Moreover, it was thought that even if the French authorities could control such commodity arbitrage, similar effects might follow directly from price distortions arising from the differential exchange rates.

The fund did not see how it could deny to other countries the right to institute fluctuating rate systems if France were allowed to do so. If the fund, under the French proposal, required other members to live up to their obligations under the fund agreement, we would be permitting a particular country to gain advantages from instituting a fluctuating rate system. If many members institute fluctuating rate systems, however, a wholly new situation is created in which the stability and order in exchange rates which are one of the objectives of the fund become difficult, if not impossible.

One of the results of the French proposal, if adopted on a widespread system, would be to promote bilateral deals and reduce world trade more and more to a barter basis, which is contrary to the objectives of the fund and of United States policy in the foreign economic field.

Although the introduction of the French system raises many difficulties and may have serious adverse consequences, we are all hopeful that the French Government and other governments, particularly the neighboring European countries, will do everything within their power to keep to a minimum the adverse consequences which may flow from the French action. In this connection I think you may be interested in the attached Anglo-French communiqué and in the French communiqué on this matter.

The fund, for its part, while regretting the French action, will continue to work with France in seeking a modification of its newly introduced exchange practices in order to meet French needs within the framework of the international monetary arrangements established by the fund agreement.

As our statement emphasizes, we have approached this problem in anything but a rigid and doctrinaire manner, and as you will see from my description of the extent to which we were willing to go, we certainly are not holding to any pet ideas or rigid concepts. The fund was established essentially to set up rules of fair practice in the international monetary field. We have no desire to be managers. Our efforts, on the contrary, are directed toward the role of a benevolent umpire, who is anxious to have the members of the fund adhere as closely as possible to the rules of fair play which it was sought to establish in the fund concept. The competitive exchange depreciation, exchange instability, and Schachtian economic warfare practices of the twenties and thirties were among the evils which it was hoped the fund would be effective in removing. We are still hopeful that, despite the present difficulties of the world, we can promote standards of fair exchange practices and gradually remove, rather than increase, exchange restrictions and competitive or discriminatory exchange arrangements. I know that the members of the fund board and the staff of the fund are devoting their full energies and best judgment to the success of this experiment in international cooperation, and that they will do their utmost to carry on despite temporary set-backs.

Please forgive me for having written at such length, but I wanted you to have an understanding of our point of view and of our objectives. If you have any questions, I shall do my best to answer them for you.

With all good wishes and the hope that I may have the pleasure of seeing you soon again, I am,

Sincerely yours,

A. N. OVERBY,
United States Executive Director.

STATEMENT CONCERNING EXCHANGE ACTIONS TAKEN BY FRANCE

(Press Release No. 35, January 25, 1948)

Camille Gutt, chairman of the executive board of the International Monetary Fund, today made the following statement:

"The French Government has engaged in full and frank consultations with the International Monetary Fund regarding a plan for exchange adjustment, which would require the approval of the fund. The essential features of the plan were the following:

"The par value of the French franc would be reduced by 44.444 percent, which would result in a change in the rate from approximately 119 francs per United States dollar to approximately 214.

"At the same time, a discriminatory multiple currency practice would be introduced whereby United States dollars and certain other currencies which can be readily sold for dollars would be bought and sold in a market inside France at fluctuating rates which would differ considerably from the new par value.

"French exporters would be permitted to sell in this market one-half of their export proceeds in the designated currencies, the other half being sold to the French monetary authorities at the official par value. French importers would be permitted to buy in this market the designated currencies needed to pay for nonbasic commodities. In addition various invisible transactions would be authorized to take place in this market, including exchange transactions of tourists, capital transfers, and other noncommercial remittances.

"The fund agreed with the French Government that a change in the par value of the franc was necessary, and indicated that it was prepared to concur in a devaluation of the franc to a realistic rate which would be applicable to transactions in the currencies of all members of the fund. In this connection, the fund has noted with satisfaction the budgetary and fiscal measures directed at internal-monetary stabilization which France has taken in recent months.

"The fund gave careful consideration to the proposal to establish a market in convertible currencies along the lines indicated above. The fund had no desire to be rigid or doctrinaire in its approach to this matter, particularly in view of the abnormalities of the present situation. Despite serious reservations regarding a system involving fluctuating rates, the fund explored various alternatives designed to meet insofar as possible the objectives of the French authorities. The fund was not, however, able to agree to the inclusion in a market with fluctuating rates of any part of the proceeds of exports, as in its judgment this entailed the risk of serious adverse effects on other members of the fund, without being necessary to achieve the trade objectives sought by the French authorities.

"The fund felt that there would be scope for competitive depreciation in the application by one country of a fluctuating rate on exports to one area while other rates remain stable and other countries maintain the parities agreed with the fund. Such a system, operating in an important trading country, would encourage trade distortions and might cast unwarranted doubt on the real strength of many currencies through the apparent discount applied to them in the French system.

"The fund feared that the widespread adoption of such a system would result in exchange uncertainty and instability and produce a disorderly exchange situation from which all members of the fund would suffer. While recognizing the difficulties of the French position, the fund felt that the solution must be found through cooperative efforts to place currencies on a sound and stable basis.

"The French Government found that it could not accept the modification of its proposal suggested by the fund and has now informed the fund that it has decided to go forward with its proposal notwithstanding the objections of the fund. The fund regrets this action by a country which collaborated so effectively in the fund's establishment and whose cooperation has been a valuable asset.

"The fund will continue to work with France in seeking a modification of these exchange practices in order to meet French needs within the framework of the international monetary arrangements established by the fund agreement."

TEXT OF THE COMMUNIQUÉ ISSUED JOINTLY BY THE FRENCH AND BRITISH GOVERNMENTS ON DEVALUATION OF THE FRANC

(Anglo-French statement of January 25, 1948)

Mr. Rene Mayer, Minister of Finance, exchanged views in London on the 16th and 17th of January with the Chancelor of the Exchequer about the monetary project of the French Government.

These conversations were continued in the course of the visit which Sir Stafford Cripps made to Paris on the 23d and 24th of January. Although the points of view of the two governments on the method to be adopted in this matter did not coincide, the conversations which took place both in London and Paris have made clear the frank and intimate character of relations existing between the two countries.

The French Government has presented their proposals to the International Monetary Fund at Washington.

They have explained that the solution chosen by them is the only one capable of meeting the exigencies of the economic situation. It does not constitute in its intention the permanent monetary system of France, but a step toward the stabilization of the currency on the basis of a single exchange rate, which is the object of the financial and economic policy of the Government.

BRITAIN SIDES WITH FUND

On the British side, objections of the same character as those put forward by the Chancelor of the Exchequer have been presented to the fund. The International Monetary Fund has today published a statement on this subject, of which the two governments have taken note.

The United Kingdom Government associated itself with the statement by the International Monetary Fund.

Whatever the differences between the French and British points of view in this matter, the two Governments wish to continue their close cooperation in order to insure that any measure which may be considered necessary in these new circumstances will have only a minimum repercussion on the commercial relation between the sterling and the franc areas.

The two Governments have the same objects in view. In this spirit of mutual comprehension, close cooperation between the technical services of the two countries has been decided upon and will begin at once.

TEXT OF THE FRENCH GOVERNMENT'S COMMUNIQUÉ OF JANUARY 25, 1948, ON THE FRANC DEVALUATION

The Government, at the time it took office, assigned itself the task of stabilizing the French economy. The result could be achieved only by putting into operation an over-all program consisting, in the domestic field, of combating inflation, and, in the foreign field, of provisions tending to adapt the value of the franc to international economic realities.

In having its fiscal and budgetary bills adopted by Parliament, the Government demonstrated its will to fulfill the first part of this program. It now remained to make the necessary arrangements in the foreign field.

In this regard, an adjustment of the exchange rates was manifestly necessary, to take account of the rise in French prices. The question was one of deciding whether it was better to proceed to a pure and simple devaluation of our currency, or, on the other hand, to have recourse to a more supple formula, better adapted to the circumstances.

TRANSITION PERIOD CALLED FOR

In the present state of French economy, it appeared impossible to the Government to define a new exchange rate satisfactory for all transactions abroad, commercial, or noncommercial.

In seeking prematurely to give such a definition of the franc it would have run the following risk: Either the devaluation would have been insufficient, and would not have achieved its purpose, or it would have been too great and would have inflicted an excessive rise in prices and impoverishment of the French economy.

It, therefore, is necessary to pass through a transition period during which at least part of the offers and bids of convertible assets can balance each other in a market where rates are established freely.

The Government's final aim, of course, is to return as quickly as possible to stability—but to a real and lasting stability, not to an artificially and purely apparent stability.

It knows that the policy it is following is the best means—considering the difficulties our economy is going through at the moment—of attaining this aim and, in consequence of aiding in the realization of the objectives adopted by the International Monetary Fund.

REGRETS FUND'S DISAPPROVAL

For arriving at these ends, the Government refers to the provisions that were inserted in the Bretton Woods agreements for the transitional postwar period on behalf of member states whose territories were occupied.

The Government knows, furthermore, that it is not compromising or hindering through its action the efforts that other countries may make in the same direction while employing different means suitable to their own circumstances.

It regrets that the International Monetary Fund, although approving certain important parts of the plan, did not consider itself able to accept it in entirety.

The Government stands ready, through the adoption of technical provisions and coordinated procedures of control, to take into consideration the concern that its measures might cause to countries with unconvertible currency, and more especially to our neighbors in Europe.

The Government is convinced that in taking the stand it is adopting today, and in thus preparing the stabilization of French economy, it is making the best possible contribution to the reconstruction of western Europe, in conformity with the report of the 16 nations.

NEW FRANC RATE DECREED

Such were the circumstances in which the following decisions have been decreed:

1. The rates at which the exchange stabilization fund buys or sells moneys against francs are increased by a bonus, starting January 26, 1948. The bonus applies to all transactions and is uniform for all moneys. Its amount is established at 80 percent of the rates practiced hitherto.

The new franc rates thereby come out to 214,392 for one dollar and 864 francs for one pound sterling.

The parities of the homeland franc (of continental France) with the other currencies of the franc zone are not modified except as regards the franc of the French territories of the Pacific as well as the French rupee. Their rate in relation to the dollar and the pound sterling remains unchanged.

2. There will be created immediately, besides the official market, a free market on which the United States dollar and the Portuguese escudo can be quoted.

FREE MARKET DESCRIBED

The features of the free market will be as follows:

(A) The market will be supplied:

By half of the proceeds of the exports, the other half being ceded to the Exchange Stabilization Fund on the basis of the latter's rates:

By all moneys having a different origin, notably moneys acquired from noncommercial payments, moneys corersponding to movements of capital into France from abroad, moneys paid by foreign tourists.

(B) The resources of the market will be employable:

To pay for imports of commodities, to the exclusion of some categories deemed essential, to pay for which the Exchange Stabilization Fund will continue to deliver currency at the rates it practices:

For all other payments or movements of capital from France abroad to the exclusion of certain payments by the State.

(C) The market thus defined will be a free market, in the sense that the currencies dealt with thereon will be established freely by the play of offer and demand.

The monetary authorities shall see to it only, first, that all currency that is to be turned over to them is indeed turned over; second, that no purchases be made except those conforming to the regulations authorized by the Exchange Office under the usual conditions—that is to say, as regards imports, only upon delivery of (French Government import) licenses.

The Journal Officiel will publish a notice on January 26 by the Exchange Office detailing the provisions of application of the new system.

Resolutions by Student Body of William Jewell College on the Marshall Plan

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an open letter from the student body of William Jewell College addressed to the Members of the Congress. Also a letter similarly addressed to the student bodies of all American colleges and universities.

William Jewell College is one of the oldest colleges west of the Mississippi River and numbers among its alumni and former students something like one-fourth of the Missouri delegation in the House of Representatives in the Eightieth Congress.

The accompanying letters represent the overwhelming sentiment of the student body of the college as expressed in a vote taken after exhaustive discussion of the subject in the open forum of an all-school convocation held January 27, 1948. The letter to the Congress is as follows:

AN OPEN LETTER TO ALL SENATORS AND REPRESENTATIVES IN CONGRESS

FEBRUARY 5, 1948.

GENTLEMEN: We want to take this opportunity and this means to inform you of the recent action of the student body of William Jewell College concerning the European recovery program, known as the Marshall plan.

At a convocation of the entire student body of 826, half of whom are veterans, held January 27, 1948, the salient features of this recovery program were presented in full. After this discussion the student body voted 777 to 49 to authorize the drafting and the sending of this letter to all the Members of Congress in order to express approval of a long-range program for European recovery and to notify all Members of Congress of the following conclusions:

First. Economic recovery of western Europe is contingent upon adequate aid given immediately by the United States.

Second. World peace and the economic stability of all other areas of the world are affected by the economic status of Europe.

Therefore, the student body of William Jewell College respectfully urges that the Congress take the following action:

1. Create an agency headed by one administrator responsible to the President of the United States to direct the European recovery program. We urge that Congress thus integrate a businesslike administration of the European recovery program with our foreign policy.

2. Make available to the agency adequate funds for the promotion of this program. If we are penny-wise and pound-foolish, the program will in effect become piecemeal aid and relief instead of recovery.

3. Implement the European recovery program by April 1, 1948, so that the program will be in action by that date. Delay would greatly diminish the possibility of success and thus would be throwing money down the drain.

The student body feels that the condition of the world demands that America face the situation with statesmanship. We are happy to believe that this also is the feeling of the Members of Congress.

Respectfully yours,
THE STUDENT BODY OF WILLIAM JEWELL COLLEGE,
By WILLIAM H. OVERTON, *President.*
THE MARSHALL PLAN COMMITTEE OF THE STUDENT BODY,
By REX BROWN and REX SCHAEFFER,
Cochairmen.

Mr. Speaker, I also include as a part of my remarks the letter authorized by the student body in convocation assembled and addressed to similar college bodies in the United States as follows:

AN OPEN LETTER TO THE STUDENT BODIES OF ALL AMERICAN COLLEGES AND UNIVERSITIES

FEBRUARY 5, 1948.

To the PRESIDENT OF THE STUDENT BODY:

During the past few weeks the members of the student body of William Jewell College have been participating in open discussions relating to the salient features of the European recovery program, popularly known as the Marshall plan. These discussions culminated in an all-school convocation, January 27, 1948, devoted exclusively to the Marshall plan.

By a vote of 777 to 49, the student body authorized the drafting and the sending of a letter to each of the 531 Members of Congress. This letter urged that Congress implement the European recovery program with adequate funds and create an agency headed by one administrator responsible to the President of the United States to administer the program.

The student body also authorized its officers to send a letter to the presidents of the student bodies of the 900 colleges and universities of America, with the suggestion that something be done on each of the campuses about the European recovery program.

The youth of America have not as yet spoken about the Marshall plan. We are only suggesting that through your leadership the students of your campus have the opportunity to express themselves.

If we are penny-wise and pound-foolish, the European recovery program will in effect become piecemeal aid and relief instead of recovery. May we also suggest that it is expedient that you act at once.

The student body of William Jewell College feels that the condition of the world demands that the students of America as the leaders of tomorrow make known today their opinions on matters of vital interest.

Respectfully yours,
THE STUDENT BODY OF WILLIAM JEWELL COLLEGE,
By WILLIAM H. OVERTON, *President.*
THE MARSHALL PLAN COMMITTEE OF THE STUDENT BODY,
By REX BROWN and REX SCHAEFFER,
Cochairmen.

Mahatma Gandhi

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1948

Mr. CELLER. Mr. Speaker, the beloved Gandhi belongs to all of us now. True, he is India's son, but the truth and the beauty of his life lifted him out of the limitations of time and place.

The meaning of Gandhi's life cannot be weighed and measured like a pound of tea, but there is not one who will deny that the impact of this frail, slight body upon the course of history has made itself felt universally.

His grip on the pulse of his country did not require what so-called strong men in other lands demanded—there was no secret police behind him, no controlled army, no spy system. His enemies knew his strength, but they made the same mistake that men of ill will always make. The body of man is mortal, but not the spirit. A bullet cannot kill a gospel.

To the United States the magic name of Gandhi had a very special significance. It has become more than a bit tiresome to hear the word "materialist" thrown at us and the American way of life. We have had a good deal of difficulty in clarifying that concept to many foreign dignitaries. Because democracy is based on the dignity of the individual, the practical application of the democratic form has resulted in the widest distribution of goods and services any country has ever known. Withal, we have been conscious of our defects, knowing our own incompletions. We hold on to the American dream, working toward wider and ever wider application. The intel-

lectual sneers directed at our stream of automobiles, cars, and refrigerators, and so forth, have reduced some of us to apologize for our so-called materialism. I may be appearing at this moment to be departing from the figure of Gandhi. But I am not, actually. To the people of the United States Gandhi was the embodiment, the clarification, the explanation of the stream of cars and refrigerators. Gandhi may have wanted to arrive at the dignity of the individual, freedom, peace, justice, and plenty in another way, by another route. But this quiet man's strength, his vision, his spiritual wealth, his practiced belief in human goodness symbolized and crystallized for the people of the United States the hopes, the never-ending struggle for the betterment of man. When Gandhi spoke the people of this land listened, and millions said to themselves, "Yes, that is right, that is good, that is true."

It has been given to few to wield so enormous an influence in the history of our time. He had none of the outward traditional trappings of leadership. He was armed, instead, with the clearest of vision and with tenacious faith. With all the strength of his soul he sought to efface oppression. Bloodshed and violence were not his answers. A good end could not be reached by evil means, he said. Hatred breeds hatred and blood draws blood.

To a people demoralized by centuries of misrule, he brought the healing graces.

It has been said that this is the age of violence and that ironic though it was for the man of nonviolence to meet his end by the hand of an assassin, it followed the pattern of our day. But that is not so. Every age has been an age of disturbance and destructiveness. But not entirely, no, never entirely, because now and then men, pure of heart, and clean, selfless and endowed with grace, have arisen to take with them on their journey through life followers in the path of peace. These are the men who when they shed their mortal lives leave behind them a world a little bit closer to the good and the true. Men like Moses, Buddha, St. Francis of Assisi, Lincoln, with this royalty Gandhi is forever joined.

Department of the Air Force

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include therein a statement by the Secretary of the Air Force, Mr. W. Stuart Symington, published in the Reserve Officer in connection with National Security Week:

DEPARTMENT OF THE AIR FORCE

The Department of the Air Force is deeply gratified that the Reserve Officers Association is once more sponsoring the observance of National Security Week. The loyal support of Reserve officers in time of peace as in time of war has for many years given needed strength to our Military Establishment. In arousing public consciousness of the necessity for providing adequate national security, the Reserve Officers Association performs another service of inestimable value.

Today more than ever before it is essential that our citizens understand the problems of national defense. The activities of the Air Force, the Army, and the Navy are coordinated in the National Military Establishment, but that establishment must be supported by the coordinated activity of all our citizens. We have an increasing responsibility to defend and preserve our democratic liberties, and there is no more appropriate period in which we should be reminded of that responsibility than in the period that includes the birthdays of Lincoln and Washington.

I wish personally and on behalf of the Department of Air Force to thank the Reserve Officers Association for sponsoring an observance that can contribute so much to the national welfare.

W. STUART SYMINGTON,
Secretary of the Air Force.

Foreign Aid, the Budget, and Taxes

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. BRADLEY. Mr. Speaker, the following findings and recommendations regarding foreign aid, the budget, and taxes, were adopted by the board of directors of the Long Beach Chamber of Commerce, of Long Beach, Calif., on January 26, 1948.

I invite the attention of the Members of the House to these findings and recommendations as they represent, in a general way, the opinion of a cross-section of business activities in the area of Long Beach.

FINDINGS AND RECOMMENDATIONS REGARDING FOREIGN AID, THE BUDGET, AND TAXES

The need of some relief to Europe in its present emergency is recognized, not only from a humanitarian and economic viewpoint, but largely for purposes of our national safety to combat Soviet Russia's avowed plans for subjugation of western Europe and the entire world.

However, the continued economic well-being of our country demands that any aid furnished be subject to the following conditions:

1. Preservation of all our natural resources inasmuch as they are essential to our continued ability to defend our Nation against future attack.

2. Other countries of the Western Hemisphere have just as great a stake in western Europe's economic recovery as has the United States; therefore instead of the United States buying relief items from other countries of the Western Hemisphere, those countries should be induced to export the needed items direct through establishment of necessary credit arrangements of their own with European nations. This would make possible a reduction in the amount of relief appropriations by about $3,333,333,333, and permit a corresponding reduction in taxes.

3. The granting of relief to the nations of western Europe should be conditioned upon the recipient country's agreement to encourage and foster the growth of free enterprise.

4. Any relief program adopted should be limited to not more than 15 months' duration and any subsequent aid should be contingent upon the result of a survey showing the then actual need, plus proof that the recipient nation has fostered and will continue to foster free enterprise.

5. The relief program should be administered in a businesslike manner by a bipartisan commission of private citizens and Federal officials as opposed to administration by one man or one department of our Government. Should relief for countries other than those of western Europe be decided upon it could logically be most economically administered by the same commission.

6. The total amount of aid furnished should be held to the absolute minimum in order that our own national solvency may not be endangered. A reduction in the amount of the national debt is of paramount importance; therefore, we favor adoption of a systematic plan by Congress to reduce such debt each year by a minimum retirement of a substantial agreed upon sum of $2,500,000,000 or more.

7. For every dollar of foreign relief voted by Congress, a dollar to be deducted from our domestic Federal expenditures. This result could be accomplished by pro rata reduction in the budgets of all Government departments excepting those essential to military defense of our Nation.

8. It is recommended that Congress repeal existing agricultural price-support legislation or at least drastically amend its application because the buying of commodities in large quantities requires vast expenditures and unduly raises commodity prices through purchases by Government agencies in competition with private enterprise. This contributes to the inflationary spiral and increases our taxes unduly.

Adopted by the board of directors, Long Beach Chamber of Commerce, January 26, 1948.

D. W. CAMPBELL,
General Manager.

Oleo Rears Its Head Again

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks and include excerpts of an editorial, I submit the following editorial from Pacific Rural Press, January 31, 1948:

OLEO REARS ITS HEAD AGAIN

You have noted the drumbeating to take the tax off margarine—stop inflation—give consumers relief in food costs.

Some of you may have noticed the stockyards papers suggesting that dairymen quit fighting oleo and start manufacturing it.

Others of you have heard farmers defend oleo because it is cheap—an excellent way for farmers to tear down their own house because chemists and exploiters can present synthetic substitutes for most farm products.

The oleo propaganda will win no distinguished service medals for intellectual honesty. For instance, the tax issue. Oleo pays very little tax—a Federal tax of one-fourth cent per pound—so small that if it were removed it would probably never give the consumer a penny's relief.

What the oleo propagandeers want is the privilege of coloring their substitute to look

like butter and not have to pay the 10-cent penalty for such act. They can sell it natural color without paying any such penalty, and do, and can artificially color it any hue except butter color without paying this penalty. But they want to make their product look like butter. That is one place where their pleas fail to adorn truth.

The plea to give the consumer price relief is also something less than a contribution to fundamental ethics. Probably the retail price of oleo, compared with the cost of the materials in it, is one of the lush things of this inflationary age. The price of oleo does not seem to be based on the cost of materials so much as on what the traffic will bear and still be cheaper than butter.

Russian Reds' Seizure of Power

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ansel E. Talbert, in the New York Herald Tribune of January 25, 1948:

RUSSIAN REDS' SEIZURE OF POWER IN CONSTITUENT ASSEMBLY RECALLED—COMMUNISTS DISPERSED DEMOCRATICALLY ELECTED DELEGATES, OF WHOM THEY WERE MINORITY, AT BAYONET POINT IN JANUARY 1918

(By Ansel E. Talbert)

Thirty years ago this month the century-old dream of Russian liberals who had been in the forefront of the fight against czarism was realized—and soon shattered. This was the convocation of the first democratically elected constituent assembly in Russian history.

Events surrounding the incident explain to a large degree the violent present-day Soviet distrust of elections in which more than one slate of candidates is allowed. For it was this event, almost forgotten today in the ebb and flow of more recent Russian history, which put the Communists in power in Russia. It was accomplished not by the democratic vote which was the aim of the assembly but by force. At bayonet point the Communists took over the assembly, overruling the voters who had a short time before rejected the Communist candidates by a substantial majority and chosen instead men from left wing but anti-Communist parties. Thenceforth the Communists controlled Russia.

On January 18, 1918, the new constituent assembly, composed of delegates elected by free and open elections throughout the nation, held its opening session in Moscow. Both its name and purpose were borrowed from the constituent assembly of the French revolution, which wrote a constitution for France and the declaration of the rights of man and then forced Louis XVI to give them his reluctant approval.

GOAL FOR A CENTURY

Such an assembly had long been sought by Russian liberals, beginning with the Decembrist rebel officers of the Imperial Guard and Navy, who massed their forces on December 14, 1825, in the Senate Square at St. Petersburg in an unsuccessful attempt to gain a constitution. This struggle by the liberals, punctuated by executions and exile to Siberia, continued throughout the remainder of the nineteenth century and into the next.

Elections for the Constituent Assembly finally were held on November 25, 1917, nearly 3 weeks after the Communist Party organization staged the revolt in Petrograd and Moscow which overthrew the provisional government of Alexander Kerensky.

One of the most constantly reiterated accusations of Communist leaders against the provisional government had been that the government was attempting to delay and sabotage the Constituent Assembly. Actually, in its first appeal to the Russian people in March 1917, 3 days after the abdication of Nicholas II, the provisional government stated that among its basic policies would be:

"To proceed forthwith to the preparation and convocation of a constituent assembly based on universal suffrage."

As late as October 25, 1917, after the election date had been set, Leon Trotsky introduced a resolution at the conference of northern councils of workmen's and soldiers' delegates warning the Russian people that the provisional government intended to prevent the assembly's convocation.

FAIR ELECTION PROMISED

Three days after the Communists seized power on November 7, 1917, Nicolai Lenin, as the new Premier and President of the Council of People's Commissars, promised specifically in a public declaration:

"The elections shall be held on November 25, the day set aside for this purpose. All electoral committees, all local organizations, the councils of workmen's, soldiers', and peasants' delegates, and the soldiers' organization at the front are to bend every effort toward safeguarding the freedom of the voters and fair play at the elections."

Other Russian political groups immediately issued manifestoes asserting that the Communist revolt had taken place because Lenin and Trotsky were aware that they could not win at the polls. In answer to this, the issue of Pravda appearing on November 11, 1917, stated editorially:

"It is clear to everybody that only an outright liar can, after this, say that the Bolshevik Government is attempting to kill the Constituent Assembly and does not want to call the election on the appointed date because it is afraid of it."

The elections were held on the appointed date, but in spite of the prestige and other obvious advantages of controlling the governmental machinery the Communist Party suffered a severe defeat. Only about one-third of the delegates elected were Communists or their supporters.

A majority of delegates were members of the Social Revolutionist Party, another left wing group which under czarism had fought constantly to end autocracy and also to distribute land among the peasants. While the Communists drew most of their strength from the industrial workers of the cities, the Social Revolutionists were supported strongly by the Russian peasants.

LENIN'S DESCRIPTION

In a Communist pamphlet issued during the summer of 1917 Lenin described the Social Revolutionist Party as wanting a bourgeoise parliamentary republic with reforms for the workingmen and peasants as contrasted with the Communist air of a republic of workmen's soldiers', and peasants' delegates opposed to all imperialist wars and to all bourgeoise governments which wage them.

Smaller blocs of delegates to the assembly were elected by the Social Democrats, the group favoring evolutionary socialism, and by the Constitutional Democrats or Cadets, a liberal monarchist group advocating parliamentary government on the British model. The right wing reactionary parties had almost no representation.

When the Constituent Assembly met in Moscow after 2 months of Communist dictatorship the delegates were not long in making it plan that they intended to carry out their mandate from the Russian people. The assembly's first act was to elect as its president, Victor M. Chernov, an old enemy of czarism and one of the founders of the Social Revolutionist Party. It also adopted a resolution at the opening session stating:

"In the name of the peoples who compose the Russian state, the All-Russian Constituent Assembly proclaims the Russian state to be the Russian Democratic Federated Republic" * * *

Communist disapproval of these actions was not long in forthcoming, either. When Chernov, as president, began his acceptance speech with the assertion that peasants must receive the land of large estates at once, Boris Shelesniak, a former sailor who was one of the Communist-elected delegates, leaped to the rostrum and shouted: "Enough!"

DELEGATES ROUTED WITH BAYONETS

At this signal Red guards with fixed bayonets poured into the meeting hall and directed the delegates to disperse. By the end of January a number had been arrested by Communist secret police and were imprisoned without trial, while many were in hiding.

The social revolutionists and social democrats almost immediately formed a union to fight by all possible means against the Communist suppression of the assembly. The Social Revolutionist Party held a conference at the end of May 1918 in Moscow, but after it adopted a demand for reconvening the Constituent Assembly the entire body was arrested.

Many of the social revolutionist leaders such as Chernov and Catherine Breshkovskaya, the little grandmother of the revolution, who had spent 35 years as a czarist exile in Siberia, managed to go underground and escape abroad. Others such as Maria Spiridonova, a young woman of considerable beauty as well as ability and intelligence who had passed 11 years in Siberian exile, were arrested, imprisoned and were never heard of again.

SOCIAL REVOLUTIONISTS' FIGHT FAILS

The social revolutionists attempted to fight the Communist dictatorship by reviving their underground fighting organization which, under czarism, had executed Von Plehve, Grand Duke Sergius, and other reactionary officials for anti-Semitic pogroms and other crimes against the people. The Communists responded with mass arrests and executions.

On one occasion during this period Lenin is reported to have answered a question regarding his views on parliamentary government by saying:

"I believe in multiparty government, provided the Communist Party is in power and the other parties are in jail."

Whether or not the anecdote is authentic, it summarizes accurately the state of parliamentary government in Soviet Russia from the date of the suppression of the Constituent Assembly to the present.

Production of Synthetic Oil

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. BARRETT. Mr. Speaker, I voted to report this bill, H. R. 2161, out of our

committee, and I am pleased that it has received favorable consideration from the House.

It has been estimated that our reserves of crude oil in this country are approximately 22,000,000,000 barrels. Our daily consumption of oil today is higher than it was during the peak of the war. We are consuming a little less than 2,000,000,000 barrels of oil each year, and, while it is not entirely certain, it is estimated that our crude oil may last but 15 years. A prudent man, therefore, would take no chances and provide for a synthetic oil industry in this country as early as possible.

Last summer I visited the shale oil experimental plant at Rifle, Colo., and I am sure that before long they will be able to produce oil in competition with petroleum. Most of the shale is located in the States of Colorado, Wyoming, and Utah. It is estimated that Wyoming has 600,000,000,000 tons of coal, and without a question of a doubt over 220,000,000,000 barrels of oil could be produced from this coal, although under present methods it would cost much more than oil produced from shale. We have more coal in Wyoming than all of Europe. Germany, by force and circumstances, was obliged to produce terrific quantities of synthetic oil.

I am hopeful that before long private industry will be able to take over not only further experimentation and research in this field but will also be able to establish commercial plants.

In the light of the condition confronting the country today, I am hopeful that there will be no effective opposition to this bill.

Brotherhood Day

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. MILLER of California. Mr. Speaker, 10 years ago, on February 27, 1938, Mr. William Randolph Hearst wrote an editorial that was recently republished in the Oakland (Calif.) Post-Enquirer. This editorial is as pertinent today as it was a decade ago.

Knowing that many of the Members would like to reread this editorial, under unanimous consent, I include it in the RECORD:

THE HEARST NEWSPAPERS CALL UPON ALL CHURCHES TO UNITE IN BROTHERHOOD

(From an editorial written by William Randolph Hearst, published in the Hearst newspapers, February 27, 1938)

"In union of the churches of God against atheism and paganism there is strength to succeed.

"In division there is almost certain defeat.

"It is not enough for the churches to wish and to say and to believe that moral and religious sentiment will triumph in the end.

"It is the preeminent duty of the churches to take the necessary measures to make sure that righteousness shall triumph and religion shall survive.

"There is a certain day in San Francisco when representatives of various religions, Jews, Catholics, and Protestants, get together and speak and plan in harmonious cooperation for the advancement of all religion.

"That day is called Brotherhood Day.

"Every day should be brotherhood day among the free churches of America.

"But to promote the happy condition of universal brotherhood of all antipagan religions let us begin by having throughout the Nation a series of brotherhood days like the one observed in San Francisco.

"There is a greater work to be done in the world in behalf of righteousness and religion, justice, and tolerance, than any one church can accomplish. Cannot all the churches unite in brotherhood to make its accomplishment absolutely sure?

"W. R. HEARST."

The last week in February has been proclaimed Brotherhood Week all across the Nation.

The Hearst newspapers are proud of the part they have played in helping to make this expression of tolerance and unity and mutual respect an American institution. They will continue to work for brotherhood among all religions and sects and creeds. For brotherhood is our surest defense against the forces of godlessness which are riding roughshod in other parts of the world.

Southern States Held Able To Force Election of President in House

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star of February 9, 1948:

SOUTHERN STATES HELD ABLE TO FORCE ELECTION OF PRESIDENT IN HOUSE—ELECTORAL VOTE BLOC COULD BE WITHHELD IF THEY REJECT TRUMAN

(By David Lawrence)

The solid South can exert the balance of power in the coming Presidential election. Ten States with an electoral vote of 115 can compel the selection of a President by the House of Representatives if the general election is close. Because of that potentiality, the South can influence the attitude of the candidates and platforms of both political parties.

The device is sanctioned by the Constitution. It permits each State to choose its own electors and these electors can, if instructed by a State convention, vote as the people of that State may direct.

By withholding 115 votes from the Democratic candidate, for instance, the first ballot in the electoral college may show that no candidate has received the necessary majority of 266 votes. This automatically takes the election of a President out of the hands of the electoral college and, as provided in the Constitution, it transfers the election to the House of Representatives.

STATES VOTE AS UNIT

But in the House there are, for this purpose, only 48 votes because the Members from each State must decide by majority vote for whom the single ballot of that State shall be cast. It is necessary for a candidate to get 25 votes in order to win an election.

It requires a two-thirds vote to make a quorum when the election is placed in the hands of Congress but the actual decision is by majority. In the House it is a majority of the States when a President is chosen and in the Senate it is a majority of the Senators when a Vice President is chosen.

The mere fact that the electors from Southern States would go to the electoral college instructed to vote for an independent Democrat would have its immediate effect on the policies or programs of any man who was a candidate for the regular Democratic nomination.

This method of exercising influence in a national election has not been used heretofore because the South, especially since the War Between the States broke up political parties, has been able to wield a veto in the Democratic national nominating conventions. But in 1936, through the influence of the late President Roosevelt, the one-third veto possessed by the South was abolished. Instead of nominating by a two-thirds vote, the Democrats now choose a candidate by a majority vote.

HURT BY LOSS OF RULE

The abolition of the two-thirds rule deprived the South of much of its influence in the Democratic Party. Mr. Truman, by his civil-rights message, has merely taken advantage of the alleged helplessness of the South, for it has been taken for granted that the South could be pushed around and would still vote Democratic on election day.

There are many reasons why the Democratic Party in the South must necessarily remain as it is, especially because of the State primary machinery. There is, however, nothing to prevent the Democrats in the South from using the name Democrat and utilizing the State party machinery and still remain free to support whomever they please in the electrical college or in an election which is transferred to the House of Representatives.

The important point to be borne in mind is that electors pledged to a particular candidate cannot ethically change their minds after a State has voted. This makes it all the more essential that, if the balance of power is to be wielded legitimately, the people of each State be advised in advance so that they may vote for electors who are not pledged to the regular nominee. There is nothing to prevent the regular nominee, however, from having a set of electors chosen in his behalf so that the people can decide between the two sets.

CONTROVERSY MAY BLOW OVER

The whole civil rights controversy may blow over. It may have been merely a desperate gesture on President Truman's part to prevent Negro votes in the big northern cities which have been Democratic from going over to the Wallace banner. But sooner or later the coalition of northern Democrats and Republicans will be able to put through legislation on the Negro problem which will be at variance with the wishes of the South. Hence, political action through the use of a bloc of 115 electoral votes appears to be one way that the South can protect itself against steps which it does not favor.

In a close election, the 115 votes could do considerable damage to a regular Democratic nominee, but if another Democrat should achieve the popularity as a vote getter that Franklin Roosevelt attained, it would not make much difference how the 115 votes were cast.

The counterattack then might come from groups in the North by reviving the third-party idea in those States where the big-city vote is a deciding factor. The presence in the contest this year of a radical third-party candidate is, strangely enough, the circumstance that gives the South its minority power.

If a Republican won a majority of the electoral votes next time, the protest of the

South would be of no avail. If, however, a Democratic majority is elected in both Houses of Congress and then the South withholds its electoral vote from Mr. Truman and the Republicans do not poll a majority of the electoral votes, it would be possible for the 10 States of the South plus 15 Republican States in the North to bring about the election of a Republican. It would even be possible for the South's own independent candidate to be chosen President if the Republicans preferred him to the regular Democratic nominee. The Constitution is sufficiently flexible for minority groups to combine to make a majority of their own in the election of a President.

Lincoln Day Address by Hon. Leverett Saltonstall, of Massachusetts

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address by the senior Senator from Massachusetts [Mr. SALTONSTALL] last evening at the Lincoln Day banquet of the Young Men's Republican Club of King County, Wash., at Seattle.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I was invited here last spring by your Chairman Army Seijas, I spoke to your Senator HARRY CAIN. He told me—"That's a great crowd—they are up and coming. I hope you accept." That just made it for me. Harry is one of the hardest workers we have in the Senate. When he speaks, we listen, for we know he has something to say. Everybody likes him. You can be proud of his record as a public-spirited, conscientious officeholder in civilian life and in military life in time of war as a fearless, independent aviator who was repeatedly promoted in rank because his leaders had confidence in him. He will give you fine service in Washington. I am proud of my friendship with him.

Tonight we are celebrating the birthday of Abraham Lincoln, the Nation's first Republican President, whose memory as a leader our citizens will forever cherish. He was a man who knew how to get things done. He was a man whose art of compromise for the country's welfare is unexcelled.

The parallel between the 1860's and the days until next November, when we choose our next President, is striking. When Lincoln was at the helm of our Government the crisis was the preservation of the Union. Today we are again living in a time of crisis, almost more explosive, and the stake this time is the preservation of individual freedom, not within our own borders alone but throughout the world. In 1948, truly a "year of decision," we are fervently working for world peace as the only way to win a lasting peace and real security for American citizens on American soil. Recently I expressed it this way: "Failure to meet this critical situation—and meet it head on—may well result in a radical change in what we mean by liberty, justice, and freedom. It's as simple as that."

In the crucial days of 1861, Abraham Lincoln put it to a Cleveland audience in these eloquent words: "If we do not make common cause to save the good old ship of the Union on this voyage, nobody will have a chance to pilot her on another voyage."

This could well be the theme of the thoughts I want to discuss with you tonight as we set our sights for a constructive, unified command in Washington. By this I mean, a Republican President working with a Republican Congress a year hence.

In terms of 1948, we should realize that we can save the ship only by integrating every segment of our domestic and foreign policies into one affirmative, well-balanced American program. The state of affairs demands that we calmly take stock—that we approach recovery abroad, national defense, the question of inflation, Government efficiency, social legislation, and reassertion of individual rights as one coordinated problem. I cannot emphasize this too strongly. Each of these seemingly independent issues must be considered in its proper relationship to our one over-all aim—to create a more secure and prosperous life for our children and their children. A determined Republican leadership can work out such a coordinated, truly national program, and give this country, this sick and limping world, the shot in the arm it needs.

Last month I listened to the President, who is expected to be the Democratic candidate to succeed himself, deliver his State of the Union message. This message carried a Santa Claus gift for everyone—absolutely everyone—to the tune, in some people's judgment, of over $10,000,000,000 in taxpayers' money. Certainly many of the goals President Truman outlined in his platform speech are agreed to by all. Who doesn't want a healthier Nation, more security, shorter working hours and higher wages? Achievement of all these goals at once, desirable as they may seem, will merely add to the already enormous expense of government and top-heavy Washington bureaucracy, for which our citizens would ultimately pay.

Government, like any family, has a limited amount of money to spend during any given period. For this reason, sound government administration demands that we carefully weigh one desirable against another. It cannot accomplish every aim it would like to each year. It must establish a priority list, in terms of the most pressing needs before the country at the moment.

What you want to hear from me tonight is my idea of which issues should be given priority consideration if we are to remain within our financial limitations—unless, of course, deficit financing in peacetime does not phase you—and how we best can resolve them in a coordinated way to accomplish our goal of preserving the American philosophy of government.

Some of the tremendous decisions facing us affect our relations with other countries; others will affect only us here at home. But in this age of radar, atomic energy, and fast transportation we realize that many of the decisions made within our borders have a deep impact on peoples throughout the world.

One of these great issues is the European recovery program. Should we go ahead? My answer is "Yes." We must.

The ultimate aim of our foreign policy is to have a free, strong America. We cannot be free in a world at war, nor strong in a disrupted one. Neither can many parts of the world now have prosperity without the helping hand of a vigorous, purposeful United States.

Most people now recognize the importance of working for recovery in Europe rather than mere relief. The general aims of the plan, which Secretary Marshall first outlined at Harvard, my university, last June, have been widely accepted. Great strides have already been made toward this end under the brilliant leadership of Senator VANDENBERG. He is virtually the voice of foreign policy in the Senate.

Surely few people doubt that Europe needs a helping hand today. As a member of the Senate Appropriations Committee, I saw at first hand the poverty and hunger, bombed-out homes, and long bread lines on the Continent last autumn. But it is not for Europe's weakness alone that we should help her, but for her inherent strength. Potentially Europe is a production-center area second only to the United States. She has a heritage of rich culture and a tradition of personal freedom and parliamentary government which tie her to us in strong bonds of sympathy.

The European recovery program, in whatever form it finally takes, will be the principal channel of our foreign policy. We must, therefore, be sure that it is crystallized to represent the aims to which we are pledged. But, and this is a big "but," we have no intention of turning on the faucet of American aid and leaving it running. This time we intend to put in the stopper and make sure Europe's level of production rises.

Long-range aid to Europe is open to question on all sides. Such a tremendous undertaking involving the peace, prosperity, perhaps the lives of many of us, merits the intense study it is receiving everywhere. It is probably the most far-reaching plan of reorganization ever attempted. I intend to examine carefully each part of this over-all plan to determine whether it is really going to do its job.

One of the biggest issues is on the question of the administration of the plan. Shall it be run by an independent corporation or agency? Shall the Department of State have direct control or act only in an advisory capacity? What role shall American industry have in the administration? Every day some new plan is proposed to the Senate Committee on Foreign Relations. This is all to the good. I, personally, am confident that under Senator VANDENBERG'S statesmanlike and patriotic guidance, his Committee on Foreign Relations will report out an administrative scheme as free from politics and as businesslike as possible. Whatever form the administration may ultimately take, a primary consideration should be to get American know-how across to European industry. We must accompany our dollars with our unparalleled knowledge of industrial and business techniques, for Europe needs more than just money. It needs practical advice as well. Industry-to-industry aid should be fostered wherever possible.

The crux of the European recovery program is European self-help. We cannot carry the whole load. Recipient nations must shoulder by far the major portion, and already we have seen some encouraging signs all along the line.

If effective self-help continues to become a reality and if we do give substantial assistance to the cooperating nations, all agree that we must make periodic checks to insure that they are meeting the goals promised. The recipient countries themselves recognize the need for supervision. We must find the hairline which defines the balance between too much and too little. Too little might mean all our efforts would go to naught—money disappearing into nonessentials or black markets, or simply wasted through inept business policies. Too much might mean bringing on our heads the accusation of trying to interfere with their internal affairs, and defeat our announced purpose.

How much aid is needed? How much money can we spare? What will ERP mean to us as individuals—in terms of high prices, shortages, and taxes? These are questions everyone is asking, and rightly so. Just as a housewife scrutinizes her budget before deciding how and in what amount she can help her neighbor in trouble, so must the United States assess its resources and econ-

omy before settling on an exact sum for aid to Europe. As a member of the Appropriations Committee, I will be hearing much about this in the coming weeks. We certainly cannot ascertain exact figures until all evidence is heard. Some reports already have been made public. We know that Europe wants goods in short supply here, such as fuel, food, fertilizer. ERP will affect our goods in short supply. If it goes ahead substantially as planned, we will feel it in many little ways. It will take a little longer to get that refrigerator you want. The farmer may have to pay a slightly higher price for his new tractor. Put it another way: If the whole amount of $17,000,000,000 for 4 years is ultimately subscribed, it means about $29 a year for each person in the United States.

Long-range aid will mean sacrifices, but let's look at the odds. If ERP is successful, world trade will be immensely furthered. This in turn means more business for us. If western Europe is made self-supporting again, it means the end of relief and recovery programs. If the plan works, western Europe will be a strong, productive, democratic ally.

What is the alternative? If Europe is unable to struggle to her feet the chances are great that Soviet Russia will take a much more active interest in her. The world has grown too small for us to be able to ignore such a development. In this case, might we not have to spend much more on building up our military strength here at home?

Senator VANDENBERG recently summed up this alternative in these succinct words: "The Marshall idea involves long-range aid to implement self-help and self-sufficiency. If self-help and self-sufficiency can be made to work, this objective may well be a bargain. * * * In any event, we must take one of the two calculated risks. There is a calculated risk if we proceed. But let's be honest enough with American destiny not to ignore the calculated risk if we do not proceed."

On the other side of the world we have another ally, China. China's Government today is fighting for its very existence. The people of China have endured years of war. If we adopt the policy of economic recovery for Europe, can we afford to neglect China? When a plan is proposed by General Marshall, Congress must give it thoughtful and sympathetic consideration.

You rightly ask: Where does the United Nations fit into the picture?"

We must by all means continue to support vigorously the United Nations. Though only 2 years old and plagued by growing pains, the UN has already demonstrated its contribution to the cause of a just peace throughout the world. Again the words of Senator VANDENBERG are particularly apt: "So long as we are talking things out, no matter how angrily, we are not shooting things out. I ask those Americans who would dismiss the United Nations as a total loss to remember this. * * * If it does not save the peace, it will fix the crystal-clear responsibility for its loss. This moral verdict of mankind finally is the greatest power on earth. Has this been worth while? Can there be but one answer?"

At the moment the United Nations is not capable of handling such extensive programs. It has neither the administrative organization nor the funds to do the job. The fact remains that we are the only nation in the world able, at present, to undertake the task.

Finally, we must be absolutely sure that we do what is to the best interest of the individual American—that we will do that which in the last analysis will help him to retain his freedom in true American tradition. Our willingness and humanitarian instinct to help our real friends when they are in real trouble is another great American tradition.

Part and parcel of an affirmative, well-balanced American program, for which we Republicans must strive, is the positive assurance that we have totally adequate national defense. Our foreign policy can only be successful if it is supported by a military force always able to back up our word. We can no longer place our reliance for security on the width of the Atlantic and Pacific Oceans. As patriotic citizens we must give the proper maintenance of our armed forces a top priority this year. In any future war we would be the first ones hit, here at home and without warning. Large segments of our industries and untold numbers of our people would be obliterated. We must be sure that as Republicans we face the hard fact that more men are needed to man our regular armed forces and supply our reserves. The day of the minuteman is gone. The men who fought at Concord took their guns from the wall, kissed their wives goodbye and went out to fight a shooting war. The twentieth century, its inventions, and methods of waging war make this an impossibility. Today we know neither the Army, the Air Forces, nor the Navy is fully manned. We realize, too, that the National Guard, even after a strenuous recruiting campaign, is far under strength. We know that the reserves required for the logistics of our armed forces are woefully lacking. It is perfectly clear to me that the security of our country comes first. To insure it, we may have to take steps that we ordinarily would be against. If we are to be militarily ready then we must have sufficient men in our reserves, in our National Guard and in our regular forces, not only to keep our country secure but also to go out and take the offensive if we are attacked. We must make it clear to the other nations of the world that we have the strength to mean what we say and say what we mean.

Within our borders, the issue uppermost in people's minds today is the question of inflation. The Republican Party must attack it with statesmanship—in a forthright, decisive, and practical way. We must go after its causes and not satisfy ourselves by turning out just another temporary, politically appealing pill to deaden its effects. We Republicans want a real cure, not just another OPA aspirin. Again, we should look at inflation in relation to an over-all coordinated national program. Are we going to work out this question by reviving the wartime bureaus and go back to the OPA days? Or are we going to work it out without centralizing tremendous powers over our lives in our Government officials in Washington—without again permitting them to spread the evils of bureaucracies over every nook and corner of our great country?

Inflation, we know, is the result of too much money with too few things to buy. Increased production is, and always has been, the primary solution to lower prices. This is a slow process, so other helpful and practical steps should be given careful consideration.

Partisan considerations cannot stand in the way of the welfare of all citizens. Yet, our Republican majority in Congress has been criticized for allegedly trying to hold back the monster of inflation with a thread. I disagree. Today the present administration has legal authority and the administrative machinery to do much more than it has to cut back prices. There are a number of steps the Republican Congress has given to curb run-away inflation. Yet, these steps have not been followed up by the present administration.

Export controls can and should be more carefully administered. The wartime Export Control Act is still in effect. Yet, there is serious doubt that this power has been used to screen with sufficient care the export of scarce commodities. Has the President prevented our steel from going to South America when it was needed here? Has he prevented our grain from being shipped to those countries in South America which are not hungry? Take the question of wheat. Was it necessary for us to ship wheat from this country to 26 countries all over the world during the last year? I doubt it. Why is it not concentrated in the countries which are actually hungry?

Few people realize the very direct relationship between the high cost of government and the high cost of living. We can eliminate nonessential Government expenses. Yet last month President Truman presented to Congress the largest Federal budget in the peacetime history of our country. His budget for the fiscal year 1949 would authorize the expenditures of over $39,000,000,000. The Republican Party—dedicated to the principles of sound Government financing—feel that this figure can be safely reduced by a further whittling down of the still sprawling Washington bureaucracy, and thus meet one of the direct causes of the inflationary trend. At the moment roughly 990 executive department bureaus and agencies, manned by an army of over 2,000,000 civilian employees, make up our Federal Government. When the Republican majority took control of Congress a year ago it started the job of trimming some of these over-staffed bureaus. It will continue to do so. But it is perfectly clear to me that the only way to cut Federal bureaucracy back to size is to effect a thorough top-to-bottom reorganization of the executive branch. And it is equally clear to me that there is only one way it can be done effectively—by a Republican President working with a Republican Congress. The results of the 1946 election decisively indicated that our people wanted less government rather than more. I am certain they will be in the same mood next November.

Sound administration of regulations governing bank credit, particularly for nonproductive purposes, is another basic approach to the inflation problem which we must insist upon. The Federal Reserve banks, in their effort to peg the market for Government securities, have lost a good opportunity to reduce the supply of money. Yet we all fear the effects of a sharp drop in Government bonds. The protection of these Government savings is a continuing Government responsibility, but that does not demand that Government must indefinitely support these bonds, regardless of what happens. Such a continued Government policy will stifle the country's economic growth and will ultimately lead to complete Government control of our banking system. The proper handling of these basic and most complicated bank-credit regulations is vested in the executive branch. We must insist that they are wisely carried out in the interest of helping our people to overcome the enemy inflation.

A judicious reduction in income taxes for all is another helpful step. Tax relief will have two direct effects: It will give incentive to business expansion, thus creating increased production—the ultimate cure—and it will give relief to hard-pressed individuals and even give many the opportunity to put away some savings. Furthermore, how can we maintain individual initiative and freedom when Government taxes continue to take out of our pockets more than 33 cents of every dollar we earn? By tax reduction, we Republicans do not believe in taking the weight off one shoulder and putting it on the other shoulder, as President Truman suggests. I believe we can lighten the load on both shoulders by cutting back the expenses of government. The House already has passed a bill reducing individual taxes by $6,500,000,000. Before settling on a final figure for tax reduction, I want to be certain that we will have adequate funds for our own national defense, foreign aid, reduction in our huge national debt, the necessary and legitimate functions of government, and, above all, a balanced budget. But even after considering all these factors, I am

confident we still can have tax relief. We will insist upon a financially sound government as the greatest bulwark against inflation. But we will insist that that government be efficiently—not wastefully—run.

Still another decision in combating inflation is rent control. It seems perfectly clear to me that rent control, equitably adjusted, must be continued until production more closely catches up with demand.

The present administration approaches the problem of inflation from a different angle. It would reimpose price controls and rationing and all that these two devices connote. Rationing does not increase the supply of vital commodities. It will not produce one additional bushel of wheat or suit of clothes. On the contrary, even selective rationing cannot help but stifle production. In a word, the return to meat lines and ration coupons will mean not only more regulation over our lives but also no more goods and services. Rationing and price controls may even mean less production. As one who still remembers the decision of the people at the polls in 1946, my present answer to the OPA sedative is "No", though some small modification of this decision may become necessary if any essential commodity becomes too scarce. I, personally, want to give the anti-inflation bill which we passed in the special session—based on the American voluntary method rather than Government dictation—a completely fair trial.

The after effects of the recent war have emphasized and aggravated certain other acute needs of the individual citizen which our party must recognize if it is to put forward a well-balanced national program. By this I mean government's rightful concern for health, education, unemployment protection for the needy, equitable labor-management legislation, veterans' benefits, civil rights, and housing. I am certainly not in favor of any cradle-to-the-grave policy, but we in the Republican Party must never lose sight of the honest needs of our citizens. While our future depends upon our inventive genius, and upon giving everyone the opportunity to improve himself by hard work, it is axiomatic that people work better if they know they have some security when they get caught in the squeeze through no fault of their own, and it is equally axiomatic that government can go into this field of so-called social legislation only to the extent to which its taxpayers are willing to pay, for the key to this insurance for decent living lies in a solvent government.

One of the greatest contributions the Republican Party can make—and I sincerely hope it will—is to draft the proper compromise between Government help and self-help in its social legislation for our people's welfare. Too much Federal assistance, which cannot be divorced from Government dictation, will snuff out individual freedom of action. Too little means Government neglect of its true responsibility for the protection of its people.

As we commemorate the birthday of Abraham Lincoln tonight, we Republicans throughout the country are reflecting upon the great challenge facing us at home and abroad. We must give the American people unerring confidence in our ability to act in their behalf.

We will continue to work for a just peace throughout the world, thereby creating a more secure and happier future for our own people. These efforts to insure lasting peace will mean bold national action and may well entail certain personal sacrifices on the part of everyone of us. These efforts also demand military strength to give clear meaning to our word. The development of atomic energy, high-speed airplanes, and supersonic instruments have made the world too small for us to do otherwise.

From my experiences in Washington I am convinced that it is time for a change. The strength of our Government by checks and balances rests upon changes in administration. Shifts in party control are safeguards against government by bureaucracy. In these times when the world has gone ahead so fast and conditions have changed so rapidly, a change is way overdue. There is a tremendous need for new ideas, new methods, more efficiency, and less waste in nearly every department of our Federal Government after 16 years of New-Deal rule. That is just one simple reason why we should vote for a change—why we should vote for unity of purpose—why we should vote for a Republican President to work hand in hand with a Republican Congress.

Within our party today we are watching some fine and able men contending for the Republican nomination for President of the United States. That is all to the good, because it gives us a wider range of Republican viewpoints. It gives us a chance to hear these candidates debate their views openly and fearlessly. But in such a contest our leaders must not become party to statements of a derogatory or personal character which could well backfire to the detriment of our sole objective—the election of a Republican President. Let us as determined Republican workers pull together in harness from now until November election day.

The Republican philosophy of government stems from the love of individual freedom. Our party must combat the pressures which today are attempting to submerge this consciousness of the individual.

We Republicans today, like Lincoln in his day, clearly understand that human freedom is indivisible.

We Republicans must keep our thinking one jump ahead of events in this fast-moving world.

We Republicans must never permit partisan considerations to run rampant at the expense of human misery.

We Republicans know that the welfare of the people will best be served by a Republican President working with a Republican Congress.

Today we are in a scoring position. We will score on November 2, 1948.

Tribute to Mohandas K. Gandhi by Hon. Elbert D. Thomas, of Utah

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the address which I delivered at the memorial services in tribute to Mahatma Gandhi at the Departmental Auditorium, Washington, D. C., Wednesday, February 11, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In speaking of our two greatest Americans, Theodore Roosevelt said, "No two great men were as good as Washington and Lincoln, and no two good men were as great." In Gandhi there was no line between goodness and greatness. His goodness is what made him great. Thus he became one of the great universals among men. World citizen in ideals and in action, but when a cause was for his people, he, like Jefferson, our outstanding world citizen, could become a tense nationalist.

Gandhi dead will be a force in the world greater even than was his power in life, for Gandhi's leadership rested upon spirituality. Trained in western culture, he became that bridge between the east and the west which in goodness and spirituality show there was no difference.

He gained many of his ideals from reading an American philosopher, but he tempered those ideals with an eastern spirit. Thus he linked the cultures of the east and the west.

One of America's martyrs, President Garfield, is said to have soothed an angry crowd by putting forth his hand and saying, "There are times in the lives of all of us when the presence of the eternal spirit is so close that if we but put out our arm we can feel it." Gandhi's sign of forgiveness, displayed toward the man who had struck him down, proved how close are the great ones who live constantly in tune with the Infinite Goodness. His gesture of forgiveness brought pause to the thoughtful of the whole world.

Religion is a bond, which, when viewed in relation to time, ties those who live in the present with those who have gone before and those who come after. Gandhi without religion and without the spirit would not be Gandhi. Gandhi now belongs to the ages. The new India is arising to be an everlasting monument to his goodness, his greatness, and his spirit.

Income-Tax Deductions for Donations to Allegedly Subversive Groups

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release by me for the Sunday papers of February 8 dealing with the charges recently made by the Senator from Minnesota [Mr. BALL] in connection with the Treasury Department approving income-tax deductions for donations to groups labeled subversive by the Attorney General.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

Senator SCOTT W. LUCAS, Democrat, of Illinois, said today that he had thoroughly investigated the charges made by Senator BALL, Republican, of Minnesota, that the Treasury Department was approving income-tax deductions for donations to eight groups labeled subversive by the Attorney General.

Senator LUCAS further said that before the charge was made, two of the subversive organizations, namely, the International Workers Order and the Joint Anti-Fascist Refugee Committee, had had their tax exemptions denied by the Bureau of Internal Revenue.

"Also at the time the charge was made, the Department had under investigation Hollywood Writers Mobilization, The School of Jewish Studies, and the National Council of American Soviet Friendship.

"The Ohio School of Social Science, the Philadelphia School of Social Science, and the Samuel Adams School of Boston, named by Senator BALL, were not under investigation, but investigation promptly began, and it is my understanding that the Bureau has now completed the investigation of the last six named and their tax exemption has been

revoked. Senator BALL is to be congratulated for bringing this to the attention of the Department, and the Department is to be congratulated for acting with such speed. However, a few more facts must be considered in relation to the charge.

"There are 28,000 organizations throughout the United States that have individually applied for and received favorable rulings that they are entitled to exemption under section 101 (6), of which approximately 7,500 fall within the educational group outside of the system of public education.

"The Bureau of Internal Revenue received reports from more than 100,000 organizations every year that claim tax exemption. It is estimated that there are some 300,000 organizations throughout the country that are exempt under section 101, exclusive of educational and religious organizations. There are 30 different types of organizations that receive tax exemption under the law.

"To handle this vast volume of reports and to make the determinations of tax-exempt status, there is a total of only 56 employees engaged in this work. There is no staff at all provided for field investigation of these cases, but such field investigations are turned over to revenue agents whose primary responsibility is the collection of taxes.

"It is ridiculous to expect such a small personnel without any assigned field force to give adequate supervision to the activities of the hundreds of thousands of tax-exempt organizations throughout the United States. Yet, in the face of such an inadequacy of personnel, the Congress last year reduced the appropriations for the Bureau of Internal Revenue to such an extent that 7,000 tax collectors, agents, and supervisors were dropped from the staff of the Bureau.

"The Treasury Department is the biggest financial operation on earth. The Bureau of Internal Revenue, with less than 50,000 employees, collects and keeps the records of $40,000,000,000 of taxes received from more than 50,000,000 people. Although not fully comparable in the character of service rendered, the biggest private business in America, the American Telephone & Telegraph Co., requires 750,000 employees to do a business of approximately $2,000,000,000 per year. The cost to the Government of collecting and accounting for internal revenue taxes is one-half of 1 percent of the amount collected. The average collections per employee, including clerical force, maintenance crews, collectors, and supervisors, is $800,000 per person per year.

"The tragedy is that hundreds of millions of dollars of evaded taxes are escaping the Treasury as a result of an inadequate force of investigators. The marvel is that more than $2,000,000,000 a year is being brought in through the enforcement activities of a relatively small staff.

"It is clear to anyone that 50,000 employees cannot adequately supervise, investigate, audit, and collect from 50,000,000 taxpayers a total of $40,000,000,000 a year. It is estimated that no less than 20,000 additional personnel is required to give adequate enforcement to our revenue laws. It is also estimated that the revenue produced by the additional personnel would be several times more than the cost.

"Senator BALL stated that this was another case in this administration of the right hand not knowing what the left is doing. Is it any wonder that honest mistakes might be made when such a gigantic fiscal policy of the United States is being carried out with limited personnel? It seems to me that the 50,000 employees of the Bureau of Internal Revenue deserve commendation for accomplishing a task that in size is beyond human comprehension. The Appropriations Committees of the House and Senate have an opportunity to render a real financail service to honest taxpayers of the country by giving to this Department additional help in order that the chiselers and the tax evaders of the Nation may be brought to justice. The niggardly attitude on the part of the Republican Appropriations Committees last year toward this Department was an open invitation for tax evaders to further their nefarious and criminal activities in escaping the payment of taxes due the Government."

Subsistence Allowances to Veterans in School

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. REED. Mr. President, one of my very good friends, Mr. J. E. Schaefer, vice president and general manager, Boeing Airplane Co., Wichita, Kans., has sent me an open letter to Congressmen, printed in the New York Sun of January 24, 1948.

This letter is so pertinent and so interesting that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO CONGRESSMEN

One of the bills which you will consider deals with the increasing of subsistence allowances for veterans in school and on-job-training programs. The issue is unfortunately as political as it is humane, since more than 2,000,000 voters would receive direct financial benefits from the proposed legislation. Supposing, however, that the majority of you are sincerely interested in accomplishing the most good, my husband and I—as 2 of the 2,000,000—would like to present the case as we see it.

My husband is finishing college by virtue of the $90 provided by the GI bill of rights. We are very grateful for that $90 a month. Without it we couldn't be here. It would be very easy to sit quietly and let you gentlemen raise it to $105, as you probably will. But we do not believe in biting the hand that feeds us, so we want you to know that we can get along without that raise.

We actually live on our $90 a month. I use "live" deliberately. It feeds us, keeps us clean, and puts a roof over our heads. It doesn't provide our clothing, not in a general sense, but it does cover occasional replacements of small items. Here, in fact, is a chart of exactly what we've done with our $90 per month in 2 years' time:

Rent	$20.00
Food (milk, soap, everything that comes from the grocery store)	38.00
Laundry	.50
Cleaning	2.00
Insurance (my husband's)	6.60
Insurance (mine)	4.40
Haircuts	1.00
Church	9.00
Stamps and stationery	.50
Entertainment	1.00
Transportation	4.00
Clothing repairs	3.00
Total	90.00

The rent is delightfully low—because we live in a trailer. (Most colleges have reasonable accommodations once you get into them; they just don't have enough.) Nor is it a superaffair with hot and cold running water. In fact, it hasn't any running water at all except that which runs down the walls and under our bed in every heavy rain, or even a prolonged light one. We carry our water in in a bucket, and we carried it out also until my husband procured for $1 a funnel, 4 feet of hose, a roll of black tape, and made us a drain. Our particular trailer hasn't even an oven—merely a two-burner gas hot-plate, but with a pressure cooker and a little ingenuity we have good, healthful meals and plenty of food on about $9 a week.

We have four times as many meatless days as the average patriotic citizen, but we won't starve. My husband also catches fish in nearby streams, and so provides sport and food at the same time. (The fishing license comes out of the grocery money.)

Laundry days are 2 weeks apart and we do it together in a help-yourself establishment in 1 hour for 25 cents. Cleaning, we watch closely, removing minor spots ourselves. One of our extravagances is a steam iron, which has more than paid for itself in renewing clothes that are merely wrinkled.

Since my husband does a great deal of studying, we have little time for entertainment, but we occasionally attend 15-cent shows which are several years old, and often better than newer ones. We have friends over for dinner, and crack walnuts and make fudge, or just plain talk. I read a great deal, and crochet and sew. We go to most student activities and picnic in the woods. I mention all this to show that we don't really suffer from lack of entertainment funds. We have no money to gamble, drink, or smoke, and we don't.

As for clothing, we didn't have a lot to start with, and the "new look" hasn't exactly stormed our area. We grew up during the depression, and learned to use good judgment in what little we could buy. Fortunately, my husband was an Army officer, so he still has his pinks and greens for school clothes.

We have had no medical expenses, but the school furnishes a health service for students who need it.

That, I think, accounts for the $90. We find that our neighbors spend theirs in similar ways. Besides our Government allowance, we spend about $400 additional each year. These things are our luxuries and include our car, which costs us about $240 a year more than the monthly $4 we deem necessary transportation. We consider these our responsibility to provide if we want them.

This additional money must come from somewhere. My husband found before the war that too much work does not mix with the kind of grades he wants. He goes to school both semesters and to summer school. That leaves 6 weeks in August and September to pick up $350 to $400. He solved it one summer by hauling paving bricks, purchased from a condemned road, to contractors. Handling, individually, thousands of 8-pound bricks is work, but it paid well.

Last summer he hauled machinery on a short job for a ditch-digging concern. For two more weeks he flew in the activated Air Corps Reserve, and week ends he painted a house. The truck drivers' union in our town generously grants temporary permits for short jobs for a small payment, thereby saving us the large initiation fee. Some of the unions are very considerate in such situations.

We do have a little savings, and we intend to keep them. It is the basement of the house we intend to build some day, and we won't be afraid to build it with our own hands. Some of our friends have savings; some do not. Most of them do odd jobs. Some do janitor work at the school for $10 a week; some have jobs in town. A few of the wives have jobs, and many of us have

small gardens around our trailers. Those with children find the going tougher.

This just shows why we can do without an increase. There are also reasons why we positively do not want any more money in the form of an increased subsistence check:

1. The proposed raise for married students alone is $15 a month. Let us assume this to be an average, since single students get less and married students with children get more. According to the records of the Veterans' Administration for November 1947, 1,309,145 veterans are attending school. A $15-a-month raise will cost the Government $19,637,175 a month. Yet, it will not be the determining factor in causing many GI's to stay in school. In fact, the good it will do is negligible, and its harmful aspects have been completely overlooked.

2. Constant wage increases from every direction are a contributing factor toward inflation. The extra twenty million that students alone will spend each month will make items just that much scarcer and higher in price. If we earn the money before spending it, rather than having it given to us, we will also be producing $20,000,000 worth of labor and various goods.

3. The most important reason is for the sake of the veterans themselves. Most of those receiving these benefits are in their middle or late twenties. They have been fed, clothed, and provided for by the Government almost ever since their parents stopped doing it. If they are going to become useful citizens in a democracy where the individual is the important unit, a necessary part of their training is learning how to take care of themselves.

If you really want to help, do something constructive about prices and housing, and the rent controls that go off in February. That will benefit all of the people.

As I said before, we speak only for ourselves. We are acquainted only with conditions in the Middle West. We know that students attending universities in large cities have different problems than in small college towns. We have lived in both, and have inquired about many. We know that the boys who fought the battles have learned to think, and we suspect that some of them may even agree with us.

M. V. M. PIKE.

British Health Plan

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "British Health Plan," from the Miami Herald, which should be of especial interest to the American public at this time, when we are considering a similar idea.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRITISH HEALTH PLAN

Short views on the news:

The young men who are flooding our universities with applications for admittance to the many excellent schools of medicine and dentistry should take a look at the new British health policy.

Great Britain's Socialist government is about to inaugurate a huge program of free medical care for every man, woman, and child in the "tight little island."

Basically the idea is that the Government will pay everybody's doctor bills, including hospital treatment, ambulance hire, drugs, and medical supplies.

The cost, as now estimated, will exceed $600,000,000 a year, and is to be collected from the long-suffering British taxpayers.

British doctors are being asked to sign up with the Government's plan, although they are free to stay out if they so choose. All who do join the Government medical service will receive a basic salary of $1,200 a year, to be augmented by fees of $3 per patient.

Thus, if a doctor had the time and endurance to see 4,000 patients a year, he could reach a ceiling of $13,200 before taxes.

All Government doctors would have to serve in areas where the Government determined they were needed most. The Health Ministry will have authority to bar doctors from locations which it considers are oversupplied with physicians.

Included in the list of services to be provided by the state are home nursing, midwives, maternity and child-care clinics. The Health Ministry is also to be the final judge of a doctor's competency, thus removing the individual's right to appeal to the courts.

Needless to say, the Government's program is meeting with tremendous opposition from the British Medical Association. This group fears that eventually all doctors will be forced into state medicine, with over-all salaries to be fixed by the Government, regardless of individual merit or background.

They cite the experience of 1912, when the doctors temporarily boycotted a national health-insurance plan, but ultimately had to yield. It is no secret that the British Government believes it is only a question of time until all doctors must surrender to its latest experiment in socialism.

Then all medical care in the British Isles may gradually descend to the level of the least competent practitioner, and a doctor with years of the best possible training and experience will find himself on the same economic level with Great Britain's 2,000,000 other civil servants.

We commend what is happening in Britain to the attention of America's doctors embryo, because while it is easy to say, "It can't happen here," the fact is that bills have already been introduced in the United States Congress which would take us down the same socialistic road.

You can still write your Senators and Congressmen before it is too late.

Government and Industrial Decentralization

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial endorsing my stand on Government and industrial decentralization, from the Dallas (Tex.) Morning News of February 7, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOL'S PARADISE?

Some may think that Senator ALEXANDER WILEY is too wrought up over the danger of a single, knock-out blow by a foreign foe. In the Reserve Officer magazine he speaks of our "living in a fool's paradise of apathy and inertia." He warns that, in an atomic war with Russia, Washington could become "a death trap for American liberty." He believes that we must scatter our armed forces and Government offices, or run the risk of having them blotted out in a single moment.

Even a little thought, though, about what the split atom has done to our traditional means of defense, will free the Wisconsin Republican of the charge of hysteria. Already we have agreed that our factories must be strung out, or deployed, over vast reaches of inland America. That is the policy behind the Army-industry national meet just held in Dallas. The same idea must be spread promptly to cover both military forces and civil government.

Perhaps the soundest argument for quick passage of the universal military training bill is that it would give every part of the country sizable forces in the event of disaster. The 16,000,000 veterans of World War II should also be fitted into this plan of instant readiness. It is nothing more than the Swiss idea of a citizens' army that can spring into action almost at a whistle.

There must be, too, a directing command behind both factory and fighting forces. That in our land is the civil authority. It is clear, then, that regional authorities should be created, on paper at least, to take over full power in their own areas in the event of national calamity. The Senator is merely talking common sense. Elementary, it would seem, as Sherlock Holmes might say.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial recently issued by the National Cotton Council of America in the February 6 issue of its publication called Cotton's Week, containing a discussion of the effect on the cotton market of the uncertainty of the fate of the Marshall plan.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MARSHALL PLAN

Uncertainty about fate of Marshall plan is credited with playing part in sharp break this week in stock and commodities market.

Supporters of plan admit there is apathy in Congress toward plan, arising primarily for two reasons:

1. Question as to whether Marshall plan will do the job.

2. Question as to whether Marshall plan will be possible without reimposing domestic controls.

As to first query, nobody knows. However, best informed opinion is that effort must be made unless Russia is to take over most of western Europe. Will Clayton, who probably knows as much about the European situation as any man in the country, said as much in a speech the other day, and if Russia takes western Europe, many informed persons believe it means eventual war with United States.

With regard to second question, feeling is growing that Marshall plan will be pos-

sible without reimposing price controls and rationing. Judicious use of export controls over scarce commodities, supporters of plan point out, should keep inflation in hand without clamping down in this country. Furthermore, plan supporters say that supply situation, particularly in grains, is better now than was anticipated when plan was first proposed.

In this connection, there have been reports that cotton purchasing for western European countries under plan would be done by Government agencies.

Cotton Council has investigated these reports thoroughly. All Government agencies, and particularly USDA, which probably would do actual buying under plan, have emphasized they feel that cotton should be handled by private trade as was done during interim aid period. Council plans to write State Department to get views officially stated. Apparently, rumors and fears that private enterprise might be supplanted in cotton as well as other commodities arise from general language of proposed legislation and testimony. Legislation permits government to purchase and transfer commodities but there have been repeated assurances that no such procedure is contemplated with regard to cotton.

Apathy toward plan and uncertainty about its fate have aroused concern on part of some Southern Congressmen. They are pointing out that demand in this country, Europe, and China for United States cotton is strong and apparently will continue so for several years. Question is whether Europe and China also can raise dollars to buy cotton, or to state it another way, matter is one of financing. If Marshall plan fails, surpluses are pretty certain to begin piling up within couple of years. This would bring back problems with which belt is all too familiar: price supports, production controls, and like.

And, still other supporters of plan, harking back to break in commodities this week, are contending that failure of Marshall plan and slump which might result could cost country many times proposed expenditures for European recovery.

The Southern Revolt and 127 Electoral Votes

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I use the above caption to call attention to the fact that in 1879 the electors from the State of Louisiana cast the deciding votes to elect a Republican President of the United States, and 1928 should not be overlooked. I am also submitting below articles on the subject under discussion, as follows:

[From the Washington (D. C.) Post of February 13, 1948]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

DEMOCRATS ALIENATED BY TRUMAN

Anti-Truman resentment among the Democrats is now so deep that some are actually talking about trying to dump him.

What Truman has succeeded in doing is alienating both wings of the party—the southern Democrats and the northern liberals. This was something that Roosevelt, despite the kicking around he gave to some leaders, was careful never to do.

But now Truman has rubbed northern liberals the wrong way by ousting such Roosevelt appointees as Marriner Eccles, James Landis, and John Fahey. Simultaneously, he has made southern leaders boil over with indignation at his civil-rights message.

In fact, the only people Truman has pleased are the Republicans.

Result of all this is that some Democratic leaders are even talking among themselves about finding a new candidate. Admittedly, they don't think the chance is great, for it's almost impossible to block the renomination of a sitting President. However, some of them have been quietly discussing a boom for Justice William O. Douglas, while others talk about a draft-Eisenhower move for the Democratic ticket. After all, the first and only political speech Ike ever made was at a Jackson Day dinner at the age of 18.

Meanwhile, Henry Wallace has told friends that he would yank his third party out of the running if the Democrats nominate Eisenhower, Douglas, Judge Thurman Arnold, or any other Roosevelt Democrat.

NOTE.—What Democratic leaders fear most is that Wallace's third party will carry so much of the labor vote that it will be impossible for Truman to carry New York and Illinois.

[From the Washington (D. C.) Post of February 13, 1948]

WASHINGTON CALLING

(By Marquis Childs)

SOUTHERN REVOLT

The convivial days of old, when Democratic Senators gathered in the inner sanctum of Leslie Biffle, staff director of the Democratic policy committee of the Senate, are no more. A brooding bitterness is too often the mood today, and even the best stories get hardly a chuckle.

The reason, of course, is the revolt of the southerners, touched off by President Truman's civil-rights message. The same kind of flare-up has occurred in the past, only to die down after a pyrotechnical display of southern oratory.

But this time party leaders are deeply pessimistic. They discount a lot of the southern talk about establishing a southern wing of the Democratic Party which would nominate its own candidate for President. They minimize the possibility that electors from the Southern States might refuse to cast their ballots, thereby throwing the election into the House of Representatives. They do not, however, discount the effect of all this on the voters throughout the country. It feeds the impression of divisiveness and incapacity. And this time the flare-up seems likely to mean more than just oratory, even though it stops short of an actual split.

The southerners are threatening to hold up nominations made by the President whenever they can. Their first target is likely to be the President's nomination of Thomas B. McCabe, of Philadelphia, to be chairman of the Federal Reserve Board. For a variety of reasons, McCabe's nomination was deeply resented.

To begin with, McCabe would fill the vacancy caused by the death of Ronald Ransom, of Georgia, who was the only southerner on the seven-man board. Failure to give proper representation to the South would in itself explain antagonism to the appointment. On top of this is the wide popularity in the Senate of Marriner Eccles, who is being demoted to vice chairman so that McCabe may have the chairmanship.

The McCabe appointment comes before the Senate Banking and Currency Committee next week. Four southerners—Senators FULBRIGHT, of Arkansas, ROBERTSON of Virginia, MAYBANK, of South Carolina, and SPARKMAN, of Alabama—are on that committee. They could certainly delay action, and their votes might block it.

An even more practical threat which the southerners say they will carry out concerns the Democratic war chest in this campaign year. There is nothing to compel the Democratic State organizations in the South to contribute to the national committee as they have done in the past.

The Southern States have, in fact, been among the largest contributors. Because of the one-party system in the South, funds are not needed at home for a party battle. Consequently, almost everything that was collected went to Washington.

Even though their per capita wealth is much less than that of most Northern States, Texas, Florida, Arkansas, and North Carolina were among the first 10 contributors in both 1940 and 1944. Their contributions were exceeded only by New York and the District of Columbia, and they all outranked Pennsylvania. But not this year, say the southerners. If they hold to this determination, the Democratic National Committee will be hard pressed to find generous contributors to make up the difference.

The southerners even talk of blocking essential legislation. Whether they will go this far is doubtful. Nevertheless, here is another possibility of stalemate in an election year, when the machinery of government creaks along slowly at best.

The required number of votes to shut off debate and stop a filibuster are said to have been counted in advance in the Senate. With the flow of oratory thus dammed up, the frustration and the anger will grow.

The suggestion which got into print, that the President might modify his civil-rights stand by later repeating his request and carefully omitting reference to abolishing segregation on trains and busses, drew a stanch denial from the White House. Mr. Truman is prepared to stand behind every demand in his 10-point program, it was said.

The President's advisers are a little surprised at the violence of the southern reaction. The 1944 Democratic platform said: "We believe that racial and religious minorities have the right to live, develop, and vote equally with all citizens and share the rights that are guaranteed by our Constitution. Congress should exert its full constitutional powers to protect those rights." Mr. Truman in his message was merely translating that generality into specific demands, and he intends to back them up no matter what the cost.

[From the Washington (D. C.) Post of February 13, 1948]

MATTER OF FACT

(By Joseph and Stewart Alsop)

FOR SOUTHERN RIGHTS THEY ARE

The white-supremacy southerners in Congress are now talking among themselves about placing either Senator WALTER F. GEORGE, of Georgia, or Senator HARRY F. BYRD, of Virginia, in nomination for the Presidency against Harry S. Truman. This underground discussion neatly balances the overt plan of the west-coast left-wingers to put forward Henry A. Wallace as a suitable Democratic nominee.

One thing is already clear, this year's Democratic convention is likely to resemble one of those awful children's parties at which large numbers of the dear little guests gang up to kick the stuffings out of the grave but tearful host. In his role as universal nursery maid to his party, the chairman of the Democratic National Committee, Senator J. HOWARD MCGRATH, is going to have a pretty ghastly time preventing public mayhem. And this will be true even though the southerners do not carry out their threat to support a candidate of their own.

Overt southern support for a rival to Truman, even if limited to the convention, would

almost certainly be going further than the southerners desire. The Democrats have been in so long that the southern leaders have almost forgotten the hungry misery of dwellers in the political wilderness. But some faint recollection of this horrid state still lingers in their minds. They are still reluctant to destroy their party's chance at the election. This is what may be expected to nip the overt anti-Truman movement in the bud, although the plan may be expected to be watered with quantities of the same sort of northern money that used to finance Gene Talmadge.

On the other hand, the strategy which the southerners appear actually to be adopting will be almost as difficult for the White House to handle. As of today, it seems probable that the Southern States, including as a minimum South Carolina, North Carolina, Virginia, Georgia, Mississippi, Louisiana, Alabama, and Tennessee, will send uncommitted delegations to Philadelphia. The uncommitted delegations will be used to wrest from the platform committee a weasel declaration on the civil- and human-rights issue.

In the past few days there have been anxious negotiations between southern leaders and White House representatives. The southerners dropped hints that if the White House continued so scornful of the South, the more violent expedient of sending overt anti-Truman delegations to the convention would have to be resorted to.

The President may deny the intention of conciliation until he is black in the face. He may personally have no such intention, but his representatives respond to the hints of the southern leaders by hinting in return that the President would in the end approve a compromise on the platform's civil- and human-rights plan. The southerners intimated that if such a compromise were forthcoming, they would then content themselves with holding a post-convention rally, as they did after the Wallace nomination in 1940. At this rally they promised they would give free rein to their propensity for oratory, but would end by resolving that much as they detested Truman, they hated the Republicans even more.

In Congress this plan has found favor with many, even among the extreme white supremacy shouters like Senator OLIN D. JOHNSTON, of South Carolina. Meanwhile some southern governors like J. Strom Thurmond, of South Carolina, and M. E. Thompson, of Georgia, have also sent assurances of eventual support to the White House.

It is symptomatic of the state of the Democratic Party that in these dubious circumstances the White House political strategists are breathing audible sighs of relief. They are thankful for very little these days. The arrangements outlined above are very little to be thankful for because of two obvious draw-backs.

In the first place, any weasel words in the civil- and human-rights platform plank will enrage and alienate precisely the groups in the North at whom the President's civil-rights message was aimed. Yet if the weasel words are not spoken, the uncommitted southern delegates will still be able to put forward their own man. In the second place, the present arrangements may be upset even before convention time if the Fair Employment Practices Act becomes law at last.

House passage of FEPC is a foregone conclusion. So is Senate passage if cloture can be applied. Application of cloture turns upon four or five Republican votes, including Senators ROBERT A. TAFT, HARLAN BUSHFIELD, and ALBERT HAWKES. TAFT, it is known, will vote to approve cloture, although opposed to the FEPC bill. HAWKES is in a hard reelection fight in New Jersey, and the other waverers will be not uninfluenced by the fact that this is an election year. If FEPC passes, the southern fat will really be in the fire. In the ensuing bitterness and recrimination anything may happen, and quite probably will.

[From the Opelousas (La.) Daily World of February 10, 1948]

"GENUINE" DEMOCRATIC CONVENTION

NEW ORLEANS, LA.

THE EDITOR, THE WORLD.

DEAR SIR: The Truman intention to use Federal power and snoopers to abolish sensible race segregation and States rights could prove a calamity to the entire Nation, including the deluded Negroes whose votes are being bought by this Truman alliance with the creed of the CIO and the Communist Party.

Mr. Truman joins the ranks of those who, in the past 15 years, schemed and hatched the rotten system of control of the majority by the use and political manipulation of a self-seeking balance of power minority.

Mr. Truman knew when he joined the Democratic Party many years ago that Democrats were then as they are now—devoutly dedicated to the principle of a republic by a union of sovereign States. The Democratic Party has not changed. But, Mr. Truman and his fellow travelers at last march with Henry Wallace, out of and away from the time-honored, unchanged customs and beliefs of the Democratic Party.

It now becomes the duty of genuine Democrats to close ranks, rebuild and rededicate our party for honorable service to those people of the Nation who believe that our safe future depends upon a political party willing to work for the greatest good of the greatest number.

Thousands of stay-at-home eligible voters from border to border and coast to coast will at last have a reason for a return to the use of their ballots, if we southerners give them a real Democratic Party.

Mr. Truman may get the nomination of the Philadelphia mongrel convention. We of the South owe it to our country to call a genuine Democratic convention, and not in Philadelphia.

Cordially yours,

JOHN U. BARR.

The Causes of Industrial Peace

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, February 13 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "The Causes of Industrial Peace," by Clarence Francis, chairman of the board, General Foods Corp. It is an article which I think all those in industry in this country who think they can solve industrial problems by way of legislation should read with great care, because I think Mr. Francis in the article supplies an answer to a great many of the business industrialists who think we will solve our labor problems by restrictive legislation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of February 9, 1948]

THE CAUSES OF INDUSTRIAL PEACE

(By Clarence Francis, chairman of the board, General Foods Corp.)

It is ironic that Americans—the most advanced people technically, mechanically, and industrially—should have waited until a comparatively recent period to inquire into the most promising single source of productivity, namely, the human will to work.

It is hopeful, on the other hand, that the search is now well under way. We are learning now that a cause of freedom from industrial strife is healthy human relations. Just as there are degrees of health, so there are degrees of industrial peace. The sort we seek is a vibrant, affirmative, productive peace. We know that it can exist because we have seen it exist. There have been few times within recent memory when we have lacked examples of this fact.

Yet, ignoring these signposts, we have lived amid the din of industrial disorder from the start. Our economic expansion has been marked by periodic disruptions from the days of the anthracite and rail strikes of the 1870's through the sit-downs of the 1930's right on down to the present.

Why has this been so? Basically, I think, it is because too many employers somehow fell into the grave initial error of treating labor as a commodity, because management and labor leaders became preoccupied with the rules of industrial warfare, because we concentrated on the vocabulary of difference—"demands," "grievances," "disputes," "prerogatives," "rights," and all the rest—and because, by implication, we accepted the notion that the interests of labor and management are basically opposed.

That's an irony, surely, since the interests of 60,000,000 Americans at work are served not by the cultivation of disunity and discord but by unity and cooperation. The tragedy is that millions of working Americans, whether organized or not, are suffering from the nonexistence of mutual endeavors to create smooth relationships.

To me, the ideal in industrial peace would be, not 15,000,000, not 30,000,000, but 60,000,000 Americans working together in well-planned and understood human relationship. Think what that would mean in terms of national unity, production, and prosperity.

I do not mean to discount the importance of labor legislation; but, conceding its importance, we must grant that it is but one of a number of trees in a very large forest.

In other words, you can legislate the conditions under which management and labor can quarrel.

You can legislate the conditions under which management and labor can maintain an armed truce.

You can even legislate the conditions under which management and labor can enjoy a negative sort of peace without fighting at all.

But you cannot legislate harmony into the hearts of men.

You can buy a man's time.

You can buy a man's physical presence in a given place.

You can even buy a measured number of skilled muscular motions per hour or day.

But you cannot buy enthusiasm; you cannot buy initiative; you cannot buy loyalty; you cannot buy the devotion of hearts, minds, and souls.

You have to earn those things.

In today's complex industrial structure, the development of better understanding between management and labor can't be left to chance. When you want to get to know a man better, you don't begin by writing letters to his lawyer. You try to find some way

of demonstrating your good will and communicating it to the man himself.

This is just as true of dealings between management and employees as it is of dealings between individuals outside working hours. Techniques and organization are needed—in small companies as well as big ones. And I am prepared to stand before you and say that, when the techniques, organization, and principles of good human relations are carefully applied, the end result is bound to be a greater measure of industrial peace.

Why are we in business, anyway? Are we simply in it to make money or do we acknowledge a stewardship toward employees, stockholders, and consumers?

Do we, above all, believe in the freedom and dignity of the individual in a free American economy?

Do we, then, believe that political and economic freedom are inseparable—and that they are equally the rights of employers and employees? I happen to be one of those who believes that you cannot put freedoms in separate compartments or maintain one kind of basic freedom without the other.

Do we want our employees to get a sense of dignity, achievement, satisfaction, and security through working harmoniously with others in a well-organized, rational, productive industrial structure and at fair wages?

Above all, are we willing to work to create these conditions?

On the negative side we know that we simply cannot afford the consequences of industrial conflict. We cannot allow the terrible danger of class consciousness to weaken our internal structure. We cannot permit the collapse of the world economy. We dare not let hunger and poverty lead millions into communism.

All true. But, on the positive side, let us consider not what we have to lose but what we have to gain. Why should our policies be dominated by a negative dread of communism instead of a positive confidence in America? As Gardner Cowles said in a recent significant speech, "No one flees toward Russia." America is the symbol of an active reality which has already accomplished more for human betterment than any system on earth. (From an address to the Congress of American Industry.)

Article by George Sokolsky

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by George E. Sokolsky from the Washington Times-Herald of February 10, 1948:

THESE DAYS

(By George E. Sokolsky)

The essence of the articles written by Henry Morgenthau on himself and appearing in the New York Post is that the State Department and the War Department had, as is their proper function, worked out plans for postwar Germany.

He had obtained a document prepared by the State Department which would have saved the world endless trouble and unbearable costs. Morgenthau was terribly angry. So he saw General Eisenhower in London and Eisenhower said to him:

"I want to say that I am not interested in the German economy and personally would not like to bolster it if that will make it easier for the Germans."

Now, how could it be that General Eisenhower or anybody else in so responsible a position could say that he is not interested in the German economy? For after all, Germany is the economic and geographic heart of Europe.

It may be that it is unfortunate for mankind that the particular people who inhabit that particular area of the earth's surface are those who are there.

But no intelligent man can say that he is not interested in German economy—for it is German economy that has already cost us two wars, and the huge cost of occupation and the British loan and the Marshall plan but so much else that has disturbed our generation.

How could General Eisenhower say that in 1944?

It was in 1944 that Henry Morgenthau was told by General Eisenhower, as Morgenthau reports, that Russia now (in 1944) had all that she could digest, and her present problems would keep her busy until long after we were dead.

That was before Yalta and Potsdam. It was before Soviet Russia took over Yugoslavia, Bulgaria, Rumania, Poland, Hungary, the Kurile Islands, Manchuria, and Korea.

It was before the Cominform was organized. It was before Togliatti attempted to force Italy, and Thorez, France, into the Soviet Federation. It was before Soviet Russia tried to take the atom bomb from us.

Certainly it is difficult to believe that Eisenhower was so badly informed, so inadequately oriented as Morgenthau makes him out to have been.

For the history and purposes of bolshevism, from 1907 to 1944, is a thoroughly documented story, widely known and discussed by intelligent students the world over.

It is not possible to believe that the man to whom the destiny of this country was entrusted could have been so superficial. Until Eisenhower speaks for himself, I, for one, decline to believe that he could possibly have expressed such views.

Of course, the confusion in thought and of policy in the Roosevelt administration are beyond belief. Morgenthau reports, for instance, that he discussed not Treasury but foreign problems with all sorts of people, although the country assumed that it was Cordell Hull who was Secretary of State.

Apparently the American people were wrong, because Hull seems not to have known what was going on.

For instance, Morgenthau discussed Tehran with Anthony Eden and then with Cordell Hull. Apparently minutes were kept at Tehran, but Cordell Hull was not permitted to see them, although, as Secretary of State, they should have been in his possession. According to Morgenthau, this is what Hull told him:

"I don't have a chance to do anything. I am not told what is going on. That's on a higher level. I am told that is a military affair. I have consultations with the War Department every day on the immediate objectives, but when they talk about the state of Germany I am not even consulted."

Why was he Secretary of State? The story is coming out, even earlier than had been expected. Maybe, in time, some of us who warned the American people that they were being fooled and their confidence abused will, unfortunately, be proved to have been right.

I, for one, would rather have been proved wrong.

The other day I remarked to a friend that it would have given me more comfort for the future of my children if the facts, as they are now disclosed, would show that I had been in error during the years of the Roosevelt confusion.

Foreign Policy Gone Haywire

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a timely editorial which appeared in the Kenosha (Wis.) Evening News on Monday, February 2, 1948. The editor has called attention to inconsistencies in our foreign policy and to such an extent that the people at large are generally confused and bewildered.

GONE, BUT NOT FORGOTTEN

Every day there seems to be less sense in our relations with Soviet Russia.

The United States finances the United Nations and Russia uses it as a world platform from which to hurl abuse at us.

Undesirables from Russia, holding credentials to the UN, continue to pour into the country. Immigration laws keep out thousands of victims of Nazi and Soviet terror.

While Russian diplomats and Reds roam our Nation, United States diplomatic representatives in Moscow are under rigid supervision, practically limited to their quarters.

The nastiest of Russian spokesmen wander around at will in our best society.

Cargoes of scarce materials leave our ports for Russia. It's cash business, apparently, all very reminiscent of pre-Pearl Harbor days.

The Marshall plan for spending $17,000,000 of our wealth to stop communism in Europe is ballyhooed to the heavens. At the same time Moscow sets a course designed to increase the cost to us of such a program.

Britain is credited by many with having shrewder diplomats than we have, but the Lion is pursuing a course just as muddled as ours. Bevin is applauded for rapping Soviet policies, and in a different part of London a colleague wins praise for negotiating a deal whereby Russian grain is exchanged for British machinery.

It's no wonder the ordinary fellow in the United States busy with his own dollar survival problems, can't make sense out of the doings of the diplomats.

The mainspring has gone haywire. What we need more than anything is statesmen, but if any of that breed still exists they must be camping in caves hidden away in the Grand Canyon.

Lincoln Day Address of Hon. John Davis Lodge, of Connecticut

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. MILLER of Connecticut. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable JOHN DAVIS LODGE, Fourth District, Fairfield County, Conn., to the Hartford Women's Republican Club, Hartford, Conn., on February 12, 1948:

Members of the Hartford Women's Republican Club, ladies and gentlemen.

The occasion which we commemorate today is of importance not only to the Republican Party but also to the Nation and to the world. Abraham Lincoln, the sixteenth President of the United States, was born 139 years ago today. Yet he is very much alive. His memory is truly enshrined in the hearts of his countrymen. In a very real sense he belongs to the ages—to our age. For in his 56 years of life he stamped an image of himself on the tapestry of history and made a lasting impression on the minds of men and women the world over. He was a pioneer. He pioneered in the lonely wastes of uncharted thought, in the unplumbed depths of the human soul, and in the field of action.

His memory has a very special meaning in this fateful year. It has a special meaning particularly for us Republicans who, while we bear much responsibility, have not yet received from the people the power completely to discharge it. It is not enough to talk like Abraham Lincoln—the Republican Party must act like Lincoln. We must translate into effective action the inarticulate aspirations of millions of Americans in order that we may meet the challenge of leadership which is presented to us. We must think of freedom not as a right to be used and sometimes abused, but as a privilege to be earned and passed on undiminished to those who come after us. We must be alert to defend and deserve that privilege. We must recognize that the concept of freedom is still the most modern, the most revolutionary idea which man has yet discovered as a basis for his spiritual, political, and economic life on this planet. We must be actively aware that freedom and responsibility are inseparable. We must so lead our individual lives as to vindicate the enormous sacrifices made in the cause of freedom by millions of people. We must fulfill our daily obligations to the society in which we live in order that when we have been gathered to our fathers we shall have made a lasting contribution to the cause of liberty. We must give more than lip service to the memory of the great man whose birth we are gathered here to celebrate.

The Republican Party was born in 1856 in the midst of the turmoil and terrible disagreements which preceded the Civil War. In this year of crisis—1948—the Republican Party must have a fresh, vital, and vigorous approach to national and international problems in order that a ravished and devastated world may have a "new birth of freedom."

Never before in the history of the party, never before since this Nation was founded, has any group had such a glorious opportunity for service and leadership as the Republican Party has today. If we fail to grasp that opportunity, our failure will be commensurate with the magnitude thereof.

The two-party system is the lifeblood of our Republic. If there were less than two parties there would be distatorship and our Constitution and Bill of Rights would be of no avail. More than two major parties often leads to confusion. It is important that the two major parties should bring before the American people the great issues of the day in order that differences of opinion should be thoroughly ventilated and exposed to public view. The greatest enemy of freedom is ignorance. The American people have a right to be continuously informed regarding the significant implications of the issues which face the Congress.

In approaching these issues the Republican Party should be guided by the principles which governed the actions of Abraham Lincoln throughout his notable public career and should bear in mind that the concept of freedom must be adapted to the needs of our day if it is to survive. It was Lincoln himself who said: "The dogmas of the past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise to the occasion. As our case is new so we must think anew and act anew."

The overwhelming majority of the American people worship freedom and revere Lincoln. They are deeply apprehensive regarding conditions abroad. They know that the struggle for freedom is not yet won. They are worried about conditions at home.

Now there are no pat answers to these difficult problems. There is no mumbo-jumbo by which we can suddenly dissolve the tyrannies which still threaten us and bask in the sunshine of a secure freedom. There is no panacea which can quickly dissipate our troubles, dispel our fears, and make out of a world recently torn by war a lotus land of peace. But there are certain principles which through the years have proved timeless in their validity; there are tenets in the faith of freedom which must be reaffirmed, which must be acted on. The Republican Party must stand for these principles if we are to meet the challenge of our time.

The great issues which confront us can be divided into two main categories:

1. Those which face us abroad; and
2. Those which face us at home.

The Republican Party has shown a commendable spirit of nonpartisanship with respect to foreign relations. Several of its members have made distinguished contributions to the development of an effective foreign policy. Indeed, it may be said that insofar as the Administration has abandoned the philosophy, appeasement or war, it is to a large extent the result of the effort made by certain Republicans. There is another choice. The Republicans have been instrumental in pointing it out. The European Recovery Program, about which you all have heard so much, illustrates the recent reorientation of the Administration's attitude toward foreign affairs. Though the principle on which this proposal is based is simple, the execution of such a vast undertaking is enormously complex.

As a member of the Committee on Foreign Affairs of the House, it has been my privilege to hear the testimony of many witnesses regarding this aspect of our foreign policy. While it is impossible within the brief compass of these remarks to penetrate deeply into the labyrinth of difficulties inherent in this program, I should like to say that in my opinion its success will hinge in large measure upon our ability to bring all the elements of our foreign policy in line with this proposal. For the Marshall plan is a strategical measure with relief characteristics. Strategy cannot be successfully prosecuted piecemeal. I have been very much disappointed by the failure of the administration to carry forward on a concurrent front the other vital segments of our foreign policy in order that the European Recovery Program should operate under the most advantageous conditions possible and in order to take every step to insure the huge investments which the American people may be called upon to make.

I should like to see the administration, as soon as possible, initiate action to accomplish the following objectives:

1. Call a meeting of the United Nations under section 109 of the Charter in order that the United Nations may be strengthened; with Russia if possible, without Russia if necessary. We who were the chief creators of the United Nations should take the lead in helping it to survive and grow and prosper.

2. Instruct our representatives to the International Monetary Fund, to which we make a huge contribution, to recommend that an international monetary conference be called for the purpose of effecting a planned devaluation of the currencies of the 16 nations participating in the European Recovery Program, in order that this may be accomplished with a minimum of economic dislocation and a maximum of benefit for western Europe and for the American taxpayer. The amount involved in the European recovery program is based on the balance of payments. Because the dollar has become the basic currency in the world today, the needs of the participating countries are estimated in terms of dollar deficits. Since these foreign currencies are artificially pegged, the Marshall plan constitutes to a considerable extent an attempt on our part to bridge the gap between the legal and the real value of these currencies. A devaluation of these currencies would make European commodities cheaper to buy. It should be expedited in order:

(a) That these countries may increase their exports and thereby reduce their dollar deficits; (b) by reducing their dollar deficits, reduce the load on the American taxpayer; and (c) increase American imports and thereby reduce the cost of living in America.

3. The President should decide on a policy with respect to export controls, and with particular reference to Soviet Russia and her satellites. Here we must recognize that a revival of trade between eastern and western Europe is important to European recovery. It is to be hoped that when we have helped the Marshall plan countries to create a capital goods surplus, the agricultural surpluses of eastern Europe will flow into western Europe, in spite of the iron curtain. On the other hand, it should be our policy and the policy of the nations receiving our aid not to help Russia to defeat the Marshall plan. This aspect of our foreign policy should not be allowed to drift from day to day on an improvised basis. It should be carefully considered, clarified, and synchronized with the European Recovery Program in order that it can help to implement its major intentions.

4. Call a meeting of the 17 nations now receiving reparations under the German Reparations Agreements in order that the questions of reparations and particularly the problem of dismanting of German plants may be reexamined in the light of the European Recovery Program. Our approach to the German problem should be revised in order that the German economy should play its part in the recovery of Europe. I do not share General Marshall's fears regarding a change in the dismantling policy, provided it is the result of conversations between the United States and those nations who are to receive reparations from Germany as well as aid from America. Separate and special agreements should be negotiated with those nations who are members of the German Reparations Agency, but who are not to receive American aid.

General Marshall's view is that a change in the dismantling policy would be regarded by the nations receiving reparations as a breach of faith by the United States. I do not propose a breach of faith. I propose a modernization of these agreements. I want to bring them up to date for the benefit of all. In any event there can be no harm in discussing their revision with the interested parties.

5. Instruct our representatives to the International Bank for Reconstruction and Development, to which we make a predominant contribution, to call a meeting of the members of the bank in order that the activities of this organization should be coordinated with the purposes of the European Recovery Program. For instance, I have been informed by Stanislaw Mikolajczyk, former leader of the Polish Peasant Party, that every dollar we spend in Poland goes to Russia. Former Ambassador Lane's arresting book tends to bear this out. Yet it is rumored that the World Bank is about to make a loan of $40,000,000 to the Communist Government in Poland. If Mr. Mikolajczyk is right, and his opinion is certainly entitled to a great deal of weight, we would, in contributing to such a

loan, be helping the Russians to defeat the Marshall plan.

6. The Foreign Ministers and high military officials of the United States and the participating nations should meet for the purpose of coordinating the activities of their respective military establishments in order—

(a) to avoid a duplication which is a burden on their economies and therefore a burden on the American taxpayer; (b) take such dispositions with respect to their armies, navies, and air forces as the tactical and strategical situation require; and (c) make those changes within their military establishments which seem desirable in view of the present stage of scientific development of the weapons of war. These results could be accomplished within the framework of the Western Union proposed by the British Secretary of State for Foreign Affairs, Mr. Ernest Bevin.

The above are but a few of the things which should be done as expeditiously as possible in order that western civilization may be made secure from the onslaught of Communist aggression. We know from bitter experience that appeasement leads to war. We must know by this time that the best way to avoid war is to be strong. We know that we are stronger if we have friends than if we are alone. We know that if these friends are strong, their strength will create a mighty compulsion to peace.

In other words, the European Recovery Program should not be an attempt to restore Europe as it was in 1939. It should not be an effort to put Humpty-Dumpty together again. It should be the beginning of a great movement to achieve an economic federation in Europe in order to spread freedom by extending the free-trade area. It should have as its ultimate goal what George Washington anticipated years ago—a United States of Europe. Such a concept involves politics as well as economics. American foreign policy must take the political factors into proper account if the economic program is to succeed. We know that a starving Europe cannot recover. We know that as long as Europe has not recovered it constitutes a hunting ground for purveyors of tyranny. Accordingly, we must face the challenge as it is presented to us—on all its fronts and in all its aspects.

I have given you these few suggestions also because it does not seem to me that a nonpartisan approach to foreign affairs demands that the Republican Party should sit supinely by and wait for the Administration to show the way. Had that been our attitude we would probably still be embarked on a policy of appeasement today. The right carries with it the responsibility—nay the duty—to participate in the formulation of an effective foreign policy.

When I returned from my investigation trip last November I hoped that our President would also see the challenge to America as a nonpartisan challenge. I confess that I have been deeply disappointed. In the first place, there has been an attitude on the part of the Administration that the Congress should accept the Marshall plan precisely as written in the legislation submitted by the State Department or the whole program would be compromised. While I have for some time enthusiastically favored the principle involved in the recovery program, it is my considered view, after weeks of study, that the Congress can improve the measure submitted to us and thereby add to its effectiveness and diminish the ultimate cost to the American people.

No one can deny that foreign and domestic affairs are closely related. They are to a large degree interdependent. What happens abroad has a very definite effect upon what happens at home, and what we do here with respect to our domestic problems will have world repercussions. To think otherwise is to be in fact an isolationist. There is no sharp line of cleavage between conditions in America and conditions outside America. We are involved in world affairs whether we like it or not.

I believe that the American people have a right to expect the Executive to rise above party in administering the vast enterprise which is the United States. I believe that the Administration must display the same degree of statemanship with respect to the needs of the American people as the Republican Party has displayed with respect to the needs of others. Yet the President has seen fit to treat questions of Tax Relief, Labor-Management Relations, the Fuel-Oil Shortage in New England, Public Housing, Federal Aid to Education, Social Security, and the Public Health, as well as other matters, as political footballs to be kicked around for the profit of the Democratic Party when they should be studied and acted on in the interests of all. The Republican Party has become infused with new blood. Out of differences of opinion within its ranks has grown a revitalized modern-minded party—a party which can withstand the pressures of the moment for the ultimate good of all—a party which is truly the party of the people. It is my belief that there are accommodations which the Government must make to modern needs which interfere in no way with the freedom of the people, but which instead help them to achieve a basic standard of living without which freedom becomes virtually meaningless. It is my belief that the Republican Party must be the party of youth, the party of new ideas within the framework of freedom, the party of insurgents, of young Turks, the party which will carry high the torch of individual liberty and thereby respond not only to the hopes and aspirations of millions of Americans, but to the longings of a prostrate world.

On the other hand, the Democratic Party is so distressed, divided, and distraught that it is hard to make out what they believe except that they believe that they should stay in office. Do they believe in anti-lynching and anti-poll-tax legislation in order to bring the concept of freedom to the fulfillment hoped for by Abraham Lincoln, or do they believe in white supremacy? Do they believe that Communism threatens freedom as Nazism did, or do they believe that they Communists should be accorded rights and privileges which will help them to destroy liberty? Do they believe in relieving the people of part of the enormous tax burden which adds tremendously to the cost of living, or do they believe that the cost of Government should go up every year as it has ever since the Democrats have been in power? Do they believe, as President Truman stated in his speech on the State of the Union, that $50,000,000,000 should be invested in American business in order to insure continuous employment and a rising standard of living, or do they believe in a system of taxation which will raise the cost of consumer goods and leave little for the start of new small businesses?

On the one hand the Democrats say that they believe that payments on the national debt should be made in order to combat inflation, and on the other hand they resist the cashing of terminal leave bonds by former enlisted men on the ground that such payments on the national debt are inflationary. They were opposed to price controls in 1946 and they favor price controls in 1948. They seem to think that the Government should stay in the red since the Reds stay in the Government.

The fact is that the Democratic Party is tired, torn, and tattered. It is desperately hanging on to power which it doesn't know how to use. It has lost contact with the people from whom that power comes.

This is a year of decision. It is a year in which men in public life should more than ever keep their eyes on the horizon in order that they may have vision to act in the best interests of the people and without regard to party advantage or their own political future. It has never seemed to me that public office is an endurance contest. It is a call to service. The American people are tired of empty promises—they want constructive action. At the time of Dunkerque, Winston Churchill promised the British people blood, sweat, and tears. That promise struck a cord of understanding and resolve which was felt throughout the Western world. Today we are engaged in a terrible conflict. It has been called a "cold war." Our promise for 1948 might well be sweat in order to avoid the blood and tears of another war.

If we are to avoid the "twin gulfs of immorality and inefficiency," if we are to meet the challenge of leadership in this troubled world, if we are to maintain America as a bastion of liberty, if we are to bestow the blessings of freedom on those millions who are languishing in chains, a revived, revitalized, rejuvenated Republican Party must take the helm and march forward to new vistas of achievement propelled by the mighty spirit of an enfranchised people and inspired by the simple greatness of Abraham Lincoln.

Government Spending

EXTENSION OF REMARKS
OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of my colleagues to the following thought-provoking editorial by the editor of the Gilroy Dispatch:

JUST WATCH GOVERNMENT SPENDING NOW

The tendency of most citizens is to demand and expect more and more service from local, State, and Federal Governments. Furthermore most public officials are continually seeking to expand those services in order to increase their own authority. All of these services must be paid for by the taxpayer.

It is high time we take stock of what Government services are essential and which can be done without. Some public and school buildings must be constructed, and some services must be expanded, but the time has come to eliminate all unnecessary expenditures. The day is fast approaching when small businesses will run into difficulties. Many of them will fail—many already are folding up.

Credits must be watched more closely than ever before. As small business houses close many of their proprietors will be seeking jobs. Soon a surplus of labor will accumulate.

Events of the past week have proved that the commodity markets can tumble without warning. The drop may be halted artificially for a while, but as supply catches up with demand a big break can be expected. When that happens millions will be lost in stocks on hand by merchants and wholesalers.

This prospect is one of the principal reasons why Government should curtail its spending now in order to help hold down fixed overheads for business and protect workers from losing homes and small ranches. Taxes have increased tremendously during the past year and next year will show still further increases as more and more costs are piled onto city, county, and school district administrations.

European Recovery Program

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony before the Foreign Relations Committee of the Senate on January 27, 1948, by Bernard Weitzer, national legislative representative of the Jewish War Veterans of the United States of America:

Mr. Chairman and members of the Foreign Relations Committee, I am happy to express to you as national legislative representative of the Jewish War Veterans of the United States the thanks of our organization for this opportunity to present its views on the European recovery program which you are considering.

Our membership is made up of veterans who have fought for America in one or more wars since and including the Spanish-American War. Our oldest surviving member until 2 years ago was a veteran of the Civil War. He died shortly after our fiftieth anniversary. In our membership today we have slightly more than 100,000 of the 850,000 veterans of the Jewish faith organized in 616 posts in 264 cities.

At our fifty-second national encampment in St. Paul, Minn., October 15–19, 1947, the more than 2,000 delegates representing all sections of the country unanimously approved the following resolution:

"Whereas the devastated countries of Europe are so weak economically that their very existence is threatened; and

"Whereas the people of the United States, through the Marshall plan, have proposed a system of aid which will rehabilitate these countries, save lives, and contribute to the peace and security of the world: Now, therefore, be it

"*Resolved*, That the Jewish War Veterans of the United States of America, in fifty-second annual convention assembled at St. Paul, Minn., October 15 to 19, 1947, record ourselves as favoring the Marshall plan and urging its adoption by Congress and its implementation in such manner as to make it most effective as soon as possible to make economic rehabilitation a fact."

In harmony with that mandate and by direction of our National Commander, Col. Julius Klein, I am appearing before you because he could not get here today.

As a veteran's organization I believe we have a special interest in the European recovery program. Colonel Klein emphasized to me that, as he looked back upon his experience in the Army in the South Pacific and the Philippines, it seemed to him that the men who fought the war fought for two main objectives. The first was to win the war. The second was to win the peace.

After victory veterans felt that they had played their full part in gaining the first objective. Civilians again, now they are ready to do what is necessary to gain the second objective and are relying upon this European recovery program to help make it possible. With the overwhelming mass of the American people, they want to get on with this job. They look to Congress to do this job and thereby make it possible to win the peace. Remembering the mud, blood, disease, and separation they experienced during the war, the veterans stand squarely behind Secretary Marshall in the conviction that "we must not fail to complete that which we commenced."

When veterans speak of peace, they usually envisage a peace which fulfills two conditions. One is prosperity, a degree of prosperity adequate to assure employment, a good living and a happy family life. The other is a peace which will last, not a mere truce before a third world war. I believe one thought was constantly in the minds of literally millions of our men overseas, the thought, "I'll do this and whatever else is necessary that my son may never have to go through this."

Western Europe, as we all know, is one of the world's two great workshops. Its 270,000,000 people normally account for more than half the world's international trade. Its present lack of purchasing power prevents recovery in South America, Asia and Africa. Unless this European workshop is enabled to produce, an economic blight will continue to rest upon the greater part of the earth. There can be no real enduring prosperity in the United States if economic break-down and chaos impoverish the surrounding world.

The peoples of western Europe, their men who fought and their women and children who suffered bombing, hunger, and enemy occupation, want the same things our veterans want—prosperity and a lasting peace. But they lack the means of making their workshop produce what it must, without assistance from us. Without the aid provided for in this program they might well lose hope in the future.

We cannot afford to consider this program only in material terms, for one of its most important consequences will be regeneration of hope and confidence. Once it has been adopted, the feeling will spread among people of western Europe that their recovery has already begun. Those who saw no way out will feel they are already on their way. Such an atmosphere of hope and confidence is an essential element in the continuance of private enterprise in the large areas of economic life where private enterprise is still dominant.

This program, furthermore, is indispensable to the attainment of a lasting peace. Without it, so serious a threat to peace would arise as to jeopardize not only the future security but also the future survival of the United States. This danger has been pointed out in previous testimony by Government officers and veterans' organizations. I do not need to repeat what they have said. The danger is obvious to any intelligent American who seeks to weigh the future consequences for the United States of an economic and social collapse in western Europe, of control of its great productive capacity by a totalitarian dictatorship, possessing unlimited ambitions, and of the probability that within a few years this dictatorship will have atomic bombs. We hope and believe that these consequences of a failure to carry out this program will be constantly kept in mind by every Senator and every Member of Congress.

A barometer of American security is provided by our appropriations for national defense. The Secretary of Defense has indicated that, if this program were not adopted, such appropriations would have to be raised to a yearly outlay equivalent at least to the total 4¼-year estimated cost of the program. Such would be the immediate measure of the increased danger of war and the increased danger to our national security. Americans are essentially a constructive people who like to get something of enduring value for large expenditures. Would we not rather spend this amount once for a 4¼-year program as constructive as any in history than spend it every year to guard against a threat which this program can preclude?

There are a number of other points I would like to make as briefly as possible.

We believe that the administration of this program must be businesslike. But we believe it is of the first importance to avoid conveying any impression that the State Department is not carrying out our foreign policy. Otherwise those countries we wish to help will be confused and the countries which are hoping for the failure of our plans will have material for the detraction of our foreign policies. A story is told of a prominent American banker who once said, "bring me lawyers who will tell me how to accomplish what I want to do." Veterans are looking to your committee to work out the means of doing what they want to do. That is to put into effect successfully this vital program for achieving the peace and prosperity for which they fought.

Much has been made of the exports this program requires. The American people have always considered that exports are beneficial and an important element in our national welfare. Although exports create a pressure just now against articles and commodities which are temporarily in short supply, they will continue to be important to our economic welfare in the future. Without this program, our future exports would rapidly wither away.

With this program, our export markets will be maintained for the years to come. In considering the immediate pressure which will be created, it is necessary to realize that the program will not increase our surplus of exports over imports this year beyond what it was last year. Thereafter our surplus of exports will progressively diminish as the aid we furnish Europe decreases and as European recovery enables our consumers to obtain many things they need or desire from abroad. At the price of a temporary pressure on a few sectors of our economy we shall gain permanent economic benefits of immeasurably greater importance to our people.

In adopting this program, we must at all costs avoid the failing of doing too little too late. These words, "too little and too late," have been written in blood on the history of many democratic peoples. We must insure now that they are not similarly engraved on the history of America.

Some prominent people have made general statements proposing that the program should be cut by or to various round sums. We have not been impressed by these statements because they are not supported by analyses and studies of the problem, of the needs of European recovery, and of the ability of the United States to fulfill them, at all comparable with the long, careful, comprehensive, and exhaustive analyses and studies from which this program resulted.

In state policy, as in business, action must be timely to succeed. If we delay the start of this program, we shall increase the risks and the cost, as the European will to recover and the plant essential for recovery deteriorate. Any reduction in the total $6,800,000,000, established with the greatest care as the minimum aid which will do the job for the first 15 months, will risk the success of the program and is likely to require its continuance for more than 4¼ years. Reduction of this amount might actually preclude the recovery which is our goal and make the program only a form of relief with no end in sight.

We believe that any American who opposes this program or urges that it should be reduced or delayed should realize the effect of his proposals. He should realize that their effect is to promote, to a degree proportionate to his influence, the Communist objective of increasing chaos in western Europe. He should realize that their effect is to promote, to a degree proportionate to his influence, the world policies of Stalin, Molotov, and Vishinsky at the expense of the world policies of the United States.

I feel that this is probably as important a problem as any that will come before the Congress in the lifetime of most of its Members. Our country's future—the future of the world—is involved vitally in the solution you gentlemen work out.

All of you who were in Congress in 1941 faced courageously the risks that were certain when you chose to have our country

fight a war against totalitarianism as symbolized by Hitler, Mussolini, and Tojo. Our whole country backed you up. It will support today this program which we believe will prevent the growth of a Communist totalitarianism to the point where a wer for survival—World War III—will be necessary.

All the speed possible, sums adequate for the size of the first 15 months task, an administrative plan that will get the maximum all-over results are the urgent need we respectfully ask you to meet.

Thank you on behalf of the Jewish War Veterans and of myself personally for your hearing of our views.

So Arthur Bliss Lane Gives Poor Poland a Book

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. SADOWSKI. Mr. Speaker, when Arthur Bliss Lane was Ambassador to Poland he saw the ruins and devastation in that country. He likewise must have seen the hunger, disease, and destitution among the Polish people.

What did he do for them? Did he try to assist them with loans and credits to rebuild the ruins and regain their strength? No. The contrary is true. He did his utmost to stop any loans or credits. He did his utmost to stop a meager supply of food and medicines for these unfortunate people, and he was successful in his efforts.

So, now he writes a book on Poland. To clear a guilty conscience? Or to make some easy money off of the gullible, as so many have done in the last 2 years? Maybe it is done for both reasons; but I have no patience with these so-called friends of Poland who shed tears over her because they do not like the Polish Government, and at the same time deny the Polish people food, clothing, medicines, relief supplies, credits and loans with which to rebuild their economy that was so completely destroyed by the Nazis. At least Hitler and the Nazis set out to destroy the Polish people and the Polish Nation openly and brazenly. They made no bones about their purpose and objectives.

But it burns me up to see these so-called friends of Poland destroying the Polish people and the Polish Nation just as deliberately as Hitler and the Nazis did, and then have the effrontery to write a book and make profit out of their destructive efforts.

Mr. Arthur Bliss Lane must know that slaughter, devastation, and oppression, even their century-long obliteration as a sovereign nation, have never weakened the Polish sense of national identity nor their patriotism.

Poland will regain her full freedom and become a potent instrument in the creation of a peaceful Europe. The signs of an unquenchable national vitality are unmistakable.

The real friends of the Polish people know this. They look with suspicion upon those who are continually carping about Polish politics, and do everything possible to deny loans and credits to the Polish people. These carping authors of books on Poland are actually driving the Polish people deeper under Russian influence. The Polish Nation last year spent all of its gold with the United States and Canada to buy wheat in order to give bread to their hungry and destitute. The Polish people are literally pulling themselves up by their own boot straps. Millions of dollars are made available for countries who did not suffer from the ravages of war, but Poland who took the full brunt of war's destruction and fury for six long years receives what? A book from the Honorable Arthur Bliss Lane.

After the war, from July 1945 up to September 1947, we gave in postwar assistance for foreign relief approximately $20,000,000,000.

Out of this sum only 8 percent or one billion six hundred million went to Poland, Czechoslovakia, Finland, Hungary, Albania, Yugoslavia, Bulgaria, Rumania, the Union of Soviet Socialist Republics, together with Ukraine and White Russia. The rest of the nations, including Germany and Italy, received eighteen billion.

Now, under the Marshall plan, seventeen billion more is going to Germany, Italy, England, and those nations that received the other eighteen billion, making a total of thirty-five billion.

Well, anyhow, we must admit that Poland and the other 11 nations of central and eastern Europe that took the heaviest punishment at the hands of the Nazis are making a splendid come-back on one billion six hundred million, and another new book by Arthur Bliss Lane.

Value of the Pound Sterling

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an excellent editorial which appeared in the Wall Street Journal recently. In my opinion it is about time for Great Britain to become realistic in connection with the pegged value of the pound sterling.

The editorial follows:

THE PEGGED POUND

Pegging the pound sterling is proving costly for the British—and for us, too.

Sir Stafford Cripps, Britain's Chancelor of the Exchequer, has reported that the Empire is now down to a bare $2,000,000,000 of gold and dollar reserves. During the past year Britain lost more than $4,000,000,000 in dollar balances. The $3,700,000,000 United States credit virtually disappeared; only $100,000,000 remains and that will be gone by April. The large Canadian credit has also evaporated.

The popular explanation for Britain's loss of dollars is that she has to import more than she exports, that the cure is to achieve a balance of her trade. This, of course, is part of Britain's trouble. But it is not the whole answer.

An important factor is the weakness of the pound. Holders of sterling know it's not worth its official price in terms of dollars. At every opportunity they will exchange it for dollars; so eager are they to do so that they will pay premiums up to 50 percent. Even the Attlee government's export and currency controls, models of stringency, cannot stop it.

Britain's loss of dollars last year through her own foreign purchases amounted to about $2,500,000,000. Since her total dollar drain was in excess of $4,000,000,000, at least $1,500,000,000 of her dollar resources disappeared for other reasons. Sir Stafford Cripps mentions one, "We are bankers to the sterling area and finance the dollar requirements of all sterling-area countries." But the well-known activities of unofficial currency-exchange markets strongly suggests that liquid British capital has been fleeing the pound and that its owners consider dollars a safer form in which to hold their funds. Last summer when Britain, for a brief period, made pounds freely convertible into dollars, the Bank of England was swamped with customers eager to swap their pounds for dollars.

The root of Britain's fiscal trouble is her stubborn insistence that the pound is worth $4.03. In the few free markets left a pound will actually bring only about $2.60. The difference between the free-market price and the official price is a subsidy. We have paid a large part of this subsidy through loans to the British treasury. The British people pay the rest of it in loss of capital, loss of trade, and a lower standard of living.

Consider it this way: The trade value of a pound—that is, its purchasing value in world markets—is $2.60. If you had £100 you could buy $260 worth of goods. Now, suppose the Bank of England offered to exchange your pounds for $4.03 each. Would you rather have £100 or $403? That's what the holders of pounds sterling think, too. It's not surprising the Bank of England had a run on its dollars last summer.

Every time the Bank of England paid $4.03 in exchance for £1 it gave $1.33 more than the pound's free-market value. For a brief while it tried to meet the $1.33 loss on each pound transaction by drawing down on the United States loan. The only surprise in the result was that Britain kept it up so long.

Now, look at it the other way around: Suppose the trading value of the pound and its official value were both $2.60—that is, that Britain devalued. That would mean, of course, that Britain would pay more pounds sterling for what it bought in the United States. It would, however, use up only the same amount of United States dollars as before. But Britain's problem is a shortage of dollars, not a shortage of pounds. Vis-a-vis the United States dollar, Britain would be no worse off than before.

And it would get out of a lot of difficulties. In last summer's interlude of free convertibility no debacle would have ensued. For then instead of needing only £25 to get $100, a sterling holder would have required nearly £39 to get $100. Dollars wouldn't have looked like such an exciting bargain, and even the sterling holders who still wanted to sell could have bought fewer dollars with their pounds. The strain on the Bank of England would have been much less severe. More likely there would have been no strain at all.

If today the official price of the pound sterling, in terms of dollars, were equal to the pound's actual trading value, the two currencies could be made freely interchangeable with no difficulty. The flight of capital from the pound would dwindle as there would be no bargains to be had by switching.

Britain, of course, would still have a dollar drain to the extent that its exports fell below imports. But this drain would not be aggravated by the impetuosity of runaway capital.

Furthermore, the dollar drain from its export deficit would probably decrease. For to the American customer the price of British goods would decrease; the bargains would be on the other side.

Today the cheapest British car costs £325 delivered in New York. To the United States customer that's $1,300. For the same price he can get a heavier, more powerful American car. With the pound at, say, $3, the British car would cost an American only $975. The British automobile then becomes an attractive buy. The same situation applies to whisky, textiles, and a host of other goods which Britain is trying to sell in an American market that is getting more competitive and price-conscious every day.

Sir Stafford says he doesn't intend to change the price tag on the pound because if he did the British "would have to pay more for what we buy abroad." How he intends to prop up the pound, he made clear to the Commons on Tuesday. The dollar drain, he said, must be closed "by our own efforts supported by the Marshall plan."

Sir Stafford is compounding Britain's difficulties—and increasing the cost of our own foreign aid—by persisting in the delusion that there is profit in an overvalued pound. Somebody has to pay the subsidy and we have the fretful feeling that it may be us.

Poland Betrayed

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington (D. C.) Times-Herald of February 11, 1948:

THESE DAYS
(By George E. Sokolsky)

Ambassador Arthur Bliss Lane has contributed immensely to the American people by publishing I Saw Poland Betrayed. It is a report to his fellow countrymen on his mission to Poland between 1944 and 1947.

I wonder whether the title should not be "I Saw America Betrayed"? for when the officials of a country forsake its honor and lower its dignity for whatever expediency, do they not disclose that its spirit has been fouled, its national morality abandoned?

The tale really begins at Tehran when Great Britain, which went to war with Germany over Poland, abandoned principle upon demand of Stalin and at the instigation of Roosevelt. Lane says:

"The discussions at the conference at Tehran in December 1943 among Roosevelt, Churchill, and Stalin remained an official secret * * * even within the Department of State the truth of what happened at this momentous conference was probably not known, except perhaps to two or three.

"Some key officials, indeed, who had the responsibility of making important recommendations on matters dealing with the United Nations organization, in conversations with me shortly after President Roosevelt's death in April 1945, deplored the fact that no records of the Tehran meeting were available even to them. Perhaps none had been made."

For page after page, following this quotation, Lane records the deceptions pursued by President Roosevelt. He recounts in detail the relations between the President and Charles Rozmarek, president of the Polish-American Congress. Rozmarek wrote to Lane:

"President Roosevelt in his talk with me expressed distrust of Stalin, having been fooled by him, as he stated, on a number of occasions. He plainly indicated that he was fearful that Stalin might again collaborate with Hitler as he did in the initial stages of the war, and the President wanted at all costs to prevent such an alliance.

"He kept on repeating to me: 'Let us win the war with Germany first.' The President let it be understood that once Hitler was defeated, he would know how to handle Stalin."

Stalin actually got a better deal in Poland from Roosevelt and Churchill than he got out of Hitler by the Stalin-Hitler alliance. Apparently Roosevelt was so sure that he could outfox Stalin after the war that he complacently permitted Stalin to outfox him while the war was on.

Lane went to Poland as our Ambassador after the peace and after we had recognized that country's puppet government. Our mission to Poland was treated cavalierly. It was improperly and even humiliatingly housed.

Its diplomatic telegrams to its own government were delayed or not sent at all. Members of the mission and other Americans were arrested. The Russians established the fact in the minds of the Polish people that the United States did not count.

Did we do anything about it? Of course. Ambassador Lane reports:

"Over my personal protest, Director General Herbert H. Lehman had appointed as director of the first UNRRA mission to Poland the Soviet member of the UNRRA Council, Mr. Menshikov. * * It was no surprise to me when in August the agreement concluded in Warsaw provided that the Polish Government, and not UNRRA, should have complete jurisdiction over the distribution of UNRRA supplies in Poland."

Also we granted a $90,000,000 loan to the Polish Government. Lane telegraphed the State Department:

"With the greatest earnestness of which I am capable I beg the Department not to approve the extension of any credits at this time. When the terroristic activities of the security police come to an end, when freedom of the press is restored, and when American citizens are released from Polish prisons—not until then should United States public funds be used to assist the Polish provisional government of national unity."

He ends his chapter:

"In my opinion, these minor gains in no way compensated for the loss of prestige suffered by the United States when we granted credits to a government which had not kept its word to us and which seized on our leniency as warrant for proceeding to even greater attacks on the freedom of its own citizens—and of our citizens."

The book should be read by every American in humility and shame.

Are You for the Marshall Plan?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following speech that I made over radio station WWJ in Detroit, Mich., on Monday, February 16, as follows:

One of the most important matters up for consideration before Congress at this moment is the Marshall plan, the European recovery program, or as it is sometimes referred to in its abbreviated form, ERP. This subject is of utmost importance because it involves politics and economics.

The program cannot be discussed in its entirety in the short space of 15 minutes. However, I do wish to touch on certain phases of our foreign-relief program, and in that connection, I wish, first, to refer to Senate Document No. 112 that was recently issued.

This amazing report shows that the total estimate of postwar assistance for foreign relief, rehabilitation, and so forth, has reached the staggering sum of nineteen to twenty billion dollars, exclusive of what may be contemplated under the Marshall plan proposals. This report covers the period from July 1945 to September 1947.

What is especially interesting to note is that Germany and Italy, two of the enemy nations, received $1,674,000,000, while Poland, Czechoslovakia, Finland, Hungary, Albania, Yugoslavia, Bulgaria, Rumania, and the U. S. S. R., together with Ukraine and White Russia, received a total of $1,644,000,000. Germany and Italy, the enemy nations, received $30,000,000 more than these much devastated nations of eastern Europe.

England, France, and Greece received $7,288,000,000.

Maybe this past policy makes sense to some people, but I am sure that it will not be understood by the vast majority of our citizens, and that it does not have their approval. I am sure that our citizens expected a humane policy which would give fair and equal assistance to the nations devastated by war. I am sure that they do not desire to follow a relief or rehabilitation program based on politics.

Our original purpose was to work out a relief, rehabilitation, and recovery program for European nations in conjunction and in cooperation with the United Nations. This was the honest and proper way to pursue a world recovery program, but certain bankers and international cartellists, under the guise of a bipartisan program, wrecked the plan that the honest and decent American citizens were supporting. A world recovery program under the United Nations would have cost our taxpayers less than one-half of what this selfish and inequitable program is costing us, and it would have brought us the respect, gratitude, and love of the whole world, instead of envy, fear, suspicion, and hatred.

I believe that our political approach is likewise wrong. I believe that our support of the rightists, or of the prewar status quo, can only bring us the enmity and hatred of the European people. That is why our position is so bad in Greece today, and that is also why we have made a mess of it in China. The people of Europe do not want communism, but likewise they do not want a return to their old governments and to the misery, intrigue, war, and starvation that those governments have brought upon them.

I am not in sympathy with a program which will shower billions of dollars on some nations and some people and ignores the plight of other people who suffered so much at the hands of the Nazis. How do you feel when you read that two and a half million German children could eat American ice cream for Christmas and 1,000,000 Polish orphan children, who went through all kinds of hell for six long years, are ignored and forgotten?

It seems like our bipartisan, big-business, and international cartellist program will only bring us the hatred and enmity of all the people of the world. We appropriated $600,-

000,000 for German civilian relief on July 23, and then 2 weeks later canceled a miserable $15,000,000 relief fund for Poland. This is something that many citizens cannot understand.

We had originally embarked on a sound American program which would give aid and credits to all people and all nations. This was the right policy to pursue, as it was in the old American tradition that has made America strong and respected. The present policy has resulted in a lot of confusion and misunderstanding. For example, we have now three groups of people in America: Those who are sincerely supporting a program of genuine relief and assistance out of the charity of their big Christian American hearts. Then there is the second group that has always opposed old-age pensions, school lunch programs, aid to veterans, Federal aid to school teachers, aid to the incapacitated, the blind, and crippled. Yes; those who wouldn't give a bone to a starving dog we find strongly supporting the present and proposed program, because it is a policy of anticommunism and a restoration of the rightists and reactionaries in Europe. Thirdly, there is the group of big bankers and international cartellists and all of those speculators in petroleum products, grain, and commodities who see for themselves an opportunity to make big profits quickly out of these free dollars that are being given to certain countries. Their motives for supporting the program are not based on patriotism, on a sound foreign policy that would work for peace, or because of sympathy for the destitute and hungry, but they have only one purpose in mind, and that is greed, high prices, and big profits that they can realize quickly out of this program.

I would like to see a genuine relief program where the gifts from America would be distributed directly to the needy people by established charitable organizations, such as the Red Cross, the various religious relief organizations, and the many other societies that for years have been doing this kind of work, so that our gifts would not fall into the hands of the profiteers and black marketeers, or into the hands of political cliques, where the people must sell their souls to get bread, or are bled white by the profiteers. The present method of distribution has brought us the hatred and enmity of the destitute and hungry.

A genuine relief program should be supplemented further by the bill which I introduced, and the amendment that I offered to the recent relief bill, which provides for free postage on gift packages being sent from the citizens of the United States to the people of Europe. In the first 9 months of last year Americans spent $44,000,000 for postage alone to send these gift packages. They are sending old clothes, shoes, food, and those things that the people in Europe desperately need. These packages go directly to the needy and the recipients know that they come from the United States. These gift packages have brought us more good will than any other thing that we have done, and it is my firm conviction that this program should be encouraged, as it would bring the greatest benefits in goods to the needy and genuine appreciation to the American people who send these packages.

I believe that Congress should junk the present program. We should quit giving gifts and instead we should give loans and credits, without interest, to all nations and their people who have suffered from the ravages of war. We should not play favorites and try to rebuild one country as against another, and particularly, as we have been doing recently, where we ignore nations and people who have been our loyal friends for centuries, and who have been on our side in every struggle. It is said, "But they have a government that we do not like." And I say in reply, "So what? The people of that nation also may not like their government, but governments come and governments go, but nations and people remain forever."

These people stand in ghastly fear of our policy of rebuilding Germany. They know that Germany has sprung at their throats at every opportunity, and in some nations, such as Poland, there is hardly a family who has not suffered the loss of fathers, mothers, brothers, or sisters. Here's a nation that had 30,000 orphans in prewar days. Today it has 1,000,000 orphans as a result of German barbarism and beastiality. Two thousand tons of human ashes were found at one crematorium just outside of Warsaw. These people and these nations have a right to be alarmed about our present policy. They also have a right to ask, "Why don't you give us an equal opportunity to rehabilitate and reestablish ourselves?"

Now, let's turn to the recent London Conference at which Russia asked for $10,000,000,000 in reparations from Germany, and which we opposed so strongly. From my viewpoint this is not an unreasonable request. It is estimated that Poland suffered over $100,000,000,000 in property damage by the Nazis. Russia's damages in all probability are two or three hundred billion dollars. Now, why shouldn't the Germans work and pay for their sins? Certainly $10,000,000,000 is not a great amount of compensation for the damages they inflicted upon the Russian people. Since the war, the United States has already contributed twice that much for the relief of European nations, and the funny part of it is that we won the war. It will serve America no good to be identified as supporting the Fascists and anti-Democratic forces anywhere in the world. Certainly that is not the desire nor the program of the rank and file of the American people. We love our liberty and we have advanced steadily in our fight for better economic and living conditions. I am sure that the sympathies of the average American are with the down-trodden, and not with the kings, queens, dukes, and the big-landed aristocracy of Europe, or with the European cartellists and monopolists. The people of Europe desire liberty, freedom, democracy, and better living conditions, just as much as we do. I believe that they shall get them. I believe that neither the left nor right shall win in Europe. I only hope that when the clouds over Europe roll away that we shall not be hated and despised by everyone. I am sure that the United States will be respected, loved, and admired if we follow the program on relief that I suggested, and also the program on credits and loans to all nations, without interest, and so to give all of them an equal opportunity to rehabilitate themselves without playing favorites one way or another.

Now, just recently it has been revealed how the proposed $17,000,000,000 Marshall-plan money would be distributed. These facts have been withheld from the public for a long time. But I think the public has a right to know who gets the money. After all, who is more entitled to know where his money goes than the man who pays the bill?—which means all of us taxpayers. Here is the break-down as it has seeped out of the State Department and the supporters of the Marshall plan:

One-third of the total $17,000,000,000 primarily goes to England. That is a sum of $5,348,000,000 earmarked for England. This will be in addition to the $3,750,000,000 which we gave to England in 1945.

I voted to help the British in 1945, as I felt that they needed some assistance, and as we were informed that this money would put them on their feet. Now they came back for another $5,348,000,000.

Holland is to get $2,436,000,000. Holland has a population that is smaller than that of the city of New York. Yet we propose to give them $2,436,000,000. That means that we will give $308 for every man, woman, and child who lives in Holland.

Denmark is proposed to get $582,000,000, and Denmark has a total population that is smaller than that of the city of Chicago.

Ireland, also, gets some of the money. Ireland was not in the war, and, so far as I know, Ireland didn't do so badly during the war. But under the proposed plan Ireland is to get $497,000,000—nearly one-half billion dollars.

Then there is Iceland. Iceland is earmarked for $38,000,000. Iceland has a population equivalent to that of Highland Park and Hamtramck, Mich., combined. Now, what couldn't the municipalities of Highland Park and Hamtramck do with $38,000,000?

Then there is Norway, which country I believe should have some help, as she did suffer from devastation during the war. But Norway is earmarked for the huge sum of $234,000,000.

Next comes Portugal. Portugal was never in the war, and I know for a fact that they profited tremendously from the war. Portugal is to get 150,000,000 American dollars.

Now, $6,000,000,000 is earmarked to go to Germany, Italy, and Austria, the enemy countries. Now, in the face of all this information, the proponents for the Marshall plan will brazenly stand up and say that this is a program for aiding the victims of war-torn countries in gratitude for their losses in the war. Those countries who suffered the most receive none of this $17,000,000,000. Will they be our friends in the future? Is it any wonder that our neighbors, the South American countries, all have a platter, looking for a hand-out of these free and easy dollars?

Oh, yes; and the expenditures under the Marshall plan is not the end. Already we are informed that an additional billion dollars must be given to Greece and Turkey, and additional hundred of millions must be appropriated for China, Japan, the Philippines, and other spots in Asia.

Here at home we have a shortage of steel, of fuel oil, gas, grain, and so many other commodities. We have the problem of taking care of our veterans, of our disabled and incapacitated, of our teachers and school children, and of the aged and older persons who are living on miserly and beggarly pensions.

Is it not time to ask if those 12 countries in central and eastern Europe who were the most destroyed and devastated during the war can make a recovery on $1,600,000,000, why is it necessary to dump thirty-five to forty billion dollars into these other nations?

I think it behooves every American citizen to look into this foreign spending program deeply and thoroughly. Let's not permit ourselves to be blitzed into national bankruptcy. Let's insist that our foreign recovery program be placed on a sane and businesslike basis.

Bon Voyage, Then, Red Frigate of Fortune

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. CELLER. Mr. Speaker, here in this country no more distinctive recognition can come to an undertaking than to have it generally referred to as an American institution. Run over in your mind those so considered; you will find their number surprisingly small, and the chances are heavily odds-on that you will have included the famous big red book Who's Who in America.

Certainly when one among these few undertakings which our customs and our usages have combined to rate as an American institution, completes a half century it seems appropriate and fitting that proper notice be given it.

Therefore, I now so record the issuance of the fiftieth anniversary volume of Who's Who. Since James M. Cain has lent his genius to preface this golden anniversary edition, I use his introduction to express, far more effectively than I, what the occasion would seem to justify:

Institutions, if they be actual and not merely nominal, will be found, I think, to possess some element, some simple, pregnant aspect, easily comprehensible to the popular imagination, which sets them off from other members of their class and gives them special status. Harvard University, certainly regarded as a thing apart, is the oldest college we have, and thus arouses reverence in the average mind, which probably doesn't know that it is also the richest, and certainly doesn't care that it is possibly, as some think, the wackiest. The late Caruso, not greatly surpassing various contemporaries in style, repertoire, or beauty of voice, could nevertheless sing louder than anybody on earth, and so passed into legend, along with Dan Patch, Babe Ruth, and other living wonders. And Who's Who in America, though a gospel, a heresy, and a raging polemic in one, and thus potentially suspect, is at the same time a Dun, a Bradstreet, a social register, and a hall of fame, all merged into a grand consolidated national glory highway, and thus unique in the eyes of the American people—this in spite of its frantic denials that it is any such thing, and the ironic agreement of its critics that it certainly is not.

It didn't seek, and doesn't seek, this role, to that extent its asseverations are true; but this is merely one more instance of the difference between what is aimed at and what is hit. The original idea, as conceived by the late A. N. Marquis, who founded it in 1897, was simply that it be a source of exact information, to be supplied by the subjects themselves, for the use of schools, libraries, newspapers, and scholars, about people likely to be frequent objects of inquiry. For a title, it is well known, of course, that he adapted to his purposes the title of the English "Who's Who," which had been published since 1848. What is not so well known is that this book, except for its title, bore almost no resemblance to the book Mr. Marquis had in mind. Until then, the English Who's Who was simply a handbook of official dignitaries, bearing more than a passing resemblance to the Social Register, the Royal Blue Book, and parts of the Statesman's Year Book, with no attempt at biography at all. Indeed, for most of the people it listed, there was little of a biographical nature to tell except their clubs, recreations, and degree of consanguinity with some noble lord; for the main point about them was their position, whereas Mr. Marquis was concerned, and indeed the whole American social scheme forced him to be concerned, with achievement. It is interesting to note that when his innovation prompted the English publishers to have a whirl at biography too, the change gained scant praise, so little that the change was regarded as a failure, and the editor responsible for it lost his job. Once accepted, though, it couldn't be discarded and crept steadily into the policy of the English book until even what a man had done began to take precedence over what he had been borne to. Of course, Mr. Marquis tried to standardize achievement as well as he could, so as to dissociate it from his personal opinion. Above a certain rank, in various fields of endeavor, such as the judiciary, the military, the Government, the academic faculty, and the like, the subject was listed ex officio. If he was an Army officer of specified rank or higher it made no difference whether he was a hero or not, whether Grant had relieved him at Cold Harbor, whether McKinley liked him: If he was of that general rank he was included in, if not, out. Industry, the liberal arts, and the learned professions had to be considered on an individual basis, since they did not, and do not, make rank a systematic matter, but here eminence in the main was a guide, and since it was easily ascertainable, selections were not difficult.

And yet, back of all this, in spite of the impersonality which Mr. Marquis imposed on himself, judgments had been passed, comparisons made, critical standards raised. If he explained that all Federal judges were in, regardless of what law schools they had been graduated from or which Presidents had appointed them, there would be those to demand by what right a judge assumed to be of more importance than the owner of a 30,000-acre ranch, or why playwrights, as a class, apparently took precedence over wholesale grocers, or admirals over contractors. Without his knowing it, there lurked in this stubby, red-bound book, which presently came off the presses with some 8,000 biographies listed, the elements of a storm which goes on, though eased by sensible changes and prestige that time has conferred, quite briskly to this day.

However, there was little indication, from the reception accorded volume 1, of the controversies that would ensue later. It was reviewed, and in the main favorably, and the sales permitted Mr. Marquis to go ahead with volume 2, his plan being to bring out a new edition every 2 years; but it was not, so far as inspection of old newspaper files shows, very hot news. And it doesn't seem to have occurred to many people that anything unusual in the way of a reference book had made its appearance. For one thing, the county history, or book of sketches in which persons of prominence were written up for some trifling sum like $150, were what the country was accustomed to in the way of brief biography, and while Mr. Marquis said no sketch in his book could be paid for, many assumed that this needn't be taken too literally; such statements, indeed, were in no way unusual in that era, even in patent-medicine advertising, but it was usually found that a quid pro quo, a contribution to a worthy cause, could be discovered somewhere along the line, for a little looking. Little by little, however, through hearsay and repetition and personal testimony, it began to seep into popular consciousness that the Marquis statement was true: You couldn't in the case of this book buy in. Then a great many Americans began to ask: "If you can't buy in, but at the same time you are in, what is the answer?" It wasn't long before they had it: "You are a success." The next step, as soon as popular consciousness began to stir editorial consciousness, was that the book did become hot news, but of a peculiar kind. For, in addition to national and international aspects, it had city, State, and even county aspects; it became as Gen. W. S. Hancock said of the tariff, "a local issue," and for much the same reason: It touched, directly and separately, every community in the land, for there was hardly one of them who didn't have somebody in it, if only some lawyer who had got himself appointed to an official body which carried ex officio listing for its members. Thus, as each new volume appeared, all papers carried page 1 stories about it, with lists of local boys who had made good, and special attention to new boys in the freshman class. Then the editorial writers took over, airing countless opinions about it, some of them favorable, others not. Among those against was Mr. H. L. Mencken, and his biennial remarks on the subject, first, in the Smart Set and, later, in the American Mercury, were awaited by all, and by none more eagerly, it was said, than the staff of Who's Who in America themselves.

Opinion, as it appears in American newspapers, need not be taken too seriously, for lying back of it is the fact that an editor is always up against it for something to write about, and finds it easier as a rule, as well as more entertaining, to knock than to boost. Thus many complaints were captious and some were waggish. Yet in the early years there runs through these criticisms a fairly consistent vein; the book gave far too much space, it was said, to obscure clerics, do-gooders, and professors in small universities, and too little to hustlers, comedians, and similar celebrities, really in the news. It may be conceded, I think, that this complaint was more than slightly founded on fact. Mr. Marquis, though I never knew him, had the reputation of being a godly man; his picture, as I look at it now, suggests more a bishop of one of the Protestant faiths than a lay publisher of books. And he constantly proved, by the policies he adopted, that he was profoundly impressed by education and the deference due to educators. From the beginning, the advertisements of schools, colleges, and universities were the only ones he would accept, this rule being still in force, so that an American, when he opens the English Who's Who and finds all sorts of blurbs, notices, and appeals scattered through it, and even stamped in gold on the cover, gets a bit of a jolt.

And it must be conceded he was almost incredibly indifferent to stage, screen, and the other lighted arts. It was the limited interest shown in these fields, I think, which really annoyed commentators most, as the omissions were glaring. And yet now, I think it can be argued that this very austerity, whether by luck or some profound sagacity that guided most things Mr. Marquis attempted, had much to do with the position the book occupies today. For it is almost impossible to picture such a work, dedicated to the cafe society of the early 1900's, as commanding the confidence of intellectuals, and this confidence it had to have if it was to win general acceptance. Later, when rock-ribbed repute had been attained, would be time enough for broadening in places that had been too narrow. As a matter of fact, this liberalizing of the book has long since taken place. Mr. Wheeler Sammons, when he bought out Mr. Marquis in 1926, did not, so far as I know, make any radical changes. But he is a man of somewhat different temperament, more hospitable to the sophistications of life, and given to more contacts, so that he is probably in wider contact with his country than was his predecessor. He is said to maintain an organization, a set of advisors scattered all over, which makes it unlikely that any important subject be left out, and almost impossible that some inappropriate subject get in. Inappropriate subjects, from all one hears, are perhaps his chief grief. They lay siege to him in droves, by wire, by mail, by personal visit, and by importunities of their friends, trying to get themselves listed. It is surprising, however, how few downright absurdities have been placed on the roll.

The Sammons innovations are in no way dramatic, but they should be pondered by all who edit reference books, for they are corrective of the special ills that afflict refernce books. The first, apart from the changes already noted, is the indication, in a clear, simple way, of the pronunciation of names about which there can be any doubt. To those who have struggled through musical reviews which assume familiarity with the most obscure titles, historical treaties which allude to forgotten personages without explaining who they were, or Britannica articles which quote, without translation, long passages of Latin—to all who have been annoyed by such phony pretensions of contributors, this gesture toward common sense

is most refreshing. Often, due for lunch with some visiting fireman, one looks into Who's Who in America for information about him, and it is indeed most helpful, if he has some trick way of pronouncing his name, to know this in advance. And anyway, since names are often so arbitrarily pronounced, it is pleasant to be sure.

The second is the listing, begun some 10 years ago, of the subject's children, in addition to his marriages. This, as the effects accrue year after year and find their way into Who Was Who, will prove of enormous help to the American scholar, and not only lighten his labors but improve his work. As things stand now, information as to the descendants of some character of history is often maddeningly difficult to get, simply because the editors of reference books did not think to instruct their contributors, most of whom have the data at their fingertips, to include it. Such categories, for example, as our military families are not commonly the subject of easily located studies; their members flare into prominence briefly, then are little heard of until the next war, and articles about them are more concerned with military exploits than with sons, daughters, or in-laws. Seeking the kin of some general, one would give almost anything for a book that would list them definitely and quickly. Yet most books do not. The English Who's Who, careless at best on the question of marriage, is a complete blank on the subject of children: "1 s., 3d." is its idea of treating the subject; that "s." and "d.'s" might have names is a possibility nobody apparently thinks of. The Dictionary of American Biography, to take an instance on our own side of the water, is a complete wash-out in this respect. The subjects' marriages it often mentions but rarely in such fashion that one can be sure the subject is fully covered. Children figure in such remarks as, "A daughter, Clara, has written a memoir, My Father and Reconstruction," but as to whether Clara was an only child or had brothers and sisters one is usually left in the dark. The Sammons contribution, if it goes no further than Who's Who in America, will do much to relieve this state of affairs; if it is imitated, as it should be, it could have a considerable effect on American biography.

Sharing Mr. Marquis' interest in education, and concerned over practical methods of promoting it, Mr. Sammons instituted, in 1938, Who's Who in America biennial citations for educational philanthropy. This, like the book itself, is something of a local issue too, for the terms of the award are so devised that it will not become the exclusive possession of a few rich men giving to a few rich colleges. For the amount of the award is considered in relation to the amount of endowment held by the college which gets it, so that small donors to small colleges are as likely to be recognized as large ones to larger places, and in point of fact many have been so recognized. Indeed, one can assume that such a citation, whose effect is likely to be considerable, can have the result of channeling money into places where it is really needed, rather than encouraging it to pile up in places where there is a great deal of it already.

In the course of an ordinary writing day, one consults the World Almanac at least once, the Brittanica three times, the Webster Unabridged Dictionary six, but Who's Who in America, in my own case anyway, is thumbed every hour on the hour. This addiction, this habit of settling endless things, from the spelling of a name to the title of a song, by a quick look-see at an appropriate entry, goes back to my childhood, when I made the acquaintance of volume 1 in the year 1901, in my father's study at Annapolis, during a summer when I was supposed to be boning square root as a preliminary to a special promotion in school, but actually spent most of my time with this fascinating book, which told all about Roosevelt and Sampson and Schley and Dewey and McKinley and Bryan and other worthies of the era, as well as George W. Cable and James Whitcomb Riley, Joel Chandler Harris, and others lying closer to my heart, and transformed them from fabulous newspaper figures into flesh-and-blood human beings. This early association, long known to Mr. Sammons, is the reason for his suggestion that I contribute a preface—that and the circumstance that I am one of a brief list of persons mentioned both in Who's Who in America and Who Was Who in America.

My education, thus derived in no small part from these pages, has been invariably my entertainment too. I know of no book so endlessly absorbing as this, so full of surprises. so suitable to sporadic peeping or hour-long poring; if you are a stranger to it, I congratulate you, for many pleasant hours lie ahead, an adventure in self-improvement, though one, I am afraid, which is habit forming. It seems odd, as I make ready to wish it well on its second half century, to reflect that I shall not be here to see it make port at the hundred-year mark, and that Mr. Sammons won't, and that most of those now associated with it won't. But so great is its usefulness, so great its vitality, so profound its hold on the country, that I think we are safe in assuming that it will dock, on schedule, with full cargo. Bon voyage, then, red frigate of fortune, and may the passengers of the future match the distinction of those of the past, and of now.

JAMES M. CAIN.

National Security and Universal Military Training

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article and five editorials from Wisconsin newspapers:

[From the Green Bay Press-Gazette of January 28, 1948]

REPRESENTATIVE BYRNES HAS CHANGE OF MIND, NOW FAVORS UMT—CONGRESSMAN SAYS HE BELIEVES TRAINING ESSENTIAL TO SECURITY

Representative JOHN W. BYRNES has announced that in light of present-day requirements for the adequate defense of the United States, he has changed his previous stand on universal military training, and now is in favor of such a program as vitally necessary to our national security.

In a 2,000-word statement issued this week, the Eighth District Republican Congressman declared that he has not arrived at this conclusion lightly, not without a great deal of study and soul searching, and said he wanted to explain the reasons for his change of mind in detail.

"I approached this problem by attempting to find the answer to just one question only. I tried to throw sentiment, emotion, and prejudice aside and arrive at a clear-cut answer to this question: Will universal military training make our Nation more, or less, secure?"

He went on to explain that he had expressed his opposition to peacetime conscription on many occasions, and that to him, as to many Americans, "the idea of drafting young men into military training during a time of peace has been repugnant" and "has gone against everything that my schooling and my instincts have taught me to believe."

Representative BYRNES also stated that universal military training was only one phase of a general program he sees as imperative for the future defense of this country.

"In preparing for a war that may come in spite of all of our efforts to prevent it, the only course open to us is to arm ourselves so strongly that not only would other nations hesitate to attack us because of our ability to strike back powerfully and swiftly, but so strongly that if we were attacked we could smash the assault quickly and surely," he declared.

"I wish to make clear that I am not discussing the type of warfare that is referred to by sensation-seekers as 'push-button' warfare," he said, adding that he was discussing the type of warfare which is possible today or in the next few years.

Other points in an all-around national defense program outlined by BYRNES included a powerful air force and air-borne troops who could defend against an air-borne attack against the United States and meet the initial blow; a cooridinated and highly efficient intelligence service; continuous scientific research and development; industrial mobilization; and unified armed forces.

But getting back to UMT, Representative BYRNES explained that reasoning process by which he had arrived at the conclusion that it is a necessary part of any adequate national defense program.

The first phase of the type of warfare possible today would be an attack through the air without warning, he said. The attack would be primarily against the great cities and would cause great destruction both to physical structures and people. And then he asked, "in such a war, where such a devastating initial attack is possible, what kind of armed forces do we need?"

First it is absolutely essential to have a highly trained body of men equipped with the latest weapons to meet this attack and be prepared to strike back to seize either advance bases for future operations or to follow up our own bombing offensive in the homeland of the enemy, BYRNES continues. And then, to defend against air-borne invasion of America, the only possible defense is "well trained reserve units in every part of our own country ready and able to meet possible invasion." These Reserve units, he points out, would also be needed to handle problems of evacuation, medical care, fire fighting and repair of essential communications and transportation.

"This will require large numbers of trained men organized into Reserve units," BYRNES declares. "To maintain such a large number of men in reserve units, it is my opinion that universal military training, which will give the rudiments of training to our young men for 6 months, then require that they join one of our reserved armed force units and train with it for a certain period, is essential and necessary. Our reservoir of trained men left over from the last war will not last forever. It must be constantly refreshed."

"Thus, straight logic, based upon a review of what is possible in the future, has led me to believe that universal military training is vitally necessary, in this era of uneasy peace, for our national security."

The Representative goes on to point out that UMT will cost money, and so will the other five points in an adequate defense. But he declares that "if it will prevent a war, or make us relatively more secure against attack, it is money which must be spent."

[From the Milwaukee Journal of January 27, 1948]

REPRESENTATIVE BYRNES NOW BACKS UMT

It takes Representative JOHN W. BYRNES, of Green Bay, some 2,000 words to explain to his constituents why he has changed his

mind about universal military training and is now supporting it. But the effort is worth the words.

Mr. BYRNES, quite unemotionally and searchingly, examines the probabilities for the years immediately ahead. He concludes that America must remain strong militarily. By his own analysis and reasoning he comes to the conviction that, for the time being a program of universal military training is one prime essential to national security for which there is no adequate substitute.

Mr. BYRNES deserves whatever credit is due any man, particularly a man in his position, who can be convinced by facts and plain probabilities, even perhaps against his will. In now changing his stand, he shows that he is not one who blindly follows his preconceived notions or closes his eyes to changing conditions.

In making a forthright statement of his change of mind and the reasons for it, Mr. BYRNES shows political courage and integrity. Many Members of Congress, just as fully convinced of the necessity for military training as Mr. BYRNES, consider it politically inexpedient to voice their views. They are avoiding rather then seeking opportunity to commit themselves. They are trying their best to keep the whole question hushed up and pigeonholed until after election.

It remains to be seen whether all other members of the Wisconsin delegation in Congress will be as objective and as honest in dealing with this vital question as Mr. BYRNES has been. The voters have a right to know where every Representative and each Senator stands on this question, and why.

[From the Manitowoc Herald-Times of January 28, 1948]

MR. BYRNES ASKS A QUESTION

"I believe universal military training, as outlined in bills presently before Congress, is vitally necessary to our national security," JOHN W. BYRNES, Representative to Congress from this district, stated Monday.

A lot of people besides Mr. BYRNES have believed the same thing and for a much longer time. What makes his arguments worthy of comment is not so much that he favors UMT or even that he is a Federal lawmaker but that by his own admission, he has expressed his "opposition to peacetime conscription on many occasions * * * the thought of drafting young men into military training during a time of peace has been repugnant."

The Congressman was convinced of the necessity of UMT by reasoning apparently so homely and straightforward as to require no exposition. He said he merely asked himself the question: "Will universal military training make our Nation more or less secure." This formula sounds easy and is easy and arrives unerringly, inevitably at the answer "Yes, it will." Mr. BYRNES, after devoting to it more thought and time than most people, could not escape the distasteful, uncompromising truth.

Enemies of UMT cannot, will not, see it in this light, of course, the only one that makes sense. Instead, they attempt to befog the issue with the old, familiar arguments: Compulsory military training will inspire militarism in the population, dictatorship in the high places, and transform our Nation into an aggressor; it will corrupt the morals and education of our youth; it is an outmoded system, useless for defense in the atomic age; and it will cost too much.

The very manner in which they sidestep the fundamental question as considered by Mr. BYRNES suggests that, consciously or instinctively, UMT opponents are aware of it, but through certain inexplicable cerebrations are virtually incapable of meeting it head-on. Obviously, they derive more satisfaction from manipulation of their own overextended dialectics than from realization of their country's security.

Admittedly, there are dangers in any military system—real dangers. A few of those mentioned above are far from mere fantasy. Considerable effort must be expended to forestall their development or at least minimize it. But quavering before these secondary hazards is the direct cause of our failure to defend against the primary threat, the menace to our Nation from abroad.

Those persons and institutions now so bitterly opposed to UMT should make a strenuous attempt to catch up with the times. Their ideas are the ones which are outdated. Their witless disregard of the world's war potentialities would be absurd if it wasn't conducive to national obliteration. Time is getting short in which they must ask themselves the question: "Will universal military training make our Nation more or less secure?"

[From the Appleton Post-Crescent of February 3, 1948]

REPRESENTATIVE BYRNES ON UMT

Representative BYRNES gained stature by his frank statement that he has changed his mind about universal military training, and now considers it a necessary part of our national defense program. His analysis of national preparedness in the light of present-day military tactics and weapons is an enlightened one devoid of the emotions, prejudices, and bias which so often confuse this great issue.

Mr. BYRNES did not have to come forth publicly now and state his position on UMT. He could have ridden the issue side saddle until it came up for a vote in the House. For that reason it is more to his credit that he announced openly to his constituents that he had changed his opinion.

In his analysis of present-day military needs of the United States, Mr. BYRNES pointed out a fact all too often passed by—the very great need for numerous and well-trained Reserve units of all the armed forces in modern-day warfare. He argues that universal training is the obvious method for recruiting young men for those Reserve forces.

The United States has always depended upon a civilian army to fight its battles. In wars past there has been time to train these civilian forces to some extent. In a future war there will not be time. Universal military training is proposed mainly as a method to train this civilian army while there is time—during peacetime.

Mr. BYRNES also points out what a valuable part such a trained young citizenry would play in case the United States were ever attacked with modern weapons, bombing from the air followed by air-borne invasion. The only defense is well-trained reserve units scattered throughout the country. They mean order instead of tumult, organization instead of chaos.

The Reserve units of our armed forces are in a neglected state at the present time. This is particularly true of Army Reserves which are not even reimbursed for inactive-duty training. They are expected to give their time and effort and put themselves forward as sturdy volunteers for the first ranks in event of a national emergency without reimbursement. The result has been as expected, a few handfuls of men with enough patriotism to do just that. But largely a paper army with great potentials but little to work with at any given time.

Mr. BYRNES sees today what the country must come to see—that all we acquired through our last excursion to the sodden fields of crimson was the acute necessity of an alert readiness for any eventuality, for treachery is now free to roam the earth.

[From the Marinette Eagle-Star of February 5, 1948]

CONGRESSMAN BYRNES DARES TO STATE HIS CONVICTIONS

Congressman JOHN W. BYRNES has received the plaudits of several newspapers of the Eighth Congressional District in recent days because he has had the courage to take a stand on two issues, neither of which will meet with the approval of many of his constituents.

Foremost is his declaration in favor of a universal military training program, in which he explains:

"As your Representative, I have expressed my opposition to peacetime conscription on many occasions. To me, as it must to all Americans, the thought of drafting young men into military training during a time of peace has been repugnant. It has gone against everything that my schooling and my instincts have taught me to believe. Yet today, I am telling you that I believe military training, as outlined in bills presently before Congress, is vitally necessary to our national security. I have not arrived at this conclusion lightly, nor without a great deal of study and soul searching."

He has taken the pains to explain at length why he arrived at this conclusion. But he could have avoided taking a stand on this momentous question at this time. More than likely Congress will delay action on universal military training in this, an election year. Yet in declaring himself for universal military training he has incurred the opposition of many mothers and fathers in the district who, whether by emotion or clear reasoning, do not favor it.

Similarly, he has invited opposition from constituents of Manitowoc by taking the position that Manitowoc should not have a new post office at this time. On this question he informed Manitowoc constituents:

"I have been outspoken in Congress against Federal building at this time. I have opposed it in other parts of the country; to be consistent, I must oppose it within my own district until there is a radical change in our present national fiscal situation."

Mr. BYRNES could have informed Manitowoc that he had the matter under consideration and would give it further attention—the well-known run-around answer—but he chose to be forthright. And he is to be greatly commended for it. The country needs a lot more Congressmen with the courage of their convictions.

[From the Denmark Press of February 5, 1948]

WE MUST BE REALISTIC

Last week JOHN W. BYRNES, Representative of Wisconsin, announced in a prepared statement that he had abandoned his opposition to peacetime conscription and considered universal military training "vitally necessary to our national security." BYRNES probably reflected the switch that most Americans had effected in their opinions on universal military training. In the first days after war's end we remembered the cost of unpreparedness. We realized the necessity for a defensive force that would turn to the aggressive at the earliest possible moment. So we grudgingly conceded that universal military training seemed the only answer.

Mothers and dads looked at sons. Today it was grade school—vacation days, and school days and dreams for futures; college or John Brown & Son in business. Somebody threw a straw upon the waters. It was the United Nations organization. We grasped for it, hoping against hope. No one dared to say aloud, but mothers kept that forlorn hope locked down deep within their hearts—"The war to end wars?" They

had heard it before. So, the UMT idea cooled, then was shelved. We had a new hope for security.

But now a different pattern has become clear, war with the socialist republic of Russia looms as a deadly possibility, UN has been sabotaged by a "veto" and the same forces that have worked within the darkest corners of aggressive nations since the beginning of time. Today most broad-minded men are accepting the facts as they stand and thinking as BYRNES does.

Our Congressman said in a widely lauded statement:

"In preparing for war that may come in spite of all of our efforts to prevent it, the only course open to us is to arm ourselves so strongly that not only would other nations hesitate to attack us because of our ability to strike back powerfully and swiftly, but so strongly that, if we were attacked, we could smash the assault quickly and surely.

"Our only course, therefore, is to develop an air defense that can break up such a sustained attack and an air offense which would cause any nation contemplating such an attack to think twice before bringing a rain of destruction down upon themselves.

"Air power, an efficient intelligence service, scientific research, industrial mobilization, and unified armed forces are agreed upon by students of national security as basic requirements.

"The only persons who disagree are those who either believe that we should disarm entirely * * * and those whose sympathies lie closer to other nations than to their own country.

"We must be realistic. We must grant to our potential enemies an intelligence equal to our own. The bare fact is that in future wars it is entirely within the realm of possibility that we shall be invaded by airborne forces who will have the same objective as our own striking force—to make it impossible for us to attack their homeland. We must be ready to crush such an invasion."

However, knowing all this, we, the little people, are praying too that the UMT program will not be a permanent feature of our way of life. A goal was shown to us once, Peace in Our Day. It has been reached before in the world's history. Some men have been blessed with a lifetime without wars and bloodshed. Something similar to the UN, we think, will be the only answer. We believe that preparedness will help us win the next war, it may even prolong the wait, until some nation thinks they have matched our power—but we doubt if strong armies ever prevented wars. We say this remembering what Hemingway wrote, "An aggressive war is the great crime against everything good in the world. A defensive war, which must necessarily turn to aggressive at the earliest moment, is the great countercrime. But never think that war, no matter how necessary, nor how justified, is not a crime."

Inflation

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. KEATING. Mr. Speaker, more bureaucratic bungling resulting in higher prices, as well as loss to the harassed taxpayer, is revealed in the accompanying article by Mr. Mark Sullivan in the Rochester (N. Y.) Democrat and Chronicle.

The administration renders lip service to the cause of lower food prices, but the moment an item starts to drop, they either step in and start buying or announce a program of future buying.

The truth is, of course, that they are playing politics with the food on our tables. They want to maintain high prices, both to present a false front of prosperity and at the same time lay at the door of Congress the responsibility for these prices.

In fundamental soundness, their approach ranks with that of the official who suggested the other day that the way to lick inflation was to control the prices of what one buys, but take controls off what he sells.

Mr. Sullivan's revealing illustration follows:

OPERATION BEE (A HONEY)

(By Mark Sullivan)

WASHINGTON.—This story is—pardon the pun—a honey. Only it isn't a story in the ordinary sense; it's an account of a Government operation. In official jargon, you might call it Operation Bee. Essentially it consists of buying honey at 10 cents a pound and selling it at 5 cents.

The beginning of the story was last fall, and has to do with flowers, bees, and the weather. Because the summer was prolonged, flowers bloomed longer; the bees, obsessed by their natural instinct for industry, worked longer. The bees gathered more honey.

Normally this would mean more honey for consumers, and a lower price for it. Housewives could enjoy a gleam of cheer in the gloom of rising cost of living. But as the consumer smiled, the Department of Agriculture frowned.

It carries out a policy of price support for practically all farm products, from wheat to peanuts and honey. To support the price of honey, the Department made a formal announcement January 28, saying that it "plans to purchase up to 12,000,000 pounds of * * * dark-color, strong-flavor honey, meeting grade A * * * from beekeepers, assemblers, processors, or their authorized agents." While the Department says that "purchases will be made on an offer and acceptance basis," it indicates that the price paid will be up to 10 cents a pound.

Having bought the honey, the Department faces the problem of getting rid of it. A frequent disposition is to sell abroad, and this is to be done in the case of honey. The Department will sell to the State Department for use in the European-aid program, and to the Army for use in various parts of the world. The selling price, arrived at by an intricate calculation of calorie equivalence between honey and wheat, will be less than half what the Department paid.

Bees are a sturdy folk, equipped to defend themselves against interference. Yet the Department of Agriculture ought not to endure frustration by bees. It has an admirable and abundantly equipped Bureau of Entomology. Somewhere in that abundance of talent could not the Department devise some means, perhaps a surgical operation or some sort of governmentally planned breeding whereby a sufficient number of worker bees could be turned into drones?

Fair Warning to Communists

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington (D. C.) Times-Herald of February 10, 1948:

FAIR WARNING

(By Frank C. Waldrop)

Congress has a duty to give every Communist in the United States fair warning of what to expect in law as the consequence of becoming a Communist. The House Committee on Un-American Activities is just now in the process of analyzing just what kind of law will do that best.

Obviously, the right law will state plainly that nobody can be a Communist and a good citizen, and that every Communist must register with the State Department as an agent of a foreign power.

Every Communist, whether he realizes it or not, is such an agent in fact.

John Foster Dulles, member of the United States delegation to the United Nations, quibbled on that issue in his testimony to the committee, as follows:

"In part, it (the Communist Party) is a clearly subversive organization subject to what Stalin calls the iron discipline of the party with respect to policies which are largely formulated by the Soviet Communist Party in Moscow.

"On the other hand, the Communist Party in some countries, notably France, Italy, and, to a lesser extent, the United States, draws into its ranks many who in no sense seek the revolutionary overthrow of our institutions * * * but who look to the Communist Party as a method of reform that will cure evils."

The difficulty, he said, is how to separate the two and distinguish one kind of Communist from another. "That," he concluded, "is a difficulty that I do not see clearly how to solve."

Well, it isn't the Government's problem to solve the difficulty. The Government's problem is to make the rules so that everybody can understand them. Then it is the problem of the man about to become a Communist to decide what he wants to be.

This country is full of radicals who don't know why they are radicals or where their radicalism is leading them. College kids, factory workers, bored housewives, rich ignoramuses with too much idle time and too little sense.

There are thousands and thousands of such people in the Communist Party and flirting around its precincts as fellow travelers.

In the hands of genuinely treasonable and clever agents—such as Red college professors, Red union leaders, and Red political experts—these dupes are as dangerous as any other Communists.

Dulles ought to know that. If he doesn't, let him read the official transcript of the Canadian spy ring's performance, as issued by the Government of Canada.

There it was shown how dim-witted people of just the sort Dulles attempts to excuse were led step by step from "reform" to espionage. They joined the Communist Party out of a sense of grievance against the world as they found it.

They became spies, enemies of their own government. Their assignment? Oh, merely

to help steal the atom bomb, a nice playful little gesture.

Ignorance of the law is no excuse, as everybody knows. Likewise, ignorance of the Communist Party's true aim is no excuse, either, for having joined or having played around with it.

But just to make sure, be absolutely fair and give every possible warning in advance to mushheads and silly sentimentalists who find the lure of communism so powerful, the law ought to be explicit and clear.

It should say: Every Communist, by the mere act of becoming a Communist, is an agent of a foreign power in the eyes of the United States Government. If you want to be such an agent, do so at your peril. And register at the State Department under the alien agents' registration law now already on the books.

That's plain enough for anybody to understand. It will give the Government of the United States a point at which to begin breaking the power of communism in this country. Is that an important power that needs to be broken?

Well, consider this fact: There are more Communists in the United States today than there were in Russia in 1918 when the Communist Party there took over the government of one-sixth of the earth's surface.

And another thing, communism offers nobody an escape from the ills of the world. It's time people like Dulles started coupling that truth to their statements about why the simple-minded turn to communism. Just because the Reds use high-sounding promises as "sucker bait" is no reason to let their stuff go unchallenged.

The test is not in the promises but in the performance.

The performance of communism is hideous oppression. Why doesn't Dulles say that at every chance?

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on February 14, 1948:

Dear friends of the Triple Cities and my congressional district, another Lincoln Birthday has come and gone and the Nation once more pauses to admire and to revere the name of our foremost American.

As a founder of the Republican Party, Lincoln was the first Republican President. He has always appeared to me as the greatest of all Republicans.

I am an Abraham Lincoln Republican. That means I am against all those who champion the things he opposed, namely, greed, selfishness, and corruption in government.

I wonder what Lincoln would say if he appeared upon the Washington scene today? I wonder what he would do to the little Caesars, the petty dictators, the arbitrary power grabbers we now find everywhere.

You and I know he would throw them off their high and mighty thrones. He would brand them for what they are, the enemies of the people.

It would be fun being a Member of Congress under a Lincoln administration. How easy one would find it to gain his ear in proposing bills that benefit the people. How sympathetic would Lincoln as President feel toward some measure your own Congressman has introduced that helps the veterans, the aged, the unfortunate, and the downtrodden.

Instead of finding oneself against a stone wall of opposition, the Chief would doubtless come up to Capitol Hill and demand that Congress take immediate action on those things.

Proposals like the Hall veterans' bonus bill and pensions for men of World War I would probably go through like a house afire.

Yes; Abraham Lincoln was a leader who wanted to see rank-and-file Americans represented in Congress. He even served in the House a couple of terms himself.

I am proud to say to you that I won the right to represent you folks in the same way Lincoln did, by your votes, not by the decree of a little group of scheming, calculating, designing men, who get their heads together in a smoke-filled room, reeking with tobacco and the suggestion of skullduggery.

Like Lincoln, I want no part of the activities of these wire-pullers. They have always tried to crucify me, and had they been able to lay hands on me, would have succeeded long ago.

Fortunately, the power you friends bring to bear defeats their infamous objectives and permits your Congressman to proceed with his work unmolested. Your votes sent in my direction strike terror to the hearts of these plotters.

Letters written by my chief of staff recently appealing for financial support are already being accorded wonderful response. His message contained a dire warning that John L. Lewis is sending his stooges into the Republican primary this year to endorse and finance my opponent. This, of course, is a matter of record, announced sometime ago, and you people know what to expect.

John L. Lewis is fully as popular in our locality as red ants at a picnic. But he could hide behind some smooth-faced front man, willing to sell his soul for a mess of pottage. His cronies plan to spend a lot of money to defeat the people's representative from this district.

Plans of some other labor bosses call for assessing each union member $1 apiece to throw in the kitty and spend it to assassinate my character. They are even going so far as to demand $5 minimum from businessmen they can scare.

This is the lowest form of extortion. To take a dollar from an honest, patriotic working man or woman, to force them to deprive their families of $1 worth of food in these days of high living costs, is the most outrageous act I have ever known.

They cannot control their members' votes. If they could, they would have licked me 10 years ago. Why, then, should they reach into their pockets and grab their food money, their rent money, their cash that could buy clothes?

The answer is, they'll have tough going to collect this blood money. Most of the people they're taking money from are my friends. They've voted for me before and will again. They're going to resent these babies taxing them to build a campaign fund to fight me.

Yes; they're on the wrong side of that issue. They'll get an awful kick-back from that one and it will be harder than the cash they extort. It will smack them right between the eyes and on the nose.

I'm willing to wager they can't get away with it. I'm betting folks value their dollar bills too much. They would rather spend the money on America. They'd rather see their dollars used to save the country, not wasted to sabotage it.

Thank you.

Hinshaw Proposes

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of February 16, 1948:

HINSHAW SEES SEVEN WAYS UNITED STATES MAY BE STRUCK

Representative HINSHAW, Republican, of California, vice chairman of the congressional Aviation Policy Board, sees seven ways in which America may be hit by an enemy. He suggested seven things to do now as national survival insurance.

His remarks may be a preview of the military section of the board's report, which is due March 1.

While the political war rages over the world, HINSHAW says these things might happen here: (1) Unrelenting subversive activities; (2) undeclared war; (3) destructive epidemics; (4) local disasters of doubtful origin; (5) radiation contamination of public utilities; (6) strikes and slowdowns in key industries; (7) direct assault.

This is what he proposes to insure that the United States will remain the bulwark of freedom, justice, and democracy:

1. Isolation of subversives, while devoting a wholehearted effort to teaching the true meaning of America to all citizens.
2. Establishment of a universal system of technical and scientific education from kindergarten through college graduate courses.
3. Establishment of a universal physical-training program through sports and outdoor activities.
4. Removal of the National Guard from Federal control and reformation of it as a defense in depth organization.
5. Assignment of policing duties now given the National Guard to State police forces.
6. Creation of a single reserve system having Army, Navy, and Air Force units.
7. Creation of a continental command with the job of defending the continental United States.

Picketing Political Meetings

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. MADDEN. Mr. Speaker, the Calumet region in Indiana is probably the most industrialized section in our country. Gary, Ind., the youngest metropolitan city in the United States, is the center of a huge steel industry. All the industrial workers in this area who have studied and familiarized themselves with the hidden provisions of the Taft-Hartley law, are opposed to it and are clamoring for its repeal. A great deal of misleading propaganda is being circulated among members of or-

ganized labor in an effort to convince them that the restrictions set out in this bill against union organization, collective bargaining, local union elections, restrictions against exercising their right of free speech, and so forth, is a concession to union labor. However, when the obstinate employer starts taking advantage of the numerous restrictive provisions of this act, the public will soon realize that the progress of union labor has been set back a quarter of a century.

The number one sponsor of the Taft-Hartley and Republican candidate for President of the United States, Senator ROBERT A. TAFT, visited Gary last week. The CIO leadership, including Philip Murray, Joseph Germano, district CIO director of the Chicago area, and Joseph Goin, subdistrict director of the CIO in Indiana, are to be congratulated on publicly requesting that the thousands of workers in the Calumet region refrain from picketing the distinguished Senator while a visitor in our community. Labor unions in Gary, the No. 1 industrial city of America, refused to follow the ill-advised actions of groups in other areas of the country picketing the chief sponsor of the Taft-Hartley bill when he has been a visitor to their various communities.

I herewith repeat excerpts from an editorial by H. B. Snyder, of the Gary Post-Tribune, of February 13, 1948:

Senator TAFT's visit to Gary and Lake County was a happy one from every standpoint. Particularly fortunate was the absence of any of the picketing that had been promised by labor. Some of the TAFT supporters were somewhat disturbed at the lack of the promised demonstration which they expected to advantage TAFT and not the picketers. Something of this feeling was doubtless felt by higher-ups in the CIO and may have been responsible for the orders to drop the program. It was apparent to anyone who gave the matter a moment's consideration that the chief beneficiaries of the demonstrations would have been the Communists who were reported to be lurking on the fringes ready to take any and all credit.

The Cow Versus Oleo

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, if the subject of civil rights brings threats of secession from some southern States, the mention of oleomargarine creates an equal uproar in States like Wisconsin where we not only make the finest butter in the world, but feel that the American people are entitled to eat butter without danger of having colored oleo slipped over on them as a disguised substitute. As the case of Cow versus Coconut comes before this Congress, I desire to plead as a friend of the cow.

When I first came to Washington, I was amazed to notice that in restaurants and hotels of the Capital City, most people pushed aside their tiny plates of butter and left it untouched. But I wasn't amazed very long, for upon tasting the oily substance served up as so-called butter, I realized it was oleomargarine. I know that if Washington served the kind of butter made in any of Wisconsin's 2,600 licensed dairy plants, there would be no pushing aside of this valuable food, but hurried calls to waiters for more of that delicious product of America's dairyland.

Back in 1931, Wisconsin farmers organized and marched en masse on the State capitol at Madison to demand that the State legislature take action to protect Wisconsin from oleo. That march on the capitol was led by Joe Beck, a State commissioner of agriculture, who in his zeal to safeguard butter, got himself fined $250 when he defied a court order. But the march had the desired result, and laws passed that day in Madison still remain on the statute books.

Farmers of Wisconsin are opposed to any repeal of the oleomargarine color-tax that would permit its unrestricted production in imitation of butter. Farmers have no objection to peanut butter, jellies, and jams—all used as spreads for bread—for they are not manufactured and colored to look exactly like butter, and so cannot be palmed off on the unsuspecting public as butter.

At the present time, oleo is cheaper than butter. But while butter can be made on any farm and is manufactured commercially in 18,000 American dairy plants so that its price is governed chiefly by demand, oleo is manufactured in only a small number of plants and a virtual monopoly exists, which could charge any price it wished if the public had no way of knowing by sight that it was being offered an inferior product that seemed to be butter.

Economically, the proposal to do away with butter and substitute oleo is unsound. At the present time, 40 percent of the beef and veal of the Nation is derived from the dairy industry. Even the oleo manufacturers cannot do without milk, and have to use it for 15.6 percent of their oleo or their entire efforts to imitate butter will fail. Our supply of leather—even the supply of fertilizer that every farmer needs on his acres—depends in great part on dairy herds.

First it was animal fat mixed with milk, water, and coal tar that Napoleon III tried to substitute as butter for his troops in the Franco-Prussian War. Then oleo was made from coconuts. Finally cottonseed oil and soybean oil are being used. But in all these operations it has been necessary to use milk, to get a product that anyone would eat. It is estimated that if no oleo had been manufactured last year, over 2,000,000 more cows would have been needed to produce the butter, and it goes without saying we could have used the meat and leather that would have resulted from that increase.

In conclusion, I would like to include an authoritative editorial on this subject from a recent issue of Hoard's Dairyman, Wisconsin's leading publication devoted to the dairy industry which is widely circulated throughout the Nation:

OLEO TAX ONE-FOURTH CENT

"Margarine Tax" is the title of an editorial which recently appeared in the Washington Post. In the main, the editorial condemns the tax imposed upon oleomargarine. It emphasizes when butter reaches a dollar a pound that it is necessary for people to use some substitute. The editorial says the revenue obtained from discriminatory excises is negligible. The reader is reminded that the public pays the taxes imposed upon margarine.

It is clearly evident the writer of this editorial is not a student of why a Federal tax is imposed upon oleomargarine. We have often stated that the Federal Government lacks police power; its taxing power is unlimited. Prior to the enactment of the Federal law, oleomargarine in many places was selling—and is yet—as butter and at near butter prices. The consumer has a right to know what he is purchasing and what he is eating.

The tax of 10 cents a pound on oleomargarine colored in semblance of yellow butter is to stop the sale of this product. The tax should be higher. Natural-colored oleomargarine is taxed but one-fourth of a cent a pound, not for the purpose of adding to its cost but to create enough revenue from this source to pay for suppressing the fraud committed when oleomargarine is sold as butter. A tax of one-fourth cent a pound is placed on renovated butter for the same reason. Adulterated butter is taxed 10 cents a pound, the idea being to stop its sale.

No complaint can be entered when only one-fourth of a cent a pound tax is levied on oleomargarine. This doesn't add a great deal to the cost of oleomargarine. Forcing it to sell on its own merits helps to reduce its price far more than the tax which the Federal Government has levied. We well remember when oleomargarine was sold as butter, even from stores. Today it is served in the color of yellow butter when customers at hotels and restaurants ask for butter.

It seems to us the dairy industry has a right to protect its products and to require all other products used in the place of any dairy product to sell upon their own merits and not masquerade as a milk product.

Further, butter at a dollar a pound is not relatively higher than wages which the farmers are paying. Any tradesman who comes to the farm today to work for the farmer wants $1.25 to $1.50 an hour; some will want $2 an hour. It requires about 1 hour's work to produce a pound of butter from the average herd in this Nation.

We realize, of course, what people want are high wages and cheap commodities. Well, there isn't any such animal.

Accomplishments of the United Nations

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following report from the Los Angeles Daily Journal of January 30, 1948, of an address by senior United States Circuit Judge Orie L. Phillips, of Denver, before the

Los Angeles Bar Association. Judge Phillips points out the accomplishments of the United Nations during the short time it has been functioning, and he warns against loss of faith in this organization because of impatience and failure to appraise its potentialities for accomplishment from a long-range viewpoint.

The common people of the world devoutly hope for peace but have lost faith in the United Nations as a vehicle for its achievement, senior United States Circuit Judge Orie L. Phillips of Denver told the January meeting of the Los Angeles Bar Association yesterday at the Biltmore.

The leading jurist of the Tenth Judicial Circuit urged that those who hope not lose their faith in the great world congregation of nations.

"It seems to me that those who lost faith in the effectiveness in the United Nations and those who regard it as impotent have been disappointed in its failure to accomplish more in a short time, have been blinded by impatience, and have failed to appraise from a long-range viewpoint its potentialities for accomplishment," he said.

The Federal jurist pointed out that he had told the annual meeting of the American Bar in 1944 that the goal of ordered justice under law among nations might require decades to accomplish.

"In attaining the objective of justice under law among nations," the speaker continued, "we must, of necessity, interpose international control by a body of international law with means to enforce it."

FORCE THE WRONG WAY

"In reaching that objective we must not move so fast as to provoke war. And, we must not move so slowly as to permit any aggressor to provoke war. Perhaps, we are compelled by the present world situation to take the risk of moving too rapidly in our effort to impose international control.

"Again, while I would strengthen the United Nations, we must not hope that the proper solution of all controversies can be compelled by force.

"We have not reached that stage as to every character of domestic dispute. For example, in labor disputes we have not deemed it wise to compel submission to adjudication, even where processes of negotiation, conciliation, or arbitration fail.

"In the early stages of a world community lacking in cohesiveness and unity and made up of many nations varying widely in their traditions and ideologies, their religions, and their governmental systems, we can only hope, by an evolutionary process, to bring about compulsory adjudication of every character of international controversy and compliance with such adjudication by force.

"Further, the moral suasion which will be engendered by a righteous opinion expressed by a great majority of the members of the General Assembly may be more compelling than military force."

TELLS ACCOMPLISHMENTS

Judge Phillips declared he did not believe any nation, no matter how powerful, would long continue a course of conduct condemned by a majority of the General Assembly of the United Nations. No nation, he asserted, would likely take the risk of being placed in the role of a world outcast.

Much more has been accomplished in the 2 years since the Charter of the United Nations came into force than realized, Judge Phillips pointed out. Specifically, he referred to the Inter-American Treaty of Reciprocal Assistance adopted by 19 American Republics at Rio de Janeiro on September 2, 1947, and which agreement supplemented the agreement of Chapultepec.

The signers represent more than one-third of the members of the United Nations and the agreement specifically outlaws war and aggression and defines aggression in clear-cut language.

"Thus, what shall constitute an act of aggression is not left to ex post facto debate on political levels," the speaker said, "as under the Charter, and action by the organ of consultation will remove threats of aggression, and is not subject to a minority veto, as is action by the Security Council under the Charter."

The speaker also cited the fact that the United Nations has begun organizing the field of international law. A committee created by the General Assembly is busy formulating definite plans for the development and the eventual statement of international law in a form suitable for the postwar world.

With World War III smoldering in many places throughout the world, the UN has taken specific action in many instances to combat impending trouble such as in Korea and in Greece, where a committee was sent to investigate guerrilla warfare charges.

He also pointed out that the General Assembly of the UN by unanimous vote adopted a resolution condemning any and all war propaganda. The Security Council also directed the partitioning of Palestine.

President Paul Fussell presided and Delvy T. Walton headed the program committee.

What the Government Knows About You

EXTENSION OF REMARKS

OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. ARNOLD. Mr. Speaker, with the increasingly complex nature of our present economic set-up, it has become customary for various Government departments, from time to time, to issue statements with regard to the apparent supply and demand of certain commodities. Such statements may or may not reflect the true facts in the degree that they can be traced to propaganda designed by pressure groups for their particular benefit.

It has occurred to me that reports and statements issued by the Government, which are of vital concern to the housewife, the merchant, and business generally, if submitted to the Bureau of the Census before being published, would be more likely to present actual conditions and be less likely to cause confusion in the buying and selling markets.

An article which appeared in the July 1946 issue of Nation's Business, by Junius B. Wood, entitled "What the Government Knows About You," bears out my contention, and I wish to include it here as an extension of my remarks:

WHAT THE GOVERNMENT KNOWS ABOUT YOU

(By Junius B. Wood)

You're no forgotten man. No, indeed, brother. Board chairman or bindle stiff, the bureau boys have your number. Your past may seem dreary, but it isn't dark.

This is the open season on the forgotten man. A national election is in the offing. The bleeding hearts and aching lungs of candidates rally the voters to the hustings to rescue the Homo Americanus which they label the forgotten man.

But don't worry, little man, you're not forgotten. Not even if you're only a tiny human atom in the big United States. Your only elbow-rubbing with the world of strangers may be while swaying on a strap in an overcrowded city bus or when buying a slab of bacon at a lonesome trading post, but Washington knows where you are and more about you than you imagine.

You're indexed and cross-indexed by a Government which never destroys a record. Even the knights of the road who cook their cinder-blown can of evening stew in a hobo's jungle, without worries over punctures or finding another $50 hotel room after 5 days, are not forgotten.

Government surveillance of the individual's finances is familiar to any citizen who can rattle two coins in his pocket and voice his right to gripe at public spending. Not so well known is our Government's diligence in cataloging every individual within its borders. A Government which counts the birds, fishes, and rats—123,000,000 of the latter by the last census—and keeps track of their summer and winter outings, should know about the human beings. You may think you're a forgotten man but the odds are 500,000 to 1 that your name and address and a wealth of personal information appears more than once in the interminable miles of Government filing cabinets.

If you've done any eating in the past 5 years—and that includes everybody in the United States—the Government has you indexed. Even those who did not reach the "da da" gurgling age got a ration book. Parents attended to that. The only ones who ate without benefit of a book, though their names were listed, were members of the armed forces and inmates of institutions. An individual who dined exclusively in restaurants could exist without one, but few neglected the opportunity to have such a useful article of legal tender.

In countries like the Soviet Union and former dictatorships, where police assiduously scrutinize every individual's domestic affairs, a card of identification is as necessary as wearing apparel. The ration book—rationing started with tires in January 1942—was the first break in American resistance to such state control of the individual. Americans accepted rationing as a wartime necessity to conserve and distribute food equitably. Others realized its possibilities for control of the individual but rationing ended, except for sugar, before that control reached the extreme of denying ration cards to the politically undesirable and leaving them to starve, as in some countries.

Being a Federal permit to purchase food, a ration book was valid in any part of the country. Its holder got it from the local ration board in the district where he resided on the date the series was issued. States and even merchants quickly realized its utility as a card of identification. The public had accepted regimentation as an obligation and officialdom followed with more burdens.

The OPA records each of the four issues of ration books as around 132,000,000, a total well over half a billion. While a book carried only the name and residence of its holder, the latter's age and sex also were recorded in OPA files. Millions of changes came with each series. The files showed the moves of every resident, citizen, or foreigner in the country.

In fact, the Census Bureau checked the records of the 1943 books to show a wartime population movement of 27,000,000 persons since 1940—the greatest mass migration movement in history in so few years, equal to the combined populations of New York, Pennsylvania, and New Jersey and greater than the entire rural population of the Nation.

In addition to telling everybody how much they should eat, the Government fixed the temperature for their homes and offices, decided how far they could drive their cars and who should have a pair of shoes, rubber

boots, new or second-hand tire, stove, automobile, bicycle, or typewriter. OPA reports 28,000,000 on its lists for gasoline, 11,000,000 for fuel oil, 30,000,000 for tires, and the remainder of 100,000,000 for certificates for other commodities.

What OPA knew about holders of food ration books was primitive compared to its data on the past life and daily doings of anybody who received a certificate for other rationed goods. Much of it was immaterial and personal prying by a comparative few of the 160,000 volunteer and paid employees who relished their sip of dictatorship and tried to make things difficult for themselves and for the helpless citizen.

The dossiers in the filing cabinets of the Social Security Board are a close second to OPA. The information on each individual is much more detailed. SSB has the facts on 86,000,000 workers whose wages are posted. Of these, 75,000,000 are on what it designates as the active list. Its records are continuous from January 1, 1937.

Those who work for themselves or are casual, farm, domestic or government workers or under the Railroad Retirement Board, are not included. With these exceptions, SSB has a wealth of information on everyone, American citizen or not, who has earned $50 in 3 months by working in this country or on an ocean-going ship flying the American flag. A social-security card and number will be issued to an unemployed person if the personal information which the Board requires for its files is supplied.

Under a Fair Employment Practice Act, if New York State is taken as an example, a private employer is forbidden even to ask some of the questions for which the Social Security Board requires written answers.

Its complete list is: 1. Name used now. 2. Address. 3. Name at birth. 4. Age. 5. Date of birth. 6. State, county, and city where born. 7. Father's full name and whether dead or alive. 8. Mother's full name before marriage. 9. Sex. 10. Color, specifying whether white, black, or what other. 11. What name was used in any previous application for social security or railroad retirement. 12. Employer's name or whether unemployed. 13. Date. 14. Signature.

REPORTS ON CHANGED NAMES

Social security has a double record of every worker as both employer and employee report. Taxes for both are paid by the employer to the Bureau of Internal Revenue, which also has its dual record. SSB will not disclose the earnings of an individual and says that the serial number and information collected are merely for identification. Employers are under no such obligation, however, and authorities often find a social-security number helpful in locating a missing person.

SSB insists that its solicitude over names, past and present, is not to aid sleuthing. The name tracing is for a more romantic purpose, namely: to protect the savings of absent-minded women who change their names by marriage or divorce, get a new card and number, and forget to notify SSB of the happy event.

Since it started keeping records in 1933, to the end of 1945, United States Employment Service has recorded the name, address, telephone number and other facts on 168,354,000 applicants for jobs. These are exclusive of 500,000 on the national roster of scientists and specialists which interested the late President Roosevelt. March of this year may be typical of 1 month's grist for USES with 1,168,000 applications of which 697,000 were veterans and 216,000 women, and 453 placed in jobs.

As the first object of USES is a quick turn-over, the names are not a dependable permanent record. Millions are duplications and temporary addresses. In addition to what each applicant writes down on occupation, education, and training, age, birthplace, race, marital status, and military service, there is an oral examination.

The figures portray current national labor conditions as each State depends on USES records for its unemployment and other benefit payments.

Most of the wage earners who are not listed by Social Security are registered in other official pension and retirement organizations. The largest group that is not cataloged by either OPA or SSB is in the armed services. However, those in service at present are not more than 5 percent of the 47,833,000 men registered by selective-service boards from 1940 to January 1946. As men up to 65 years of age were registered in 1942, this produces another Government agency with a file of the entire male population between the ages of 18 and 69 years.

DETAILS FOR THE DRAFT

Selective-service data on each individual is much more detailed than in any other registration. It specifies which of 419 occupations or trades, or 35 professions, he follows. It explains further whether he works for himself, his efficiency in his job, his education, including familiarity with foreign languages, and much more. All is put on individual cards, keyed to classifications.

Much of this remains in the Government files as out of 48,000,000 registered, only some 34,000,000, between the ages of 18 and 45, were notified to report. More data was added to their information sheets, until finally, allowing for occupational and physical deferments and rejections, some 13,000,000 were inducted into the service.

In addition to being indexed, numbered, tagged, and psycho'ed, the lads and lassies in military service also are among America's fingerprinted millions. The fingerprints of nearly half the population of the United States are in the files of the Federal Bureau of Investigation in Washington.

Fingerprinting had difficulty living down its unsavory birth as a means of crime detection. Also, as the identification records are kept by the Nation's largest crime prevention agency, many associated fingerprinting with a suspicion of past crimes or future escapades.

Records of the FBI show, however, that by now the prints of sinners are a very small fraction of the total in its files. The Bureau has the prints—five fingertips of each hand—of 65,000,000 residents of the United States. About 6,000,000 of these have been furnished by police departments, of persons who have been arrested for some offense. Many of them were not convicted. About 15,000 are tough birds still on the wing who can be identified if they leave the trace of a single finger when making an uninvited call. Being the international exchange center, it also has a few thousands from 89 other countries and provinces.

The 6,000,000 have grown from 810,188 cards, which started the Bureau in 1924, mostly from Chicago and from the Federal prison in Leavenworth, Kans. The other 59,000,000—individuals with clean records—started from scratch. War speeded up the collection with compulsory fingerprinting of not only men and women in the armed forces but of Government employees, workers in defense plants, and close to 5,000,000 aliens in the country.

In addition to this permanent identification of half the population, various States and cities go in for it. When not all 10 fingers are on the uniform type of card, FBI rejects their offerings. Postal savings banks print the four fingers, exclusive of the thumb, on the right hand of each depositor. There are 4,100,000.

Some States and cities require two- or five-finger prints from taxi drivers, holders of gun permits, public employees, persons in the liquor business and other specified occupations.

FBI's records are purely for identification. They do not record occupations though a card does show where the individual was employed when the print was made. Such information would be given only to public law enforcement officers. An employer is not told whether a new employee has a record or has changed his name. But if the individual is wanted, though years have elapsed, the city or county will be notified. That often happens.

PRINTS HELP IDENTIFY

The individual who has a police record has a good reason for not being fingerprinted. There are some reasons why the other 59,000,000, even when not required for a job, put their loops and whorls on a card. In the armed forces, they identify casualties, discourage the old trick of fitting out a spy with a prisoner's uniform and dogtag, and prevent frauds. In civilian life, they can identify victims of amnesia, accidents, or sudden death and unmask imposters.

With all this finding out how the people use their time, and comparatively few need to be watched because they are misbehaving, the Government is even more thorough in keeping track of what they are doing financially. Telling anybody about taxes may be as useless as introducing a man to his grandfather. Everybody is his own expert, so it will be brief.

Income tax returns are filed by more than 50,000,000 individuals and firms each year. About one-fifth of these are tax exempt. In addition, the Bureau of Internal Revenue receives nearly 15,000,000 quarterly declarations every 3 months and 92,000,000 income-tax withholding receipts and about the same number of separate social-security reports in a year. All are cross-checked in its New York City office where each of the 50,000,000 names is indexed.

Of the income and excess profits total collected last year, 58 percent was paid by individuals, or four times what corporations contributed. That means a name for almost every household.

The Internal Revenue Code provides a year's imprisonment and $1,000 fine for unlawfully disclosing information from a tax return. Section 55 specifies: "Returns constitute public records, but, except as hereinafter provided in this section, they shall be open to inspection only upon order of the President and under rules and regulations prescribed by the Secretary (of Treasury) and approved by the President."

One of these rules is that each year, the Secretary publish a list of each person who received $75,000 or more in salary, bonuses, or commissions from a corporation. The Ways and Means Committee of the House, the Finance Committee of the Senate, and the Department of Justice may inspect any return. The 32 States which levy additional income taxes have the same privileges within State limitations. Also, any holder of 1 percent or more of a corporation's stock can inspect its return. All are subject to the same penalty for making the information public. Anybody can find out whether an individual or corporation has filed a return, but not the amount.

BUSINESS IS CATALOGED

While private snoopers cannot get information, the Government has the essential financial facts on every business in the country. The individual is no longer required to report securities which did not pay dividends or the names of corporations which did pay. However, the New York office can get the information by cross-checking from the corporation's report.

Any of 26,000,000 rural toilers, and on a farm everybody works, overlooked by the Internal Revenue Bureau does not escape the Census Bureau's tabulations for the Department of Agriculture and its Triple-A and other bureaus. The country has 6,000,000

farms, a decrease of 90,000 since 1940, embracing 1,140,000,000 acres of which 352,000,000 were in crops in 1944.

To encourage production, the Government guarantees that the six major crops—wheat, corn, rice, peanuts, tobacco, and cotton—will receive 90 percent of parity prices (cotton, 92½ percent) until 2 years after war officially ends. It also fixed marketing quotas, now ended except for tobacco.

This gigantic regimentation of agriculture is kept up to date by 3,000 County Agents who watch the buds and beasts on every farm. A chart of each farm is in Washington. Though many controls are removed, crops still are a concern of a Government which decides not only how much its people shall eat but how much and what food shall be grown.

DREAM OF STATISTICIANS

Finally comes the statistician's dream of heaven—the Bureau of the Census—with thousands of clerks poring over miles of tables, adding and sorting machines humming through the day, parading columns of nine figures across endless white pages until finally another report emerges on the prosaic or eccentric doings of the millions of human beings in the American ant hill.

Every time a year ends in zero, the Bureau gives the body politic a complete check-up. In interim years, it takes censuses of manufactures, agriculture, religions, vital statistics, automobile accidents, cities, and many special subjects.

In the big canvass, it lists the name and address of everybody, from the cradle to the grave, and 30 more facts of possible interest about each one, including race or color, wages or salary, and whether more than $50 came from other income. With straw poll technique, it has 15 supplementary questions for 5 percent of the inhabitants—parents' birthplace, mother tongue, military service, social security, trade or profession, and whether women have been married more than once, age at the first venture, and number of children.

In 1787, the founding fathers put a section in the Constitution requiring a census every 10 years to apportion Representatives and taxes for each State. That was all they foresaw, but Government, insatiable in making work, has added questions through the years until a national census indexes even the thoughts of the population.

In the last census, 1940, the army of enumerators put down close to 132,000,000 names. An unnamed 7,000,000 have been added since. Each name is transferred to a 45-column card in which holes are punched according to the data on the individual.

Tabulations are made at close to lightning speed by electrical contact through any selected hole in a card. As there are eight series of cards with the same names on several series, the 132,000,000 blossomed into more than half a billion cards.

CENSUS SHEETS ARE PRESERVED

Once the tabulations are completed, this pasteboard mountain is destroyed. The enumeration sheets, around 4,000,000 for the last census and each larger than a newspaper page, are preserved. These sheets for every census, from 1790 to 1870, with the name and data on everybody who could be found in the United States, are in the ornate National Archives palace in Washington.

Those for the seven later censuses are in the big concrete offices of the Bureau in Suitland, Md., and, astonishingly, are consulted daily. The Bureau searches these old records for the answers to an average of 200,000 requests a year for information which they alone can supply.

In most cases, it is needed to get a birth certificate, citizenship papers, an old-age pension or a passport or to prove the nationality of parents. The Bureau does not sort its millions of names alphabetically but keys its records by States, counties, townships, municipalities, wards, streets, and house numbers or rural locations. If an inquirer does not know his old address when the census was taken, and about half of them don't, the Bureau cannot supply the information.

After all this cataloging of Americans—OPA, 132,000,000 listed; Social Security, 86,000,000; USES, 168,000,000 listings; Selective Service, 48,000,000; FBI, 65,000,000; Postal Savings, 4,100,000; Internal Revenue, 50,000,000; AAA, 26,000,000; and Census, 139,000,000—old Diogenes would need a radar lantern to find a forgotten man in the United States.

Reece Calls on Truman

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of February 16, 1948:

TWO-PARTY SYSTEM FOR SOUTH URGED BY GOP CHAIRMAN—REECE CALLS ON TRUMAN TO STAVE OFF DEMOCRATIC FILIBUSTER ON CIVIL RIGHTS

Chairman Reece, of the Republican National Committee, yesterday urged a two-party system in the South as one way of preventing what he called infringements upon civil liberties.

He also challenged President Truman to urge Democratic Senators from the South not to filibuster against antilynching, anti-poll-tax, and other administration-recommended civil-rights proposals when they come up for action.

GOP EFFORTS PRAISED

Southern governors and legislators have denounced the President's 10-point civil-rights program. It calls for no segregation in transportation and Federal guaranties against discrimination in employment because of race.

They are talking of withholding Dixie's electoral votes from the President as one means of retaliation.

Reece, in a letter to 20,000 Republican officials and party workers, credited the Republican Party with originating most measures in the Nation's history for promoting civil liberties.

He added that Democratic filibusters in recent years had blocked all Republican efforts to put through antilynch, anti-poll-tax, and fair-employment-practice measures.

"Just now," he said, "there are some rumblings from the deep South indicating a growing realization that the un-American, one-party system is injurious to everyone, including its presumed beneficiaries.

"It is to be hoped that eventually an enlightened self-interest will put an end to this anachronism in certain of our Southern States."

Reece is a former Congressman from the Republican First District of Tennessee. He said many of the President's recommendations "are duplicates of proposals which Republican Members of Congress have been seeking to enact into law for many years."

COMPARED WITH RUSSIA

He asserted that infringements upon civil liberties "are nearly always to be found where a one-party system prevails."

"Though there may be differences in degree," he went on, "that principle would apply, regardless of whether the party bears the Communist name, as in Russia, the Nazi label in Germany, the Fascist label in Italy, or the Democrat label in Mississippi."

The Dilemma of the East-West Trade in Europe: Will the Machine Products Sent From Western Europe in Exchange for Grain Too Dangerously Strengthen the Hand of Moscow Satellites?

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, we all know that the iron curtain has cut Europe politically in half. We also know that agriculturally the eastern part of Europe has traditionally been interdependent with the industrial west. Over 70 trade pacts have been entered into by the east and west since the end of the war. The west needs the food from the east. But when England, France, and the other nations of the west are shipping machinery to Poland, Bulgaria, and the other satellite countries, it should be done with the full knowledge that such shipments are intended by Moscow and its puppet governments to fit into the over-all Soviet plan; that plan is to strengthen the Communist-dominated governments further rivet them to the Politburo. The eyes of the west should be wide open to these deals. Following is an excellent article from the February 14, 1948, issue of America:

EAST-WEST TRADE AND EUROPEAN RECOVERY

(By Tibor Payzs)

The European recovery program is based on the assumption that in the next 4 years eastern and western Europe will gradually resume a normal pattern of trade. This is a factor in the calculations of both the general report of the Committee on European Economic Cooperation, resulting from the Paris Conference of 16 European governments, and the message of President Truman to the United States Congress on the Marshall plan, December 19, 1947.

But Communists everywhere are inimical to the European recovery program. In September 1947 the Communist Parties of nine European countries held a conference in Warsaw which resulted in the announcement of the formation of the Communist Information Bureau, the Cominform. A manifesto was made public which stated: "The Truman-Marshall plan is only a farce, a European branch of the general world plan of political expansion being realized by the United States of America in all parts of the world."

Since the Cominform came into existence, a great deal has been done by Communists both beyond and behind the iron curtain to wreck European recovery and to hasten the advent of a Communist continent. Still, east-west trade in Europe, a basic assumption in the calculations for the ERP, has not stopped. In fact, it is on the increase. According to a dispatch of World Report, dated December 30, 1947, there are at present 71 bilateral trade agreements in force between

east and west. At present, however, these represent, at a yearly rate of $1,400,000,000, only 30 percent of the volume of prewar trade. Curiously, there seems to be even more anxiety on the part of some eastern European countries, such as Poland and Czechoslovakia, than on the part of western Europe to maintain trade relations with the United States and Britain.

This would apparently indicate a Communist inconsistency between political and economic policy. But an analysis of the Communist strategy in Europe as it unfolds from recent events, both west and east of the iron curtain, might shed some light on the issue.

In the west, the French and Italian Communists—the only two western groups which were among the founders of the Cominform—have been on the offensive since the latter part of 1947. In France, however, the Communist attempt to tie up the national economy through strikes was unsuccessful. Many workers refused to answer the call for strike, and about 1,000,000 members of the Communist-dominated CGT (General Confederation of Labor) have set up a non-Communist organization, the Force Ouvrière, under the leadership of Léon Jouhaux. On the political side, the considerable support of General De Gaulle's RPF (Rally of the French People) in the municipal elections shows a waning of the French voters' enthusiasm for the Communists. (In the last two national elections the Communists received about 30 percent of the total vote.) In Italy, the Communists followed the familiar pattern of strikes, political agitation, and violence. But there are no Communist gains of consequence here, either. The goal of one Communist section for every church tower has not yet been reached, according to a recent announcement by Pietro Secchia, the chief of party organization. Communists, however, do not as a rule attain power through democratic majorities.

As to its continental strategy, there is little evidence that the Cominform was hoping for victory in France or in Italy before the end of 1947. Activities in these two western countries were more in the nature of preliminary skirmishes. Before a full attack can take place in the west, the eastern European hinterland must be solidified.

The Communists still feel the need for "mopping-up operations" in at least some of the countries of the region, both in domestic politics and in the national economies. In addition, they wish to consolidate the political and economic relations of the eastern European governments both with the Soviet Union and with each other. A further task is the regulation of trade relations with the rest of the world, particularly with the western European participants in the ERP.

Admittedly the countries of eastern Europe are Communist-controlled. Investigation into their domestic politics, however, shows that the claim that they are ruled by coalition or "National Front" governments may be granted some validity, proceeding from south to north in the region. Of course, Communists occupy everywhere the key positions. But while Albania, Bulgaria, Yugoslavia, and Rumania are, for all practical purposes, one-party States, Hungary, Poland, and Czechoslovakia are not—as yet. The Peasant or Agrarian Parties, the Socialists, and other non-Communists in the governments are the left wings of those prewar parties. It has been a question of survival—often only a temporary survival—to follow the Communist lead. However, for some time these parties seem to have had a mollifying effect on Communist decisions. It should be noted that the last genuine Peasant leaders, in or out of the governments, such as Petkov of Bulgaria, Maniu of Rumania, Mikolajczyk of Poland, were eliminated only quite recently. More recently, even Alexander Obbov, a left-wing Peasant leader in Bulgaria who seemed to have been a docile Communist collaborator, was shoved into the background.

As to the Socialists, in Rumania the formation of a single Workers' Party of the Communists and Socialists is scheduled for early February. Socialists in Poland and Hungary, though left-wing Socialists, of course, have been able so far to resist the Communist "invitation" to fusion. In Hungary the two parties had separate election slates. The Czech Socialists remain relatively independent. Many large trade unions in these countries are still under socialist, and not Communist, leadership. The rank and file of trade unionists have opposed the attempts at fusion. Also proceeding in the south-north direction, one finds minor opposition parties still tolerated. Thus the Communist job in the domestic politics of eastern European countries is still not fully completed. Undoubtedly, however, the Communists are doing their best. They know that to carry out their plans they must accelerate their pace, for, in view of the recovery program, time is definitely against them.

In international politics, there is unqualified orientation toward the Soviet Union as the great power upon which alone the democratic countries of eastern Europe can rely. The United States is denounced as imperialist. And the British labor government is aiming at hiding the true face of imperialism behind the mask of democracy and Socialist phraseology. Another significant development is the rapidly expanding system of treaties for political, economic, and cultural cooperation among the governments of this region. This development also follows a south-north direction. It began with the closest collaboration, to the point of customs unions, between Albania, Bulgaria, and Yugoslavia. It continued with the extension of the network of treaties to Hungary and Rumania. There are signs of further developments, involving Czechoslovakia and Poland. The ultimate plan for an Eastern European Confederation is not denied, but is rather termed the "music of the future" by no less a Communist than Premier Georgi Dmitrov of Bulgaria, the chief of the prewar Comintern. Such a confederation, if realized, would no doubt evolve in time into a Union of Soviet Socialist Republics of eastern Europe.

The economic pattern follows closely the political one in this area. There is planned economy everywhere: 2-, 3-, and 5-year plans are setting up economic goals. In domestic economy, nationalization, next to land reform, is the outstanding future. Constitutionally, there are three sectors of national economy: Nationalized, cooperative, and private. Basic industries and large financial establishments are nationalized. Cooperatives play an important role, particularly in food production. With some exceptions, private enterprise is permitted in medium and small industries so long as they remain within the bounds of the over-all state economic planning. Foreign trade and internal wholesale trade are either nationalized or controlled by government agencies. Some of the retail trade is taken over by the cooperatives from private hands. Rapid increase in the industrialization of Poland, Yugoslavia, and Hungary is planned, and a further shift in Czechoslovakia from light to heavy industry. In general, the similarity to the new economic policy of Lenin in 1921 is a striking one. But as the NEP was a temporary stage preceding full sovietization, so there is little doubt as to what is in store for eastern Europe if the Communist planners should manage to have their way.

In foreign trade, the Soviet Union emerges as the principal customer of the region. The various plans of the governments of eastern Europe are made subsidiary to the Stalin 5-year plan for the U. S. S. R. This has been brought about by bilateral trade agreements between Moscow and the capitals of eastern Europe and, in the case of Hungary and Rumania, former Axis satellites, through reparations and the Russian title to German assets under the terms of the Potsdam agreement. The latter has occasioned direct intervention by the Soviet Government in the management of some Hungarian and Rumanian corporations, and the joint Soviet-Hungarian and Soviet-Rumanian enterprises in bauxite, oil, and Danubian navigation.

But apart from the direct dominant role of the Soviet Union, there is another parallel between foreign trade and foreign politics in eastern Europe. The region is in the process of being forged into a large economic unit. To this end the rapid increase in industrialization envisaged in the different plans is a basic condition. According to the trade agreements among the governments of eastern Europe, raw materials and industrial products are to be exchanged in a fashion which will help to transform the noncomplementary economies of the countries into substantially complementary ones. Czechoslovakia is an example. Her engineering equipment will go to Poland to produce steel and improve the Upper Silesian coal industry, in exchange for coal, electric power, zinc, and food. Yugoslavia will receive Czech industrial equipment for aluminum, iron ore, lead, and chrome. Bulgaria will pay for Czech machinery with lead, tobacco, hides, maize, and pigs; Rumania pays for it with oil, timber, and agricultural products.

Czechoslovakian industry, as it is today, could only partially fulfill the demands upon it. At present, however, more than half of Czechoslovakia's trade is still with the west. While non-Communist elements in the Government might sincerely consider their east-west trade a contribution to European recovery, it is certain that Communists view this trade as a means to provide Czechoslovakia with western industrial equipment—that is, with the tools which will develop her into the machine shop of eastern Europe. Much the same applies to the coal which Poland is so anxious to trade for western machinery. In fact, east-west trade in general must be looked upon in this light.

Thus east-west trade is fostered by the Communist-controlled east: (1) Because temporarily it still needs western trade relations for a balanced economy; (2) because the industrial equipment it receives for export is necessary for the attainment of its goal, 5 years hence. This goal is the political, economic, and military self-sufficiency of a combined eastern Europe and Soviet Union, a veritable new imperial order.

These seem to be the reasons, then, why, in spite of the fact that it helps the ERP, the east is anxious to continue and increase east-west trade.

It is necessary that the west should realize the implications of this trade. Undoubtedly such trade will make the ERP cheaper to the American taxpayer. Moreover, while the United States can make her own economic policy, she cannot dictate the trade relations of the sovereign states of western Europe. But it should not be forgotten that, while east-west trade is helping the ERP, it simultaneously accelerates the Communist plan for eastern Europe and strengthens the Soviet hinterland for an aggressive hand in western Europe, the Far East, and elsewhere. It is doubtful that under these conditions any future normalcy in east-west trade relations in Europe, that is, the prewar flow of eastern food, fodder, timber, and coal, in exchange for western industrial products, will be reached or sustained beyond a period of 5 to 10 years.

Still, for complex reasons of international economy, east-west trade must be accepted while it lasts. But the west must consider that trade a calculated risk which must be taken with eyes fully open to its place in Communist world strategy as a whole.

We've Scuttled Our Air Defenses

EXTENSION OF REMARKS
OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by W. Stuart Symington, Secretary of the Air Force, entitled "We've Scuttled Our Air Defenses," which appeared in the February issue of the American Magazine:

WE'VE SCUTTLED OUR AIR DEFENSES

(By W. Stuart Symington, Secretary of the Air Force)

The safety of the United States demands that we have an impregnable air curtain—a curtain sufficiently strong so that no fleets of hostile planes or waves of guided missiles can reach the mainland of this country. As part of that curtain we require adequate radar protection, which we now lack.

Dollars as a yardstick are misleading these days. But it has been estimated that to provide an air force able to guarantee the minimum safety margin of national security the bill would run as high as $8,000,000,000 annually.

The United States had, in its mighty air force of World War II, the greatest weapon imaginable to ensure a permanent peace and to keep us from fear of successful attack. After V-J day we scuttled it—just as surely as if it had been a rowboat and we had taken a double-edged ax to its bottom.

If we had kept strong, there might not even have been a threat of World War III today. If we hurry and catch up, the threat may recede. But the very nature of air preparedness demands that we waste not another single day.

To cite one bit of concrete evidence, a small but revealing example of how we are hamstrung in many ways by lack of funds, one of our valuable acquisitions as a result of victory in Germany was the capture of huge stores of German air force intelligence films. These showed industrial developments and terrain in a part of the globe where some day we may have to wage a war of self-defense. But we are so short of money and personnel that we are in danger of having some of this invaluable footage spoil before we can develop it.

Imagine what a potential enemy nation would do if it could lay its hands on similar films of our defenses and industrial centers.

No longer are we the leading air power of the world. In quantity we have slipped behind the Soviet Union, and qualitatively both Russia and England have numerous developments that exceed our own efforts. England, despite her severe economic strain as a result of the war, is devoting a greater portion of her defense budget to an air force than we are.

There is no doubt that Russia is going all-out for air power. The Russians are reported to be producing aircraft at the rate of 75,000 to 100,000 a year.

What kind of planes are these? In the last war the Russians were deficient in long-range heavy bombers. But this has been corrected. When Russia was our war ally several of our B-29 Superfortresses, at that time the mightiest bomber in the world, capable of operating at a 4,000-mile range, were forced down in Soviet territory after attacks in Japan.

We never saw them again, but now Russian-made copies of the B-29 have appeared in fairly sizable numbers. Manufacturing experts have estimated that Russia, with moderately aggressive production, could have at least 1,000 of this type of plane during the coming year. In December 1946 the Russians even tried to place orders for a number of sets of B-29 type tires, wheels, and brake assemblies right here in the United States. The orders were not accepted.

We are getting new bombers—the B-36, the B-50, and others—which far outstrip the B-29 in range and bomb-carrying power. Still, the B-29 is a very formidable long-range bomber.

Let's take a look at jet planes. We are catching up in this field, but we are still behind other nations. Britain has a jet fighter more advanced than ours. Russia, in her show of military strength last May Day, flew 100 jet planes en masse, and, on Red Air Force Day last August, exhibited at least eight different types of jet planes, including a four-engine jet bomber. One of their fighters is a swept-back-wing type. At time of this writing the United States has produced only one experimental model of this type. It indicates that the Soviet Air Force is preparing to hurdle the transsonic speed barrier. We haven't done that yet. Any aeronautical engineer can tell you that if an air force is able to fly 100 planes of a type at one time it must have at least 300 to 500 in existence. This, to an engineer, would indicate a monthly output of at least 200.

One of the brighter rays of hope in the otherwise gloomy picture is that the United States Air Force has finally achieved what it has been struggling for since the days of Billy Mitchell—coequal status with its brother services, the Army and the Navy. The recently enacted unification bill gave us that.

As the first Chief of Staff and the first Secretary of the newly created autonomous United States Air Force, Gen. Carl A. Spaatz, and I have pledged ourselves to strive to give the Air Force—and the Nation—the most for its dollars.

In World War II, under the brilliant leadership of Gen. "Hap" Arnold and Assistant War Secretary for Air Robert A. Lovett, and a score of inspired, resourceful fighting commanders in the field, the AAF became the world's mightiest air armada—more than 2,400,000 men and 80,000 planes. We were backed by an industry capable of producing 96,000 planes a year.

Then came VJ-day. Demobilization, of course, was necessary, but we demoralized as well as demobilized. Undoubtedly, it was the fair way, the American way, to carry out a system of demobilization that released our men in order, depending on their tenure of service, their combat records, and their family status. But, by doing it this way, we stripped ourselves of the very veterans whose skill and technical knowledge were absolutely indispensable to keep the remnant of our Air Force going. True, we had numbers of men and numbers of planes. But, as an air force, they could not fight, they hardly could fly, and there was barely a nucleus left to teach the green hands.

Now the Air Force has started on the road back. The road has been—and still is—painful, arduous, and fraught with frustrations and obstacles. Under the leadership of General Spaatz, Gen. "Hap" Arnold's leading field commander and now his successor, and a staff in which youth, inspiration, and ability abound, we are making progress. But even the greatest of leaders cannot continue to make bricks without straw, so the Air Force is facing a crisis.

An air force, I have heard General Spaatz say, is like a four-legged stool. One leg is the military air-force-in-being (this includes operations and training plus the backing of vigorous, unrelenting scientific research and development). The second leg is a strong air reserve and national guard. The third leg is industry—a healthy and adequate manufacturing network capable of rapid expansion in time of emergency. The fourth is an up-and-going air-transport industry to serve as the nucleus for military transport in event of war. Remove any of the legs and your four-legged stool of air preparedness collapses.

What are we doing about maintaining this four-legged stool so the country can rely on it?

As for an adequate military air force, we simply do not have it. When General Spaatz took over after the war, he put our best brains to work on determining the minimum number of air groups and supporting personnel we must have to maintain national security. Our planners came up with the rock-bottom conclusion, in which Gen. Dwight D. Eisenhower concurred, that at least we could dare get by on was 70 combat groups augmented by 22 squadrons, and backed up by 27 groups in the air national guard. To maintain these 70 groups and keep the other business of the Air Force going, we must have 401,000 men and officers.

In the event of war, the mission of such an air force would be (1) to protect our own industries; (2) to support the evacuation, if possible, of our pitifully outnumbered occupation troops in Europe, where there is the ever-present danger of Bataan being repeated on a large scale, plus protection of the advanced bases from which our own air offensive must strike; and (3) to launch and sustain a full-scale air offensive and destroy the enemy's industry and economy with atomic bombs and the latest weapons.

Now, a 70-group air force, unless it is backed by the capability for almost miraculous rapid expansion, would be strictly a one-shot proposition. It would be wiped out in another air war in a very short time. We must count on being able to expand with extraordinary rapidity to at least 180 groups—and I speak of groups which, in load-carrying capacity, are approximately 40-percent greater than those of World War II—and, if the war continues, to keep on climbing, perhaps as high as 350 groups if the war should last 3 years.

But we do not have these 70 groups. The money has not been available. Even recruiting has fallen down. As of a recent date, we had been able to climb to a total of 321,000 men. If we're lucky, we'll have 55—not 70—groups operating by the end of the year.

Painstaking surveys have indicated that, if we get the 70 groups, which we don't have now, we'll have to procure more than 5,800 planes and train 5,400 new pilots annually to keep the force operational and nonobsolete. That would mean the Air Force would have to spend $8,100,000,000 annually and employ 664,602 military and civilian personnel to keep such an establishment going. From the standpoint of absolute national security, anything less may be a step toward national suicide, any time any first-rate air power wishes to attack us.

To stress just one item: It is vital for this Nation to have an adequate radar network—the electronic eyes that will warn us if enemy air fleets near our boundaries—set up along the vulnerable approaches to the United States. Yet the necessary radar is just not available, so we do not have this network.

"Why spend money on old-fashioned types of planes and a large force of men to fly them when the next war will be a push-button affair?" This is an argument frequently raised by critics who may be well meaning but who certainly are poorly informed. Sure, we are going to have push-button warfare. There is not a scientific problem that will not yield to sufficiently intensive research, provided we put enough time and money into it.

But push-button warfare is, at best, 10 to 15 years off, and probably more. The era when the warrior scientists of enemy nations will sit in underground shelters 10,000 miles apart, and manipulate multibutton consoles that will aim atomic, radar-guided rockets at one another may be coming, but we at

least have some breathing space before it arrives. So the next war, if it comes within the next 15 years, will be fought with improved versions of weapons now at hand.

We do plan to take the initiative in setting up underground plants for manufacture of highly critical items. In next year's budget we shall request $5,000,000 for construction of an experimental underground jet engine plant.

The soundest strategical concept of how the next war will come is that there will be no warning, not even a relatively short period in which America can get ready. There will be no allies this time to hold the fort until the American arsenal can catch up. If we survive the first shock—and we can do so only by the expensive process of keeping up our defenses—we then can win the war only by offensive action. Even America's vast resources would be exhausted by a protracted stalemate against a far-off power that cannot be blockaded. To end it, we would have to strike with powerful, devastating weapons to make the enemy cry quits. If we are hit, only a powerful air force in being can strike back hard enough and fast enough to prevent the destruction of the United States.

Georgia Veteran Laws

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. DAVIS of Georgia. Mr. Speaker, recently there came to my attention an outline of Georgia's laws affecting veterans and their dependents, as compiled by my good friend, Paul Ginsberg, national junior vice commander of the Disabled American Veterans, 786 West Wesley Road, Atlanta, Ga., who, while a practicing attorney at law, has devoted a great deal of his time to veterans' affairs. At the present time he is also serving as commander of the largest DAV chapter in the State of Georgia.

Many of the potential beneficiaries under these State laws are not aware of the valuable rights, privileges, exemptions, and benefits available to them, under certain circumstances and, therefore, I am hopeful that this résumé of Georgia's veteran laws will come to their attention.

The outline is as follows:

CIVIL RELIEF AND ALLIED BENEFITS

Acknowledgment is made of legal instruments executed by members of the armed forces.

Evidence may be admitted of presumed death or absence.

Disability of minority is removed for qualified veterans under the GI bill of rights.

Protection is granted to persons acting under power of attorney granted by members of the armed forces.

Fiduciary powers are suspended during war service.

CIVIL RIGHTS

Absentee registration and voting is provided.

CLAIMS; ASSISTANCE IN OBTAINING BENEFITS; SAFEKEEPING OF PAPERS

Roster of soldiers, sailors, and marines of the Civil War, when completed and certified by a majority of the Georgia Soldier Roster Commission, shall be prima facie evidence of the truth thereof. (Powers and duties of the roster commission have been transferred to the veterans' service office.)

The fee of clerks of superior courts for recording and indexing discharge certificates is limited to 25 cents.

It is the duty of the director of the veterans' service office to disseminate information to veterans of the war with Spain, the World Wars I and II, and any other war, military occupation, or expedition since 1897, their dependents and beneficiaries, as to their rights and benefits under Federal legislation or legislation of this or any other State and to assist such persons in the prosecution of claims.

The State department of veterans' service furnishes counsel and assistance to veterans.

EDUCATIONAL BENEFITS; QUALIFICATION FOR THE PROFESSIONS AND TRADES

The State board of education is authorized to receive Federal funds to provide education of noncollege grade for persons above 18 years of age.

Certain requirements of graduates of the University of Georgia School of Medicine are suspended during military service in World War II.

The year of continuous experience required immediately prior to the issuance of a certificate as a public accountant is not broken by service in the armed forces.

Veterans of World War II may attend the common schools regardless of age. The State board of education may provide the facilities free of charge.

EDUCATIONAL OPPORTUNITIES FOR CHILDREN OF VETERANS

Aid is extended to children of veterans who were killed while serving in the armed forces during World Wars I or II, or who died as a result of such service. Amount: $300 per child per year with free tuition in State institutions of secondary or college grade.

EMPLOYMENT PREFERENCES, PRIVILEGES, ETC.

Continuation of membership in the teachers' retirement system is provided while in the armed forces of the United States.

Equal civil-service preference is extended to war veterans.

Certificate of registration is granted without examination to certain persons whose practice as an architect was interrupted by World War service.

Leaves of absence are granted to employees of the department of public safety for service in the armed forces.

Benefit rights are preserved under the Unemployment Compensation Act.

EXEMPTION FROM EXECUTION, GARNISHMENT, ETC.

Confederate pension money is exempt from garnishment and all other legal processes.

GUARDIANSHIP

A Uniform Veterans' Guardianship Act has been enacted with modifications.

The appointment of a guardian of an incompetent veteran or the minor child of a veteran is provided, to receive certain benefits on behalf of such ward.

HOMES

Confederate veterans may be admitted to the Confederate soldiers' home.

HOSPITAL BENEFITS, ARTIFICIAL LIMBS

An incompetent veteran may be committed to a Federal hospital under the Uniform Guardianship Act.

The general assembly is authorized to levy taxes to supply artificial limbs to Confederate veterans.

MARRIAGE AND DIVORCE

Residence requirement has been established for filing petition in action for divorce.

MEDALS

Medals are provided for service on the Mexican border and in the World War.

MEETING PLACES, MEMORIAL BUILDING PRIVILEGES, ETC.

A war memorial building commission has been created.

NATIONAL GUARD SERVICE

Credit is given for war service with reference to retirement and service medals.

PENSIONS

Pensions have been granted to Confederate veterans or their widows, integrated with old-age pensions.

RELIEF AND REHABILITATION

County aid is extended for food and clothing to Confederate veterans.

A veteran resettlement corporation has been created to make loans guaranteed by the Federal Government under the GI bill of rights.

TAX EXEMPTIONS: EXEMPTION FROM LICENSE FEES, RENEWALS, ETC.

Parks and places where baseball, football, or any similar game is played, and race tracks where bicycle, horse, or other races of similar character are held, where admission fees are charged, are exempt from any special tax thereon, whenever the proprietor or owner is a maimed or disabled Confederate soldier.

Resident hunting and fishing privileges are extended to nonresident Army officers, troops, and soldiers, stationed and confined for training duties in various camps and cantonments throughout the State.

All back income taxes of members of the armed forces who die during service in World War II are canceled.

Income-tax exemption is granted to members of the armed forces during World War II and for 6 months thereafter. No return is required.

Reciprocal agreements may be made for the operation of automobiles owned by draftees and members of the United States Army and registered in other States.

Confederate veterans may act as life- and fire-insurance agents or solicitors without payment of license tax.

Disabled Confederate veterans may do business as photographic or similar artists without licenses.

Veterans may conduct any business not prohibited by law without the payment of a license tax.

Disabled veterans are exempt from payment of peddler's and business license taxes.

Members of the armed forces during World War II were exempt from poll tax.

Homestead exemption of $2,000 was extended persons in the armed forces during World War II.

TRANSPORTATION PRIVILEGES

Common carriers may sell tickets to Confederate veterans at half price.

Many of these laws have been enacted through the sponsorship and cooperation of the DAV and other veterans' organizations.

At the present time the DAV has some 21 chapters scattered throughout the State of Georgia, most of which maintain volunteer or part-time service and employment officers to assist veterans with their problems in their own communities.

In addition to this service on a local level, the DAV maintains five full-time national service officers, under the direction of James A. Aldred, at the Veterans' Administration regional office, Atlanta, Ga.

Those DAV experts extend all types of service to veterans and their dependents, free of charge, more particularly in the technical preparation, presentation, and prosecution of their justifiable claims for

various types of governmental benefits to which they may be lawfully entitled under existing Federal and State laws.

DAV MEMBERSHIP ELIGIBILITY

Formed in 1920, and chartered by the Congress in 1932, to render service to, for, and by America's disabled war veterans, the DAV has been generally recognized as the official voice of America's disabled defenders.

According to its congressional charter of incorporation—Public Law 186, approved June 17, 1932, as amended by Public Law 668, approved July 15, 1942—active membership in the DAV is open only to those Americans whose bodies bear the scars of wounds or injuries, or the blight of ailments or disabilities incurred during, or by reason of, active service during time of war in the armed forces of the United States, or of some country allied with it.

More and more wounded and disabled veterans of World War II are becoming active members of the DAV.

Eligibles may become life members of the DAV upon payment of a fee of $100—$50 if born before January 1, 1902—in cash, or by a down payment of $5 or more, plus such installments as will complete payment of the full fee by the end of the second succeeding fiscal year—ending on June 30—after which, if not fully paid, a carrying charge of $5 per year would accrue. A growing number are becoming DAV life members.

DAV SERVICE TRAINING PROGRAM

Realizing the need for extending assistance to all veterans and their dependents after the close of World War II, the DAV entered into an agreement with the Veterans' Administration and the American University in Washington, D. C., back in 1944, to train some 400 World War II handicapped veterans to become national service officers. An intensive 6-month special course was set up, followed by 18 more months of on-the-job training in three different regional offices of the Veterans' Administration, under the supervision of old-time, long experienced DAV service officers.

The members of the tenth and last class of such trainees received their diplomas in May 1947 and are now completing their job training in all parts of the country.

This is the most intensive and ambitious program yet attempted by any veterans' organization to provide, without cost to the applicants, expert aid and assistance in the solution of the many problems confronting veterans and their dependents.

No veterans' organization has any more extensive and effective Nation-wide service staff to take care of the problems of all veterans and their dependents, and particularly those who have service-connected disabilities, than the DAV.

During the more than 28 years of its service activities, the DAV has sponsored and supported much liberalizing legislation on behalf of disabled veterans and their dependents.

Liberalized application of such laws, too numerous and too technical here to set forth, has, each year, been brought about by numerous conferences with officials of the Veterans' Administration and other governmental agencies.

DAV NATIONAL HEADQUARTERS

Located at 1423 East McMillan Street, Cincinnati, Ohio, the national headquarters of the DAV takes care of all administrative matters and records and publishes the Disabled American Veterans semimonthly newspaper containing accurate, up-to-date information as to all existing and pending legislation, Presidential Executive orders, court decisions, opinions of the Attorney General, Comptroller General, and VA Administrator, VA regulations, service letters, circulars, and other instructions, as well as much other information of interest and of value to disabled veterans and their dependents.

The present national commander of the DAV is John L. Golob, of Hibbing, Minn., a badly wounded World War I veteran, an insurance agent in private life, who has had a broad background of 28 years of experience in various local, State, and National DAV activities which qualify him to lead an organization composed exclusively of America's disabled war veterans.

Its national adjutant, Vivian D. Corbly, has been secretary-treasurer, business manager of the organization, and editor of its newspaper since 1925. Capt. Cicero F. Hogan is his able assistant.

The largest bank in Cincinnati, the Fifth Third Union Trust Co., has, for 28 years, been the depository for the funds of both the DAV and of its incorporated trusteeship, the DAV Service Foundation. Officials handling funds have always been adequately bonded by the Fidelity & Deposit Co. of Maryland.

NATIONAL SERVICE SET-UP

The national service headquarters of the DAV is now located in a beautiful building at 1701 Eighteenth Street NW., Washington 9, D. C., which was acquired by the organization in 1945.

In this Washington office are located the department of claims, headed by William E. Tate; the department on legislation, headed by Francis Sullivan; and the department of public relations and employment, headed by Millard W. Rice. In addition to these service departments, the DAV service headquarters has its office manager, John E. Feighner, as assistant national adjutant. All of these various departments are staffed by trained experts, all of whom are themselves war wounded or disabled veterans.

These DAV national officers know all about the technical complications that disabled veterans must overcome factually to prove the service connections of their disabilities to the satisfaction of rating agencies of the Veterans' Administration, under the limitations and restrictions of existing law, as legalistically interpreted and as administratively applied.

DAV SERVICE ACCOMPLISHMENTS

The DAV has freely rendered technical help to thousands of disabled veterans each year in obtaining compensation for service-incurred disabilities, medical treatment, hospitalization, insurance benefits, pensions for dependents of deceased veterans, vocational training, civil service appointments, and last but really first in importance, suitable gainful employment.

During the past 18 years for which records are obtainable, the paid national service officers of the DAV have extended service as indicated by the following brief resume:

Claims handled, 1,525,753.

Total monetary benefits, $132,512,-111.87.

Additional compensation payments thus obtained for thousands of disabled veterans and their dependents, who might not otherwise have been able to procure such needed benefits, have converted such beneficiaries from local liabilities into community assets.

It is, of course, not practicable, in a brief statistical résumé, to indicate the many different types of service extended by service officers. Many liberalizing precedents have been established by the decisions obtained, which subsequently have proved of value to hundreds of thousands of disabled veterans having similar claims, the results of which cannot be computed from service reports.

DIFFICULTIES OF PROVING SERVICE ORIGIN

Most citizens agree with the DAV that the Federal Government should bear the burden of providing for the Nation's defenders, but only when it has been established that the veteran's disabilities were incurred in or aggravated by his military service.

To prove service connection of a disability, however, is not an easy thing to do, except where official records show its inception in service. An equitable claim cannot necessarily be legally established.

Many different factors may make it extremely difficult, and in many cases impossible, for a veteran factually to prove that his disabilities were caused by his war service, even though actually service-incurred or aggravated.

EMPLOYMENT PROGRAM

The DAV has adopted, on a Nation-wide basis, a man-job-matching method program to provide suitable, useful, gainful employment for all disabled veterans. Less than 7 percent of the Nation's 2,100,000 compensated war-disabled veterans are totally unemployed. The remaining 93 percent are less than totally disabled and must therefore supplement their inadequate compensation payments with income from employment.

This scientific approach to a most distressing problem has produced some worth-while results thus far. The handicapped veteran's abilities have been matched with the requirements of the job, rather than stressing his disabilities. It has been demonstrated by the employment record of such disabled veterans that they have a low absentee record, a low turn-over record, a low accident record, and a higher efficiency and production record. It has thus been demonstrated that to hire disabled veterans is just plain good business, bringing benefits directly to them, their dependents, their communities, their employers, and taxpayers generally.

AN INVESTMENT IN PATRIOTISM

It is definitely in the interest of all Americans that the fight for justice must be made for those who have sacrificed

their youth and a part of their bodies or their health in our country's most hazardous occupation, its military and naval services during time of war.

The faith must be kept with those who have made such sacrifices in the past, as well as with those who are, or have been, dependent upon these heroes, so that other young men who, in the future, may be called upon to make similar sacrifices, will have the assurance, on the basis of past performance, that if they, too, should also be so unfortunate they will not be permitted to become mere forgotten heroes.

The determination of the DAV to see to it that America's disabled veterans are adequately provided for should be generously supported, as a public investment in the future patriotism of our youth and as practical patriotism which brings huge humanitarian and financial dividends to every community, to every State, and to our country.

As a veteran of World War I, it is a pleasure for me to commend the service program of the DAV, and I am sure it merits the consideration and support of the entire country.

H. R. 5052

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. JOHNSON of Texas. Mr. Speaker, most daily newspapers in cities like Austin, Tex., in my district, have three types of newspaper dealers—newsboy carriers, the boy who deliver the paper to your home; street vendors; and independent out-of-town dealers. All are independent contractors, who buy papers at a wholesale rate and resell them at the uniform retail rate. These dealers, for all practical purposes, actually own the papers after they receive them, since no refund is made for unsold copies. They operate under contract and are independent merchants—not employees. Comparatively little control is exercised over them by the newspaper officials.

These carrier boys deliver the papers they purchased throughout the city. Nearly all of them are under 18 years of age. The turn-over among them is rapid, with at least 10 percent changing each month. The average length of service of these boys is less than 1 year. Most street vendors are adults, but the turn-over among them is very rapid also.

The out-of-town dealers are more constant in length of service, since they operate their own street stands in their own communities. Again, all of these dealers buy papers at wholesale rates and sell them at retail. They are not on the pay roll of the newspaper publishers and their revenue fluctuates with the number of papers they buy and resell.

Recently the Bureau of Internal Revenue proposed to issue an order which would have had the effect of placing these contract merchants under the provisions of the Social Security Act. The Ways and Means Committee has very wisely reported legislation with the purpose of defining the employer-employee relationship, so as to exclude these people from social-security provisions.

If these contract vendors are classified as employees and made subject to the old-age benefits tax, as will be done unless H. R. 5052 is passed, it would be just as logical to tax the cigarette companies for the old-age benefits tax covering the cigarette girls who sell their products over the counters.

The amount of old-age benefits tax which each newspaper would have to pay would be negligible compared with the cost of keeping records on it and collecting the matching tax from the newsboys. On many boys who work a week and then quit, the Government would collect about 20 cents each—10 cents from the newspaper and 10 cents from the carrier. It would take a Philadelphia lawyer to interpret the regulations and bookkeepers and detectives to keep track of the accounts and personnel involved.

Mr. Speaker, I hope H. R. 5052 can be considered and passed at an early date.

Our National Cemetery Scandal

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. SIKES. Mr. Speaker, Foreign Service, the national magazine of that great organization, the Veterans of Foreign Wars, recently carried a thought-provoking article entitled "Our National Cemetery Scandal." It is such a timely discussion that I believe it should be reprinted here. Incidentally, I want to point out the fact that at the forty-eighth national encampment of VFW in Cleveland a resolution was passed asking establishment of national cemeteries in every State and Territory of the Union. The resolution was sponsored by 26 State departments of the VFW.

The article follows:

OUR NATIONAL CEMETERY SCANDAL

(By Herbert L. Schon)

The Air Corps lieutenant from Boston who flew a million-dollar bomber over Germany and crashed to his death during the Schweinfurt raid has become the victim of governmental economy.

An infantry staff sergeant from Columbus, Ohio, who died on Okinawa after putting to good use training and equipment which cost thousands of dollars is being denied benefits which cost a fraction of that amount.

All of the flags at half staff and 21-gun salutes which will greet these fallen heroes and approximately 200,000 other World War II dead being returned for final burial during the next few years will not cover up the fact that this country has failed to provide a national cemetery for them in their native States. For the next-of-kin and other relatives of these men and women, the outward display of tribute and respect which will mark their homecoming must add up to something less than a heartfelt welcome from a grateful Nation.

Seemingly forgotten by Congress, 21 States whose World War II casualties total well over 122,000, and whose veteran population is more than 5,000,000, are without national cemeteries. Such populous areas as all of New England, Pennsylvania, and Ohio today cannot provide burial plots for veterans in resting places maintained by the Government. The condition in densely populated California and New Jersey, which have one such cemetery apiece, is not much better.

Figures reveal a striking story of callous indifference and neglect for the veteran's right to rest with his comrades in arms. They show that while there are over 16,000,000 veterans of the Spanish-American War, World War I, and World War II eligible for burial in national cemeteries, there are today only about 434,000 grave sites provided for them. Despite the fact that 21 States have no burial facilities maintained by the Federal Government for veterans, and that other areas of the country are inadequately provided for, not a single national cemetery has been established since the year 1939.

Any member of the armed forces who is killed in action, dies while on duty, or a veteran who has been honorably discharged, is entitled to burial in a national cemetery where space is available. This privilege is also extended to the veteran's wife, unmarried sons under 21 years of age, and unmarried daughters of any age. There is no cost attached to such burial.

Such liberal provisions look good on paper, but to veterans and their families who live hundreds of miles from the nearest national cemeteries there is little comfort to be gained from them. Conditions make it impractical for these bereaved families to take advantage of a privilege they were intended to receive.

The mother of the Air Force lieutenant from Boston might want to have his remains interred in a national cemetery where he could once again be near men with whom he fought side by side. But since there is no cemetery of this type maintained in Massachusetts, she would be faced with the problem of whether or not to approve burial in the Long Island National Cemetery at Farmingdale, N. Y., over 300 miles distant and the nearest one to her home. Like most Gold Star mothers, she probably would refuse to consider interment of her son at a point which would prove inconvenient for relatives and friends to visit. Similarly, parents of the staff sergeant from Columbus, Ohio, would be reluctant to think of burial in the national cemetery located at New Albany, Ind., over 700 miles away, for their son.

Other very practical considerations are causing relatives of veterans to pass up the opportunity they have to apply for a carefully maintained grave site for their loved ones in national cemeteries. For the aged, traveling great distances in order to be present at interment services is a physical ordeal sometimes impossible to bear. Families in moderate circumstances find that the cost of railroad fare to these cemeteries is a burden which their budgets cannot stand. And since the Government allows only a limited amount for such expenses as transporting a veteran from the place of his death in this country to the national cemetery, many have found it wiser to seek out burial lots in private grounds near to their own communities.

Charged with maintaining an inadequate number of national cemeteries at the present time, the War Department is not unaware that something should be done, and soon, to correct a condition which is keeping thousands of veterans from taking advantage of regulations passed expressly for their benefit.

In 1946 the War Department supported congressional action which called for establishment of at least one national cemetery in every State and additional cemeteries in States with a population of over 500,000. The proposed bill was defeated.

During the first session of the Eightieth Congress, early in 1947, a bill was introduced which provided that surplus military reservations be used to expand cemetery facilities. While this measure would not have provided each State with a national cemetery, it would have given a more equitable distribution. Ultimately the bill was passed by the Senate, only to be amended in the House so that provision was made only for expansion of Jefferson Barracks National Cemetery in Missouri and the Fort Rosecrans National Cemetery at San Diego, Calif. Thus, once again the needs of veterans in 21 States without facilities were overlooked.

Without Congressional approval, the War Department stands powerless to take steps necessary for creating at least one new cemeterial shrine in every State. Each passing month will add to its dilemma in attempting to provide adequate service, for the death rate of former armed forces personnel is rising slowly but steadily.

Actuarial figures show that deaths of Spanish-American War veterans will reach a peak within the next few years. In 1968, it is estimated, deaths of World War I veterans will have attained their highest point. The greatest number of deaths of men and women who served during World War II will come in 1987.

While these dates seem distant, statistics furnished by actuaries give little encouragement or support to those who could adopt a do-nothing attitude. Studies show that veterans' deaths during the next decade will occur at the following rates: 1948—124,331; 1949—128,603; 1950—133,093; 1951—140,509; 1952—145,742; 1953—151,466; 1954—157,866; 1955—164,426; 1956—173,822; 1957—182,657; 1958—190,524.

Present lack of national cemeteries stems partly from the manner in which they were originally established by a well-meaning Congress.

Determined to preserve from desecration the graves of soldiers who fell in battle during the Civil War, Congress authorized the Secretary of War in 1866 to secure suitable burial places in which to inter the dead properly. The following year the War Department was granted the right to purchase grounds for national cemeteries, to enclose them with substantial fences, to mark each grave and to appoint a superintendent at each cemetery.

With casualties having occurred for the most part in the South, the largest number of cemeteries was established in that section. Since the majority of them were opened during or shortly after the Civil War, it was impossible to envision the vast expansion of the United States, the shifting centers of population, or the accessibility of the sites which were being established. And, besides, it seemed unlikely then that fighting of any great magnitude would ever again compel the entrance of United States troops into action.

For many years Arlington National Cemetery in Virginia, where the Tomb of the Unknown Soldier of World War I is located, was believed by many to be the only Government-maintained land for veterans' burials. There was also a mistaken notion held by some that Arlington was given more extensive care than other national cemeteries. In recent years, however, with increasing veteran mortality, a growing number of families have found that there are other national cemeteries and that all of them are given the same careful attention by the War Department. Records show, too, that establishment of the new national cemeteries near large centers of population invariably results in the facilities being used to a progressively greater extent year after year by those for whom they were intended.

Today there are available grave sites for veterans in national cemeteries located in Alabama, Arkansas, California, the District of Columbia, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Nebraska, New Jersey, New Mexico, New York, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia. Those honorably discharged servicemen whose families live near these cemeteries, however, are in a minority compared to millions of veterans who do not live within a reasonable distance, or reside in States where there are no national cemeteries at all.

Forced to suffer along with a cemetery system created for the most part during the horse-and-buggy era, War Department officers today can offer slight solace to next-of-kin who may wonder why something isn't being done to remove inequities which are causing disappointment and sorrow. Thus far nobody holds out even a hope that something definite will be done in the near future.

Whatever excuses may be offered during coming months when relatives of veterans start asking questions about the lack of national cemetery facilities, it is unlikely the answers will lessen a growing suspicion that the dead soldiers and sailors of our world wars are fast becoming forgotten men.

Conditions in China

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. COX. Mr. Speaker, I have here a speech which Dr. H. H. Kung, former Premier and Finance Minister of China, delivered on January 8, of this year to the Far East-America Council of Commerce and Industry. I think it would be of interest to my colleagues before we consider the problems which face us in China to hear some extracts of this speech. Dr. Kung is internationally recognized as the most experienced and able finance minister his country has had in her modern history.

In the opinion of many, it was in no small measure due to Dr. Kung's successful management of China's finances during the last war that his country was able to face alone the tremendous difficulties which confronted her before the United States became her ally. The dangers which faced China then appears to many to have been even greater than the difficulties she faces today.

Dr. Kung in this speech said:

Mr. Chairman, ladies, and gentlemen, I feel greatly honored to be asked to meet with you this afternoon, and certainly it is a great pleasure to see so many familiar and friendly faces. I am afraid I do not deserve all the kind remarks made by our chairman. Anything I have done for China in my capacity as a servant to my country and any good will which I have tried to promote between the United States and China, I have considered as a privilege, and I am sure that many who are here have contributed as much, and perhaps more, both to their beloved countries as well as to the world.

As many of you know, we Chinese are a modest people. When you ask a Chinese about his home, he is likely to speak about his hovel; if you say that his wife is a beautiful lady, he is likely to say that she is an old hag. So when he speaks of his country, he deprecates—every country is more wonderful; every nation knows better; the statesmen and politicians of all countries are comparably pure and noble—they sprout angels' wings—they move about in a halo of glory; but of his own statesmen and politicians he speaks of them as if they were a useless lot.

I should like on this occasion to change the tune. I shall forget that I was born in China and shall only remember that I was educated in America, which I consider as my second home. As such, since we are good friends, let me tell you that there is much to say for China's heroism and fortitude against greater odds and over a more prolonged period than any country has faced in many generations.

Three years ago, when I was in the United States, I had the pleasure of addressing a similar gathering on the subject of postwar cooperation in the development of China. * * * It was then my hope—as it is now—that it should be possible for American capital to come and help us develop our country. It has always been my conviction that foreign investors should be given their just share of profits with sufficient security for them in any undertaking which they may have in China. A question was raised during the war in this country as to whether one preferred butter or bullets. Obviously, you could not have both, so you rationed butter until it almost disappeared from the market, but you made enough bullets to save the world from the forces of evil. Often in history a country has been faced by just such a sharp choice.

When in 1927 the Chinese National Government was established in Nanking under President Chiang Kai-shek, we were full of enthusiasm for our plans for the reconstruction of China. We were going to eliminate the Tuchun system, abolish civil war, modernize our civil and criminal codes, extend our educational system, build railroads, improve highways, airlines, we hoped that with the abolition of extraterritoriality, the establishment of excellent courts, the training of our judiciary and competent civil servants, trade and commerce would be expanded and vital industries would come into existence. As we hoped that the corruptions that had become a habit and a tradition under the Manchus and the Tuchuns would be corrected.

That was in 1927. Since then we have been engaged in constant war. We were attacked by the remaining Tuchuns. We faced the shifty politics of warlords who, while pretending to have reformed, played havoc with national interests. We faced the constant sabotage of national interest by the Chinese Communists. We faced the Communist armies. We faced the threat from Japan. From September 18, 1931, until VJ-day we faced the Japanese forces. They attacked us in Manchuria, in north central China, and everywhere. They concentrated their formidable forces against us until Pearl Harbor. We stood against all this completely alone from September 18, 1931, until December 7, 1941.

Whatever strength in manpower, in wealth, in resources, and in spiritual fortitude China has possessed has gone into this struggle to keep China free, to safeguard China from conquest by a foreign foe and from the Chinese agents of a foreign power. Luckily we have had a strong and great leader during our great trials. Under the leadership of Generalissimo Chiang Kai-shek we stood firmly and unremittingly against our enemies, despite the fact that on more than one occasion very attractive peace offers were made to China by the Japanese in order to withdraw their forces from the Chinese theater to concentrate them against your and other countries.

Under these circumstances we could do little more than utilize our strength in the national defense. Our glorious plans for reconstruction have remained plans. Our wonderful ambitions have remained ambitions. Our hopes remain hopes. But we still stand an independent unconquered people. We also chose bullets instead of butter—we were willing to accept no other choice. We still must keep that program of reform and reconstruction before us. I, for one, deeply believe in Dr. Sun's principles of people's livelihood, and am intensely interested in economic reforms within the country and promotion of international trade without. To achieve this, I personally believe the following are urgent things that should be done:

As soon as possible, a currency reorganization should be instituted. This new currency must have full convertibility; it should be backed with sufficient reserve so as to insure complete confidence. Effective measures should be undertaken to increase the national production of all consumer goods and to meet the necessary needs of the common people, seeing to it at the same time that waste is eliminated as much as possible. We must combat the flight of capital and the unnecessary use of foreign resources. The unfavorable balance of trade should be countered by energetic and well-planned measures to encourage exports. At the same time, every effort must be made to develop and modernize our rural economy for the welfare of the farmers. Further methods should be devised to strengthen the national economy when the currency is being stabilized. This will again call for the balancing of the national budget, which had actually been achieved before our war with Japan. The honoring of Government loans and balancing of international payments, together with a reorganization of the system of taxation to insure a fair and equal distribution of the national burden, should be accomplished. The actual carrying out of the plans for the development and improvement of the existing communication systems to facilitate the revival of normal business and trade should be undertaken. At the same time, foreign capital should be encouraged and protected to participate in the general development of the natural and potential resources of China.

Against the background of inviting foreign capital to China, in my opinion, exists the enviable record of the National Government in regard to meeting payments on service of debts that they themselves incurred. For example, every loan made by the United States Government to my country was serviced by us, and even in our most dark days the payments were made as they fell due and although our exchequer might have been low.

Parenthetically, I might remark that every disbursement of every one of these loans to which I refer was checked and accounted for by my Government to the loan-controlling agency, whether it be the Export-Import Bank, the Reconstruction Finance Corporation, or the Federal Reserve Bank here in New York.

In the present stage of world affairs, we realize that more emphasis is placed upon Europe than China. I must note here that I speak as a private person not delegated to discuss policy, but think that most Chinese will agree that we neither judge nor criticize your foreign policy nor its geographical emphasis. I only want to state realistically that we too are fighting the same menace which threatens the democracy and peace of the world, but our resources are being exhausted and that if unaided, we may suffer even greater reverses. We can no more stand alone than Great Britain or France could stand alone in their fearful days, or than Italy or Greece or Turkey can stand alone today.

Gentlemen, your country has formulated a very unselfish and comprehensive plan for the recovery of Europe which is necessary to prevent the spread of tyranny through that Continent. American policy toward China has still to decide whether timely and sufficient aid should be given to close the door to communism in that area to conform with her policy of containing that menace in Europe. It must not be forgotten that China's position geographically is believed by many to be more important than Europe for the strategical defense of this American stronghold, the heart of freedom. * * *

Because of devastation from without and within, we have no industries now to support the needs of the present civil war. Our industries such as exist on a minor scale are not the type that can supply our American trained and equipped armies. We, therefore, need American arms and munitions, airplanes and spare parts. If we do not get the help, we shall continue to fight for unification and liberty. Chinese do not fear failure. Dr. Sun failed many times before he succeeded. We shall not fail his memory.

But, with help, we can accomplish so much more and so much faster; we can put out the fire before it becomes a holocaust; we can more quickly alleviate the suffering of our masses and the threat of suffering to others in foreign lands.

* * * * *

From their manifesto, you know that the Chinese Communists can never be your allies or your friends. They are the far eastern phase of the iron curtain. When that curtain is lifted, the National Government shall, as always, be your friend; those behind the curtain can only be your enemies. If it were that the Chinese Communists merely wanted political rights, no one could argue with their claim to political freedom unto itself, but armed insurrection which aspires to regional political autonomy that impairs the integrity of the state in a military, economic, and social sense, must be resisted.

Friends, I believe you understand why I speak so candidly. I do not for a moment question the good will of your Government and your people. Your distinguished President and your wise and industrious Secretary of State are burdened with heavy problems, particularly as every country turns to the United States for aid which obviously is becoming wearying to a people, who have already done so much. I speak so candidly because since my youth at Oberlin and Yale, I have had such close ties with you that I feel at home among you, as one of you. I speak to you with such frankness because the air of America has fed my spirit, and my affection for this country has been less only than my affection for my own.

* * * * *

Gentlemen, remembering world history, you need no reminder that we are not the first nation against whom false charges have been made and our leaders castigated. I know we have shortcomings as well as our virtues, but we also know that much of the recent propaganda has been malicious and mere fabrications, and much built up from the proverbial molehill into a mountain. These charges and many others, my friends, were made against all nations and were even laid at the door of these United States in the dark days of Valley Forge and the threatening days of your own Civil War. They were also made against such great leaders and Presidential administrations as Washington, Jefferson, Lincoln, and many others. Every country has faced its tragic days. Every country has known its black hours, when every hope seemed lost. But, like you, our country in days of national tribulation still stands before the world a free people—battered, yes—hurt, yes—but fighting free.

Conditions in Palestine

EXTENSION OF REMARKS
OF
HON. FRANKLIN J. MALONEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. MALONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the National Conference of American Zionist Emergency Council, Washington, D. C., February 15, 1948:

In the bosom of every true American beats a heart filled with love and loyalty for our great country, and this is true whether the American be Jew or Gentile, Protestant or Catholic, white or colored, Republican or Democrat. Right or wrong, either in internal or foreign policy, though our country may be, this war affection never diminishes. If she be wrong, then it is our right—nay, it is our duty—to exert every effort within our means to right that wrong; and if we hold public office, the means to right the wrong is enhanced and the duty proportionately greater.

Conscious of a wrong in the Palestinian situation, and likewise conscious of our duty, 30 Republican Members of the House of Representatives, including myself, within the last few days addressed a petition to Secretary of State Marshall. We requested information as to whether or not Great Britain was, directly or indirectly, shipping arms to the Arabs to be used against the Jews in Palestine; and if Great Britain was condoning such action in others, and what position was the United States going to take.

Under our Constitution, the executive branch, headed by the President, primarily is responsible for foreign policy. We in the House of Representatives have practically no authority in such affairs except in matters of appropriation, but we do have the authority to direct such a petition to the Secretary of State. This we could do. This we did do.

Further than this we can speak before the people and help to direct public opinion along the proper channel. With this purpose in mind I am addressing you tonight.

I need not dwell lengthily upon the history of the struggle of the Jews in Palestine, as you only too well are aware of these facts. What is happening there today is that a small, willful group of self-appointed, rather than democratically elected Arab leaders, has incited a number of their countrymen to deeds of horrible violence in an attempt to defy the recognized decision of the United Nations. To begin with, this violence was on a small scale and tentative in character. If the British authorities, which so proudly declared that they and they alone were going to maintain order and did not wish anyone to interfere with them, had taken the most elementary police precautions, these misdeeds would have remained a minor incident. But the British Government has chosen to assume an attitude of benevolent neutrality toward the rioters, thus encouraging them to ever greater misdeeds and thus persuading others, who have so far been peaceful, to join their ranks.

Essentially, therefore, the responsibility for what is going on in Palestine at the present time rests with Great Britain.

A second consequence of the British attitude is that the neighboring Arab states of Palestine were encouraged thereby to lend active support to the Arab rioters in the country. Their territories are now openly

used as bases for operations against Palestine; men are being trained and armed in those neighboring states for the fight in Palestine; soldiers and officers of their armies are being encouraged to take leave with pay to join the Arab rioters in Palestine along the well-known model of the German and Italian "volunteers" in Spain; arms from government stores and money from governmental treasuries are being given to those rioters; and several invasions of armed groups into Palestine have taken place from Syria, the Lebanon, and Transjordan. In two cases those invaders engaged in battles with the Jews as soon as they crossed the frontiers, and upon being repelled, withdrew with their arms into Syria and the Lebanon, there to prepare for their next act of aggression.

This is no longer disorder or a civil war within a country. This is international aggression. This is the very state of affairs to prevent which the United Nations has been created. But to this very day the United Nations has done nothing in order to call those states on the carpet. As for the British Government, it tolerates this state of affairs and it is believed even continues to supply those aggressor governments with armaments.

But there is no point in we citizens of the United States protesting either against the sins of commission of the Government of Great Britain or against the sins of omission of the United Nations. We must look to our own Government to do the right thing and not to tolerate the wrong thing. It is up to the American Government to take whatever steps are necessary in order to recall the British Government to the sense of its obligations and to the elementary decencies involved. Specifically it is up to the American Government to take up the matter in the United Nations, of which we are so leading and so active a member. It is up to the American Government to do everything in its own power to bring about the speedy implementation of the United Nations decision, and neither to do nor to tolerate anything that would run counter to the verdict of the United Nations.

This is the crux of the situation where we, citizens of the United States, are concerned. Unfortunately, the position assumed by our Government in many ways has been as shameful as, and in other ways more shameful than, that assumed by others. The British never supported the partition plan adopted by the United Nations. They were markedly cool to it from the start and made no secret of their dislike for it. The Arab Governments openly spoke against it. But our Government supported partition as the fairest compromise between the Jews and the Arabs, each of whom claimed Palestine as their own.

Having thus actively supported the plan, and having greatly contributed to its adoption by the United Nations, our Government has assumed in the last 2 months a most reprehensible attitude of coolness toward it; an attitude of straddling the issue. Nothing has been done by President Truman and his subordinate officials to smooth the way for the carrying out of the decision. But a lot has been done, mainly under cover, to put new obstacles in its way.

We might have signified to the Arab States our displeasure at their acts of aggression. We have not done so.

We might have used our friendly relations with Great Britain, with whose government we are so closely linked, to represent to it the need to conform with the United Nation's recommendations, to allow an increase of Jewish immigration into Palestine, to open the port of Tel-Aviv for the influx of immigrants, arms and civilian supplies. We have not done so.

We might have put the question of acts of aggression, now brazenly perpetrated in Palestine, before the Security Council of the United Nations, as we have put the questions on Greece, Iran, Korea, and other countries before the United Nations. We have not done so.

We might have relied on the long American tradition in permitting individual American citizens, who voluntarily feel like joining the fight for just causes, go abroad without hindrance and accompanied by the best hopes and wishes of the American people, as we had done in the cases of those who had gone from this country to help defend England, France, and Finland and many free countries in their hour of stress. We have not done so.

While thus carefully refraining from doing anything that might help transform the United Nation's decision into reality, Mr. Truman and his subordinate officials have done plenty in the other direction.

An embargo has been clamped on arms to the Middle East. No difference has been made between arms for the attackers and arms for the defenders; between arms for those who seek to defy the United Nations and arms for those who defend its verdict. Since the Arab rioters are kept fully supplied by the Arab Governments and it is believed—indirectly—by Great Britain, this means in practice that the embargo has been instituted in order to make it impossible for the Jews of Palestine to defend their lives and the newly proclaimed Jewish state.

Pressure has been exercised in respect to Jewish immigration. But this pressure was not applied to the British in an effort to get them to admit more Jews to Palestine. This pressure was applied to the Jews in an effort to get them to stop further immigration for the time being, thus nullifying the essential stand taken by our own Government for the last 3 years, according to which the immediate admission of large numbers of Jewish immigrants into Palestine was the most urgent of all tasks relating to that country.

Steps have been taken by our present administration to recall the passports of Americans fighting alongside the forces of law and order in Palestine. Press announcements have been issued by this administration and unfriendly comments have been inspired by officials of this administration, seeking to place these Jewish volunteers in a bad light before the public. Our country was founded by volunteers from abroad who helped defend a just cause. Lafayette and Kosciusko are names of honor in the history of America. From time to time, freedom-loving Americans returned the compliment and helped to fight for liberty and justice, even in those cases where our country was formally neutral. But disregarding these precedents, the administration has now chosen to take punitive measures in order to discourage those of us who are young enough and indignant enough to want to help a small people which fights alone for a cause sanctioned by the United Nations of the world.

A lot of arguments are being used to justify this attitude of the administration. Some of these arguments find their way into the newspapers, others are bandied around by word of mouth. It is alleged that the United States of America cannot afford to back its own policy and the United Nations policy; cannot afford to back it because of the international situation. What does that mean? We can rightly afford to stand up to Russia, the second greatest and strongest nation in the world, when we believe that justice demands it. And here it is said that we cannot afford to stand up to a few ambitious rulers and arrogant demagogs in the Middle East.

It is said that we dare not support the Palestine partition plan because Russia supports it. How do you like this way of double talk? As long as Russia's stand was undecided, we were told we could not support the Jews in Palestine because Russia would come out against them. Now that Russia has come out for them, we are told that we cannot support them because Russia has come out for them. Heads I win, tails you lose.

I do not believe that the present stand of the administration is necessary in the national interest, however narrowly you constr ' that national interest. But I do believe that the present attitude of the administration is very much contrary to American national interest if you look at this national interest from a broader and higher point of view. I think the principal national interest of America is to assure respect for the United Nations, to show continuity and determination in backing that which is right, and to safeguard the reputation of America for integrity and honesty.

I feel that the present attitude of the administration is not calculated to advance any of these three objectives and I, therefore, oppose it.

I am not a member of the Democratic Party nor do I have its confidence regarding the internal relations within the administration. I do not know, therefore, neither do I wish to know, to what extent the present attitude is due to Mr. Henderson, to Mr. Lovett, to Mr. Forrestal, to Mr. Marshall, to Admiral Leahy, or to President Truman. Our Constitution does not make any such fine distinctions. Nor are the citizens of the United States called once every 2 or 4 years to make such fine distinctions. The executive branch of the American Government is one whole. It is headed by the President who instructs the members of his Cabinet, and who, in turn, issue directives to their subordinate officials. All I can do, all we can do, is to address our protest to the executive branch of our Government as a whole and, if necessary, to carry our protest, against this Executive policy, to the American people as a whole.

In this sense I join with you in this expression of indignant protest against the attitude assumed by the American Government on the question of Palestine and in the insistent demand that our Government should immediately take the only stand consistent with its dignity and integrity.

CAB Denies Delta Air Lines Application

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Shreveport Times, Shreveport, La., on February 8, 1948, entitled "CAB Decision Ignores Needs of Big Mid-South Travel Area":

CAB DECISION IGNORES NEEDS OF BIG MID-SOUTH TRAVEL AREA

The decision of the Civil Aeronautics Board denying the application of Delta Air Lines for a new New Orleans-Washington-New York route that automatically would give one-carrier service to and from those cities for Shreveport and a huge mid-South travel area surrounding it is a shocking set-back to prospects for future air transport and economic development in this entire area.

The decision is shocking enough in its total disregard of the needs of the largest area in the United States, geographically and in population, not having one carrier service to and from the present-day world political capital, Washington, and the present-day world economic capital, New York—our local

area. But, the decision is even more shocking in that its very wording reeks with crass sectional favoritism. It favors the Great Lakes-Midwest area with new air transport service while ignoring even greater needs of the big southwestern and mid-South area radiating from Shreveport. It favors air lines having eastern and northern financial backing, even though one of them—Pennsylvania-Central Airlines—is so wobbly that the banks are pressing it on loans, over an airline southern-backed and operated and sound in every way—Delta Air Lines.

The Times stated editorially on last December 23 that the CAB was giving our local area a brush-off through having delayed for 9 months a decision in this case, after its own examiner had recommended back in March 1947, that Delta be given the extensions that would establish the new New Orleans-New York route, and give this area its first one-carrier service to those cities. That brush-off, through delay, was bad enough, but if this decision stands we may find ourselves brushed completely off the national air map so far as major service to key eastern points of the Nation is concerned. And it begins to look as if that is exactly CAB's intention.

The Times casts no reflection on the individual integrity of any member of the CAB. We stated editorially not long ago that we had confidence in their integrity. But we very definitely now do question their judgment, and we even further question their self-stated reasons—in the decision—on which they formed their judgment.

The Fall in Prices

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following article by Gould Lincoln which appeared in the Washington Evening Star of February 12, 1948:

TRUMAN WRONG AGAIN, FALL IN PRICES SHOWS—DROP MAY ELIMINATE ELECTION ISSUE—DEMOCRATS AT A LOSS

(By Gould Lincoln)

A week ago President Truman insisted he still wanted price-control legislation; that it was needed to check a drastic inflation which might run riot. He spoke at a press conference a day after the first break in the commodity markets. Succeeding days have shoved prices lower and lower, until the consumer is now paying less for his pork, his flour, his butter, and other necessary items. Unless there should be a tremendous reversal of form, prices will continue to fall.

The politics of the situation is obvious. Price control and rationing legislation is dead as a door nail. If prices of commodities continue to fall, high prices will not be an issue in the coming campaign. Demands for another widespread increase in wages either will not materialize or will fail.

What will all this do to Mr. Truman, seeking reelection? He will have been proved wrong again—as he was when he demanded $2,000,000,000 from Congress immediately after the war ended to offset an expected tremendous unemployment. The unemployment never materialized. He will have been wrong again as he was when he took a position that wages could be increased without increasing prices—a position into which he may have been drawn by his then Secretary of Commerce, Henry A. Wallace.

CRASH NOT YET IN SIGHT

Production—always the answer to high prices—has begun to catch up with demand. Crop reports in this country and around the world have indicated there will be ample supplies of grain—possibly a surplus. And gradually the production of manufactured goods is coming in sight of the supply necessary to meet all demands. There is no crash yet in sight—for the demand is still high, employment is full. But there is opportunity for a leveling-off process, with reasonable prices and the threat of inflation out of the window.

Now that prices are falling, screams are coming naturally from those who benefited by high prices—and from those who made money trading in commodities and stocks. To the great mass of Americans, however, a reduction in prices is a boon. That they are not beholden to Mr. Truman for a cut in their cost of living is something that will sink in.

Republicans generally view the price recession as favorable to their cause. However, there are those, particularly from the farm States of the West, who may be expected to join a clamor for Government support of commodity prices—despite the fact that producers, handlers and traders in these commodities have been making inordinate returns during the last 2 years. That, too, is politics.

MAY NEED OTHER ISSUE

The attitude of the Democrats toward the price reductions is still to be developed. They have been calling for price controls and price reductions for so long they seem at a loss for the moment. Secretary Anderson of the Department of Agriculture has been charged by Senator TAFT with seeking to bolster the falling grain market by offering to buy grain for the Government. This Mr. Anderson has flatly denied. But any huge purchases now by the Government, which might be calculated to halt the price drop, will be looked upon with suspicion. Obviously the administration cannot have t both ways—and if high prices was the issue upon which it hoped to win next fall's election—as charged by Republicans—it must find some other issue.

Already the Democrats have begun to say that the Republican tax reduction bill must not be put through—since prices are falling. They take the ground that with falling prices, revenue returns of the Government will diminish greatly, and that the present tax rates must be maintained, or there may be a deficit next year. That is not necessarily so. If Government expenditures can be curtailed by billions of dollars, the tax returns, if production and employment keep up, should be ample to permit of a reduction in the income tax—the same income tax, practically, that the people paid during the war.

Mikolajczyk Tells How Stalin Crushed the Real Polish Government and Set Up His Pattern for Puppet States in Warsaw—America and England Stood By—Some American Leaders and Newspapers Aided Stalin's Bloody Plan

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, herewith are two additional installments of Mikolajczyk's story as contained in the Milwaukee Sentinel. Sad indeed is the story of Poland sacrificed on the altar of opportunism.

Well do I remember the sickening spectacle of certain leaders and newspapers in our own country that sided with Stalin in setting up the Lublin government in Poland, leaders and newspapers that thereby collaborated with the bloody plan of the Soviet leader to permit the extermination of the heroic Polish underground army of Warsaw while the Red army paused outside the city, American leaders and newspapers that ridiculed the London Polish Government in exile and favored the Communist Lublin clique. Those American leaders and newspapers not only aided and abetted the betrayal of the Polish people in the imposition upon them of the police state, but they actually aided and abetted Stalin in setting up the northern anchor of his iron curtain. Those American leaders and newspapers who were so ready to sacrifice principle then should have no great standing in the forum of American public opinion today. For while they could be moralistic, their eyes were blinded to moral principle. They could strain the gnat and swallow the camel. If they aided Stalin through ignorance, then their name is still ignorance. If they aided Stalin with knowledge of their acts, then their name is Pharisee or possibly even worse is the charge against them: treason to the principles of western civilization.

The articles from the Milwaukee Sentinel follow:

SOVIETS STOOD ASIDE AT WARSAW AS NAZIS ANNIHILATED POLES—STALIN ALSO ACTED TO HALT BRITISH AND UNITED STATES AID

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment XIV)

Stalin turned down Roosevelt's request that I be permitted to confer with the Red leader in Moscow, in the summer of 1944, but consented to see me after Churchill had presented the same request in somewhat stronger language.

I was prime minister of a country whose fight against the Germans, at overwhelming odds, had aroused the sympathy and admiration of the civilized world.

And, as such, I was going to Moscow to plead for support from a great ally who could help our cause—especially that of the embattled underground—with a minimum of effort.

The Red army has been doing an unbelievable thing as it advanced across Poland behind the retreating German Army. From London I had instructed our underground leaders throughout Poland to rise up and fight the Germans—our plan carried the code word "Tempest"—whenever the Red army appeared at the edges of a Polish city.

In accordance with this plan, the Polish underground had aided in the liberation of hundreds of towns and inhabited places, and in some places the delighted Red army commanders gratefully pinned medals on the chests of our heroes for their splendid valor and cooperation.

But then these very men, these Poles who had rendered such great aid to the advancing Red Army, were suddenly disarmed, arrested for "sabotage" and, in many cases, shipped into Russia at gun point.

Now, as I flew toward Moscow in the hope of appealing to Stalin's humanity, if he possessed such emotions, the Red army fought its way to the suburbs of Warsaw.

The nucleus of our extensive Polish underground was centered in Warsaw. There we had maintained the underground section of our parliament, the courts of justice which meted out positive punishment to German commanders for their hideous atrocities, our schools, welfare services, central communications departments, and other units, including 40,000 crack troops under the command of General Bor-Komorowski.

In the case of each uprising of Polish underground forces, as the Russians approached, I had left the final decision to those who were closest to the situation. In the case of Warsaw, which was to be the biggest of all the home army's operations, the invocation of Tempest rested with General Bor-Komorowski, Deputy Prime Minister Jankowski, and Speaker of the Underground Parliament Puzak.

Unknown to me, as I traveled from London to north Africa on the first leg of my journey to meet Stalin, the Warsaw underground, on July 29, 1944, had received the following radio message from the Moscow radio station which was called Kosciusko—used in Russian broadcasts to Poland:

"Poles, the time of liberation is at hand. Poles, to arms. Make every Polish home a stronghold in the fight against the invader. There is not a moment to lose."

RUSSIAN GUNS NEAR

The guns of the Red army could be heard in the center of the capital. Russian planes fought the Luftwaffe overhead. Red army tanks rumbled on the environs of Praga, the industrial suburb of Warsaw.

So, on August 1 at 5 p. m., the Warsaw home army came into the open against a sadistic foe that had butchered close to 6,000,000 of our people. It rose, 40,000 strong, to fight the heavily entrenched Germans and facilitate the entry of the Red army into the capital.

What followed remains one of the blacker marks on the record of Communist Russia. The Red army, acting on orders from Stalin, did not enter Warsaw until many months later.

General Bor-Komorowski's men and women, with ammunition and food enough for only 7 days, fought 63 days to utter annihilation—while countless divisions of the Red army remained in the suburbs.

And Stalin, beyond refusing to help, brought great pressure to bear on the British and Americans to refrain from attempting to help us.

IGNORANT OF PLOT

But as I traveled toward Moscow I knew nothing of the beginning of this fantastic doublecross, aimed at exterminating the remaining cream of Polish manhood so as to make easier the eventual reduction of Poland to a Russian police state.

My principal concern, after I reached Cairo on the way to the Kremlin, was the disquieting news there that Stalin had effected an agreement with the Polish stooges who called themselves the Polish Committee of Liberation, soon to become the Lublin government, and now recognized by all the United Nations.

My position was thus weakened, and for a time I considered giving up the thought of continuing on into Russia.

But at Tehran there were messages for me from Roosevelt and Churchill—copies of wires sent to Stalin imploring him to receive me and beseeching a change of his attitude toward Poland.

COLD RECEPTION

We arrived at Moscow on July 31. The reception was bleak. Pravda made no mention of our arrival, though it was rapturous over the impending arrival of a member of the Danish underground and news about the exchange of ambassadors between the U. S. S. R. and the Polish Committee of National Liberation.

I saw Molotov on July 31 at his office in the Kremlin.

"Why did you come here? What have you got to say?" he asked frigidly. I replied:

"I came here to see Stalin, and I ask your aid in helping me to get to him. I want to discuss with him the problems of our common fight against the Germans and the possibility of collaboration between the Red army and our underground.

"We can provide a wealth of information that will be of help to your forces. Beyond that pressing question, I'd like to talk to Stalin about Soviet-Polish relations."

MOLOTOV UNIMPRESSED

Molotov did not seem impressed. "We'll take Warsaw on the 5th or 6th of August," he said. "As for Stalin, he's very busy with military operations, but I'll try to make an appointment for you on the 2d or 3d of August."

Then he looked at me quite severely.

"But before you meet Stalin we want you to see the Poles from the Polish Committee of National Liberation."

I answered:

"I can see them, but that's an internal question concerning only Poles. I'm here as a representative of the Polish Government to see the Prime Minister of Soviet Russia."

That ended the meeting. I returned to the house that had been assigned to us in Moscow and underwent a nerve-wracking 2 days. I learned on August 1 that the Warsaw underground had risen and, through British Ambassador to Moscow Clark-Kerr, I received the first of a series of desperate messages appealing for aid in the terribly unequal fight.

On August 3, in the afternoon, I was informed Stalin would see me at 9:30 that night.

The man who wins "elections" by a 100-percent vote is nonetheless the most heavily guarded individual on earth today.

SCANNED CAREFULLY

On the night I saw him the first time, to plead the case of a depleted and desperate ally who was being treated more shabbily than such former enemies as Italy, my papers were carefully examined at the main gate of the Kremlin, NKVD men led me through the yard to the door of a certain building in the enclosure, more NKVD men took me to a waiting room, still more NKVD men scrutinized me for 5 minutes while I stood in that room, and finally I was admitted to the Red leader's large study.

With me were Professor Grabski, veteran speaker of the Polish Parliament-in-exile, and Polish Foreign Minister Romer.

Stalin was standing near a conference table that reached along the wall. With him was his translator Pavlov. Stalin wore his marshal's uniform, adorned by a single decoration.

On the wall above him, curiously enough, were big oil paintings of two old Czarist generals, Kutuzov and Suvorov. Relegated to an obscure spot near the door was a small photograph of Lenin.

"Won't you sit down?" Stalin asked.

He took a place near the end of the conference table, his back against the wall. I sat opposite him, with Pavlov in between. Stalin lighted a cigarette, exhaled the smoke, and made a gesture for me to sit.

(Installment XV)

Stalin looked across his conference table at me, on the night of August 3, 1944, while the Warsaw underground army was fighting for its life, and asked me why I wished to see him.

A few days earlier he had given an order to the Red Army to stop on the edges of Warsaw while the Polish home army, enticed by the Moscow radio to come out of hiding and fight the Germans, was cold bloodedly exterminated.

Simultaneously, Stalin had signed an "agreement" with a group of Communist-trained Poles who called themselves the Committee of the Liberation.

"I'm glad to be here in Moscow on the anniversary of the Stalin-Sikorski agreement of 1941," I began, reminding him of a pact of friendship and aid which he had broken with characteristic callousness whenever it served Russia's purposes.

"It is also nice to be here at a time when the Soviet Armies are defeating the Germans on Polish soil," I continued. "I'd like to discuss the Polish-Soviet relations, the collaboration to finish the fight against Germany, and I'd like to discuss the question of the future administration of Poland.

"But, above all, because the fight within Warsaw has started, I want to appeal to you to bring immediate help to our men in their pitifully unequal battles with the Germans."

Stalin looked back at me and answered:

"But you are not taking into consideration the agreement which has been reached between the Soviet Union and the Lublin Committee."

It was the last time I was to hear him use the word "committee" in connection with the Polish stooges who had been so carefully assembled to extend the influence of the Kremlin into Poland. Thereafter, Stalin referred to them as "the Polish Government," though, of course, I was the Prime Minister of the actual Polish Government, and so recognized by all the countries of the world except Russia.

"You are speaking of something that has been done since I left London for Moscow, as you know," I said.

Stalin went on:

"The trouble with the Polish underground army is that it does not want to fight the Germans."

"You've been misinformed," I almost shouted. "Our home army began fighting Germans in 1939 and has never stopped fighting them."

"TOO EARLY" FOR AID

I reminded him of Sikorski's efforts in 1942–43 to enlist his aid for that fighting, and of Stalin's reply that, while he was "sorry to see Polish blood shed," it was too early to give help to our fighters in the homeland.

I reminded him, also, that there was a clear-cut record of our years of sabotaging German troops and supply trains moving across Poland to the Russian front.

"Ah, yes, but what an army!" Stalin snorted. "It has neither tanks nor artillery."

CAN'T TRUST POLES

"But that's one of the reasons I'm here to see you," I said. "Can you supply our men with tanks and artillery? Your forces are in the very suburbs of Warsaw, and are near home army units in many other sections of Poland."

"I cannot trust the Poles," Stalin answered. "They suspect me of wanting to occupy Poland again. They're making a lot of trouble for me."

I asked him to name one example. Just one.

"Well," he pondered, "there was the case of the commandant of your home army forces in the Chelm area. As we neared that region, he mobilized all able-bodied men from 16 to 65 and joined in the fight."

I asked him what was wrong with that.

"He should not have done this," Stalin replied steadily. "We needed those men for the harvest. So I had to order the arrest of that commandant."

DIFFERENT PEOPLE

Startled at his reasoning, I launched into a defense of the patriotism and cooperation of the Polish people—in face of extreme hardships and danger—but he cut me short this time.

"The Poles are a different people today than when you left there in 1939," he said.

And he moved the talk along the touchy question of our frontiers.

"You must realize this," he said, "that nothing can be done for Poland or you if you do not recognize the Curzon line."

"For the loss of eastern Poland," Stalin continued, "you'll get the Oder line in the west, including Wroclaw, Stettin, and East Prussia. Koenigsberg (promised to Poland in Mikolajczyk's talks with Roosevelt) will remain with the Soviet Union, as will the area around it."

VIOLATES CHARTER

I protested that this was a violation of the Atlantic Charter and the several Polish-Soviet pacts, and after hearing me out Stalin shrugged and said:

"Maybe we can make some changes in the Curzon line that will be to the benefit of Poland. But first you've got to reach an agreement with the Lublin Poles. Hereafter I intend to deal with only one Polish Government, not two."

Then he reminisced about Warsaw, especially the picturesque old part of the capital, and said that the Germans were defending it more savagely than he had expected. There would be a small delay in capturing the city, Stalin said.

"I'm eager to help your home army there," he went on. "But how can I? I don't know how to communicate with your commanders. I'd like to drop two of my communications officers in there, to send me word about the situation."

I offered him every assistance and urged him to do this.

FRUITLESS MEETING

Above all, I felt as he talked, that he was determined that Polish resistance, as exemplified by the Polish underground then fighting the Germans in the streets of Warsaw, must perish. The Red army, and the Red army alone, would be the "liberators of Warsaw."

I met with the Lubin Poles, in the fruitless hope of appealing to whatever Polish blood was left in their veins and getting their support for the home army and the future democracy of our native land.

They were a motley bunch, but Molotov met them at the airport with a great show of ceremony. Pravda, which had not once mentioned our presence in Moscow, ran long articles in praise of them.

They were Osobka-Morawski, a former co-op clerk who had been set up as head of the new Communist-controlled Polish "Socialist" Party; Wanda Wasilewska, a Polish Communist who, after the 1939 invasion of Poland by Hitler and Stalin, wrote that Poland "would never rise again"; Andrze Witos, a distant relative of the venerable head of the Polish Peasant Party and a frightened little man since his release from a Soviet death house, and Gen. Michal Zymierski, who had been dishonorably discharged from the Polish Army before the war for accepting a bribe.

PLEADS FOR HELP

"I spoke to Stalin the other night, and he expressed a willingness to help our forces in Warsaw," I said. Turning to Zymierski, I added, "As commander in chief of the Kosciuszko Divisions, you have good contacts with Red army headquarters, and now it's your duty—as a Pole—to bring help as quickly as possible. Our men are in desperate straits."

Zymierski started to reply, but Wanda Wasielewska, a stern, horse-faced, sex-starved fanatic, silenced him.

"There is no fighting in Warsaw," she said, looking at me through narrowed eyes.

Anti-Semitism in Russia

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 15, 1948:

ANTI-SEMITISM SEEN MOUNTING IN RUSSIA—INTENSITY OF FEELING DECLARED SURPRISING IN LAND BOASTING OF LACK OF PREJUDICE—ARMY POWER QUESTIONED—FORCE IN 1948 IS DESCRIBED AS FINEST IN THE WORLD FOR WAR BASED ON 1945 TECHNIQUES

(By Drew Middleton)

(Mr. Middleton left his post as correspondent in Moscow in May of 1947 for a vacation. Not having been able to obtain a reentry permit, he has been assigned to another post. This series on Russia has been written in London from notes he brought with him when he left Moscow.)

The extent and intensity of anti-semitism in the Soviet Union is surprising in a country that boasts of its lack of racial prejudice.

It is met in the streets and is evident in Government departments. It flourishes in Moscow but also in Odessa and Kiev. Reports on minor court cases reveal evidence of flourishing anti-semitism in the poorer quarters of the capital.

The Jews are blamed for shortages of bread or potatoes. In Kiev widespread discontent over the inadequacy of rations assumed an anti-semitic aspect.

One Russian never passes the pictures of members of the Political Bureau, which are displayed on national holidays, without muttering:

"Dirty Jew dogs, you killed my father."

Two former colonels of infantry have reason to know about anti-Semitism in the Soviet Union.

TRANSFER TO INFERIOR POSTS

These two colonels are Jews. Before the war they lived in the same town and worked in the same factory. When they were demobilized and returned to their jobs they learned they were to be transferred to inferior positions in distant parts of the Soviet Union.

Wearing the medals they had won fighting against the Germans, the two men journeyed to Moscow. After their protest had been heard, they received jobs similar to their old ones in towns not far distant from their old home. But the two friends were no longer to work in the same factory.

Still mystified, they invited their former factory manager out for a drink on their return home.

In his cups he said, "So you're moving. A good thing, too. You're good workmen, but we decided on the committee (the local Soviet) there were too many of you Jews in this town and in the factory. So we made a routine complaint."

Anti-Semitism is not an announced Government policy, as it was in Germany. But it is difficult to believe that such widespread anti-Semitism could exist in so closely controlled a police state if the Government did not give its tacit approval.

Announced or not, it appears to be Government policy to reduce the number of Jews in positions of influence in the Ministry of Foreign Affairs. Moreover, Jews are barred from joining the ministry even in the most subsidiary positions.

Jews cannot now enter the principal military academies in Moscow. Their number is restricted in the medical and law schools in the university at Kiev and in Moscow University.

Jews trace the start of the present antagonism to the treason trials 12 years ago. Leon Trotsky, they point out, was a Jew and so were many of his followers.

Like much else in the Soviet Union, the armed forces of the Socialist state present an imposing and awe-inspiring front.

The Soviet Army—the adjective "Red" has been abandoned—is formidable from the point of view of manpower, tanks, and guns. In 1948 it is probably the finest army in the world for the warfare of 1945.

Behind this front are certain important weaknesses. Some reflect the deficiencies of the Soviet economy as a whole. Some are the result of a mental hangover arising from a deep draught of victory laced with propaganda.

Despite nearly 2 years of preparation after the signing of the Russo-German pact of 1939 it was nearly eliminated in the first 2 months of the German invasion.

The German commanders, especially Field Marshal Gen. Karl von Rundstedt, consistently outthought their Soviet opponents. Many elements of the vast multinational Soviet army were unreliable in battle; notably, according to a Russian staff officer, the Armenians, Kazakhs and Uzbeks. Matériel, weapons, and ammunition were deficient in quantity and quality.

The Soviet state is one built by and defended by land power. Today the Russian Navy, its history one of startling defeats and dubious victories, is subsidiary to the ground forces.

Soviet air power is considerable. But it is subordinated to the needs of the ground forces. Construction of a long-range, heavy-bombardment force was opposed by the ground commanders, during and after the war, and, as in the Wehrmacht of National Socialist Germany, their views prevailed.

ATOM BOMB A FACTOR

The present emphasis on the atom bomb shows that a section at least of the political hierarchy understands the importance of nuclear fission in war. But according to articles in the military journals and magazines and the conversations that several highly placed foreigners, including two of the most successful of western generals, have had with Russian general officers, there is a strong belief that what was god enough for 1945, or even earlier, will be good enough for 19—.

The weaknesses of Russia's industrial economy today are also the weaknesses of the war machine. For today industrial strength is the prerequisite of not only victory but survival and the manufacture of decisive weapons demands a larger, better-trained, more-experienced industrial population than ever before.

For centuries Russia's main defense against invading armies has been her enormous size. Invading armies were swallowed in the vast expanse of Russian earth as, with supply lines extended, they pursued the retreating Russian forces. Today when war moves in the air such a defense is outmoded.

The Soviet Union, with a totalitarian system that can direct all national effort in peacetime to one objective, probably has now succeeded in manufacturing at least one atom bomb. Whether it has solved the other problems that have arisen from the new conditions of warfare is another question.

Can Soviet industry in its present straitened circumstances begin large-scale manufacture of atom bombs?

Will the army's general staff continue to resist "interference" by scientists and technicians in organization and planning for war?

Are there enough technicians, scientists, and "managers" to meet the new requirements of atomic armament and simultaneously fulfill plans for industrial expansion under the 5-year plan and the demands of the established armed forces?

PINNACLE OF POWER

Today the Russian Army has reached the pinnacle of power.

Well-advertised demobilization has been balanced in part by continuous conscription. It is undoubtedly the largest army in the world, with at least 2,000,000 troops in eastern Siberia, the Maritime Provinces, and Manchuria, and over 2,750,000 in western Russia, the periphery or satellite states and the trans-Caucasian and Karelo-Finnish Republics.

Equipment in the last war's weapons is excellent. Tanks, guns, and mortars are bigger, combat soldiers more heavily armed and the sheer mass of matériel more impressive than anywhere else in the world.

Command, again measured by 1945 standards, is good.

The navy, except for submarine construction, has remained static since the close of the war.

Since the removal from high position of most of the senior officers who advocated long-range bombardment in the western style, the Soviet Air Force has concentrated on the support of the ground forces.

The production of jet-propelled fighters has gone on since the end of the war. On May 1, 1947, not fewer than 100 of them flew over the Kremlin. From what the writer saw on airfields in Minsk, Kiev, Odessa, Zaporozhe, Stalino, and Rostov, as well as in Moscow, the Soviet Air Force is also well off in light and medium bombers.

The only four-engined bombers evident are those produced for major military demonstrations.

One is struck by two thoughts after seeing such parts of the Russian war machine as are exposed to foreigners. The first is that the United States and Great Britain contributed far more to the victory over Germany than one would expect even after an extensive tour of the fronts of western Europe.

The second is that the Russian Army has reached the apex of its power about 10 years too late and at a time when the vast masses of machinelike soldiery, the ponderous tanks, the tremendous guns are but minor equipment for war.

Increase of Pay for Postal Employees

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jerry Bakst, from PM for February 6, 1948:

POSTMEN RING FOR PAY RAISE

(By Jerry Bakst)

The Nation's 340,000 regular civil-service postal employees are asking Uncle Sam for a $1,000 a year salary increase to help them combat the soaring cost of living.

They are driving for passage of bills to grant them the raise now before Congress but the postmen fear that this year, as in the past, they will get much florid oratory and little or no cash.

The highest paid of these postal employees—railway-mail clerks—receive $3,300 a year, about $63.50 a week, after 10 years of regular experience. But their regular experience doesn't start until they have served time as substitutes at $1.14 an hour. Then they become permanent subs and get 5 cents an hour increases every year.

When vacancies occur and they are finally appointed as regular civil-service employees, their starting salary is $2,300 a year. They get $100 increases each year until they hit $3,300.

CARRIERS', CLERKS' TOP IS $3,100

They get another $100 the third year after they hit $3,300, another $100 in the eighth year, and still another $100 in the fifteenth year, so that the peak becomes $3,600 a year after at least a quarter of a century's work.

Income taxes, of course, are deducted, and so is 5 percent for pensions.

But the railway mail clerks, low as their pay is, are better off than other postal workers:

Letter carriers and post-office clerks get $2,100 to $3,100 a year.

Mail handlers who load and unload the mail pouches get $2,000 to $2,500. So do custodial employees such as guards, elevator operators and garagemen.

Special delivery messengers get $2,000 to $2,800.

NO RAISE IN 2 YEARS

The postal workers have been behind the economic eight-ball for a long time. From 192[illegible] to 1942, they got no pay increase of any kind. In 1942, they got a $300 cost-of-living bonus and in 1945, another $100 was added and the $400 boost was made permanent.

But the base entering salary scales remained the same.

Under the Reclassification Act passed in 1945 and effective in January 1946, classification inequities were ironed out, increments were given certain crafts for long-time service, and all base pay scales were raised $400.

Since then, with living costs zooming up, the men who handle your letters haven't had a raise.

Postal employees, whose legislative arm in the New York City area is the Joint Council of Affiliated Postal Employees, also point out that pension deductions have jumped from 2½ percent of salaries in 1920 to 3½ percent in 1936 and again to 5 percent in 1942.

There were no benefit improvements, the postal workers point out.

ASK 40 PERCENT RAISE FOR SUBSTITUTES

The Joint Council, composed of 23 A. F. of L. postal union locals representing some 18,000 workers in six crafts, is pressing, along with other postal-employee organizations, for passage of the Langer-Chavez bill, S. 1849, and the Dingell bill, H. R. 4704, which incorporate the pay raise they seek.

They are also asking 40-percent pay raises for substitutes who, before they reach permanent substitute status get 99 cents, $1.04, or $1.14 an hour, depending on the craft they're in. Substitutes don't always work a full workweek but are always on call, which hampers them in getting outside work. During rush periods like Christmas, when they work overtime, they are paid straight-time rates for overtime work.

There are a lot of other angles to the postal workers' plight. Senior post-office clerks and railway mail clerks must be familiar with the postal "schemes" of as many as four States. They must know where each post office is located, what railroads serve the town or city it's in, and must be acquainted with railroad schedules so that mail will move with a minimum of delay.

RAILWAY CLERKS HAVE "HOME WORK"

When a railway-mail clerk is finished with his run—say from New York to Albany—the mail he has sorted must be bundled up and ready for the letter carrier who will deliver it to its final destination. All the letter carrier should have to do is sort the mail for the streets he serves in house-number order.

In addition to his own "schemes," the railway mail clerk must have enough knowledge of the rest of the country to be able properly to route mail picked up on his train run. Moreover, he is personally responsible for all registered mail he handles and if such mail is lost, he may be held liable.

When his run is through he has home work, just as he has home work before he starts out. Before he leaves he must prepare all his tags, labels, and forms. When he gets back, he must prepare a trip report. For this work at home, the railway mail clerk gets $200 a year extra, which is why his salary exceeds that of a post-office clerk by that amount.

En route, a railway-mail clerk may have to purchase additional mail space from the railroad if the load picked up on the run is more than has been anticipated. He is responsible for the purchase and must account for it when he makes out his trip report at the end of the run.

Should Butter and Oleo Be Treated Alike by Government

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, under permission to revise and extend my remarks, I wish to include a radio address as prepared by Mr. E. W. Tiedeman, general manager, Central Grade A Cooperative, and executive chairman, National Dairy Council, Appleton, Wis.:

The topic for discussion "Should butter and oleo be treated alike by government?" really means: Should the present taxes and regulations be removed from oleo? My answer is "No."

Right at the start I want to make it perfectly clear that the dairy industry is not trying to deprive consumers of oleomargarine; we have no desire to bar, or to limit, or to interfere in any way with the legitimate sale of oleomargarine, we have no objection to the use of oleo just as long as oleomargarine is sold on its own merits, for what it is—a white vegetable compound.

Dairy farmers have no quarrel with oleomargarine in its legitimate field—no more than they have a quarrel with vegetable shortening, or lard, or salad oils.

But let me make this perfectly clear, also; dairy farmers have opposed and will continue to oppose all efforts of oleo to masquerade as butter. Oleo is not butter, no matter how well its oils are deodorized, no matter how well it is needled with vitamins A and D, no matter how well is is artificially flavored and colored, no matter how skillfully the distinctive butter carton is imitated, no matter how many signboards and advertisements appear, showing farm scenes with dairy cows up to their knees in clover, no matter how it runs the entire gamut of imitation—oleo is still not butter. Since it is not butter, dairy farmers insist that laws which are intended to prevent its being sold as butter, be kept on the books. This whole issue is just that simple—if the consumer wants oleo, she has a right to get it; if she wants butter, and most people do, she has the same right to be sure she is getting butter.

The present laws which curb unrestricted sale of colored oleo as butter are a safeguard to consumers. That is why these laws were enacted. They are, also, necessary for the protection of the dairy industry, because only law can help to counteract misrepresentation, fraud, and deception in the sale of oleomargarine.

Dairy farmers take the position that (1) oleo regulation is necessary to protect the consumer from intentional or unintentional fraud and deception and (2) oleo regulation is necessary to protect the dairy industry from free and unhindered sale of oleo in imitation of butter.

The history of oleo legislation briefly is this: Oleomargarine was introduced into the United States in 1874. By 1883 its fraudulent sale as butter had become so widespread that Congress considered its control. In 1886 Congress passed the first Oleomargarine Control Act levying a tax of 2 cents per pound. This tax proved to be ineffective, and by 1902 some 30 States had passed anticolor laws, and Congress enacted the law which taxes oleo 10 cents per pound when it is colored in semblance of butter. That is the one that the oleo lobby is trying so hard to have repealed.

It is contended by those who are trying to get repeal of the oleo-color tax that present-day business ethics are in themselves a guaranty against deception in the sale of colored oleo as butter. Unfortunately, this is not true, as the annual reports of the Commissioner of Internal Revenue will attest.

I am not suggesting that manufacturers of oleo would be intentional parties to fraud. The opportunities of fraud would be manifold, however, after the colored tax-free oleo left the hands of the manufacturers.

Again let me emphasize that so far as consumers are concerned, the 10-cent color tax on oleo does not cost them anything, if all they want is a lower priced spread in its original form. They should not complain about paying a 10-cent tax for the privilege of coloring oleo yellow, since the yellow color adds nothing in the way of nutritional value. Yellow is the trade-mark of butter with which nature has endowed it. For thousands of years the natural yellow color of butter and its typical flavor have been universally recognized and accepted. The producer and the consumer know that butter is both a food and a flavor. To them color and flavor are the evidence of its identity. They believe that the consumer is entitled to buy either oleomargarine or butter, with the feeling of assurance that there will be no confusion, no uncertainty, no parading in false colors. There is only one reason why anyone wants to color oleo yellow and that is to make it look like something which it is not.

The oleo tax has been described by its opponents as a tribute to the dairy industry. It is not a tribute to the dairy industry—neither the farmers nor the dairy industry get the tax; it goes to the Government. The oleo tax is primarily a regulatory tax for consumer protection against unrestricted imitation of butter. It must be granted that when regulation is necessary, the product regulated should pay the cost of the regulation enforcement.

The cries of protest from oleo manufacturers have been mounting day by day. It has been said that the color tax is unjustified, and that oleo is the only food product which bears a tax. They neglect to mention that oleo itself is protected by an internal revenue tax of 15 cents per pound on all oleomargarine imported from foreign countries. They likewise forget to mention that oleo enjoys privileges under Federal regulation that are are not extended to butter.

Under the Federal food drug standards for oleomargarine, makers of oleo are permitted to add butter flavoring, preservative, and vitamins A and D.

On the other hand, if butter manufacturers wished to increase the natural vitamins A and D content of butter, by addition of vitamins A and D, or to add preservatives to guard against the improper refrigeration of butter, such practices would cause such butter to be subject to seizure and condemnation as an adulterated food product.

The contention that oleo is the only food product which is taxed is belied by the fact that other imitation butters are also taxed. There is a ¼-cent per pound tax on processed or renovated butter.

In the case of butter, it was unnecessary for Congress to impose any regulatory tax, because no question of fraud or deception is involved in its manufacture. Butter is a natural product, sold for what it is, and is not an imitation of any other product. Oleomargarine is an imitation of butter. Does anyone think if the natural color of butter were pink, that the oleo people would be crying to high heaven because they are taxed when they color their produce yellow?

To summarize: If the present Federal taxes regulating oleo were repealed, it would mean that—

1. Practically all oleo would be colored yellow—there would be little if any white oleo on the market to help hold down the price of colored oleo. There would be nothing to prevent manufacturers from boosting the price of yellow oleo. It is very likely that low-income people would be paying more rather than less for oleo.

2. Consumers would have no adequate protection against fraud, deception, and misrepresentation.

3. No control would be left to the Federal Government over intrastate production and sale of oleo because the Pure Food and Drug Act does not apply there.

4. The dairy industry would suffer tremendous losses because of the resulting increase in fraudulent sales of oleo as butter.

5. Finally, the whole issue boils down to this—if the consumer wants to get oleo she has the right to get it. She can get it. She does get it. If she wants butter, she has the same right to be sure she is getting butter. She can have this assurance only by keeping taxes regulating oleo on the statute books.

The Palestine Question

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. ROONEY. Mr. Speaker, the present critical situation in Palestine and the plight of the Jewish population there should receive the serious consideration and immediate attention of an aroused Congress.

I cannot conceive that our country, the outstanding champion of a peaceful and democratic solution to the Palestine question, will view with indifference the military offensive and atrocities now being carried out against these defenseless people.

Under the permission granted me I include in these remarks the following stirring address made by Mayor William O'Dwyer of the city of New York at a meeting in Manhattan Center, New York City, under the auspices of the Emergency Zionist Council a week ago Thursday evening, February 5, 1948:

I am here as an American citizen who loves his country, who believes in her institutions and who always wants to see that her strength is on the side of right, on the side of humanity.

I have seen the ravaged lands abroad where people and land have both been turned into rubble, and where the survivors lack the power to do what they think should be done. This tragedy of impotence has never come upon us here. We still have power to see things clearly, to choose spiritual values, to abide by principle.

The one great, real, and tangible victory that came out of the wholesale destruction of the last war has been the establishment of the United Nations. It came out of the hope and faith, in the hearts of the common people the world over, that such moral chaos as had plunged the world into war, twice in one generation, could be averted, and must be averted. It is our best hope of establishing a new order of decency, justice, and peace in world affairs. It was fathered by our own late great President Roosevelt. It was brought to birth on our shores in San Francisco, and, by common consent, this country was made its permanent home.

We in the United States have thus acknowledged our stake in the future of the United Nations. We here in New York have given a special pledge of our faith in its future. We have assured to it all the facilities and hospitality necessary for the accomplishment of its importafit work and great purposes.

One of the most important and urgent problems to face the Assembly of the United Nations was that of Palestine and the displaced Jews of Europe. The nations met and formulated a plan which was a compromise, but it was also a step forward.

During the General Assembly's deliberations, Arab leaders issued one threat after another, and proclaimed their determination to resist with arms any United Nations decision on partition.

The nations of the world and the United States Government heard these oft-repeated threats, took into account the attiude of the British Government, and, after deliberate and thorough discussion, voted to adopt the resolution to partition Palestine. It was not mere sentiment that dictated this American policy on Palesine. It was the realization that freedom and democracy in the world, justice in international relations, world peace and the legitimate interests of America would best be served by this solution of the problem of Jewish homelessness—a problem that has been a festering sore in international relations for such a long time.

When the decision was solemnly adopted in plenary session of the United Nations, it marked the first genuine victory of that tribunal. It marked the first instance of accord among nations, in which their rivalries were subordinated toward achieving some measure of justice. It was the first proof of the strength of the United Nations as a whole.

It seemed fantastic to suppose then that the seven Arab delegations which left the Assembly Hall defiantly vowing that they would set that decision at naught could make good their threat. It did not then seem possible that the most important expression of our modern new world organization could be turned into a mockery and into such a tragedy as it has become.

We are now witnessing the murder of hundreds of people in Palestine. We are now witnessing the frustration of the hope of a homeland, of a people who built that homeland with sweat and blood from desert earth. We are now witnessing the murder of the honor of the United Nations which

pledged them this homeland and the honor of the United States which played a leading role in supporting that pledge. What has happened and is happening in the Holy Land since the decision of the United Nations is a matter of daily newspaper headlines.

Ironically, the decision that was intended to help the stateless and homeless Jews has been so perverted that it may result in a carnage of Hitlerian proportions unless it is checked.

I believe that the heroic Jews in Palestine will not give their lives cheaply. They have already taught the world what to expect from them in courage and in military prowess. They will fight, with their bare hands if need be.

These people are no revolutionaries seeking the overthrow of a government. They are the legitimate recipients of a legal award, waiting peaceably for the day when the mandate is lifted and they may rightly take over. They are the people whose lives and homes are now being subjected to ruthless, sudden, and swift attack by foes who have sworn to exterminate them before the promised hour of liberation arrives.

The whole future of the United Nations is today pin pointed on the manner in which its decision on Palestine will be carried out. You cannot have international peace so long as you permit international murder. You cannot have peace here if you permit anarchy to flourish anywhere. The manner in which we deal with the Palestine decision may well decide whether the United Nations organization is to fulfill its purpose or whether it is doomed to nullity and failure. And that answer hinges, in a great measure, on the good faith and action of our own country.

We spoke for the conscience of the world when we threw our great prestige and moral force into that United Nations solution of the Palestine question. It meant, as I see it, that we voted in good faith and that we would back with deed our pledged word to the United Nations and to the people of Palestine. That is the kind of vote the world expected from us, and that is what the world has a right to expect from us. Our support was not intended to mean that we would merely register a vote on the record and then turn away from the inevitable consequences of implementing our vote.

We are the greatest, richest, most powerful Nation in the world, the one nation which has come through the war with moral, spiritual, and material values undestroyed, the leader that holds up to the world, as a beacon light, the shining values of democracy. We are a nation that must keep faith with ourselves and with the world.

Has anything happened since the United Nations adopted its decision, to warrant a revision of this American policy on Palestine—a policy that has been shaped over a period of many years, and endorsed time and again, not only by our Chief Executives, but by Congress, and by American public opinion? The answer should be "No." The answer is "No." The question that may be asked—the question that is being asked is, Have we been as energetic and as forthright in fulfilling our promise as we have been in making it? Are we using our power and our resources to implement that United Nations decision, for which we were so largely responsible, or are we allowing the situation to deteriorate? Are we merely standing by in the matter or are we doing something about it?

I am afraid that American inactivity is largely responsible for the growth of the crisis in Palestine and in the Middle East. We seem to be following a course inspired by anti-Jewish circles, who want to manipulate events in such a way as to be able to say: "The opposition to partition is so formidable, that the plan simply cannot be carried out. Give up the whole idea." That is precisely what they are saying, and they are saying it to the councils of our Government.

I am here to say that America and its people will not accept a reversal of the United Nations decision on Palestine—a decision in which the United States played so prominent a part. I am here to say that if we weaken in the support of that decision, it will have the most disastrous effect on the fortunes of the United Nations.

For even a child can understand that the issue before us now is much deeper and wider than Palestine or the Jewish people. It is the existence of the United Nations that is at stake. We live in an era of such fears as shrivel the mind and the heart. There is no answer to these fears except to strengthen the means of collective security. The hope and faith of too many of the common peoples the world over are centered in it. If we let down the United Nations on the question of Palestine, it will never recover. With the United Nations will go our hope for world peace. The death of the United Nations means the death of our civilization. And in this lies the tragedy for the world, for mankind, for each and every one of us.

Such tragic consequences must be prevented. They can be prevented. We dare not admit defeat or helplessness. But we must act, and act courageously and quickly.

Clearly, this problem cannot be solved overnight. We must separate the long-range problem of the Jewish State in Palestine from the immediate emergency now confronting us. The United States is in a position to take swift action in the immediate emergency and demonstrate to all the world that we stand in back of our commitments, and that promise means performance.

With our backing, it is still possible for the Security Council, under the Charter, to form a United Nations international police force or constabulary which can be sent to Palestine to prevent the breach of the peace that threatens. This force should be ready to move in when the British troops leave, or earlier, as requested.

With our backing, it is still possible to have the Security Council examine the question of using and invoking measures, short of military force, for the maintenance of peace and security. The resolution of the United Nations Assembly recommended such action. With our backing, the doors of Palestine may be immediately opened to the displaced Jews of Europe.

And we should, of course, lift or modify our own recent embargo on the shipment of arms to Palestine. The result of this embargo is incredibly unjust. It is tantamount to arming Arabs to attack the Jews and frustrate the United Nations decision, while preventing the Jews from receiving arms to defend themselves and thus sustain the decision of the United Nations.

We Americans understand the real implications of a one-sided embargo and we resent being told that the matter is so complicated and the considerations so involved that only a small group of professional diplomats can be entrusted in handling it.

The embargo must be modified. It is a cruel travesty to maintain it in the face of organized massacre and international lawlessness. By all means, let us deny arms to aggressors. By all means, let us deny arms to those who attack the Jews of Palestine and flout the judgment of the United Nations. But we are honor bound to make the decision of the United Nations effective by supplying arms to those who resist aggression and those who support the United Nations. Give arms to the Jews who are compelled to defend their lives and to preserve their freedom.

There are times in the unfolding of history when a great moral force must make itself felt or what has been achieved by generations of men, at infinite cost, can be swept away overnight. Bitterness and disillusionment cannot be underestimated as weapons of anarchy and destruction.

Now is such a time. The United States, moral leader of the world, must assume her role. She cannot remain remote; she cannot remain inactive.

Capt. Alden Partridge, Apostle of Preparedness and Universal Military Training

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted, I am extending my remarks and including a verbatim copy of the address I delivered at Norwich University, Northfield, Vt., on the twelfth day of February, it being National Defense Day, and the occasion of the observance of the one hundred and sixty-third anniversary of the birth of Capt. Alden Partridge, founder of Norwich University:

Mr. President, fellow citizens, we are met today to appropriately observe the one hundred and sixty-third anniversary of the birth of one of America's great men, Capt. Alden Partridge, Vermonter.

"The grand military defense of our favored country, both against external invasion and internal insurrection, is vested in the great mass of American citizens from 18 to 45 years of age. These constitute the grand military force of the Nation; a force whose feelings and interests are identified with those of the great body of the people, and which, while it forms an impregnable barrier around the Constitution and liberties of the country, is in no respect dangerous to either. But in order that this constitutional force should answer the purpose for which it was originally instituted, it must be properly organized and duly instructed in the elements, at least, of military science and tactics. Hence arises the necessity in our country, of an extended system of military education, and of a general diffusion of military knowledge. If these so necessary requisites be not attended to, if the great body of American citizens do not feel that they are something more than merely nominal soldiers, our population will gradually degenerate, our militia, so emphatically styled the bulwark of our liberties and independence, will lose their military spirit, will decline and finally be destroyed; on their ruins will spring up the standing Army detached by feeling and by interest from the great mass of the people, and when this crisis arrives, it will not require the spirit of prophecy to predict our fate from that of the most celebrated Republic of antiquity.

"The liberties of Rome were safe while military information was generally diffused and every Roman citizen considered and felt himself a soldier. But, how fatal were the results when by the operations of a system organized by Caius Marius, the savior and scourge of Rome, and matured by Julius Caesar with a view doubtless to the accomplishment of his ultimate object, the final prostration of the liberties of the country; those noble and patriotic legions which had so often, in time of peril and danger, proved the shield of their country and the terror of its enemies, were transformed into mere mercenary bands, alienated from the country and identified in views and interests with their leaders alone.

"But Rome, though the most striking, is not the only instance in which similar causes have produced like effects. The republics of Greece furnish additional instances. Can you believe that if the Greeks in the age of Demosthenes had possessed the same spirit and organization which they did in the age of Themistocles and Aristides, or, if the soldiers who fought at Cheronea had been of the same stamp with those who fought at Marathon and Thermopylae, they would have so tamely submitted their necks to the yoke of the Macedonian conqueror? From an attentive consideration of these, as well as of many other similar instances which might be adduced, I am forced to the conclusion that in every republic the due cultivation of a proper military spirit amongst the great mass of the people and a general diffusion of military information are indispensably necessary for the preservation of liberty; and consequently that those republics which neglect these requisites, will eventually be driven to exchange their freedom for a form of government bordering at least on military despotism."

The foregoing is quoted from the announcement of Capt. Alden Partridge's Views on Education and Military Training, as published in the Windsor Journal, Windsor, Vt., in 1820. He did as much as any American to mold, to shape, to determine the educational policies of his time and of succeeding generations.

Today we honor ourselves by undertaking properly to observe the one-hundred-and-sixty-third anniversary of Alden Partridge's birth in the little town of Norwich, in Windsor County, Vt., February 12, 1785.

He was educated in the common schools, at Dartmouth College, and West Point, from which latter institution he graduated as first lieutenant of engineers. In 1806, at the age of 23, he was detailed to act as Superintendent, and continued to serve in that capacity, with brief intervals, to 1815, when he received a permanent appointment which he continued to hold until 1817.

In the early part of 1819, having resigned from the Army the year previous, he was employed as United States Government engineer in charge of the survey of our country's northeastern boundary under the Fifth Article of the Treaty of Ghent. I have seen the original correspondence involving his selection for that important task and have read the diary he kept as he made and completed the survey. In July of that year he resigned this position to carry into effect a plan of education that had occupied much of his attention since 1810.

Over and over again he expounded the doctrine that in every republic the due cultivation of proper military discipline among the great mass of the people and a general diffusion of military information are indispensably necessary for the maintenance of government and preservation of liberty.

He followed the thesis laid down by Milton, who said: "A complete and generous education is that which fits a man to perform justly, skillfully, and magnanimously all the offices, both public and private, of peace and war." History attests its correctness.

Revolutionary as was the educational system for which he stood sponsor, it was entitled to, and eventually it won, the respect of the leading educators of the land.

Someone has said that the true test of a great man is found in the fact of his having been in advance of his age. Alden Partridge qualifies under such a definition. He was a great man.

His advanced educational ideas, at first opposed by his contemporaries, have been appropriated one by one; they thereupon have been accepted and adopted almost universally. He was prominent, and a leader, not only as a military officer and an educator, but in the zealous discharge of his duties as a citizen.

The product of a hard land rich in many men, he was an exemplar of fearlessness, courage, depth, and breadth of thinking; an inheritor of that prescience which our New England forbears contributed and which their successors have continued to pour into the melting pot we call the United States of America.

Four times he represented his home town of Norwich in the Legislature of Vermont. In 1821 he was elected president of the University of Vermont, but declined to accept the honor. What was the loss of the University of Vermont was the gain of Norwich.

Three times he was an unsuccessful candidate of his party for Congress.

He had the courage of his convictions, nevertheless. I have seen a political campaign poster he had printed and widely distributed wherein he declared himself as a candidate for President. He took advantage of the attendant publicity to talk about the necessity for a trained citizen soldiery, as you might expect.

The towns of Strafford and Norwich adjoin. Substantiated tradition has it that Senator Justin S. Morrill's Land Grant College Act was inspired by Captain Partridge's lectures, discussions, pronouncements, and conferences had with him, and the necessity for some form of military training as a basis for citizenship, such as advocated and exemplified by his neighbor, the founder and then president of Norwich.

Jefferson, Madison, Monroe, Clay, Calhoun, and Morrill were his friends; distinguished men of the time in which they lived, but no more distinguished, no more able, no more entitled to a high place on the honor roll of our country than this teacher, prophet, educator, and public servant—Alden Partridge.

In 1834, while a member of the Vermont Legislature, he obtained the charter for Norwich University, of which he was elected president in 1835, serving until he resigned on November 11, 1843.

When president of Norwich he called conventions of military officers and persons interested in the militia of the several States to discuss plans for the organization and discipline of the militia and for the wider dissemination of a knowledge of military science.

In 1839 he visited Portsmouth, Va., and at the request of similarly minded patriots, established an institution soon recognized by the State of Virginia as the Virginia Literary, Scientific, and Military Institute, which had an outstanding record as has Virginia Military Institute at Lexington.

From 1840 to 1853 he was as above stated very actively engaged, country-wide, delivering lectures, attending conventions along military lines, training and instructing officers and men. Among other institutions he established along academic-citizen-soldier-training lines were those at Bristol, Pa., in 1845, at Reading, Pa., in 1850, as well as one at Pembroke, N. H., that same year.

In 1853 he established another institution at Brandywine Springs near Wilmington, Del., for which institution with competent financial support he had great hopes, which were shattered by a fire in the fall of 1853, when the buildings were consumed by flames.

In the fall of that year he returned to Norwich, Vt., where his family still resided. It was there on the 17th of January 1854 that he died, and in the little old cemetery at Norwich, the body of one who had been so active and restless was laid to rest.

He was one of Vermont's great men; one of her most distinguished sons and citizens.

We do not fully appreciate the magnitude of the debt the people of the United States and the State of Vermont owe this hardy pioneer of broad, prophetic vision, with the courage, and the determination to make his dream come true. Together with his contemporaries he laid the everlasting foundation on which has been erected the superstructure of the greatest and best republic the world has ever known.

Americans today, as in the days of Alden Partridge, are opposed to war, or anything which looks like another war; but the average citizen today would be as bitterly opposed to anything and everything which looks like such a wilful lack of preparedness as that with which we were twice recently confronted when we ought to have been ready to have prevented or to have entered and to have then ended the war.

History and experience have taught, as Alden Partridge long ago insisted, that in a republic the due cultivation of proper military discipline among the great mass of the people, and a general diffusion of military information always have been, are now, and always will be indispensably necessary for the defense, protection, and preservation of this Government. Contradiction is idle.

As Secretary of State Marshall has well said:

"We are living today in a most difficult period. The problems are different, but no less vital to the national security than those during the days of active fighting. But the more serious aspect is the fact that we no longer display that intensity, that unity of purpose with which we concentrated upon the war task and achieved the victory.

"There is a natural tendency to relax and to return to business as usual, politics as usual, pleasure as usual. Many of our people have become indifferent to what I might term the longtime dangers to the Nation's security. It is natural and necessary that there should be a relaxation of wartime tensions.

"But I feel that we are seriously failing in our attitude toward the international problems whose solution will largely determine our future. The public appears generally in the attitude of a spectator—interested, yes, but whose serious thinking is directed to local, immediate matters. Spectators of life are not those who will retain their liberties, nor are they likely to contribute to their country's security.

"There are many who deplore, but few who are willing to act—to act directly or to influence political action. Action depends upon conviction, and conviction in turn depends upon understanding both of the past history of man on the globe and an understanding that action is a basic necessity of man's nature."

I am neither a militarist nor a pacifist. I am an American, and as such, with every rational and conscientious person the world over, I join in the wish and the hope that there may never be another war. I am not so foolish, however, as to believe my hopes will soon be realized, or my wishes speedily come true. There is no established peace, none which may be established by agreement, nor any to be won, but which must be defended.

All may dream of the day when wars shall cease. Every effort to bring about a realization of such a dream, so long as it does not strip us of our defenses, nor develop a condition of unpreparedness, nor lay us open to, nor invite attack, is commendable, and deserves our support; yet, I say to you while we dream, grim reality stares us in the face. If we are to have universal peace we must be prepared to initiate it, maintain it, and fight for it if need be.

America will cease to be a great nation, and the exemplar of republics whenever her young men and young women no longer possess adequate preparation, courage, energy, daring, training, endurance, determination, and the power to fight their Nation's foes or vigorously to maintain the principles on which our founders conceived, established, and defended this Nation of ours.

Capt. Alden Partridge was the prophet of preparedness. Military training for citizens

today, as in his day, is the essence of democracy. It recognizes the equal responsibility of all citizens for the safety of the country whose protection they claim. It is fair, it is just, it is right. It is an American plan.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. REED of New York. Mr. Speaker, under unanimous consent, I am inserting an article by Cecil B. Dickson, of the Gannett News Service, as follows:

MARSHALL PLAN CALLED "COVER-UP" FOR ERRORS OF ROOSEVELT, TRUMAN

(By Cecil B. Dickson)

WASHINGTON.—More and more the Marshall plan to aid busted Europe shows as a "cover-up" for the tragic mistakes the Roosevelt and Truman administrations made in dealing with the Soviets.

As debate over the Nation as well as in Congress develops, postwar mistakes made by our Government in Europe loom in greater magnitude.

All the great and highly touted postwar plans, which have already cost American taxpayers $20,000,000,000 in cash and many more billions in inflated prices, have failed of effectiveness.

The evidence is in the Marshall plan itself, if the United Nations, UNRRA, the World Bank, the International Monetary Fund, the $3,750,000,000 loan to the British, the administration by the Army of Germany and Austria and all the other financial and material aid contributed thus far had been successful, there would not have been any Marshall plan. It would not have been needed.

The Truman administration says we must have the Marshall plan, to restore Europe and to stop the sweep of communism westward in Europe.

Yet, it gives no assurance that the plan, to take $17,000,000,000 from American taxpayers and buy our scarce materials and food to send abroad at the risk of more inflation here, has any possibility of succeeding.

Even the author of the give-away plan, Secretary of State George C. Marshall, admits it is a calculated risk with doubt as to achievement.

Proposed administrator of the dubious project, Lewis W. Douglas, our Ambassador to England has admitted that even with the sharing of our wealth with western Europe, there is serious question as to whether it will accomplish the objective in 4 or even more years.

Looking backward a few years, I remember that on December 7, 1941, General George C. Marshall was horseback riding when the Japs bombed Pearl Harbor. The bombing took place while Secretary of State Cordell Hull was conferring with two treacherous Japanese at the State Department.

Looking farther backward, I recall that shortly after the Germans moved into Russia on June 22, 1941, General Marshall held a special secret press conference in which he predicted the Russians could not stand against the Germans 6 weeks. The idea was to boom lend-lease aid for the Soviets, whose strength he underestimated.

Again looking backward, I recall the luxury with which we fought this war, a more luxurious war than ever fought in history. G.anted that the general did have the great concept of the requirements of the world wide conflict and that this Nation had the wealth in money, manpower and material strength to wage it on such a scale, I often wondered if so many tools had not been available whether the general would have ended the war with the title of hero, as he did.

Still recounting, I remember now when he could not get the Nationalist and Communistic governments in China to do as he wanted them to do, the then Ambassador Marshall recommended withdrawal of American assistance to Chiang Kai-shek's government.

It is almost a year ago that I was with Marshall in Moscow for the Big Four Conference, which resulted in another failure to deal with the Communists. There it was, after a strange but brief discussion with him at our Embassy that I decided that this man could not brook interference with his objectives.

It happened that after Marshall's Harvard foreign-aid speech, I wrote the first story in America giving some concept of the scope of the proposal.

At the time, I questioned the right of any one man, or any group of men, appointive in office, to commit the whole economy and all the people of our Nation to a project of such dangerous proportions, and even more dangerous potentials.

Now it is developing, despite the Marshallites' claim we have to spend along the lines of the Marshall plan or expand our Military Establishments, that we are going to have to do both if the Marshall plan is accepted.

Already there are proposals for bigger armaments, larger air forces, and compulsory military training to back up the Marshall plan.

To many worried and thinking people, the question arises as to whether the backers of the Marshall plan, who made so many mistakes in Europe and with Russia, are not now making another mistake.

If we are going to war with Russia, can we afford to give away wealth needed to fight? Will Europe help us fight if we help them more than we have?

I don't think so.

Address to Young Democrats of North Carolina

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address delivered by Hon. JOHN J. SPARKMAN, Senator from Alabama, before a convention of Young Democrats in North Carolina at Greensboro, N. C., February 7, 1948.

Likewise, Mr. Speaker, under leave to extend my remarks, I include, following the address by Senator SPARKMAN, an editorial entitled "Advice to Democrats," which appeared in the Greensboro Daily News under date of February 10, 1948:

ADDRESS BY SENATOR JOHN J. SPARKMAN, OF ALABAMA

It is a real pleasure to be with you at this meeting. One of my rich experiences has been the opportunity to meet with many groups of our citizens, groups of varied composition and seeking various goals. Of all these groups, there is none with whom I like to associate more than the Young Democrats. This is not only because of the warm personal friendship I enjoy with many of you, but primarily and fundamentally because of the importance of the task which you have undertaken.

This is a task of no small magnitude. It is no less than to awaken the young people of our country—both those now eligible to vote and those about to become so—to their role as citizens. You have set yourselves to recruit them into active participation in our political life. You have set yourselves to educate them to function with political intelligence, both as to issues and as to techniques. From among them you will select and groom promising candidates for public office. You continually pour fresh energy into the lifeblood of the party. You help to set the tone of party politics, providing new insights and ever-higher standards.

These are goals that will require a high degrees of citizen participation. They present opportunities so wide and so challenging that it is stimulating to meet with you and talk about them.

One fact that points to the importance of more active citizen participation is that in the 1946 elections only 35,C00,000 voted out of 91,600,000 Americans 21 years of age or older. In the Presidential election of 1944, only 48,000,000 American citizens voted.

Comparisons made with other nations show that on a proportionate basis twice as many Englishmen voted in their last national election; and that from two to four times as many Frenchmen and Italians have consistently voted in their postwar elections. Moreover, our record is worse as to the number of eligible voters who cast their ballots than it was in the pioneer days when to vote was much more difficult than it is today. We are forfeiting a most precious privilege by not exercising it.

Another attitude which disturbs us is the position taken by many that "it is better to be a street sweeper than to be a politician." This stand is completely incompatible with the preservation of democracy. Responsibility toward and activity in the field of politics must be accepted as of equal importance with our responsibility to our business and our church. Of course, there are some dishonest office holders just as there are some dishonest businessmen and preachers. But we do not condemn these latter two segments of society as a whole just because of the occasional crook. In either case, it is the duty of the concerned citizenry to expose the culprits.

A general lack of esteem for people engaged in political work will tend to discourage those best qualified to seek office. And the slurring title of "bureaucrats" given those who enter Government service does not encourage our most competent young people to serve their Government as a career. This is already evident in many Federal positions of grave responsibility.

You have chosen to work within the ranks of the Democratic Party. Perhaps you have done this largely as a matter of tradition. Tonight I would like to discuss with you why as a matter of conviction, as well as tradition, the Democratic Party is the party to which you and the rest of the South should continue to give allegiance.

THE SOUTH CONSISTENTLY PROGRESSIVE

A question is sometimes raised as to how truly the Democratic Party today represents the thinking of the South. Such a question cannot be answered without careful analysis. In the first place, what do we mean by "the thinking of the South"? It is evident that the South today is like a rich and many-colored carpet, woven of many strands of thought. Some are highly conservative; others distinctly liberal; a few are even called radical. Many of us come from an agricultural background; but others reside in cities concerned largely with the problems

of industry. We come from a variety of economic levels. Yet, out of such a varied web, consistent patterns have emerged which have led us in the direction of one political party and its program—the Democratic Party.

We in the South are often criticized for being too conservative. In fact, reactionary is the term most often used to describe us. I have never felt that such criticism was either fair or borne out by the facts. At the outset, American liberalism was essentially agrarian, and had its origin in the South under America's first great liberal, Thomas Jefferson. The great majority of southerners cast their ballots for Jefferson in 1796, and in 1800 they were largely responsible for his election to the Presidency.

In the Jacksonian revolution of 1828, it was the South which gave Old Hickory his most solid support. From Jackson until the War Between the States, the Democratic Party was the majority party and generally carried most of the South in State and National elections.

Following the reconstruction period, there was an era of uncertainty and fear during which the southern masses were tied to the big planter, the manufacturer, and the railroad magnate. Conservatism was the order of the day. The rank and file was too busy struggling for the bare necessities of life and all groups were too occupied trying to regain control of the machinery of government to be interested in national progressive movements.

By the 1890's, however, the southern majority had recovered its political independent thinking. In some areas of the South populism spread like wildfire, and the Democratic Party soon took over many of the measures advocated by the Populists. Since the mid-nineties the majority of the people in the South have supported those National and State candidates recognized as liberals.

Historians generally agree that Bryan's first nomination in 1896 was made possible by Southern support. The South rallied to him in 1900 and again in 1908. His ascendancy within the Democratic Party would have been impossible without southern support.

And again the progressivism inside the Democratic Party made possible the nomination of Woodrow Wilson, and the resulting new freedom which characterized his administration. North Carolina was one of the Southern States that gave Wilson consistent support at the Baltimore Convention in 1912.

During the 1920's when conservatism ruled the day, progressivism inside the Democratic Party was kept alive by great and outstanding Democrats such as your own late and beloved Josephus Daniels.

It was this progressive wing of the party and the strong support of southern Democrats that determined the decisive nomination of Franklin D. Roosevelt at Chicago in 1932. The eastern delegations had given Roosevelt little initial support. It was the South that made his nomination possible. We know of the overwhelming approval the South gave Roosevelt in 1936, 1940, and again in 1944, and I confidently predict the same wholehearted support in the nomination and election of Harry S. Truman in 1948.

It was the South that made possible the enactment of the great liberal program of Franklin D. Roosevelt. Almost every measure of the New Deal was sponsored by Southern leadership in both Houses of Congress. Go down the list and one by one you will find the names of southerners in the lead on all of these great liberal measures.

In my opinion, the South will continue to support liberal candidates and liberal legislation.

From this sketchy résumé it is conclusive that:

1. The South has by and large been in the forefront of progressive movements since the founding of the Democratic Party by Thomas Jefferson in 1801.

2. The belief that the South supports the Democratic Party today solely as a result of the reconstruction era is, to say the least, highly questionable.

3. The truth is that the Democratic Party has generally always been the party of progress and has always, even before the Civil War, normally received the support of southerners.

SOUTH MUST WORK WITHIN THE DEMOCRATIC PARTY

From time to time we have threats of revolt in our party. I suppose such is to be expected, particularly in the election years when controversial issues have a habit of coming to the front. This year is not the first time that we have heard rumblings. In fact, it happens just about every 4 years. It is only natural that there should be differences within a party as big as ours and made up of as many different groups from different parts of the country with greatly divergent views and interests. However, in the past we have pretty well succeeded each time in settling our differences within the party and I feel confident that this year will be no exception.

After all, the thought presents itself, what would the South have to gain in bolting the Democratic Party? Certainly we could expect little consideration from the Republicans. So far as that party is concerned, the South has hardly been a part of the Union. The South is a great and important part of this Nation and of the Democratic Party, and it need not be afraid of what may happen to it at the hands of its own party.

THE DEMOCRATIC PARTY THE PARTY OF PROGRESS

Contrary to the thinking of many people, the South supports the Democratic Party because it is the party of progress. It is the party that discovered and gave life to the welfare clause of the Constitution. It is the party that dared legislate under the general welfare clause.

Ever since the Democratic Party first came into power in 1801 it has stood for "equal rights to all and special privileges to none." It has followed the premise that governments are not the masters but the servants of the people governed and that to serve the public best, government must be responsive to the changing needs of the people.

The Democratic Party has followed the principle that property should be protected in all its legitimate rights, but that the rights of men come first. Our party has decreed that the minority is to be protected, but that the interest of the majority is not to be sacrificed to the greed of the minority.

It is significant that the scope of the objective of the Democratic Party has progressively widened in response to definite and new needs and problems.

The reforms which the party has initiated or supported since its founding are confirmation that it has not deviated in its support of legislation that would benefit all the people rather than a select group. A study of progressive legislation since the beginning of the nineteenth century shows that nearly all forward-looking measures were enacted under Democratic administrations—measures which for the most part were severely criticized and strongly opposed when first advocated, but which are accepted now as being essential to the welfare of our Nation.

Furthermore, the record shows that since 1860 the Democratic Party has never won a national election with a platform or a candidate considered to be conservative.

Let us take a look at some of the measures which have caused the Democratic Party to be labeled as the party of progress—the party that gets things done.

It was a Democratic administration through which the conservation of our natural resources of soil, forests, water, and minerals, was given the attention it deserves in our total economy.

During the last 15 years the dissipation of our soil and forests has been retarded, and millions of acres have been restored to productivity. Greater advantage has been taken of our water supply than ever before. Great dams have generated billions of kilowatt-hours that have been channeled into hundreds of new industries.

One cannot emphasize too strongly the importance of even expanding this program. If we want to make full use of our resources so as to have adequate protection against future emergencies, no part of our conservation needs can be neglected. One conservation need is dependent upon the other.

For example, we must have minerals to build machinery to cultivate the soil. We must rebuild our forests if we hope to have sufficient construction material for our homes, factories, farms, and mines. We must build hydroelectric plants to prevent the rapid depletion of our coal and oil reserves. Even today we are seriously feeling the pinch of an oil shortage. We must practice soil conservation for no country can exist indefinitely as a first-class power when its ability to produce food continues to decline.

In actively expanding its aid to these worth-while needs, the Democratic Party has taken the position that the wealth and wonders of our Nation should be protected for the welfare and pleasure of all.

If the policies adopted during the last 14 or 15 years are pursued, never again will a greedy few exploit the forests, the soil, and the minerals which rightfully belong to all our people. Private ownership of natural resources must be directed toward the interest of the people as a whole.

In its concern to conserve the Nation's human resources, the Democratic Party has shown itself to be a party of progress.

Along with the struggle for material prosperity there must go the fight for higher moral and spiritual values. From its birth the Democratic Party has worked for the welfare of those less able to help themselves. We remember the preachings of Jefferson on behalf of equal opportunity for all. We recall Jackson's fight for the interest of the average man. As a matter of fact, one can only recall one or two Presidents during the past century outside the Democratic Party that has shown much concern for social-welfare legislation.

The three Democratic Presidents since the turn of the twentieth century have supported legislation designed for the common good.

Wilson advocated and passed progressive measures which made his administration one of an unparalleled era from the middle of the nineteenth century to the time of Franklin D. Roosevelt. Just to name four or five, there were the rural credits law which made it easier for the farmers to borrow needed money; a law creating the Federal Trade Commission to prevent abuses in business; a law strengthening the antitrust provision; a child-labor law; and an 8-hour-day law.

Under Roosevelt the Democratic Party renewed the struggle for progressive measures in the field of human welfare. As a result, we have the rural-electrification program which has added more comfort to rural life than any other project.

This Federal program is self-liquidating and the REA co-ops are ahead in their payments, but more important is the effect upon the rural economy and rural well-being.

The REA loan program has enabled local groups of farmers and other rural people to provide themselves with an essential service they were unable to obtain in any other way.

Rural power lines financed with REA loans have brought greater prosperity and stability to our entire national economy.

Experience has shown that for every dollar spent on power lines rural consumers spend about $4.50 for wiring and new electrical equipment alone. This money, for the most

part, is spent locally. It goes to the small businessman—the neighborhood hardware merchant, the proprietor of the crossroads store, the local wiring contractor.

The program is a loan program. Local people are doing the job. The Government is helping them merely by providing the necessary financing. As the local people progress with the job they are paying back the Government loans with interest.

Altogether, a review of REA's balance sheet leads to the unavoidable conclusion that here is a case of public money well invested.

The Democrats inaugurated the school-lunch program, which has become so essential to the health and well-being of millions of our children.

Repeated studies show that a large proportion of our population is undernourished and does not enjoy the highest physical well-being. General Hershey pointed out that nutrition had something to do with at least half of those rejected for military service. The school-lunch program aims not only at helping the Nation's agricultural economy but at assuring that minimum nutritional requirements will be met in all States.

It was a Democratic administration that gave to the country its first long-term comprehensive program of economic security.

As a result, today millions of Americans enjoy social security. Assistance is given to the aged, the needy blind, and dependent children. Other millions are covered as workers. Insurance is provided against unemployment.

Social security has worked. We Democrats are justifiably proud of this program.

It was a Democratic administration that established true opportunity for the American worker.

More has been done in the last 12 years to nourish the inherent freedom and dignity of the laboring class than in any other administration in the Nation's history. The magnificent achievements of labor during the war made it possible for our soldiers to have the necessary weapons to whip the enemy. The just treatment his Government had given the laborer accounts for a great part of his willingness to increase his production during those crucial years.

After a dark and unhappy era, unionism came to be respected and is now regarded as an essential part of our economy.

We must continue to emphasize the human element in industry and strive toward increasingly wholehearted cooperation between labor and management.

It was a Democratic administration that sponsored the most generous program for returning veterans that this or any other country has ever offered.

Employment provisions, medical and hospital benefits, insurance, educational opportunities, readjustment allowance, terminal-leave pay, loans with which to establish businesses or buy homes, all combine to express appreciation of a grateful Nation to those who saved our country and its way of life.

One could name other progressive legislation which is intended to add happiness, health, and general well-being to the lives of our citizens.

For example, there is the hospital program which is just getting underway, and which is planned to provide more liberal and extended hospitalization to our people.

There is the Federal Deposit Insurance Corporation which establishes confidence in our banks, and guarantees the holdings of the small depositors.

THE DEMOCRATIC PARTY THE PARTY OF BOLDNESS

The Democratic Party is not only the party of progress—but it is the party of boldness, of daring.

It is the party which has created precedents rather than followed them.

The Democratic Party led in the establishment of international trade agreements. These agreements have been of immeasurable help in providing outlets for our surplus products and in enabling us to secure the materials of which we are in short supply. The freer the trade among nations the greater the chances for world economic and political security.

The great dream of participation in an international organization through which nations could settle their differences at the conference table was envisioned by the Democratic Party.

It was that great Democrat, Woodrow Wilson, who dreamed of a League of Nations that might give us lasting peace.

It was that Great Democrat, Franklin D. Roosevelt, who dreamed of the United Nations, the one great hope for lasting peace.

One historian has described the 99-day session of Congress which ushered in the Roosevelt administration, after 12 years of Republican rule, as the period of the most daring leadership in American history. The social reforms—some of which I have already named—gave the people of America the chance for security and self-respect.

It was a Democratic administration that initiated the CCC program that not only resulted in the savings of forests, fields, and streams, but what is more important, rescued millions of youth from an endless life of waste.

We remember the bold leadership of our party which declared a national holiday of banks so as to prevent a certain collapse of our financial system.

It was the leadership of our party which inaugurated the programs of NRA, NYA, PWA, etc., that served their purpose of putting new lifeblood into a sick economy.

It was the Democratic Party that dared the bold program of lend-lease when the fate of democracy hung in the balance at the beginning of World War II.

And when this country was drawn into the war by the sneak attack on Pearl Harbor it was Democratic leadership that dared plan and put into effect a program that hastened the end of the greatest struggle ever known to mankind.

The production of hundreds of thousands of planes and thousands of ships, and the supplying of over 14,000,000 in the armed services with the materials of war are miracles of achievement which some timid leaders declared to be impossible.

And it is Democratic leadership which has originated the Marshall plan—a daring attempt to rehabilitate the war-torn democracies of Europe.

If the Marshall plan fails, we shall have lost democracy as we know it.

And thus it is that our party has met the challenges of the times. When faced with domestic or international disasters, Democratic leadership has been equal to the occasion and has enabled our Nation to weather the storms of adversity.

THE DEMOCRATIC PARTY THAT HAS HELPED THE SOUTH

Not only has the Democratic Party been the party of progress and the party of daring, but it is the party that has meant most to the South.

In this regard, because of lack of time, I shall confine my remarks largely to the last 15 years. During this period more has been done to develop the natural and human resources of the South than in any like period of our history.

Throughout the past hundred years volumes have been written on the potential riches of the Southern States. Our minerals, farms, forests, and waterways have been praised as a possible source of huge developments. Our people have been looked upon as a fountain of labor for possible industrial expansion.

It took a Democratic administration to convert empty phrases about these assets into positive action.

President Roosevelt recognized that it is not what a country has that makes it great but how it uses what it has. He recognized that if the South was treated as an equal partner with other regions of the country, the whole economy would profit—that the South was too rich in resources and people to be longer neglected.

Perhaps the greatest single project which has redounded to the welfare of our region is the TVA. The history of this project is too long and too rich to relate here. Suffice it to say that a great section of our Southland has literally been brought back to life. Serving a population of approximately 4,000,000 people living in the States of Alabama, George, Kentucky, Mississippi, Tennessee, Virginia, and North Carolina, this monument of Democratic leadership serves as an internationally known laboratory for regional development.

It also serves as an example of how Federal funds can be put to use in a project that is too big an undertaking for State or local authorities. At the same time it proves the feasibility of coordinated participation of every level of the State and local governments, local business, agricultural and labor groups, and the individual citizen himself. This grass-root participation in the affairs of Government is an essential ingredient of a functioning democracy. It is the antidote to centralization and regimentation. Furthermore, the economic status of the people of the area served by TVA has shown an improvement of 50 percent in excess of that of the rest of the Nation. This decentralized administration of TVA and the improvement in the economic status of our people may well be a source of pride to your own two good Senators and Members of your House delegation who throughout the years have supported TVA.

TVA, of course, is not the only cause of increased industrial activity in the South, but as the single largest development in the area it must be given a large share of the credit. It is significant that from 1933 to 1946 employment opportunities in privately-operated manufacturing concerns located in the TVA area increased 161 percent. This compares with the national average of 131 percent.

During the war years many new industries were placed in the South. Some of them are staying and new ones are coming. According to Kiplinger magazine of July 1947, the 1946 construction awards in the South hit the $2,000,000,000 mark for an unprecedented high.

From 1939 to 1945 the South's food industry and related factories increased the value of their output almost $1,500,000,000.

From 1939 to 1946 the annual value of the South's exports has increased from $86,858,000 to $445,500,000.

The farm program of the last 15 years, under a Democratic administration, has likewise produced noted changes in southern economy.

No group can appreciate the farm program more than the tobacco farmers of your own State. There was established for the first time in history a proper balance between the production and consumption of tobacco by the adoption of the tobacco program.

The shackles of one-crop system have been broken and diversification has become the practice of the day.

The Farm-Tenant Loan Act has added dignity to the farmers' efforts to become farm owners.

Soil and forest conservation, which means more to the South than any other area, has received added stress.

Farm mortgages have been reduced from $800,000,000 in 1930 to about $120,000,000 now.

The school-lunch program has made for a healthier population.

Those of us who grew up on the farm can appreciate the comforts now extended to hundreds of thousands of southern farmers by the rural electrification program.

When this program got underway 13 years ago, only 1 southern farm in 20 had electricity. In your own State there were 9,672 farms that enjoyed this convenience—today there are 157,581.

We could continue to discuss what our party has meant to the South. We could point out, for example, that since 1929 our per capita income has risen from $371 to $801 (North Carolina to $817), and that southern wages and salaries have increased 156 percent, compared with a national increase of only 49 percent.

However, it is far too early for self-satisfaction. The South is still the most undeveloped region of our country—the South is still the Nation's low-income area.

And so we must continue to strive for progress. We must expand the programs which have shown that they more than pay for themselves in added income and personal comforts to our people.

Somehow we must give more encouragement to small business. This might be done by stricter enforcement of the antimonopoly laws, by promoting research and applying the findings to business enterprises, by opening large surplus war plants through such plan as multiple tenancy, and perhaps by extending loan insurance.

Effort must be continued to give an equal education to all our boys and girls regardless of the section of the country in which they live.

World and national conditions are changing, and so is the South. We want to solve problems peculiar to our region with no outside dictation. We want to make progress and at the same time preserve our customs and institutions that have proved their value through the years.

From our experience in the past and from the program, or lack of program, on the part of the Republicans today, we know that we cannot look to them for help in working out our greater destiny. The Democratic Party for us is the party of hope.

In closing, may I wish you continued success in the work you are doing, work that is hard, sometimes dull, but more often full of interest and at all times necessary to the perfection of our democracy. The Democratic Party relies on your enthusiasm and constant support. The year 1948 may well prove one of the most crucial in the history of our country. Let us all work together to make it a year of progress and victory.

[From the Greensboro (N. C.) Daily News of February 10, 1948]

ADVICE TO DEMOCRATS

Senator JOHN J. SPARKMAN, of Alabama, gave guests at the Young Democratic dinner Saturday night at Sedgefield and southern Democrats generally something to think about when he warned against a bolt from the national party.

The Alabamian declared that if the Truman civil-rights program is a question of interfering with our principles in the South the Republicans have been equally guilty. In substantiation of this declaration, Senator SPARKMAN pointed to the Republican platform of 1944 as advocating the same set of reforms now considered offensive to southern Democrats. He contrasted the definite statement of the Republican platform on the controversial issues with the generalizations of the Democratic platform on the same subjects.

Warning against southern Democrats falling for Republican trickery with reference to the civil-rights issues, SPARKMAN challenged his audience to continue with the progressive policies of their party instead of giving aid and comfort to a party that has not considered the South a part of the Nation. In this connection he reviewed the progressive legislation enacted under the Democratic administrations in the last 15 years, emphasizing the benefits that had accrued therefrom to the South.

All this seems to make a lot of sense. For while it may be true that the northern and southern wings of the Democratic Party represent differing viewpoints the fact remains that this party has had a lot more to do with the development and progress of the South than the Republican Party has. It seems to us that the wiser course for southern Democrats is to work for greater voice and recognition in the affairs of their national organization. Certainly there is little reason to feel that the Republican Party, enhanced by revolting Democrats, is likely to be more considerate of the South than it has been in the past. The Republican Party largely speaks and acts for big business and entrenched interests centered mainly in the North and East. What consideration could the South with its own peculiar regionalism hope to have under such circumstances? Are southern Democrats to abandon the ideals and principles that have brought the South to its present condition and seek refuge where it has been ignored up to now? Southern Democrats have more to gain from a stiffened attitude toward their national party than from turncoat tactics.

Senator SPARKMAN expressed hope that Democratic Party differences can be resolved and that will be increasingly possible as the South continues to develop and assume larger stature in the Nation's life. This seems to be a good time for southern Democrats to let their national leaders know in positive fashion that they are tired of being ignored in the advocacy of such controversial matters as the civil-rights program. Their chances of achieving this will be greater if they have a saner and more workable plan as a substitute.

Shortage of Natural Gas

EXTENSION OF REMARKS
OF
HON. HENDERSON H. CARSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. CARSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by J. French Robinson, president of the East Ohio Gas Co., before the Senate Interstate Commerce Subcommittee regarding the shortage of natural gas.

There exists in the Northern and Midcentral States, and particularly in the State of Ohio, a critical shortage of natural gas. It is estimated that since January 14 more than 250,000 industrial workers have been idled because of this shortage.

We have heard through the papers, and otherwise, many reasons for the causes of this shortage. Mr. Robinson has spent his entire life in the gas industry and gives what, in my opinion, is a most fair and unbiased opinion regarding this shortage. In an effort to eliminate some of this shortage, the House passed a bill to amend the Natural Gas Act last year, but said bill failed to be reported out by the Senate Interstate Commerce Committee. Hearings before the Senate Interstate Commerce Committee were completed on February 12. In my opinion, the major portion of the shortages has been caused by conflicting opinions, both within the Federal Power Commission, and by the courts, and I commend Mr. Robinson's statement to each and every one of you in order to get a clear picture of this emergency. Regardless of the causes of this shortage, regardless of the factors involved, this situation calls for immediate action.

The statement follows:

STATEMENT OF J. FRENCH ROBINSON BEFORE SUBCOMMITTEE OF THE INTERSTATE AND FOREIGN COMMERCE COMMITTEE OF THE UNITED STATES SENATE ON H. R. 4051, A BILL TO AMEND THE NATURAL GAS ACT, APPROVED JUNE 21, 1938, AS AMENDED

My name is J. French Robinson. I live in Cleveland and am president of the East Ohio Gas Co., a gas-distributing company operating in Ohio. I am also a director of the Consolidated Natural Gas Co., of which my company is a wholly owned subsidiary. Consolidated's other subsidiaries are: The Peoples Natural Gas Co., Pittsburgh, Pa., a gas-distributing company which operates in Pennsylvania; Hope Natural Gas Co., Clarksburg, W. Va., a gas producing and transmission company which operates in West Virginia; New York State Natural Gas Corp., a gas-transmission company which operates in Pennsylvania and New York; the River Gas Co., a gas-distributing company which operates in and around Marietta, Ohio.

I am here now as a spokesman for the gas-distributing companies in the country.

The gas-distributing companies believe that H. R. 4051 will clarify the original intent of the Natural Gas Act, approved June 21, 1938. We think it is important that this be done. Here are our reasons:

CLARIFICATION OF THE NATURAL GAS ACT WILL MAKE MORE NATURAL GAS AVAILABLE FOR EACH COMMUNITY

Distributing companies have the job of taking gas from wells or transmission lines and making it available in each community to—

1. Domestic users—and these users take precedence over all others, not only because it is a legal requirement in most States but also because we are under a natural obligation to supply gas first to keep people warm, and enable them to cook their food and heat water for their cleaning needs.

2. Commercial users—such as restaurants, bakeries, churches, schools, etc.

3. Those industrial users who need an uninterrupted supply of gas to manufacture or process goods for the general public. However, this type of user must be and is curtailed in his supply of gas when the total supply in the area drops to a point where it jeopardizes the supply available for domestic users.

4. Those industrial users whose supply can be interrupted on very short notice.

There are more than 600 distributing companies supplying straight natural gas to 9,400,000 customers in 5,100 communities in the United States. About 30 companies supply mixed gas, consisting of natural and manfactured gas, to 2,500,000 customers in 560 communities. This means that these companies furnish gas to about 53,000,000 of the people in this country.

Domestic users of gas have a greater investment in the gas industry than the distributing companies

I spoke of the natural and legal obligations the distributing companies have to domestic

users. We also have a dollars-and-cents obligation. Let me use East Ohio as an example because it is the company I know best.

At East Ohio we have an investment in plant of about $104,000,000. What investment do our domestic users have? First of all each one has an investment in piping to use gas in his home. Then he has a gas range and a gas water heater. If he heats with gas, he has invested in a furnace or boiler or circulating heaters—some sort of space-heating equipment. He may have a gas refrigerator. If he rents he still has to pay for all this in his rent.

All told, we estimate that our domestic and small commercial customers have an investment of about $138,000,000 in equipment that can be used only with gas.

It is difficult to estimate the investment that our 800 industrial customers have in plant equipment designed expressly for the use of natural gas but it is my belief that if such an estimate were made, the amount would be as much as the investment of the domestic and commercial customers mentioned above.

Our customers—both domestic and industrial—have bought this equipment in good faith, in the considered belief that their gas company will continue indefinitely to supply them with the gas they need.

We, the gas-distributing companies, are obligated to fulfill the faith that our customers have had in our intentions and abilities to keep them supplied.

Why do we have gas emergencies in cold weather?

Since the middle of January extremely cold weather made drastic curtailment of industrial consumers necessary. Even so, severe domestic shortages occurred in many areas. As recently as January 30, 1948, the Associated Press reported that 250,000 men and women were unemployed due to shutdowns, attributed to the lack of natural gas. There was no shortage of gas in the major gas-producing areas. The entire shortage was in the amount of gas being delivered to and by the gas-distributing companies.

But the causes of it were elsewhere.

Certain areas of the United States are thickly populated. Our areas have the gas reserves. The first area served by natural gas was the Appalachian area, consisting of Pennsylvania, Ohio, West Virginia, Kentucky, and western New York. Until recently the area produced as much or more gas than it used. Today it does not. The Appalachian area uses 26.8 percent of the natural gas consumed in the United States for domestic and commercial purposes; it has just about 2.8 percent of the Nation's total gas reserves.

Conversely, the producing States of Kansas, Oklahoma, Texas, and Louisiana use 22.3 percent of the natural gas consumed in the United States for domestic and commercial purposes and have 82.9 percent of the Nation's total gas reserves.

That is why the Appalachian area has been importing gas through long distance transmission lines in large quantities since 1943. This is one instance of the need for interstate transmission of gas. There are many others like it.

The natural-gas industry since 1940 has spent $1,300,000,000 to improve the supply of gas to the people who use it. Still there is not enough gas coming through the pipe lines.

Confusion as to the extent of the jurisdiction of the Federal Power Commission is one of the basic reasons.

The oil and gas fields of the Southwest are the only ones with sufficient gas reserves to supply the thickly populated areas. Much of the gas produced in these fields is produced as a byproduct of oil production. The oil producers are under no obligation whatsoever to sell this gas for transportation to out-of-State population areas. They can sell it as fuel within the State in which it is produced, or they can sell it for the manufacture of gasoline, carbon black, and such products. Four large plants, two of which will be finished this year, are planned to make gasoline from natural gas.

This means, first of all, that gas transmission companies must buy southwestern gas in competition with buyers who would use the gas locally for purposes other than fuel. They must pay the same price for it as anyone else—or get no gas. And if the price is inadequate producers who can do so will suspend production and development. You can understand how this works. You saw meat and other products disappear from the legitimate market when prices were controlled, and miraculously reappear when the law of supply and demand was allowed to set the price. With natural gas there is one difference. The producers have other legitimate markets to which they can sell if the Federal Power Commission sets too low a price.

Wherever the Commission has had an opportunity to set prices for produced gas, as in the case of the production departments of certain transmission companies, it has set a price which is so low that no one in his right mind would sell gas at that price if not under absolute legal compulsion to do so. For example, the Commission has allowed prices of 1.14 cents and 2.21 cents per million cubic feet for gas at the well mouth, as against a prevailing field price of 7 cents.

Naturally many large oil companies have refused to put their gas on the market under long-term contracts for fear they will be subject to such rulings of the Federal Power Commission and to the costly process of complying with the Commission's accounting and report orders. We are convinced that a great deal of gas is being withheld from the markets entirely because the Commission has construed the present act as giving it control of the gas before it actually reaches interstate transmission lines at any time it desires to exercise such control.

Many times we have said that another big reason for current gas emergencies is the lack of steel for building additional lines from producing areas. Big pipe lines are laid only to fields where a large volume of gas for transmission can be assured. Producers, as we have pointed out, are reluctant to commit themselves to long-term obligations because of their fear of coming under Federal Power Commission rate and other regulation theories. That reluctance caused the transmission companies to hesitate about making the huge investments necessary to build pipe lines. Their orders for steel were thereby delayed and the pipe-line companies lost all hope of favorable priorities from the mills.

CLARIFICATION OF THE NATURAL GAS ACT WILL PREVENT UNNECESSARY DUAL REGULATION OF GAS DISTRIBUTING COMPANIES

Many companies distributing natural and mixed gas operate solely within one State. All of their activities are regulated by State or municipal authorities who have jurisdiction over rates, depreciation, and depletion charges, financing, major extensions, rules, etc.

A few of these distributing companies produce all their own natural gas locally. Their production properties and facilities, as well as their so-called transmission facilities, are used to move all of the gas to points of local consumption.

Most of these distributing companies also take gas from interstate transmission lines, but all of their operations are within the State in which they take possession of the gas.

When the Natural Gas Act was passed in 1938, its purpose was clearly specified as one of filling in the gap between State and Federal regulations. The act itself stated that the production and gathering at one end, and the distribution at the other end were not to be subject to the act.

The Federal Power Commission has, however, consistently misconstrued the language of the act and has attempted to bring under its general jurisdiction everyone who handles natural gas from the time it leaves the bottom of the well until it reaches the burner tip. This means complete regulation from Washington of one of the major industries of the country. It means that millions of customers of distributing companies will have to pay as part of their cost of gas service not only what the present complete and effective State and municipal regulation costs, but also the cost of complying with the accounting, reporting, and procedural requirements of the Federal Power Commission.

Perhaps the most menacing aspect of this dual regulation is that the Federal Power Commission has been asserting views on what natural gas should be used for by ultimate consumers. It will never prove practical to have a body in Washington decide how and by whom natural gas shall be used in each of the thousands of cities in this country which are being and can be served by natural gas. That is a local problem which should be handled in the future as in the past, by local and State authorities.

Actually, the Natural Gas Act recognized this situation, but as we know, Federal administrative bodies have a tendency to expand their powers—a little bit here and a little bit there—until they are met with statutory language which no one can misconstrue. H. R. 4051 does just this and will prevent an enormous and expensive amount of Federal duplication of existing State regulation. And it will let the gas distributing companies and the municipalities and State commissions decide who in each community is to get natural gas and how much.

CLARIFICATION OF THE NATURAL GAS ACT WILL IMPROVE THE NATION'S GENERAL FUEL SITUATION

Earlier in this statement I brought out the fact that this amendment to the Natural Gas Act will make more natural gas available as fuel. I am repeating that statement now because I want to bring to your attention the fact that it was not only the gas industry that operated under emergency conditions this winter. All along the eastern seaboard there has been and still is a critical shortage of fuel oil. In some areas coal in its several forms has been scarce. Anything that can be done to improve the supply of any one fuel is a contribution toward licking the national shortage of available fuel.

If this amendment to the Natural Gas Act were passed and producers could be sure that they had nothing to fear in the way of regulation by the Federal Power Commission, I feel certain that many producers would be willing to enter into long-term agreements to supply natural gas for distribution as fuel instead of delivering their production to nonfuel users as they do now.

Such action would not only relieve the fuel situation in general; it would lop an enormous amount from the Nation's fuel bill. Using the city of Cleveland as an example, again, the cost of gas to the user allows him to save 25 percent of the money he would put out if he were using coal, and 50 percent of what he would pay if he were using oil.

CLARIFICATION OF THE NATURAL GAS ACT WOULD NOT NECESSARILY INCREASE THE PRICE OF GAS TO THE USER

Several things should be kept in mind in discussing gas prices to users, especially in times like these. Let's take them one by one.

States regulate gas prices and profits

Every State in which gas is distributed keeps close watch on both prices to users and gas utilities' profits. There has been some fear expressed by the newspapers that if the Federal Power Commission did not regulate producers, the gas distribution companies might be tempted to pay outlandish prices

to producers and so force a rise in the cost of gas to the user. Well, frankly, any gas distributing company that went off the deep end in that respect would be foolish, to say the least. And any gas distributing company official who has ever taken part in a rate case before State authorities knows it. No expense is allowed by these authorities unless it is a reasonable one.

Selling price of gas reflects field price only to a minor extent

The following table shows some facts about gas production in the Texas, Louisiana, Oklahoma, and Kansas gas fields. It is based on these areas because they supply most of the Nation's gas today and have 83 percent of the known gas reserves in the United States. The last year for which data were available in the Bureau of Mines Minerals Yearbook was 1945:

History of Texas, Louisiana, Oklahoma, and Kansas gas production

	1907	1922	1940	1945
Production, 4 States (billions of cubic feet)	82	279	1,754	2,758
Percent of total United States production	20	37	66	70
Average field price, 4 States (cents per thousand cubic feet)	8.2	8.3	2.1	3.1
Average selling price, entire United States (cents per thousand cubic feet)	23.7	49.9	65.7	61.2

What this table shows, first of all, is that the gas industry is becoming more and more dependent upon these four States for its source of supply. The field price in these States will become more and more important as a factor in the price we distributing companies have to pay for gas.

The second thing this table shows is that there has always been competition to buy gas from these States, and that competitive buying has increased over this period without forcing the unregulated field price of gas to skyrocket. One reason for this, of course, has been that in the past 12 years, for example, the discoveries of new gas reserves have been over three times as great as the amount of gas used, even though the use of gas has been increasing.

The only conclusion that can be drawn is that the field price of gas has about as much relation to the selling price as the cost of electricity has to a trolley fare. When we take on the job of distributing gas and making it available to users we must provide for such operating expenses as labor and materials, taxes, and all the other costs that any business has. So our selling price is based on many costs, only one of which is the field cost of gas. Even though most of these costs have been increasing steadily, we have been able to offset them. This is because, until the Commission moved in with its loose interpretation of the act, there has been a free market for gas in the field, and our pipe-line suppliers by their diligent efforts have been able to get for us our share of this gas. Consequently, we have been able to increase our volume sold, thus creating a broader base to support our operating costs, and so reducing the proportionate share of these costs that each m. c. f. of delivered gas must bear.

Let us refer to East Ohio as an example. During the past 7 years the field cost of gas that East Ohio buys in Ohio has increased by 11 percent. Yet the price of East Ohio domestic gas today is 10 percent lower than it was in 1940. A fundamental reason for this is in the much larger volume of gas we have been handling.

Remember, it costs just as much to lay a 20-inch pipe line whether you are going to put 20,000,000 cubic feet of gas a day through it or 60,000,000 cubic feet. It costs just about as much to operate it. But there's an enormous difference in the cost per thousand cubic feet when you spread those more or less fixed costs over 20,000,000 cubic feet or 60,000,000 cubic feet.

One of the most important things about this amendment is that it will get more gas into the transmission lines and out into the distributing lines. That means savings for everyone—the transmission companies, the distributing companies, and the users of gas.

We don't have to worry about demand for the gas, once we get it into the lines. Let me use East Ohio as an example one more time. In 1940 we had 512,000 customers, of which 62,000 used gas for house heating. At the present time—7 years later—we have 564,000 customers, and 197,000 of them use gas for house heating. Of our house-heating customers, 46,000 were added in 1946 and 30,000 more were added in 1947 in spite of the restrictions that the Ohio Utilities Commission placed on this use of gas, and this has been happening in every section of the county where gas distribution is available.

Until 1940, East Ohio's largest day's sales were 228,000,000 cubic feet. On January 14 of this year, our sales exceeded 510,000,000 cubic feet.

In view of the current cheapness of gas in comparison with other fuels, and the convenience of installing and operating gas-heating equipment, it is very likely that we would have at least 200,000 more house-heating installations within the next 5 years—if we could get the gas to supply them. Each additional house-heating customer requires 2,000 cubic feet of gas on a peak day so that we will require an additional 400,000,000 cubic feet on a cold day to take care of these additional installations. As mentioned before, the greatest amount of gas that we were able to deliver on a single day for all of our consumer requirements has been 510,000,000 cubic feet.

For the past several minutes, I have been talking almost exclusively about East Ohio Gas Co. But this same growth in the demand for gas has been going on everywhere that there are distribution lines. Sales of domestic gas in the United States have increased from 542,000,000,000 cubic feet in 1940, to 789,000,000,000 cubic feet in 1946. Total sales of gas to all users have increased from 2,655,000,000,000 cubic feet in 1940, to 3,900,000,000,000 cubic feet in 1945. Increased field costs spread over these volumes will obviously have little effect on final rates to users.

The extra costs of regulation of distributing companies by the Federal Power Commission adds to rather than decreases the price of gas to the user

As an illustration of the added cost to domestic and other customers of regulation of distributing companies by the Federal Power Commission, I refer to the experience of my own company. We have no rates that can be regulated by the Commission, but it insists we should comply with its accounting and report requirements although we operate only in Ohio and already report fully to the Ohio commission.

The original cost and other studies necessary to this end would cost us between $1,500,000 and $2,000,000, all of which we would eventually have to get from our Ohio customers. We could have our suppliers buy a lot of gas for us to distribute to our customers at prevailing field prices in the Southwest—or at higher prices—for this amount of money.

Natural gas is a bargain; it will remain a bargain if it can be kept coming to market

During the past 8 years, the cost of living has increased greatly—70 percent in Cleveland, for example. Yet the tapping of the vast southwestern gas fields for eastern and midwestern consumption, and the resulting economies by distributing companies of handling increased volumes has resulted in no appreciable increase—and often a decrease—in the cost of natural gas to consumers in thousands of communities throughout the country.

The result in Cleveland is that to heat a home today with natural gas costs only 50 percent as much as it does with oil and only 75 percent as much as with coal.

If present gas volumes can be maintained and increased, it is apparent that natural gas will continue to be a great bargain even though substantially higher prices have to be paid to the producers. This is so because the well head price or gas in the Southwest—whatever it may be—is only a small fraction of the ultimate cost of transporting this gas for thousands of miles to thousands of communities and distributing it through city streets to consumers.

SUMMARY: THE GAS DISTRIBUTING COMPANIES BELIEVE THAT H. R. 4051 WILL PUT INTO EFFECT THE ORIGINAL INTENT OF THE NATURAL GAS ACT APPROVED JUNE 21, 1938. WE SUBMIT THAT THIS RESULT IS NECESSARY TO ASSURE ADEQUATE SUPPLIES OF NATURAL GAS TO COMMUNITIES THROUGHOUT THE NATION

I do not need to stress the point that H. R. 4051 carries out the original intent of the Natural Gas Act—the Federal Power Commission is not to have jurisdiction over natural-gas production and gathering, or over gas distribution. That has been ably expressed by Report No. 800 of the House of Representatives Committee on Interstate and Foreign Commerce, submitted by the Honorable HENDERSON CARSON on July 7, 1947.

I do want to stress this—the interest of the distributing companies in this clarifying amendment is twofold: First, to get an ample supply of gas for the 53,000,000 people dependent on our service. We think that the amendment will have little or no effect on the selling price of gas to our customers. But that is not the fundamental issue. The fundamental issue is whether the Nation will go on having "gas emergencies" indefinitely, or whether the people who depend upon us to supply them will get as much natural gas as they want and need. Second, our interest is to avoid expensive and unnecessary duplicate regulation.

My statements today have been devoted entirely to the amendment of the Natural Gas Act as it relates to the distributors of natural gas to the ultimate individual users. The subject was covered in its broader aspects when I testified last spring before a House committee. This testimony is recorded in the printed proceedings entitled "Amendments to the Natural Gas Act; Hearings Before the Committee on Interstate and Foreign Commerce; April 14 to 18 and May 28 and 29, 1947."

Merchant Marine—Lest We Forget

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. BLAND. Mr. Speaker, on the 30th of January and 9th of February 1948, I stated my reasons for opposing the proposal to transfer, by gift or charter, 500 ships to foreign nations. I endeavored to show the extremely dangerous position in which such procedure would place our merchant marine. On page A687 of the Appendix of the RECORD and succeeding pages is a copy of a speech delivered by the gentleman from Louisiana, Hon. HALE BOGGS, before the annual meeting of the

Mississippi Valley Association, at St. Louis, Mo., on the 26th day of January, 1948. I hope it will be read by every Member of the Congress.

The gentleman from Louisiana [Mr. BOGGS] comes from the port of New Orleans, and knows, as few other men in Congress do, the problems of the American merchant marine—how they transcend all local considerations, and how essential they are to national well-being and security.

The gentleman from Louisiana [Mr. BOGGS] quoted many of our national leaders on the vital importance of the merchant marine and aptly called attention to the situation which developed during World War I and immediately thereafter because we had neglected our merchant marine. He correctly described conditions before and in World War I. He said:

At this time there were no American-flag shipping overseas from the ports of the Gulf of Mexico and there were no dependable services by foreign ships to many markets. Foreign ships which brought coffee from Brazil to New Orleans did not offer a return service but loaded cotton, grain, and other products for Europe and then carried manufactured goods from Europe to the east coast of South America, making what was termed triangular voyages. Naturally, the owners of those ships were interested in developing commerce between their own countries and South America. Sailings to European ports and to the Orient were seasonal and dependent upon the movement of cotton or grain. Because of their infrequency and uncertainty they were of no value to the exporter of manufactured products.

Then came World War I, finding us dependent upon the ships of other nations for the transport of nearly all of our foreign commerce. When these foreign ships were suddenly withdrawn from war service, there was stagnation of our foreign trade and ocean freight rates advanced to fantastic heights. We had goods for export for which the world was crying but no means of transporting them. This loss of trade lost our country a vast sum of money even before we entered the war.

When we finally became participants in World War I we were forced into a frenzied era of ship construction, costing more than $3,000,000,000 for vessels that could have been built for less than one-third the sum during the preceding years of peace. As few of these ships became available until after the war, the ships of our allies had to transport our men and supplies to the scenes of hostility.

I became a member of the House Committee on Merchant Marine and Fisheries in April 1921, and continuously for almost 27 years I have fought for a restoration of the American merchant marine. I served during the chairmanship of Greene, of Massachusetts; Edmonds, of Pennsylvania, White—now Senator from Maine; Scott, of Michigan, and Davis, of Tennessee. I served on the subcommittee dealing with the merchant marine. Mr. BOGGS states the exact situation existing when the Merchant Marine Act of 1936 passed the House of Representatives.

I am confident that the proposed sale or temporary transfer of some of our war-built merchant vessels to European nations might very well undo all that has been done and again scuttle the American merchant marine.

I emphasize my support of the Marshall plan in principle, but my unequivocable opposition to the transfer of our ships by sale or charter to foreign countries. I said so in my remarks on January 30 and February 10, 1948.

Mr. BOGGS quoted from General Eisenhower, Admiral Nimitz, Mr. Harriman, and President Truman and ex-Presidents Woodrow Wilson and Franklin D. Roosevelt confirming the dangers emphasized by Mr. BOGGS.

Many of our Presidents have expressly recommended a reasonably adequate merchant marine. I quote some of them.

Calvin Coolidge:

The maintenance of a merchant marine is of the utmost importance. Our own vessels carry only about 40 percent of our foreign trade. We are dependent on our competitors to carry 60 percent of our trade to market. Of course, the result is that they help themselves and hamper us. Parity in merchant ships is only less important than parity in warships. We ought to make the necessary sacrifice to secure it.

Woodrow Wilson:

How are we to build up a great trade if we have not the certain and constant means of transportation upon which all profitable and useful commerce depends. And how are we to get the ships if we wait for the trade to develop without them? The Government must open these gates of trade, and open them wide; open them before it is altogether profitable to open them, or altogether reasonable to ask private capital to open them.

To speak plainly we have grossly erred in the way in which we have stunted and hindered the development of our merchant marine. It is necessary for many weighty reasons of national efficiency and development that we should have a great merchant marine. * * * It is high time we repaired our mistake and resumed our commercial independence on the sea.

Moreover, we can develop no true or effective American policy without ships of our own—not ships of war, but ships of peace, carrying goods and carrying much more; creating friendships and rendering indispensable services to all interests on this side of the water. They must move constantly back and forth between the Americas. They are the only shuttles that can weave the delicate fabric of sympathy, comprehension, confidence, and mutual dependence in which we wish to clothe our policy of America for Americans.

Theodore Roosevelt:

Ships work for their own countries, just as railroads work for their terminal points. From every standpoint, it is unwise for the United States to continue to rely upon the ships of competing nations for the distribution of our goods.

To the spread of our trade in peace and the defense of our flag in war, a great and prosperous merchant marine is indispensable. We should have ships of our own and seamen of our own to convey our goods to central markets, and in case of need to reinforce our battle line.

Ulysses S. Grant:

A nation of the vast and ever-increasing interior resources of the United States must one day possess its full share of the commerce of these oceans, no matter what the cost. Delay will only increase this cost and enhance the difficulty of attaining the result. * * * Building ships and navigating them utilizes vast capital at home; it employs thousands of workmen in their construction and manning; it creates a home market for the products of the farm and the shop; it diminishes the balance of trade against us precisely to the extent of freights and passenger money paid to American vessels, and gives us a supremacy upon the seas of inestimable value in case of foreign wars.

Thomas Jefferson:

The marketing of our productions will be at the mercy of any nation which has possessed itself exclusively of the means of carrying them; and our policy may be influenced by those who command our commerce.

For a navigating people to purchase its marine afloat would be a strange speculation, as the marine would always be dependent upon the merchants furnishing them. Placing as a reserve with a foreign nation, or in a foreign shipyard, the carpenters, blacksmiths, caulkers, sailmakers, and the vessels of a nation, would be a singular commercial combination. We must, therefore, build them for ourselves. * * *

To force shipbuilding is to establish shipyards; is to form magazines; to multiply useful hands; to produce artists and workmen of every kind who may be found at once for peaceful speculations of commerce and for the terrible wants of war.

It is as a source of defense that our navigation will admit neither neglect nor forbearance. The carriage of our commodities if once established in another channel, cannot be resumed in the moment we may desire.

George Washington:

We should not overlook the tendency of war to abridge the means and hereby at least enhance the price of transporting productions to their proper markets. I recommend it to your (Congress's) serious reflections how far and in what mode it may be expedient to guard against embarrassments from these contingencies by such encouragement to our own navigation as will render our commerce and agriculture less dependent on foreign bottoms which may fail us in the very moments most interesting to both these great objects. * * * There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion which experience must cure.

To the same effect were statements by President Hayes, President Arthur, and President Benjamin Harrison. President McKinley said:

Our national development will be one-sided and unsatisfactory so long as the remarkable growth of our inland industries remains unaccompanied by progress upon the seas. There is no lack of constitutional authority for legislation which shall give to this country maritime strength commensurate with its industrial achievements and with its rank among the nations of the earth. We must encourage our merchant marine. We must have more ships. They must be under the American flag and built and manned and owned by Americans. They will not only be profitable in a commercial sense; they will be messengers of peace and amity wherever they go.

Presidents Taft, Harding, and Hoover expressed themselves to the same effect, as quoted below:

President Taft:

All the great commercial nations pay heavy subsidies to their merchant marine, so that it is obvious that without some wise aid from Congress the United States must lag behind in the matter of a merchant marine.

President Harding:

Our shipping will strengthen American genius and determination, because carrying is second only to production in establishing and maintaining the flow of commerce to which we rightfully aspire.

I do not for one moment believe in Government ownership as a permanent policy, but I prefer that hazardous venture to the surrender of our hopes for a merchant marine.

So we mean to maintain the flag on the sea until such a future day as when Congress may rise above the obstructionist, when the reflective sentiment of all the country will sense the great necessity and compel the legislation required to turn to the national way of triumph on the seas.

President Hoover, in a message at the launching of the steamship *Santa Rosa* in 1932:

The efforts put forth in the rehabilitation of the American merchant marine have proved beneficial to the country at large. During the past 10 years, as compared with the prewar decade, the proportion of our foreign trade carried by ships under the American flag has substantially increased. It has notably grown in trades where no American-flag services previously were provided.

President Hoover, when Secretary of Commerce:

We must have ships if we would expand our exports on sound lines, and we must have them as auxiliaries to our national defense.

To secure export markets we must have some sound proportion of American-controlled shipping to assure us against combinations in rates which would prejudice our goods in competitive markets. Nor have our merchants been without experience in finding that the transport of our goods in foreign bottoms has been taken advantage of by our competitors to learn details of our trade connections.

It is just as important to the farmer to be guaranteed reasonable rates for sea transport as of land freight. The real security is an American-owned merchant marine.

It is simply a truism to say that we must have an American overseas merchant marine.

There is only one protection of our commerce from discrimination and from combinations which would impose onerous freight rates. That is to maintain upon these trade routes the regular operation of very substantial shipping under the American flag.

Other great statesmen of all parties have reached conclusions in accord with those expressed by the able patriotic men who have filled the Presidency, speaking under their responsibility to speak for the best interest of all the people of the United States rather than from the impulse to attain victory for the particular party with which they were affiliated and which had honored them. The unanimity of the views of Presidents of different faiths is convincing truth of the accuracy of their conclusions. James G. Blaine, of Maine, one of the greatest Americans whom our Nation has produced, Representative in Congress, and Secretary of State under President Benjamin Harrison, said in Twenty Years in Congress, written by him:

The principle of protecting the manufactures and encouraging the navigation of America had been distinctly proclaimed in the first law of the new Government and was thus made in a suggestion and emphatic sense the very cornerstone of the Republican edifice which the patriots of the Revolution were aiming to construct.

Secretary of State Elihu Root said in 1906:

We are living in a world not of natural competition, but of subsidized competition. State aid to steamship lines is as much a part of the commercial system of our day as state employment of consuls to promote business. It will be observed that both of these disadvantages under which the American shipowner labors are artificial; they are created by governmental action—one by our own Government in raising the standard of living and wages by the protection tariff; the other by foreign governments in paying subsidies to their ships for the promotion of their own trade. For the American shipowner it is not a contest of intelligence, skill, industry, and thrift against similar qualities in his competitor, it is a contest against his competitors and his competitors' government and his own government also. Plainly, these advantages created by governmental action can be neutralized only by governmental action, and should be neutralized by such action.

Senator Wesley L. Jones, from the State of Washington, in a speech in 1913, in the Senate of the United States said:

Since 1885, foreign ships have carried over $50,000,000,000 of our foreign commerce. Estimating the freight at 15 percent, we have paid them over $7,500,000,000 for getting our products to their markets and supplying our own. Of what benefit is a balance of trade in our favor if we pay most of it for freight?

Senator Jones was recognized as an authority on the subject on which he spoke.

On March 4, 1935, President Franklin D. Roosevelt presented to the Congress the issue of whether or not the United States should have an adequate merchant marine and answered the question affirmatively. He said:

To me there are three reasons for answering the question in the affirmative. The first is that in time of peace, subsidies granted by other nations, shipping combines, and other restrictive or rebating methods may well be used to the detriment of American shippers. The maintenance of fair competition alone calls for American-flag ships of sufficient tonnage to carry a reasonable portion of our foreign commerce.

Second, in the event of a major war, in which the United States is not involved, our commerce in the absence of an adequate merchant marine, might find itself seriously crippled because of its inability to secure bottoms for neutral, peaceful foreign trade.

Third, in the event of war in which the United States itself might be engaged, American-flag ships are obviously needed for naval auxiliaries, but also for the maintenance of reasonable and commercial intercourse with other nations. We should remember lessons learned in the last war (H. Doc. No. 118, 74th Cong., p. 1).

Under date of June 18, 1934, the Secretary of Commerce, with the approval of the President, appointed an interdepartmental committee to be known as the Committee on Shipping Policy, consisting of representative departments of the Government. This committee made a comprehensive study of the American merchant marine, and recommended a shipping policy to be pursued by the Government. The Secretary called for a comprehensive study of the policy to be followed by the administration in the development of an American merchant marine necessary for national defense and for the growth of the foreign and domestic commerce of the United States, including the question of subsidies, personnel, and unemployment.

That committee worked almost continuously for the next 6 months and submitted its report, which was attached to the President's message. The committee said:

The committee feels that it is necessary, for the purposes of both national defense and the development of foreign and domestic commerce of the United States that we have an American merchant marine. It is needless to call attention to the part that our merchant marine has played in the national defense of the country during various wars in which the United States has been engaged. We need only to recall the World War when we learned the result to us of allowing our merchant marine to approach the vanishing point. Between the outbreak of the war and our entry into it we found that the foreign shipping lines on which we had relied to carry our commerce had withdrawn their services to American trade in a large part, with the results, inter alia, that the ocean freight rates increased in some instances 1,000 percent and over. We found the products of farm, mine, and factory at the water terminals without sufficient transportation facilities to move them to their destination. After our entry into the war, it was necessary for the Government to embark upon a huge shipbuilding program resulting in the expenditure of about $3,000,000,000 to furnish merchant ships to carry supplies that were necessary for the support of our troops. We also had to train personnel to operate this new merchant fleet. It was further necessary to draw heavily upon the trained personnel of the Navy at a time when their services were needed for manning new combat vessels. This was in contrast with the experience of other maritime nations which were able to utilize their trained merchant marine personnel for operation of their naval vessels (H. Doc. No. 118, p. 21).

The President's message and the accompanying papers were referred to the Committee on Merchant Marine and Fisheries of the House of Representatives and the Committee on Commerce of the Senate. These committees studied the problems presented by the above message of the President and accompanying papers. H. R. 7521 was introduced in the House, was studied for many months. Hearings consuming 1,243 printed pages, and held for 15 days, resulted in the committee reporting favorably H. R. 8555 on June 20, 1935, Seventy-fourth Congress, first session, report No. 1277.

The report showed that the committee had carefully considered the message of the President and accompanying papers.

The bill provided means for the termination of ocean mail contracts which were the subjects of considerable controversy and gave the President agencies to assist him in his responsible duties but without abating or diminishing powers, and sought to give him the opportunity to work out substitution of contracts such as he might recommend for contracts which he might wish to cancel or modify and the committee sought to provide safeguards to prevent abuses in the future.

The committee said in its report:

The problem of an American merchant marine, its present condition and needs, the competition it must meet, the aids granted by other nations, and some of its outstanding difficulties are so complex that the committee summarizes them in this report that members may have before them the difficulties which have confronted this committee and also the Nation.

The committee disclosed the condition of our oceangoing merchant marine at

the time the report was submitted, discussed the needs for trade promotion and protection, and showed that the American merchant marine was in danger of destruction without new construction and replacement immediately.

A select committee on inquiry into the operations, policies, and affairs of the United States Shipping Board and Emergency Fleet Corporation, consisting of seven Members of the House of Representatives had been appointed under the authority of the Sixty-eighth Congress and had submitted its report in which it said:

In fact, had it not been for the American merchant marine at the close of the World War the United States would probably have paid out in increased ocean freight rates alone more than the total cost of the Government fleet. It was the Shipping Board which brought about, through control of its tonnage, constant reductions in ocean freight rates which inured to the benefit of American producers, industries, and shippers. This tremendously important fact cannot and should not be overlooked in estimating what the American merchant marine is worth to the people.

In addition to the enormous savings in freight rates, it must be remembered that the percentage of American commerce carried in American vessels has materially increased in volume over the prewar period and the freight money paid out by shippers for carriage in American vessels has remained in the United States. This sum constitutes a huge total.

Foreign ships are built abroad, their earnings are largely invested abroad, and they are manned almost entirely by foreigners who spend most of their money in other lands. It becomes apparent that the financial benefits to this country from foreign ship operations are meager. On the other hand, the earnings, wages, and purchases involved in the operations of ships are transactions which directly benefit the Government and people of the United States. An American merchant marine becomes, therefore, an effective instrument in the stimulation of domestic labor and industry.

The report of the Committee on Merchant Marine and Fisheries quoted from the Committee on Shipping Policy as follows:

In the opinion of the committee it is beyond question that this country should maintain a merchant marine, and this quite aside from the matter of national defense. In reaching this opinion, the committee is influenced by the following considerations:

1. The necessity of securing steamship service over routes essential to our commerce for which the steamship service of other countries might not provide.

2. The beneficial effect of the control of general shipping rates which the existence of an adequate national merchant marine assures.

3. The desirability of having available at all times a supply of tonnage to meet our urgent needs in the event of the withdrawal of foreign ships in a time of crisis or emergency abroad.

While there may be an occasion for differences of opinion as to the exact size which the merchant fleet should attain in order to meet these considerations adequately, the determination of what that size should be on an objective, impartial basis, giving due regard to the public interest as a whole, calls for close study and painstaking analysis of a very intricate and constantly shifting array of complex facts. Such a task can best be carried on under the direction of the unified authority on maritime affairs which is the subject of a later recommendation, and which can give full consideration to all aspects of a matter closely bound up with our foreign relations, the balance of our international payments, and the advancement of our agriculture, industry, and commerce in general.

The report pointed out that during the period from 1922 to 1928 no vessels were built in American yards for overseas foreign service and under the 1928 act 31 new vessels were built for ocean mail service and 42 reconditioned while in the preceding 5 years, in the construction of freighters, this country had built 4 while Great Britain was building 295, and for the 5 years previous when we were constructing 4 in American shipyards Great Britain built 558.

The report said:

During the postwar period from 1922 to 1933, about 16,500,000 tons of oceangoing ships of 2,000 gross tons and upward were constructed throughout the world of which the United States constructed less than 7 percent.

Obviously, something must be done quickly or our flag will disappear from the seas. We shall be reduced to our prewar position where we had 81 vessels of less than 50,000 tons operating on our regular services at which time we carried less than 10 percent of our commerce in American ships.

The tonnage under construction in the United States consists of two tankers aggregating 16,800 tons. The other tonnage consists of four vessels averaging 418 tons each. There is not one oceangoing vessel building in the United States for either domestic or foreign trade for the carriage of goods and passengers. Shipping serves every State in the Nation not only by supplying the transportation to carry its products to the markets of the world, but also by drawing upon every State for materials, supplies, and equipment for the construction of a ship. There is no other industry so diversified. The shipbuilding industry is a great consumer of raw materials. It buys from other industries not only the materials and equipment that are incorporated within the ship itself, but also the products that are consumed within the shipyard during the process of construction.

The evidence shows that from 80 to 85 percent of the cost of a ship goes to labor. This includes not only the labor within the shipyard itself, but also the labor performed on all the materials and equipment that are purchased by the shipyard and used in the construction of the vessel. When a shipyard buys material, as, for instance, a piece of machinery, the industry making this machinery performs labor upon it; and it, in turn, buys raw material, such as steel, copper, lumber, and other products, which, in turn use labor in their production. In tracing the production of any of these products it will be found that in producing ingot copper or steel, or lumber, that labor has been performed, so that finally everything is labor except the intrinsic value of the mines, fields, or forests of the country.

There is no industry in the United States where so much good could be done throughout the country and so many of the unemployed taken off the relief rolls as in the shipbuilding industry, with all of its ramifications. In this bill we have provided for the use of American products so far as practicable. The ships are needed, the American merchant marine has grown so old that it is in danger of destruction, men are on the relief rolls anxious to obtain employment, and the opportunity to grant relief is before us.

Ship operation is the most highly competitive business in the world. It is as true now as then that—

Failure to grant aid would open the door to monopolies in shipping and abandonment of the smaller ports. A few companies who could finance themselves would absorb all other lines, curtail operations, abandon ports, fail to develop smaller ports, operate from the now congested centers and destroy that equitable service to all ports of this country which has been the hope and dream of the interior portions of our country as well as of the ports that are to be served.

The study that was made by the House Committee on Merchant Marine and Fisheries confirmed fully the President's message that aid was necessary for a reasonably adequate American merchant marine, and "that only by providing for American shipping Government aid to make up the differential between American and foreign shipping costs could a reasonably adequate merchant marine be maintained," and it concluded that it would well afford to call a subsidy by its right name.

Members of the House Committee on Merchant Marine and Fisheries who still serve in the Congress of the United States are Edward J. Hart, of New Jersey; Richard J. Welch, who was second to Frederick R. Lehlbach, of New Jersey, who was ranking Republican on the committee; Ralph O. Brewster, of Maine, now junior Senator from that State; Clare E. Hoffman, of Michigan; and Bland, of Virginia, who was chairman.

Hon. Lindsay C. Warren, who was a member of the committee, is now Comptroller General of the United States.

The committee studied exhaustively all questions involved in the subject and summarized in its report the subsidies that were paid by foreign countries.

I hope this review of the record may prove interesting and useful. Partisan politics have never entered into the deliberations of the committee handling this legislation. All members were impelled and guided solely by the best interest of America as they saw it.

I am convinced that the same motives and spirit have guided and actuated all of the members of the United States Maritime Commission from the dates of their first appointments in 1936 to the present time.

No men occupying any offices have tried more honestly and faithfully to serve America than the former Commissioners and those who now serve. To say that they have made mistakes is only to say that they are human, but I believe that an unbiased, comprehensive study of their work, their problems, and their difficulties will convince all who wish to do justice to say that they have done well.

One of the Commissioners who gave of himself without stint and unreservedly, Admiral Vickery, paid with his life for his devotion to the cause. He was as truly a victim of World War II as any soldier who fell on the battlefield. His duties were arduous. He, too, was one of those immortals who died that America might live. I feel that I would be untrue to his memory, and a perfect ingrate, if I should omit this tribute to his memory.

May his sleep be sweet and may all of us who survived him remember his services.

Lord God of hosts, be with us yet.
Lest we forget! Lest we forget!

Betrayal of Poland

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. REED of New York. Mr. Speaker, the perfidy of those who have sacrificed our national honor for their own advancement in the field of domestic and world power politics is gradually coming to light.

Just so long as the sovereign citizens of our Republic reward aspirants for public office because such candidates flatter and charm them, they will find themselves betrayed.

Under unanimous consent granted, I am inserting an article by Frank R. Kent, which appeared in the Washington Evening Star of February 13, 1948:

LANE BOOK ON POLAND'S BETRAYAL DIFFICULT FOR ROOSEVELT DEFENDERS TO ANSWER

(By Frank R. Kent)

It is typical of the worshipers of the late Franklin D. Roosevelt that they should agree with practically everything in the impressive and significant book of Arthur Bliss Lane ("I Saw Poland Betrayed") except the single statement that at Yalta and Tehran Mr. Roosevelt, in his effort to charm Mr. Stalin, abandoned the principles of the Atlantic Charter and, in effect, cast aside his promises to Poland, opening wide the door for the savage and brutal domination of that suffering country by the Soviet forces.

That, of course, is an extremely serious charge—particularly when it is recalled that in 1944 hundreds of thousands of American Poles voted solidly for Mr. Roosevelt in the firm conviction that he was the vigilant and unshakable champion of Polish freedom and independence. But it is not a new charge. Others have asserted that at these Roosevelt-Stalin meetings Poland was blithely sold down the river, the former American President trustingly relying on the unsupported word of the Soviet dictator, utterly ignoring his long, black record for violation of treaties, agreements and pledges; incredibly permitting him to have a free hand in Poland.

Of all who have made this devastating accusation, Mr. Lane carries the most weight, presents the most convincing evidence and was in best position to know the facts. It no more can be claimed that he was inspired by a personal or political motive than it can be contended he did not fully appreciate the nature and implications of his statements. Here is no Roosevelt hater, no representative of reactionary forces, no economic royalist or ambitious seeker of office. Instead, here is an outstanding American with a distinguished career of diplomatic service covering more than 30 years in various parts of the world.

ROOSEVELT NOMINEE

Named Ambassador to Poland by Mr. Roosevelt himself, he was in London in 1944 when Poland was occupied by the enemy and her government was in London. He entered Warsaw immediately following the German surrender and remained there until last year, an eyewitness to every step of the Soviet seizure of Poland, with full understanding of the callousness of the pledge violation and of the humiliating failure of our Government to lift a hand to prevent or utter an effective word to protest what, beyond question, was one of the most dreadful and indefensible crimes against a free people in all world history.

Because of his official position and by reason of our Government's apathy, Ambassador Lane was personally impotent to halt the strangulation of Poland. When he talked with Mr. Roosevelt, after the latter's election in 1944, he urged the importance of insisting to the Soviet Government that the independence of Poland be maintained.

The Roosevelt reply was: "Do you want me to go to war with Russia?" When he returned to Warsaw he did what he could, but the Soviet representatives paid slight attention to him, and his own Government not only did not back him up but, over his earnest protest and with American citizens unjustly imprisoned, loaned the Polish puppet government $90,000,000.

The whole story as told by Mr. Lane is a sickening one of shameless treachery, broken promises, and unshackled brutality. It is interesting to note that the Lane report, both as to responsibility for this murderous assault upon the integrity of a great people and on the character of the occupation, coincides with that made in Jan Ciechanowski's book, published 2 years ago.

DEFENSE UNCONVINCING

Mr. Ciechanowski for many years was the distinguished Polish Ambassador to this country. By some it was unfairly argued that as a Pole he was prejudiced. But no prejudice can be charged against Mr. Lane. He is not a Pole; he is an American diplomat with no political connections, aspirations, or purposes. Early last year he resigned his post as Ambassador to Poland and, at the age of 52, closed his long diplomatic career solely to be able to tell the American people the truth of what happened to Poland—and why.

This he has done in his book and is doing in his lectures. It is a shocking story and few Americans can reflect upon their country's part in it without a feeling of shame. The defense of Mr. Roosevelt's role, at Yalta. Tehran, and after the seizure began, is not a convincing one.

Chiefly, it amounts to statements from his former intimates that while Mr. Lane has made a "valuable contribution," they personally know of Mr. Roosevelt's "deep concern" for Polish freedom and had often discussed with him his ideas for maintaining it. This clearly inadequate reply is supplemented by a transparently futile effort to shift the blame for what happened, first to former Secretary of State Stettinius and then to former Secretary of State Byrnes.

In other words, no reply worthy of the name has been made. Nor is it likely one will be. For the historians probably the kindest thing is to accept the explanation that Mr. Roosevelt was a sick man whose judgment was impaired. Certainly the notion, which so many agree Mr. Roosevelt cherished, that he, who spoke no word of Russian, could, through two interpreters, "charm" Mr. Stalin, who spoke no word of English, seems hard to reconcile with reason.

Life in Soviet Russia

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. McDOWELL. Mr. Speaker, for 25 years the Communist Party leaders all around the world have stated time after time that the only safe place in the world for members of the Jewish religion is in Soviet Russia, as anti-Semitism was a crime under Soviet laws. In recent years the world has come to know that that is not true and that as a matter of fact anti-Semitism has become more and more flagrant under the direction of Joseph Stalin, a well known anti-Semite all of his life. Therefore, Mr. Speaker, under permission to revise and extend my remarks, I place in the RECORD an article in the New York Times of yesterday by C. L. Sulzberger, which discusses the regrettable status of the Province of Biro-Bidjan which was many years ago set aside as an all-Jewish state in Russia. It is in the far east of Siberia, so far north that life there is a burden, and it has been permitted to steadily deteriorate over the years as is so well described by Mr. Sulzberger's article.

I hope all of the Jews of the world will read this article and ponder on the honesty of the officials of Soviet Russia:

SOVIET JEWS' AREA REPORTED IN DECAY—OBSERVER SAYS ANTI-SEMITISM DRIVES SOME TO BIRO-BIDJAN, BUT DREAM OF HAVEN FADES

(By C. L. Sulzberger)

PARIS, February 14.—In view of the Soviet Union's advocacy of the partition of Palestine into Jewish and Arab states and of the quiet anti-Semitism that still obtains in many areas of the Soviet Union, it is interesting to report on the Province of Biro-Bidjan.

This autonomous Jewish district was established in the early days of the Soviet Union on the Trans-Siberian Railway in the Far East. Jews were encouraged to migrate within the Soviet borders to establish their own seat of national culture. Russian and Yiddish are the official languages of Biro-Bidjan.

An observer recently spent considerable time there. He expressed the opinion that the Soviet government had lost interest in that area as "a project of importance" and that this haven for an oppressed people was being permitted to fall into decay. At best, he said, it is treated on a parity with other remote parts of the Soviet Union and no lenger as a dream project.

Travelers are rarely permitted to inspect that distant province.

Although, because they feel uncomfortable in conditions in which the anti-Semitism engendered during the war has not died out, Jews, especially intellectuals from Russia proper, are still emigrating to Biro-Bidjan, they are likely to be disappointed by what they find, according to my informant.

He said that the oblast, or district, of Biro-Bidjan, which has a rugged climate, consisted of only a few villages in addition to the town of Biro-Bidjan, in which lived about 30,000 inhabitants, somewhat less than a third of the oblast's population.

The town, he added, is built entirely of wood except for fewer than a dozen brick buildings, and contains three cobbled streets, an intourist hotel, and a few small factories. There are a brick factory, a sawmill, a textile factory, and wagon and pipe works. The town has no sewerage system or water supply, the observer remarked.

Although families are not so crowded as in Moscow, and often have more than three rooms, they live primitively, usually in two-story wood apartment houses for 10 to 20 families, according to the informant. The buildings, he said, are constructed around a courtyard in whose center are a lavatory pit and garbage dump.

BUILDING FOUNDATIONS SINK

Most of these buildings were erected within the last 15 years, but were said to be in a state of dilapidation. The town is built on swamps, and some foundations have sunk to a depth of 10 feet, the observer said.

As a result, he went on, the brick buildings have cracked and the wood ones warped, with many floors rotted by the unusual damp of the summer rainy season. Only a few trucks and old busses were said to make up the transportation system. To obtain water the inhabitants often have to travel 2 or 3 miles in communal trucks.

Most of the population subsists mainly on locally grown potatoes and vegetables, according to the traveler. These are produced in allotments worked after hours in the factories and state projects, he said. To support their families, many of the men have had to take two jobs, he added. One engineer was said to be feeding his wife and children by working 19 hours a day.

The local factories once received good material from western Russia, but a lack of repairs has induced what the observer described a "state of interrupted breakdown." Thus, although Biro-Bidjan has a pipe factory, it has no sewers, he remarked.

Despite the original dream of forming a Jewish state in Biro-Bidjan, its Jewish population is less than one-fourth the total; according to my informant, who said that the Jews nevertheless held many of the administrative positions, including the local party secretaryship.

The secret police has its outposts in Biro-Bidjan, the observer declared. One of its main functions was said to be to prevent disillusioned pioneers from departing.

In the Soviet Union in general it was learned that allegedly as a result of the gradual exclusion of Jews from public life (with a few notable exceptions such as Jacob Suritz, recently Ambassador to Brazil, and Vice Premier Lazar M. Kaganovich) certain Jewish leaders protested recently to Foreign Minister Molotov about anti-Semitic trends.

Mr. Molotov was said to have intimated that governmental action might be taken later when circumstances were more favorable.

Mr. Kaganovich, a member of the Politburo and a friend of Premier Stalin, was said to have made similar and firmer promises. Soviet Jews seemed to have hope that their situation might become more favorable since the death more than 2 years ago of A. S. Shcherbakov, a Politburo alternate who was reputed to be the most powerful anti-Semite in the Soviet Union.

Trends toward anti-Semitism appear to have brought about more group consciousness in Soviet Jews, and the membership of organizations such as the Jewish Anti-Fascist Committee is growing.

Anti-Semitism in the Soviet Union may have some bearing on recent British contentions that Communist Jews, many of whom spoke Russian, had migrated to Palestine.

Government Spending

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Livingston Enterprise of February 6.

This editorial was sent me by Arnold F. Cayser, a civil engineer of Livingston, Mont., with the statement:

I am complying with a timely request which appeared as editorial in the Livingston Enterprise only last night.

The editorial follows:

WRITE A LETTER TO YOUR CONGRESSMAN

The congressional budget committee has proposed a reduction of $2,500,000,000 in the total of Federal spending proposed by President Truman.

That is not enough and every taxpayer should write to his Congressman and Senator and tell them so.

The Federal budget should be cut seven or eight billion, perhaps even $10,000,000,000 below President Truman's recommendation of $39,700,000,000.

President Truman and his bureaucrats have asked Congress for every cent of money which they hope to wring from a Republican Congress, and then they have added to it for good measure.

If the Government were forced to live as sparingly as its citizens are forced to under the present inflated prices it could get along with a great deal less than is asked.

Tell your Congressmen and Senators that taxes are sapping the lifeblood of the American economic system and that if there is no relief this Nation will be forced into socialism because there will be no source of capital to finance enterprise.

Tell your Congressman that Government spending is inflationary, because the Government enters the markets and bids up the prices of things that the people need.

Tell your Congressman that high taxes are inflationary because Federal tax is piled onto Federal tax in the price of every item which an individual buys.

Tell your Congressman that a reduction in individual taxes will not be inflationary but will be deflationary, because it will make unnecessary another round of wage increases, because it will reduce the cost of manufacturing and selling, and because it will take the Federal Government out of the market place to the extent of the reduction.

Tell your Congressman that Government spending is being poured directly into consumer-goods items in even greater proportion than is private spending.

Tell your Congressman that you are willing and even anxious to go without huge Federal-aid projects until they can be financed more cheaply. Tell him that you are opposed to adding any new costs to the budget, such as that for socialized medicine or for United States aid to education.

Tell your Congressman that Federal employees must pay everything they need for their subsistence in competition with you and I, while they produce nothing to fill channels of trade and commerce. Tell him that the Federal pay roll should be reduced so that these people could get jobs in private industry, where they are needed to help produce goods.

Tell him that you are in favor of tax reduction and budget reduction and that you think the proposal to slice only $2,500,000,000 from an inflated $39,700,000,000 budget is ridiculous.

Communism and Subversive Activities

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. FISHER. Mr. Speaker, under leave to extend my remarks, I include the following radio interview between myself and Hon. J. Edgar Hoover, Director, Federal Bureau of Investigation:

Mr. FISHER. The people of the Nation have been anxious about our internal security since the early days of the war when Nazi Germany, aided by fifth columns, overran the many peaceful countries of Europe. Espionage and sabotage in those countries were uncontrolled. The fifth column had already done its work. In those days we, too, worried about what might happen in America. But our worries were never realized because our Nation throughout the war years experienced no enemy-directed acts of sabotage, and espionage was under complete control. One very good reason, and, indeed, the controlling reason, for this safety and security which were ours is explained by the existence of the Federal Bureau of Investigation or the G-men, as they are more properly known.

The man who heads that organization has made a profession out of security. For nearly 24 years Mr. J. Edgar Hoover has led the FBI to victory after victory and I am happy to have Mr. Hoover as my guest on this program today.

Mr. HOOVER. It is a pleasure for me, Congressman FISHER, to be with you on this program and to have this opportunity to speak to the citizens in your great State of Texas.

Mr. FISHER. I am sure, Mr. Hoover, that you feel very strongly, that the ending of the shooting war in Europe and in the Pacific did not end the necessity for vigilance here at home. You and I both know that if we have enemies to the American way of life we must know who they are before we can adequately defend ourselves, and I have the feeling that a potential threat again comes from a totalitarian force—this time the Communists. But am I being an alarmist, Mr. Hoover, when I say that communism is a menace to our democratic institutions?

Mr. HOOVER. I would say, Congressman FISHER, that you are being very realistic in your observations. The fact that there are less than 100,000 known members of the Communist Party of the United States of America in itself is not too serious. But they are only the duly constituted members of the party. The Communists themselves make the boast that for every party member there are 10 others ready, willing, and able to do the party's work. This includes Communist sympathizers, fellow travelers, and stooges who conceal their real identity with a cloak of pseudo respectability. Whether the menace of communism can be determined by the number of Communists on the party rolls is immaterial. There are some misguided and innocent persons who claim that we have nothing to fear. Unfortunately the good people of Germany and Italy learned that lesson, but only after it was too late. The Nazi Party only had 30 members when Hitler joined it in 1920, while the Italian Fascist movement in 1919 consisted of Mussolini and 150 of his friends, and when they marched on Rome they were outnumbered ten to one. But they were organized just as the 80,000 members of the Communist Party were when they overthrew the old Russian Government and seized power. In fact, in proportion to the population there are more Communist Party members in the United States today than there were in Russia in 1919. But yet we hear people in the United States saying that any denunciation of communism is likened unto the rise of national socialism in Germany where "The attacks on the rights of a very unpopular minority led to the attack on the rights of all the people."

Mr. FISHER. I know, Mr. Hoover, how deep-seated your contempt for anything that smacks of fascism is but don't the Communists always say that anyone who denounces

the Communist way of life is a "Hitlerite," a "Fascist," or a "Reactionary."

Mr. HOOVER. That is right.

Mr. FISHER. Now Mr. Hoover, what evidence do we have that the Communists stand for the destruction of the American way of life? We have found the Communists are good at deceit and trickery—the first thing a Communist learns is to lie about being a Communist. They masquerade under a lot of false colors.

Mr. HOOVER. We need go no further than the words of the Communist leaders themselves. In recent years they have been very cautious about using such phrases as "force and violence," but in their schools and in party caucus their every plan is based upon the necessity of a world revolution to establish "the dictatorship of the proletariat." In their own words they plan "to raise these revolutionary forces to the surface and hurl them like a devastating avalanche upon the united forces of bourgeois reaction, frenzied at the presentment of their rapidly approaching doom." The phrase "united forces of bourgeois reaction," Congressman FISHER, necessarily includes every patriotic American who is convinced that our system of government and our way of life are the best the world has to offer.

Mr. FISHER. That is certainly a plain statement, Mr. Hoover, but is it not true that Communists deny any plan to overthrow our constitutional government by force and violence?

Mr. HOOVER. Certainly they do. But Communists do not mean what they say when they are speaking for public consumption. They feel no moral compunction when they state that lie. The great god of the American Communists, Comrade Lenin, urged the use of deceit and trickery. His writings, which are their "bible," declare. "The strictest loyalty to the ideas of communism must be combined with the ability to make all necessary practical compromises, to maneuver, to make agreements, zig-zag, retreats, and so on, so as to accelerate the coming to power." The Communists cannot maneuver or zig-zag around the ruling of the Attorney General when he held that the Communist Party from the time of its inception in 1919 believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States.

Mr. FISHER. The Communist Party of the United States also denies any connection with any foreign political party or government, does it not?

Mr. HOOVER. That is true. American Communists naturally do not admit in public that their interests are identical with those of Soviet Russia. In reality, however, the one fundamental principle of the party line from which there can be no deviation is the duty to support Soviet Russia in all its dealings with other countries, including particularly the United States. Need anyone be reminded that "The Yanks are not coming" was the Communist chant during the Russian alliance with Hitler? The day before the Nazis marched into Russia, American Communists were voicing protests against our every defense effort. But less than a month later the same voices demanded all-out production and started the chant for a second front.

Mr. FISHER. You are convinced then, Mr. Hoover, that the American Communists constitute a fifth column with loyalty pledged to Soviet Russia.

Mr. HOOVER. I am, Congressman FISHER.

Mr. FISHER. Suppose, however, that actual war were to break out. In the event of that ultimate test of patriotism, where do you think the Communist Party of the United States would stand?

Mr. HOOVER. I believe few Communist statements, Congressman FISHER, but I take some of them at full face value. Here is one I freely accept. A top functionary of the Communist Party when asked the very question you have just asked me, said: "A war by the United States against the Union of Soviet Socialist Republics would be an unjust war, which is why it must be fought against; but if it should come, the Communist Party of the United States would be with Russia, and make no mistake about that." This is not the feeling of just one Communist leader. It is part of the accepted catechism of all true Communists. In another section of the country a Communist leader made this statement: "I believe that everyone should know that we are for Russia and if need be we will die for the cause. I don't mean that war with Russia is coming soon; I hope not, so that Russia will be better prepared."

Mr. FISHER. Such statements leave no room for doubt, Mr. Hoover. The Communist's first and only loyalty is to a foreign nation and an ideology opposed in every sense to the American way of life.

Mr. HOOVER. Yes, Congressman FISHER, the Communist Party of the United States, the dupes and its fellow travelers, have been, still are, and always will be a menace to our liberty, our democratic ideals, and our freedom to live and to worship according to our conscience.

Mr. FISHER. Mr. Hoover, what can the individual citizen do to defeat the Communist attempt to impose a totalitarian dictatorship upon this Nation of ours? A single individual, no matter how strong his patriotism, cannot hope to stem the tide of Red fascism by his efforts alone.

Mr. HOOVER. True, Congressman FISHER. One individual or even one organization alone cannot defeat communism. But our Nation is made up of individuals and its historic tradition has made its watchword "United we stand." The Nation's strength is the sum of the strength of the individual citizens. If each does his part, the Nation has nothing to fear.

Mr. FISHER. It is evident that each citizen, then, should know communism for what it is and fight it by exposing its true nature to others.

Mr. HOOVER. Yes, Congressman FISHER, and I want to point out that the Congress of the United States has performed a signal service in publicly disclosing through its members the forces, both Communist and Fascist, which menace America.

Mr. FISHER. We all might do well, Mr. Hoover, to take a page from the book of the Communists themselves. The true Communist devotes himself to the interests of the party with an enthusiasm which amounts to fanaticism. If all our citizens support Americanism with this same kind of fervor, the battle is as good as won.

Mr. HOOVER. That is certainly true, Congressman FISHER. At the same time, we must not let our enthusiasm lead us to violate the very principles of democracy we seek to preserve. We must be certain the man we label as a Communist is truly dedicated to the Communist cause. Sincere liberals and progressives are communism's most deadly foes, yet the Communists seek the protective cloak of liberalism to do their dirty work. A favorite Communist technique is to shout loudly for better living conditions and protection of civil rights in order to enlist popular support. The sincere liberal also fights for such desirable objectives, but his motives should not be confused with those of the Communist. We must be careful, too, that law enforcement is left in the hands of duly constituted and well-trained officers. No one is justified in taking the law into his own hands. One lynching is worth a great deal to the Communist propaganda machine. Fascism is a danger no less than communism, if it is allowed to flourish. We must fight any evidence of its recurrence.

If we do these things: Expose communism wherever it exists, protect the civil rights and liberties of everyone and devote our energies enthusiastically to making our kind of democracy work—then the Communist infiltration will fail and the Constitution of the United States will triumph over the Communist manifesto.

Mr. FISHER. Mr. Hoover, in a statement before the House of Representatives' Committee on Un-American Activities, you summed up the best antidote to communism as vigorous, intelligent, old-fashioned Americanism with eternal vigilance. That prescription is one that each American citizen would do well to take to heart.

Mr. HOOVER. Thank you, Congressman FISHER, and thank you for this opportunity to express my views to your fellow Texans.

Mr. FISHER. Thank you, Mr. Hoover, on behalf of all our listeners.

Inequality in Income-Tax Law

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

THE SENATE, STATE OF NEW YORK,
Albany, February 13, 1948.

Hon. DANIEL A. REED,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I am enclosing herewith copy of Senate Concurrent Resolution 11, introduced by Mr. Anderson, adopted in the senate on January 12, 1948, and concurred in by the assembly on February 2, 1948, memorializing Congress to amend the Federal income-tax law by eliminating the inequitable tax discrimination between residents of the so-called community-property States and the so-called common-law States.

Sincerely yours,

WILLIAM S. KING,
Clerk of the Senate.

Senate Resolution 11

Whereas it is our belief that a fundamental American concept of government is the establishment and maintenance of equity and freedom from discrimination among citizens in their relation to government; and

Whereas it is further our belief that such equity and freedom from discrimination does not now exist in the matter of the imposition of Federal income taxes pursuant to article XVI of the Constitution of the United States and its implementing statutes, because of the inequality of the income tax-burdens upon the residents of a few States of the Union and those of the many other States resulting from the so-called community-property laws of said few States; and

Whereas it is our belief that such inequality is substantial and places an additional estimated tax of $170,000,000 annually upon a large segment of the residents of this State; and

Whereas it would be tremendously difficult for the so-called common-law States to uproot their rules of property in an effort to remove this discrimination; and

Whereas it is our belief that the best and most equitable means available for the removal of this tax discrimination lies within the legislative powers of the Congress and the

legislative approval powers of the Chief Executive: Now, therefore, be it

Resolved (if the assembly concur), That the legislature of the State of New York respectfully urge the Congress of the United States to speedily correct the Federal income-tax law by eliminating the inequitable tax discrimination between residents of the so-called community-property States and the so-called common-law States, of which this State is one; and be it further

Resolved (if the assembly concur), That the legislature of the State of New York respectfully urge the President of these United States to speedily approve such corrective legislation when, as and if submitted to him for executive approval; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, to each Member of Congress and to the Governor and legislative body of every common law State in the Union.

By order of the senate.

WILLIAM S. KING,
Clerk.

In assembly February 2, 1948; concurred in without amendment.

By order of assembly:

ANSLEY B. BORKOWSKI,
Clerk.

Stinnett, Tex.

EXTENSION OF REMARKS
OF
HON. EUGENE WORLEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. WORLEY. Mr. Speaker, under leave to extend my remarks, I submit herewith an interesting newspaper article about the very friendly town of Stinnett, Tex., which I am happy to say is in my own congressional district:

ALWAYS A SPARE ROOM—"FRIENDLIEST TOWN" EVEN LENDS YOU CAR

(By William C. Barnard)

STINNETT, TEX., February 7.—A freezing mist stung the stranger's face when he got off the bus in this northern Panhandle town. He saw nothing that looked like a hotel—just a row of weatherbeaten business houses bordering the highway from Borger and Amarillo.

Constable Ben Foster, a small, lean, middle-aged man, walked up and stuck out a hand.

"What can I do for you, friend?"

"I have to spend the night and I'm looking for a room."

"I'll get you fixed up," Foster said, smiling, "If Ed hasn't got something maybe Curley will have, and if Curley's full up I'll put you up in the jury dormitory at the courthouse. We're not trying anybody right now."

Then he added reassuringly: "Don't worry about a room—Stinnett never turns anybody away."

Ed was clear out of rooms and so was Frantz (Curley) Ferguson. But Ferguson, owner of a hardware store and pool parlor, had an idea:

"My youngest can spend the night with his grandma. My wife and I will move into his room and this man can have the big bedroom with the desk."

The visitor protested, but Ferguson refused to listen.

"It's all settled," Curley said. "Now, here's my car keys—you probably have some running around to do while you're here and I don't want you getting wet and muddy."

CANOPY OF SMOKE

It was a typical incident here, and big city citizens who walk around the unconscious man on the sidewalk and never nod to the guy in the next apartment would be amazed.

Stinnett, with a population of 635, is the seat of Hutchinson County, which sits atop the world's greatest gas field. Thirteen miles south is Borger, carbon black center. Over most of the county the smoke hazes the atmosphere, softens the sunrise, colors the sunset, and sometimes gives the appearance of an impending blue norther.

Most men of Stinnett work in carbon black plants and in the gas field. The gas wells march right into town.

Outside Stinnett are fine ranches and wheat farms, and the ranchers and farmers are part of Stinnett's community life that centers in the two-story brick school. Everyone knows everybody. There are no doctors or dentists in town and Druggist Burt Downer does quite a business patching up scratches and swabbing throats.

It was at Stinnett that Frankie Groves, 103-pound, 16-year-old junior, last fall became the first girl ever to play in an interscholastic league football game.

Businessmen decided to present Frankie with some new clothes. Curley Ferguson went out for 30 minutes and got about $100. After that he just went back to his store and people began dropping in to contribute. Nobody gave less than $5.

"We sort of make it a point to help out," Ferguson says. "A while back a fellow here went over to Borger and a doctor told him he needed an operation and would be laid up in a hospital for 3 weeks. That was at noon, but the word got around. By 5 o'clock we had enough money to pay the doctor, the hospital, and to keep the man's wife and three children until he could get back to work."

EVERYBODY'S GAME

"This town goes in for athletics," says School Superintendent M. W. Graves. "Every eligible girl and boy plays basketball and every eligible boy, except three, went out for football. The three have after-school jobs. Boys and girls stay in training. I have never seen a high-school girl here smoke a cigarette."

Miss June Gibbs' home economics class took in $1,200 last year selling food at entertainments and hot dogs and coffee at football games. That's no easy trick, since there are no bleachers here and the crowd continually moves around.

When a fullback lights out on a 60-yard run, the fans run along the sidelines with him. Ed Fagg, 90, turned out for one game last fall and trotted up and down the sidelines, too, saying, "I'm going to see this game if it kills me."

Coach Truman Johnson, 220-pound Irish-Cherokee Indian from Oklahoma, teaches history and civics and drives one of the three school buses, making two 15-mile runs a day. The former Centenary football star and Chicago Cardinal professional sets out before sunrise and gets home after dark.

In his store, Ferguson runs things from an easy chair at the rear of the shop. A man came in, picked out a frying pan, rang up the sale on the cash register, got his change, waved to Curley and departed.

Curley's visitor was impressed by this easy self-service.

"Is it a good idea to let people get in your cash register?" he asked.

"Why not?" Curley shrugged. "If they get short-changed they have nobody to blame but themselves."

Union-Shop Elections—Building-Construction Industry

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. LESINSKI. Mr. Speaker, Robert N. Denham, general counsel of the National Labor Relations Board, has just announced a program of union-shop elections in the building-construction industry. It is estimated that the program will involve a minimum of 14,000 separate elections and that 2,500,000 building-trade workers will vote. The election in this industry alone will probably cost the American taxpayer in excess of $1,000,000.

I have been engaged in the building-construction and material businesses since early manhood, and I am, therefore, familiar with all phases of the operations and problems of the building-construction industry, and I am of the opinion that this poll is unnecessary and will impose an unwieldy administration burden on the National Labor Relations Board.

Under leave to revise and extend my remarks, I will include a report by the Public Affairs Institute which appeared in the weekly issue of the Trainman News of February 7, 1948, which is the official weekly publication of the Brotherhood of Railroad Trainmen.

This very enlightening and able report of the Public Affairs Institue confirms many of the criticisms which were directed against the union-shop election proceedings provided in the Taft-Hartley Act.

The report is as follows:

UNION SHOP ELECTIONS UNDER T-H—UNWIELDY, UNBINDING, UNNECESSARY

(A report by the Public Affairs Institute)

A recent report released by the National Labor Relations Board reveals that 2,064 cases were filed with that agency for the month of December alone. This is the largest number of cases ever filed with the Board in any one month in the entire 12 years of its existence. Over half of these cases consisted of petitions for elections authorizing a union shop.

When this particular provision of the Taft-Hartley Act was debated, its supporters proclaimed that the rank and file workers must be protected from compulsory union membership. Therefore, union security could not be valid without a poll among all the employees of a given bargaining unit.

Critics of this provision, on the other hand, vainly pointed out that not only was such a poll unnecessary but that it would impose an unwieldly administrative burden upon the NLRB. The accuracy of this prediction is borne out by the fact that the Labor Board is now confronted with a steadily increasing back-log of cases. The latest available figures which deal with the month of December indicate an all-time high of 5,833 cases buried under "unfinished business."

Recently the board conducted a union security election among the employees of the American Woolen Co. This one election in-

volved the polling of over 20,000 employees in 21 mills located in 14 different cities. Yet this task was comparatively simple in the light of the demands to be made upon the board in the near future. For example, the United Automobile Workers of the CIO has announced that it will seek an election not for 20,000 but for 250,000 employees.

ELECTION COST STAGGERING

What of the cost of conducting these mammoth elections? It is estimated that it costs the Government about 45 cents for each vote in a union shop election. Therefore, such an election among the 250,000 General Motors employees represented by the UAW would cost well over $100,000. Obviously, the over-all cost of these elections would be staggering.

Is it not strange that Congress can be so lavish in its use of Government funds for the restriction of organized labor, and so niggardly with its expenditures where public welfare could be improved? Millions of dollars for union shop elections, and not enough funds to conduct an effective Department of Labor.

An even more important factor is the effect of such unwieldly procedure on labor-management relations generally. The very nature of the field in which the labor board operates requires that matters before it be handled promptly. For instance, a union seeking to be certified as a bargaining representative cannot wait weeks and perhaps months for the board to consider its case without creating unrest among the employees and disturbing relations with the employers

A backlog of board cases means a backlog of injustices and dissension in the factories, shops, and offices throughout the country.

IS SUCH EXPENDITURE NECESSARY?

Is this expenditure of time, money, and good will necessary? The answer again is to be found in the figures for the months of December and November. Of the approximately 73,000 votes cast during that month, 93 percent were in favor of the authorization of union-shop provisions. Elections held during November showed 90 percent of the employees were in favor of the union shop.

Despite this overwhelming sentiment in favor of union security, the Taft-Hartley Act does not require an employer to enter into such an agreement even after an election has been held. For example, if as much as 100 percent, of the 250,000 GM employees were to vote in favor of a union-shop provision, the General Motors Corp., would not be required by law to agree to such a provision. It is illegal for a union to insist on a union shop without an election, but it is perfectly legal for an employer to ignore the preference of his employees as determined by a labor board election.

If the sponsors of the Taft-Hartley Act had really been interested in giving effect to the views of employees, they would have included in the act a provision compelling the employer to agree to a union-shop provision where a majority of the employees vote in its favor.

Why Materials Controls Are Unnecessary, Unworkable, and Obstructive

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by John H. Middlekamp for the Automobile Manufacturers Association to the Senate Banking and Currency Committee on January 30, 1948:

INTRODUCTION

My name is John H. Middlekamp. I am a vice president of the Mack International Motor Truck Corp., a producer of trucks and busses. Today, at the request and with the assistance of the fact-finding committee on Government controls of the Automobile Manufacturers Association, I am appearing to give you the views of the automobile industry on the materials controls embodied in legislation before your committee.

This is a subject on which I can speak with some knowledge, as during the war I helped administer the production controls imposed on the automobile industry. Shortly after Pearl Harbor I was called to Washington to expedite truck production for the Office of Production Management. I had been with the Brooklyn-Manhattan Transit Co. for 17 years, my prewar job being superintendent of its automotive equipment. Later, I was commissioned by the Army to head up a department to control truck production, and on January 1, 1944, at the request of WPB and the Army, I accepted the directorship of the Automotive Division of the War Production Board.

PURPOSE OF THIS STATEMENT

The automobile industry is thoroughly convinced, after exhaustive reviews of its experience both in peace and war, that:

1. No need has yet been shown for imposing materials controls upon the domestic economy at this time or at any foreseeable time of peace;

2. Partial controls—that is, regimenting some segments of the economy and leaving others free—are impossible for the Government to administer or for industry to operate under; and

3. Complete controls won't work in a free country. Even if workable, complete regimentation of the business and industry and agriculture of America would fail to create and in fact would prevent the stabilization of the economy which is the professed goal of the bills before the committee. More importantly, it would inevitably weaken and quite possibly destroy the capacity of the last free country in the world to maintain its own economy and help the rest of the nations of the world throw off the shackles of regimentation and the consequent economic paralysis which has caused them to look to us for assistance.

You will have noted that we are talking mainly about materials controls. In our industry, both wages and prices are competitive matters which are not discussed collectively. They are handled by individual companies on the basis of their individual problems and policies. In some instances, the specific as well as the broad economic arguments we will use to oppose the control of materials are applicable also to wage and price controls, but I want to stress that our presentation is based upon our knowledege and experience in the materials field.

From our experience with OPA controls of prices of materials during the reconversion period we know that items carrying unrealistically low prices disappeared from the market before the agency could—or would—correct the maladjustment. This compounded the problems of manufacturers, who were forced either to develop and use more expensive substitute but available materials or to reduce production. Thus price controls on basic materials instead of stabilizing prices actually increased costs and inflated prices.

AUTOMOTIVE INDUSTRY AND NATIONAL ECONOMY

The automobile industry, as you probably know, is not self-contained. We neither produce nor fabricate all the materials that go into our passenger cars, trucks, busses, and taxicabs. Instead we buy materials and parts from thousands of sources—thousands of small businesses.

To produce our vehicles, we use components which we make ourselves from basic materials bought from the steel, copper, lead, zinc, textile, lumber, plastics, and other materials companies. We also use complete or semifinished components or subassemblies bought from parts producers, most of which are "smaller businesses" by any definition.

The nonintegrated system of production stood us and the Nation in good stead during the war. Then the emphasis was on subcontracting, and this industry with the aid of its thousands of subcontractors (or vendors as we call them in peacetime) was able to produce—in trucks and tanks and guns and planes and hundreds of other lethal items—about 30 percent of the country's metal-based war production. For about half of our industry's important contribution to victory, smaller businesses can take credit. Subcontractors located in 1,375 cities and towns in 44 States accounted for 56 cents of every dollar's worth of automotive war production, and that pattern probably is not much different now.

You perhaps may know that the automobile industry is responsible for approximately one out of every seven paid jobs in America, with about 8,200,000 persons earning their living in the manufacture, distribution or use of its vehicles. Besides employing about 800,000 people in its own plants, it generates employment for nearly 7,500,000 people in 537,000 outside concerns, nearly all of which are classified as small business. Automotive sales and service accounts for one-fifth of all retail business, one-eighth of all wholesale business.

Normally the automobile industry is likewise responsible for a large proportion of the employment in other industries, using 15 percent of all steel, 80 percent of all rubber, 69 percent of all plate glass, 65 percent of all upholstery leather, 35 percent of all lead, 10 percent of all cotton, 9 percent of all tin, and a substantial share of nearly every other commodity sold in the United States.

These facts are cited to show the role of our industry in the over-all economy of our country and the role of small business in the automobile business. Any shortages of materials resulting from attempts to allocate them would diminish automobile production and employment, not only in the great industrial cities but in hundreds of smaller cities and towns in nearly every one of our Nation's 48 States. Thus, it would directly and adversely affect a considerable portion of the industry's total production and employment.

WHY MATERIALS CONTROL WON'T WORK

We are disturbed because in all of the official testimony offered to support measures to allocate or ration or control materials there has been no apparent realization of the fact that allocation of materials by Government, either through compulsion or through so-called voluntary agreements, means allocation of end products—the finished goods that customers buy. By allocation the Government tells each company or industry how big or small it can be.

Frankly, our industry does not believe that there exists or could be created in Washington in peacetime any group of men endowed with sufficient wisdom, judgment, objectivity, and knowledge of the future needs of the Nation to fairly and honestly allocate steel or other materials between competing products. That is, they'd decide that in 1948 there should be built so many passenger cars, so many trucks, so many airplanes, so many freight cars, so many buildings, so many bobby pins, so many of this, and so few of something else. This is exactly what the allocation of materials means, for you can't

provide more of a scarce material to one segment of the economy without taking it from another segment.

Even if it could be assumed that such a determination could be made with reasonable fairness and foresight, I don't believe that anyone would be able to imagine that the same official body or any other could fairly and efficiently allot materials to individual competing producers within a single industry. What standards would they use? If they used a historical base, taking a given year or period of years as the bench mark, they'd freeze the status quo. The smaller company could not grow, the new company could not even get started.

To circumvent this, any bureau in charge of materials controls would then attempt to use some basis other than historical for allotting materials to competitors. This inescapably would lead to discrimination and the use of personal-advantage considerations rather than broad economic factors as standards.

SCARCITY BREEDS INFLATION

More possessions of more people were destroyed in World War II than ever before. More farm tools, fertile fields, and factories were destroyed—and our own production facilities were worn nearer the end of their useful life than in any previous conflict.

Our first postwar problem was to rebuild worn facilities to produce the tools and basic materials from which we could build the commodities needed to fulfill the war-deferred demand.

This has been done. The pump is primed—the repaired and expanded facilities are producing at a steadily increasing rate and the market for some items is beginning to be satisfied. The job that American industry has done in converting its facilities to war production and reconverting them back to peace production probably will never be either understood or appreciated by people outside industrial areas, but you may take our word for it: In scope and speed it has no counterpart in industrial accomplishment any place in world history.

Unfortunately the acceleration of the production of commodities was seriously slowed down by prolonged strikes which delayed the current high rate of commodity production. One result was the loss of 18,000,000 tons of steel since VJ-day. Because of such production losses, too many commodities have been in short supply too long, inviting inflation and profiteering abuses.

Just as restricted production clearly adds to inflation, so increased production leads to stability. Greater production of scarce items is the only sure cure for inflation.

PARTIAL CONTROL IMPOSSIBLE

During World War II partial materials controls, by means of priority systems, failed despite the wholehearted efforts of Government and industry. These failures occurred under conditions ideally suited to partial control, if such control could ever be made to work, because there was practically only one customer—namely our Government. Also the variety of items bought by the Government during the war was small compared to the tremendous variety currently sold to millions of customers.

Partial control usually implies attempts to ration scarce items through a priority system, allowing the best priority for the commodities considered most essential. Lesser ratings are assigned to commodities considered of lesser importance. Essentially a priority is a license to buy if you can find a supplier with enough of the scarce item to reach down to your particular priority rating.

Partial control by priority failed during the war and certainly would fail in times of peace. Manufacturers with ratings less than the best cannot plan ahead because they can have no assurance that they can obtain all the materials they need to build their product when they have relatively low priorities for part of the materials required. The several partial-control systems attempted during the war seriously curtailed production and would drastically impede output now and thus increase costs and raise prices.

About the middle of 1941 the priority system was in the process of breaking down with the Priorities Division of the Office of Production Management unsuccessfully attempting to handle about 7,000 pieces of mail a day—a modest amount of mail compared with what was to follow. The production requirements plan, the next system of partial control, also failed. Please remember this because it is significant: These two systems covered only a relatively few specialized war commodities. The number of war products amounted to mere thousands of items while American industry now is producing hundreds of thousands of articles.

COMPLETE CONTROL ELIMINATES INDIVIDUAL INITIATIVE

Complete controls of materials would be impractical, and ultimately disastrous, even if it is more possible to make them effective temporarily than such partial controls as priorities.

The Government's effort during World War II to completely control material distribution was called the controlled materials plan. CMP applied to all manufacturers but affected, for all practical purposes, only one customer—the Government—and a limited variety of war commodities. CMP was at best only partially successful despite the utmost cooperation between Government and industry to make it work. But it would have failed completely even under those conditions if the variety of products had been as numerous as in peacetime and the demand as variable and unpredictable.

The amount of paper work, as exemplified in one form which I will show you shortly, and the number of people required to make such a plan work in peacetime would by their sheer weight bog down any such plan. WPB required 18,000 people to control the materials for a relative handful of kinds of products, while the armed forces and industry had to take hundreds of thousands of people out of productive work to operate the bare paper work of such controls.

The war proved that a materials allocation plan cannot be even partially successful if the end products receiving allocations are not first broken down into components and the results compiled on the basis of the quantity of material required to produce each of the components of the finished product.

The allocation of the scarce material in the bill of material of the end-product establishes the number of end products which can be built. This is the result of any complete allocation of any scarce material.

Our industrial production is highly intricate, and the result of many years of intensive training of great numbers of men, each constantly making immediate important decisions in his own field and on his own initiative. Literally millions of conversations, letters, and telegrams between these production men in industry accurately time material deliveries throughout vast industrial organizations. Slight disturbances in any one plant can cause production losses in many distant plants.

The production and materials procurement relationship in our tremendous and intricate American industrial machine has been amazingly, efficiently, delicately balanced to maintain steady production with minimum inventories, despite the natural mechanical difficulties and other handicaps of converting from war to peace. Disturb it through central material control and you seriously slow it down, by reducing or eliminating the opportunity for individual initiative to find the answers to the countless production problems which the experience and imagination of the men of industry have qualified them to solve.

At this point we would like to offer for the record a brief summary of the continuous failure and confusion which accompanied progressively intensified attempts to control materials during the war. This summary is taken from the official history of the WPB and its predecessors and it is keyed to the page numbers of that publication.

MATERIALS CONTROL DANGER ILLUSTRATED

Here is a picture of a truck and the bill of material of the 14,426 parts of which the truck is made. Also, here is the wartime CMP form converting this truck to quantities of the basic materials required to produce the parts from which it is made. This is one of three basic trucks my own company made during the war—now we have 42 different models of trucks and busses.

This paper work which we had to do for each of the three trucks we built during the war had to be done, in relatively about the same volume and with the same loss of productive effort, by each of the nearly 300 vendors who made materials or parts for us. Now, in peacetime, because of the greater variety of models, my company buys from 4,200 vendors, which is fairly typical of the industry.

If any one part of this truck were not available in our factory on schedule, due to the failure of the Government to issue on time the proper priority for it after poring over the paper work required of us and all other producers of items using controlled materials, all the other material on hand and the man-hours ready to assemble the vehicle would be immobilized. Production would slow down or stop and costs would rise. This part I show you, a rocker arm, is typical. It demonstrates perfectly the logic of that old truism about the battle being lost for the want of a horseshoe nail. For the want of this setscrew the rocker arm assembly could not be built. For the want of the rocker arm, the engine could not be completed. For the want of an engine, the truck could not be built—all for the lack of this little piece, which maybe costs us 25 cents.

Yet, this is just one of the parts needed for just 1 of the 42 models of one manufacturer. In our own industry there are more than 50 producers of various types of motor vehicles. There are 94 other American industries which like the automobile industry produce various products in volume more or less by assembly-line methods. In these other industries and our own industry, there are 11,000 plants. The number of separate products, taking model differences into consideration, runs into the hundreds of thousands and the number of different kinds of parts required for their production runs into many millions.

The point is that the whole productive process in any of these plants can be halted by the lack of a single part, even such a simple part as the rocker-arm setscrew.

Yet, complete allocation would require definite action somewhere concerning each of these separate numberless bits and pieces. This would require a bureaucracy many times larger than the WPB. It would raise industry's production costs astronomically because of the magnitude of the number of men who would have to be taken from productive labor to handle the paper work. All this, mind you, is not intended to increase production—which is not the purpose or result of allocations—but is merely to distribute a shortage.

Any such attempt at material control, as our wartime experience proved, does require the detailed analysis and expensive paper work typified by the CMP form to be applied to each different product using a temporarily scarce material. And, usually, before there is time to develop a production program for each commodity, the supply of the

scarce item has been sufficiently increased or industry has used its ingenuity to develop a substitute material which nullifies the original need for control.

WHY NOT POSITIVE INSTEAD OF NEGATIVE APPROACH?

Materials controls and their consequent expensive burden of paper work—and frustration—do not produce more. On the contrary, they do produce less and they do increase costs.

Developing incentive for our citizens to build and grow more of everything needed is the positive American way of beating shortages and consequent high costs and high prices. We are acutely and constantly aware of the perils of pricing people out of the market.

But wasting the time and energy of our citizens in an attempt to paper control a distribution of scarce items is certainly a negative and therefore un-American approach to the problem, which instead of curing the shortage only prolongs it and twists the inflation spiral a turn or two higher.

Our proposal is this: Given our free, competitive economy a fair chance to complete the already well-advanced job of bringing supply and demand into balance, by the fundamental processes of the market place. There is every evidence that we now are nearer to bringing scarce materials into supply-demand balance than at any time since before Pearl Harbor. Certainly, the production record of American industry in 1947, including that of our own industry, effectively challenges the factually unsupported claim that control is necessary in order to get higher production so as to stabilize our own economy and help the rest of the world.

Of all the myriad consumer goods made from steel, for instance, there are few which are still hard to get except automobiles. Immediate or near future delivery is available for some models of radios, electric stoves, refrigerators, washing machines, vacuum cleaners, and many other products. Even in the automotive industry, busses and heavy-duty trucks are becoming increasingly available. As the demand for more and more products levels off, more steel is becoming available for products in short supply. Sooner or later, and probably rather sooner than later, steel shipments to all industries will be on a normal delivery basis. That is, if we don't interfere with the function of the free market.

After all, it was not a regimented, or controlled, or Government spoon-fed economy that has permitted the people of the United States, with less than 6 percent of the world's land surface and 7 percent of the world's population to have and enjoy 80 percent of the world's automobiles, 60 percent of the life-insurance policies, 54 percent of the telephones, 48 percent of the radio sets, 46 percent of the electric-power capacity, 35 percent of the railway mileage, 30 percent of the improved highways, and 92 percent of the modern bathtubs.

These material signs of well-being, together with the social and economic blessings they have brought us, are all the fruits of our particularly individualistic competitive economy, possible only under our form of government. Thus it just doesn't make sense to us to regiment our free economy in order to free the economy of the rest of the world.

Let us permit our citizens to freely muster all their ingenuity to overcome the production bottlenecks rather than curtail overall production down to the level of a scarce item.

On March 4, 1944, in the annual report of the Special Committee to Investigate the National Defense Program, then known as the Truman committee, the following statement was made on page 18:

"Any attempt to create for peacetime production a regimentation more complicated and more difficult than that which we have had during the war would be most unfortunate and contrary to the principles of democracy."

As an industry, we concur.

And as an industry, we ask you to consider carefully, as we know you will, the implications of fastening the burden of materials controls upon our peacetime production, which with its multiplicity of manufactured products, and customers, would require a system of industrial regimentation infinitely more complicated, more burdensome and more costly than anything we had during the war.

Lincoln Day Address

EXTENSION OF REMARKS
OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Lincoln Day address delivered by me at Bangor, Maine, Friday, February 13, 1948:

Mr. Chairman and fellow Republicans, the warmth of your welcome belies the chilly reputation of Maine winter weather. The kind words of the gentleman who introduced me give rise to a feeling similar to that of the man who was given a flowery introduction and upon arising to address his audience said, "After that fine introduction I can hardly wait to hear what I have to say." In speaking of the warmth of your welcome, I cannot but recall the chill reception I received one Memorial Day in my own congressional district when called upon to address a crowd at a national cemetery. Soldiers were there with a firing squad to salute the colors. The chairman who introduced me said, "We will now have an address by Congressman MARION T. BENNETT. At the conclusion of his remarks the firing squad will shoot a volley over the dead."

I spoke last night at Portland, Maine, and am greatly enjoying my first visit to your State. I know pretty well what a fine place it was before I got here because for 6 years I have had to listen to FRANK FELLOWS and the other Members of your congressional delegation sing its praises. I must admit they had aroused my curiosity. Many people of America have been curious about both Maine and Vermont since that historic day you demonstrated that when it comes to voting you have better discrimination than all of the rest of the country put together. That judgment is also evident in the character of your representation in the National Legislature in Washington, in both House and Senate. Without meaning to discriminate among your Members, I must confess that FRANK FELLOWS is a particular buddy of mine and that it is pleasing to me that I have this opportunity, in his district, to assure you that all of his colleagues in Congress share my high estimate of his character and ability.

On these occasions, at this time of year, we pay homage to the memory of Abraham Lincoln, first President our party furnished to the Nation. I would assume that Maine, and especially Bangor, would have considerable personal interest in this custom because Bangor was the home of Hannibal Hamlin, father of the Republican Party in Maine and Vice President in the first administration of Abraham Lincoln.

History records the incident when once Bangor staged a giant parade in Hamlin's honor and offered him a carriage. He turned it down, saying: "I'll walk with the boys." As a member of the Maine Legislature, later a Congressman, Senator, Governor, Vice President, and Ambassador, this humility characterized him as it did Lincoln himself. It is a quality which must have appealed to Lincoln as it did to the voters of Maine. America was fortunate in Lincoln and Hamlin. It would be nice to have a Lincoln and Hamlin in Washington today, one at 1600 Pennsylvania Avenue and the other presiding over the Senate. But, Missouri reserves the distinction of furnishing the present tenant of the White House, whose lease expires in 1949.

It may interest you to know that my own congressional district is the one where High Tax Harry Truman was born, at Lamar, Mo. There he spent his youth and made his later acceptance address as nominee of the New Deal party for Vice President. Of course, he has never been able to carry the county or the district where he was born, for any office. We know Harry too well. In Missouri we know that he was never elected to any office by an honest vote, that he is a dues-paying member of the corrupt Pendergast machine, its defender on the Senate floor and in the White House, and he will not carry Missouri in November 1948. Republicans are on the march in Missouri. They have 9 of the 13 seats in the United States House of Representatives and both Senators today, for the first time since the Civil War.

It is just a little difficult to tell what the Democratic Party stands for today. If you vote for its candidates you can't be sure whether they represent the ultra-conservatism of the deep South or radicalism of the far left wing.

You can't know whether you are voting for the attitude toward labor that vetoes the Taft-Hartley bill or that which threatened to draft railroad workers into the Army at bayonet point.

In foreign affairs would it be expressing sympathy for Communist Russia or for a reactionary monarchy somewhere?

Would it be in support of controls and rationing or for a party which refers to such as the methods of a police state?

Would you be voting for anti-poll-tax and lynching laws or for a party that calls such practices viciously un-American and threatens to secede again from the party if not from the Union?

A party that looks for Communists under every bed or hides them under every bed?

A party which calls speculators in the grain market gamblers in human misery or one whose officials busy themselves in such activities?

A party that advocates "four freedoms" for all the world or participates in secret conferences where they are sold down the river?

A party which is for more production or which favors plowing it under and killing little pigs and throwing them in the river?

These are but a few of the puzzling questions which indicate the only sane and sensible answer for Americans in 1948, is to support the Republican Party which has a program and knows where it is headed. I gain, as a Republican, much satisfaction from the fact that when Tom Clark, the Attorney General, recently came forth with a list of Communist-front subversive organizations, and 23 names of Members of Congress appeared on their membership lists, no Republicans could be found among them.

In fact, it was not until a Republican Congress took office one short year ago last month, that any genuine effort was made to find this vermin which for 14 years had been permitted to worm its slimy way into the foundations of this Republic. We are trying to get the Reds out of the Government and the Government out of the red. That is the most important job facing America today. It is the key to our future prosperity and security. It will open the door to peace,

defeat of high prices, preservation of industrial peace, the building of homes, improving the Nation's health and education, broadening the protection of social security, protecting civil rights, reclaiming land for farming, increasing industrial production, lowering taxes and the high price of government, and protecting ourselves against infiltration of dangerous ideologies.

I cannot emphasize too strongly, in this connection, the need for us to become the party of youth. We need to do more than ask youth to join our columns. We need to demonstrate that we not only understand the problems of our youth but are anxious and willing that energetic youth help lead the direction of our party.

The youth of America is disillusioned by the moral and political corruption in high places in Washington under the present administration. It is easy to understand why this is so.

For years Kansas City, Mo., has been a cesspool of political corruption where public officials worked hand in glove with the rackets of vice, gambling, vote theft, and murder. Books have been written about it. Have you read Tom's Town? or Tom's Boy Harry? You would find it hard to believe that these books are not fiction except that they are documented. It was hard for Americans to believe that when Boss Tom Pendergast was on his way to prison, his errand boy in the United States Senate said, "I will not desert a sinking ship." It was unbelievable when, as Vice President, he took an Army airplane and flew to Kansas City to attend this man's funeral. It was shocking when last year he sent his check for dues to Jimmy Pendergast, the new boss, and Uncle Tom's nephew and political heir, in order that he might remain in good standing in the notorious Pendergast Jackson County Democratic Club.

When an honest district attorney at Kansas City prosecuted and won penitentiary sentences for 259 members of the machine, Harry Truman pardoned many of them when he became President. He fired the district attorney, Maurice Milligan, and appointed a man named Sam Wear, a gentleman I defeated for Congress the first term I was elected 6 years ago. Wear could find nobody to prosecute following the theft of a congressional election from Roger Slaughter but the Kansas City Star uncovered thousands of ghost votes. He is still in office but a special prosecutor has been assigned to do the job. He isn't getting anywhere because the courthouse vault holding the evidence, the fraudulent ballots, was blasted open one night and the evidence was stolen. Truman flew from Kansas City to Washington the next day. Eighty-one indictments against 71 individuals are thus left hanging in the air. When Congress demanded an investigation of the affair the Democrats filibustered for days, the clock around, to prevent it from coming to a vote—a confession of guilt.

Yet, there are some who say that Harry Truman never did profit from the crookedness of the Pendergast machine. But, somehow he was elected presiding judge of the county court which built a new courthouse in Kansas City with Pendergast ready-mix cement, and paved every road and cowpath in Jackson County, Mo., and eventually State highways with the same materials. Somehow he got elected to the United States Senate twice by fewer votes than were later marked off registration lists as ghosts. Somehow he has made good. Harry, himself, says, and I quote, "I have got ahead because I am a regular Democrat. That is how I became judge, Senator, and Vice President." His present position he owes both to this formula and intervention of divine providence which must have been hard pressed to choose between Truman and Henry Wallace. This is the same man who today rattles the saber at Russia but who vetoes a labor bill which requires labor unions to certify that no Communist is a union official, with power over the life stream of American commerce. It is under this administration, my friends, that we have reached the sad state where it is unfashionable and vetoable if one is called upon to raise his hand to his heart and say, "I pledge allegiance to the flag of the United States and to the Republic for which it stands * * *."

I emphatically reject any belief that the present administration is either willing or competent to save this country from the dangers of inflation, bankruptcy, and totalitarianism. I charge it with aiding and abetting these forces through ignorance, cowardice, crookedness, and lust for political office. I contend that it is necessary to elect a Republican President who will cooperate with the Republican Congress which has tried but has been considerably thwarted in its efforts to save America.

Let me say, that as one who is not an isolationist, one who has voted for foreign aid, I am alarmed at the incompetent manner in which it has been administered by the executive department of our Federal Government. When I was in Athens last summer I saw it on the black market. I saw it on the black market in Italy, France and 16 other countries. I thought of the evils which had arisen under the same men in Missouri affairs. I wondered whether they could ever be corrected now that their jurisdiction has been extended to the national and international field? I am convinced that they cannot be so corrected. I am further convinced that, as Republicans, we must insist that first things be put first.

We must first purge our Government of all Communists, New Dealers, Pendergast politicians and fellow travelers.

We must stop the nonsense which granted aid to Greece and Turkey to fight communism and within a week of extending aid to Poland, Hungary, and Czechoslovakia, and other Soviet satellites. We cannot and should not waste our strength helping both sides when it is our own security which is at stake.

We must repudiate the President who promulgates the Truman doctrine to fight communism by aiding free peoples to resist it, and at the same time says he sees no reason to stop exports of war materials to the Soviet Union, as he has the power to do.

President Harry Truman granted export licenses to Russia for $113,700,000 worth of automobiles, farm machinery, machine tools, freight cars, locomotives, and steel in 1947, along with over 8,000,000 barrels of oil and aviation gasoline since the war. Apparently, the administration has learned nothing from New Deal appeasement of Japanese totalitarianism with scrap iron and oil prior to World War II. Apparently, it is not concerned with this inconsistency with the Truman doctrine. Apparently, its muddled thinking and confusion of purpose thinks it is all right for the taxpayers of this country to shell out in straight Government gifts from this country to Russia since VJ-day, $177,347,762.04, with $16,080,000 of it handed out last year to add to $11,058,833,000 we gave Russia outright to help her win the war. All of this aid direct to Russia does not take into account the hundreds of millions of dollars we have given both during and since the war, especially since, to her 11 satellite countries.

We must stop subsidizing socialistic and communistic experiments and governments abroad. We must stop subsidizing foreign politicians and black markets. We must stop paying blackmail to those who threaten to turn Red if we don't feed them greenbacks. While we are for relief for starving and freezing people abroad we must get an administration which will be for some relief for the American taxpayer, for the old-age pensioners in the United States of America, for our own needy school teachers and other citizens who are being forced to the wall by inflation. Foreign aid distributed in an inefficient manner so that it helps neither recipient nor giver, hits you twice—in high prices and high taxes.

It is intensely interesting that the President and his paid propagandists advance the theory that Republicans are responsible for high prices because they do not restore rationing and price controls when we have given him the other powers to fight inflation that he asked for. Our experience conclusively demonstrated in 1945 and 1946 that such controls retard rather than promote production, which is the cure for inflation. Price controls and rationing deal with the effects and not the causes of inflation.

A simple rule of either medicine or economics is that in order to prevent a thing you must control its cause. In medicine you cannot prevent an illness by misreading the thermometer that is recording the patient's temperature, nor by fixing it so that it cannot rise, nor by throwing it in the river.

Likewise, in economics, you cannot prevent inflation that has already taken place by falsifying the evidence recorded in the market places where people do business, nor by attempting to fix prices, nor by closing markets and tampering with the free exchange of goods and services. Prices are the thermometer of the inflation patient, not the cause of the disease. To fool with the thermometer, and acclaim that it protects the health of the patient, is the lowest form of economic quackery and the foulest brand of political snake oil. Even if the quack loudly proclaims his love of the patient and concern about his welfare, it does not make his shenanigans any less futile. Curbing inflation requires the treatment of causes, not condemnation of effects. High prices are not the criminal. They are only his tracks and inflation is his name.

The New Deal wrecking crew in Washington has done all it can do to hamstring private enterprise in such a way as to build up a clamor for wartime controls in peacetime and to stimulate a boom-and-bust economy. It has thwarted Congress in its effort to cure the causes of inflation, which are many. About some of these causes, such as the drought and increased consumption, due to a larger population and national income, Government can do little, if anything. But it is pertinent at this point to remember that it was Harry Truman who vetoed in 1946 the OPA extension bill which called for an orderly end to wartime controls. He, and not Congress, abruptly decontrolled commodities following public repudiation of price control and rationing, with its shortages and black markets, in November 1946. It was Harry Truman who, on October 16, 1947, denounced rationing and price controls in a White House press conference as "methods of a police state." But this is an election year, and he is looking for an issue. He thinks your memories are short. He hopes you have forgotten that in June 1946, 79 percent of the communities in America were short of bread. In the same month 58,000 butcher shops closed because they had no meat to sell. In September a majority of city people ate fish and poultry because there was no other meat, and horse meat was replacing beef, even in hospitals. He has reversed himself again. He is back in bed with the CIO-PAC and those other left-wing forces which demand economic controls over the businesses, the farms, the housewives of America, as the price of election support. He cannot escape the responsibility for 15 years of power for his party by passing the buck to Republicans, who have had control only of the national legislature for a year's time. We did not get in this fix overnight.

Prices are breaking and within a month, at most, we should know if this is the "leveling off" or "recession" economists have been predicting as a result of consumer resistance to the high cost of living. When prices started to fall, the Secretary of Agriculture

indicated it was time for Government to start buying heavier to keep them up. Which causes us to ask, "Is the administration trying to combat inflation and high prices or not?"

On the whole, I would say that the Administration favors high prices, on its record. From the beginning of the New Deal we recall the program of destroying crops and killing stock to promote scarcities and high prices. Truman has out-Wallaced Wallace on this score. The pig-killing program of Henry Wallace was interesting but here is Truman's record to the high cost of living.

1. He has permitted his appointees to speculate on the commodity market and enrich themselves while running up the price of commodities.

2. He has sent the Government's Commodity Credit Corporation into the market, as he did January 20, 1947, at Kansas City, when it bought $40,000,000 worth of wheat in 1 day. That was 19,000,000 bushels and it drove wheat up over a dollar a bushel. The Government has been buying over one-third of the wheat crop to give away to foreigners. That program is reflected in the price of groceries. For a long time, it has been the chief cause of food scarcities and high prices. The administration bought 1,600,000,000 pounds of sugar at $1 per hundred pounds above the market price, the same day controls were taken off, just to make sure prices would rise when controls went off.

3. The President has not used the powers he always has had to stop deficit spending and creation of printing press money printed to meet the costs of unproductive Government spending. The administration opposes any reduction in the high price of government. Its philosophy is: "You make it, we take it. You lend it, we spend it."

4. The President refused to permit income-tax reduction in 1947. Wartime taxes in peacetime have added to the cost of living, cut take-home pay, discouraged production and business expansion. Since 1948 is an election year, he has come out, as was forecast when he vetoed tax-reduction bills in 1947, with a plan of his own, seeking to increase taxes on business and distribute the loot among the people at $40 per head. Increased taxes on business mean higher prices.

5. The President has encouraged low productivity by labor with his administration of the wages and hours law, insistence that wage increases can be granted without increasing production costs and retail prices, keeping hundreds of thousands of people on the dole who should be made to get a job, and by condoning feather-bedding union practices, business, and labor monopolies.

6. The President has refused to restrict exports to friend or foe.

7. The President has drawn people from farm and factory to work in the political machine in Washington and branch offices throughout the Nation, when they ought to be in jobs producing goods and wealth. The cost of government has become so high that we pay more for it than we pay for food. Food costs have gone up 162 percent since 1939, which is bad, but cost of government has gone up 450 percent in the same time. The food bill was $330 per person in 1947. The bill for government, on a per capita basis, was $371, or $41 more per individual than the food bill. The New Deal has increased the national debt $253,000,000,000 in 15 years. The Republican Congress in 1947 was able to reduce that debt, balance the budget, and cut expenses $3,000,000,000, but could have done better with cooperation from the White House. At least, it reversed the trend.

8. The President has fostered and supported the OPA which reduced production, hamstrung business and agriculture, created scarcities, black markets, and stimulated inflation.

9. The President has encouraged labor policies which result in strikes and crippling of production and has opposed all legislation to cure the causes of industrial unrest.

10. The President has, from the beginning of his public service, adhered to the Henry Wallace, New Deal theory, that our Nation has reached the limit of industrial and economic development and nothing remains to be done except to divide the national wealth under an economy of scarcity. In this he has outdone Mr. Wallace by such programs as that initiated by "soft soap" Charlie Luckman, of soap-opera fame. This gentleman who struggles along on an annual salary of $300,000 was brought down to Washington to persuade Americans voluntarily to do without meat and eggs, which OPA had previously forced them to do without. He was financed by half a million dollars misappropriated from funds set aside by Congress for aid to Greece and Turkey. His zany program failed in its announced objectives but did help promote high prices and restricted production.

11. The Soviet system cured inflation by abolishing their currency and issuing new, worth 10 cents on their old dollar, which they call the ruble. Here it is being done by easy stages, cutting the value of the dollar, every savings account and insurance policy. Here it is called managed currency. It is printing-press money. The gold we are still buying at $35 per ounce from Russia is buried in the ground at Fort Knox, for what purpose no one has ever been able to figure out.

The New Deal has vetoed, blocked, and hamstrung with poor administration every congressional effort to bring order out of chaos. It has spent its time pardoning Kansis City election thieves and letting Mayor Curley, of Boston, out of the Federal pen in time to line up his mob for the next election. Truman's administration has witnessed unprecedented scandals in the Army of which he is Commander in Chief.

Undermining confidence in the dollar, in the Constitution, in the laws of the land, in the armed services, every attempt is being made to have us in the middle of the stream again on the eve of the next election. We had better get wise to this crisis or emergency technique which has been used so often to win elections since 1933. The road now marked the "Truman Trail" is actually the same old road we have followed into two world wars and depressions. Its toll is high in dollars as well as in what Churchill called "Blood, sweat, and tears." Are you ready to pay the price in dollars, goods, controls, restrictions and freedom, scarcities, high prices, eventually in lives? That question is one you must answer. There is another road. That road is to vote Republican and save what's left.

I find I have come to the end of my address and have hardly mentioned the name of Abraham Lincoln. Since I was a very small boy he has always been my hero. Next to the Galilean Carpenter I feel that he more perfectly reveals the attributes of providence than any other person told about in the annals of history. A strange light shone from his sad gray eyes. All the magic of morning, noon, and night, all the mystery of dark forests and starry skies were in them. A strange divinity shone from his face, carved with lines of worry and suffering, cut deep with care and love for mankind. A boundless love, fathomless as the sea, illimitable as space. No monarch ever had greater power than he. None ever employed it so tenderly, so benevolently, so graciously. No power of pardon, except that of providence, ever was exercised so mercifully. No other human being ever dried so many tears, stopped so many heartaches, revived so many hopes. Do not think me sacrilegious when I say he was a man of sorrow and acquainted with grief. He was bruised for our iniquities, wounded for our transgressions, and the weight of the world was upon his shoulders. He saved others, himself he could not save. And, in the words of the poet:

"And when he fell in whirlwind, he went down
As when a lordly cedar, green with boughs,
Goes down with a great shout upon the hills,
And leaves a lonesome place against the sky."

But, I must confess, that there is no really new thing I can say about Abraham Lincoln, nor is there a new thing to be said of the mountains, of the stars, nor of the sea. The mountains ever tower in majesty above the shifting clouds, the quiet stars ever keep holy vigil above a tired world, the mysterious sea ever sobs on the shore. But to mountain, to star, and to sea man ever turns in reverent homage, and thus it was with Lincoln. He was mountain in the majesty of his thought, star in the steadfast purity of his purpose, sea in the deep undervoice of mystery and of sadness, so he abides.

My friends, I am an Abraham Lincoln Republican, and proud of it. Long live the Republican Party and may God bless America.

Regular Veterans Association Recommends a Practical Plan for Recruiting and Maintaining the Full Strength and Efficiency of Our Armed Forces

EXTENSION OF REMARKS
OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. McGREGOR. Mr. Speaker, for sometime past, Mr. William M. Floyd, national commander and legislative representative of the Regular Veterans Association, has been in close touch with me in connection with the legislative program of his organization affecting the welfare of our country, its service men and women, and its armed forces. I have been glad to cooperate with him because of his clear thinking on these subjects.

Under the leadership of Commander Floyd and his national officers and committees, the Regular Veterans Association has succeeded in establishing an enviable record for promoting logical and reasonable legislation for the welfare of veterans and their dependents and for the security of the nation. Today it is one of the principal veterans' organizations and certainly one of the most active in carrying out its national program. Its aim is to serve all veterans who have honorable service whether it be in time of war or in time of peace.

It is my privilege to be well acquainted with Commander Floyd personally. I had the pleasure of meeting most of the national officers of the organization, as well as many of the State and post officers when I attended the national convention held at Wilkes-Barre, Pa., in August of last year, and spoke before the assembled delegates and visitors. Sometime later, on a tour of investigation in the western part of the country, I became acquainted with a number of other national and State officers. I was glad to talk to these men about veterans' problems and about the effective work being

carried on by the Regular Veterans Association throughout the country.

In my own great State of Ohio, and in my district, the Regular Veterans Association is well represented. I am very proud of the high caliber of the men and women representing this organization in Ohio. Among the outstanding men who are carrying on a great work for the Regular Veterans Association in my State, are Mr. Neal C. Perkins, the department commander for Ohio, and a leader in rehabilitation work for disabled veterans. Closely associated with Commander Perkins are Edgar Norton, Springfield; James Gallagher, of Burton; Commander Ralph H. Grieves, of Springfield; Commander Joseph Pinter, of Burton; and Commander D. A. Pabon, Bethel, Ohio.

While at the national convention in Wilkes-Barre, I was privileged to visit and observe a number of the business sessions as well as the work of the national committees. I was much impressed with the businesslike conduct of the convention, with the strong and constructive program mandated by it. I was greatly impressed with the sincerity and the capability of the leadership of the Regular Veterans Association as demonstrated at that convention. I was so much impressed, as a matter of fact, that I then and there became a life member of the association and paid my dues in full.

I am proud of my membership in such a fine association of men and women, every one of whom has served his or her country in its armed forces and in almost every part of the world. The Regular Veterans Association itself is proud of the fact that it has such a national leader as Commander William M. Floyd. His value as a leader was fully recognized when the national convention unanimously drafted him for his fifth consecutive term as national commander of the organization.

Commander Floyd has the confidence of the membership of the Hill, for we have learned by our experience with him that he does not misrepresent any issue, he stands on his own two feet, and he is a man whose word is as good as his bond. I am pleased that we will continue to have his wise counsel at all hearings on veterans' legislation, and I shall welcome his recommendations and suggestions at all times, for Commander Floyd has the welfare of all veterans uppermost in his mind.

I wish to point out here the alertness of the Regular Veterans Association to the needs of national defense when problems present themselves.

More than a year ago, after demobilization of our wartime forces had been completed, the then authorized Regular forces dwindled seriously because of the lack of voluntary enlistments. Men were not interested in entering the Regular services. At the time, the Regular Veterans Association was the first of any organization to take a practical view of our armed forces and to recommend to the President, to the Congress, and to the War and Navy Departments, a 10-point program suggesting important measures that would make the armed services more attractive for enlisted men and thus induce reenlistments. Most of these recommendations were adopted by legislation where necessary and by War and Navy Department policy where legislation was not required. The services soon were recruited to full authorized strength.

Among the 10 points were recommendations for substantial increases in pay for enlisted men; increase in allowances for quarters and rations; 20-year retirement for disability; greater opportunities for enlisted men to secure commissions; and several other recommendations that helped make the service more attractive.

At the present time, the regular forces are nearly 150,000 short of their authorized enlisted strength. Some Federal officials are now advocating that a peacetime selective service system may become necessary. Commander Floyd and his organization do not agree with that thought. This organization believes that ample voluntary service can be secured if the services are made attractive to a degree comparable with civil life, and if a decent security can be assured enlisted men who decide to make a career in the armed forces.

Recently, astute National Commander Floyd conceived a plan he felt would stimulate voluntary enlistments without having to resort to peacetime selective service. He immediately called a joint meeting of his national committees on universal military training and national defense. The plan was discussed. The result of the conference produced a program which places the Regular Veterans Association in the envied position of again being first to recommend a practical plan for recruiting and maintaining the full strength and efficiency of our national defense forces.

The suggested program which has already been presented to President Truman and the Department of National Defense, proposes:

First. To authorize double time credits for retirement purposes to enlisted personnel who served in the armed forces between December 7, 1941, and March 1, 1946.

Second. To offer the same inducements to enlisted personnel of the women's services.

Third. To apply the authorized double time to longevity pay entitlement of enlisted personnel.

The committees, in their conference, made further recommendations for members who have served honorably in the peacetime establishment, to provide parity in disability compensation for all persons who have served honorably in the armed forces of the United States at any time.

Distinguished members of the Regular Veterans Association who took part in the conference conducted by National Commander Floyd were Commander Patrick J. Foley, chairman of the national defense committee; Commander Claude E. Allen; Commander Leonard Hoffman; Senator John Sparkman, Alabama; Representative J. Harry McGregor, Member of Congress, Ohio; Representative John Phillips, Member of Congress, California; Commander William J. Chisholm; Victor E. Devereaux, national service officer; Past National Judge Advocate Pompei J. Orlando; Frank B. Gigliotti, chairman of the Americanism committee and past national senior vice commander; Harold S. Wanner, national quartermaster; and Master Sgt. Junior J. Spurrier, a member of the armed forces and holder of the Congressional Medal of Honor.

I was very happy to serve on the committee conference, for the members comprising them were all active life members of the Regular Veterans Association.

Included in the many constructive resolutions mandated by the Regular Veterans Association, are a number that I especially approve, and I feel that some of them should be set forth here as far as space permits. They form only a small part of the extensive and logical program of the association.

I believe, for instance, that disability compensation for peacetime veterans should be on a par with those of disability compensation for wartime veterans; that a World War I pension of $50 per month for all who served 90 days or more, should be paid to those veterans upon reaching the age of 55, with a $2 increase each year thereafter; adjusted pay for World War II veterans having 90 days of service on the basis of $4 per day for service rendered outside the continental limits of the United States, and $3 per day for service within the continental limits of the United States; that Congress should expedite reasonable legislation for the housing of veterans and their families; that the pay of the enlisted personnel of the armed forces should be increased; that the retired pay of all retired enlisted men should be exempt from taxes. I also agree with the Regular Veterans Association that the Department of Justice should take immediate steps to outlaw the Communist Party in the United States.

Of course, the national legislative program of the association embraces many other constructive resolutions. A considerable number of the bills so strongly advocated by the organization, were enacted during the last session of Congress, and Commander Floyd is exerting every effort to secure enactment of the bills which are now before the present session for consideration.

Trojan work has been performed by the association and thousands of deserving veterans are now receiving pensions or compensation because of its efforts. The work is being carried on intensively, and the achievements of this veterans' group are remarkable mainly because it is sincere in trying to secure reasonable legislation rather than place itself in the position of being an association of so-called Treasury raiders.

It is a pleasure for me to acquaint you with the splendid work and accomplishments of the Regular Veterans Association, especially under the able administration of National Commander Wil-

liam M. Floyd. I believe it to be a public duty and service to bring to the attention of my colleagues, and to the public, some of the outstanding achievements of such an organization of wartime and peacetime veterans as the Regular Veterans Association.

Britain's Economic Situation

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of February 16, 1948:

BANKRUPTCY NEAR, SAYS LONDON PAPER—HARD WORK AND HARD LIVING SEEN ONLY SALVATION

Britain faces bankruptcy.

So says the London publication, the Economist, in the leading article of its February 14 issue. The article is entitled "On the Rocks."

By midsummer at present rate of expenditure, Britain will have exhausted its remaining reserves of about 600,000,000 pounds, the Economist says.

"After that, it will just be impossible to buy either the food or the raw materials which are necessary for Britain to eat and work," declares the Economist. "The aspect of starvation and mass unemployment is now alarmingly close."

BASED ON WHITE PAPER

The Economist bases its prediction on figures in the latest British white paper.

The publication declares the outlook is not encouraging even with Marshall plan aid.

Britain, it said, used previous loans to live and to spend on a scale which was quite out of accord with Britain's real economic position.

"And what guaranty is there that the Marshall plan may not be used in the same way?" it asks.

The Economist declares American and other loans have served to mask from the government and the people alike the country's true economic straits.

HARD WORK URGED

It advocates that Britain begin now to pursue the policy it would pursue if the Marshall plan were reduced to a half or a third and to use the surplus thus created to build up reserves, modernize industry, develop economic integration in western Europe and undertake now the program of hard living and hard working "in which in the long run salvation alone will lie."

Britain, the paper declares, has been cradled in illusions since 1945. If it had realized the situation then, as had Poland, it might have set to work as the Poles have done.

The reality is of a nation in its worst economic straits since the Napoleonic wars, the Economist declares.

Yet unions press for more wages for fewer hours while the well-to-do fight the controls and restrictions, it says.

WORLD WAS BLAMED

"Britain has been living like an improvident family which, failing to make both ends meet, first spends the accumulated capital of the past, then borrows from friends—and when their loans are exhausted, begins to pawn the furniture," the publication says.

The publication blames Britain's plight mostly on the fact it was the only Allied Power to fight both World Wars from first day to the last.

The solution to Britain's problem, the Economist says, is the same as that faced by any family facing bankruptcy—either it goes under to a life of perpetual makeshift and pauperism, or it restores its solvency by vigorous action—by buying less, by cutting down every kind of expense and by straining every nerve to sell more of its goods and services.

ECONOMIES PROPOSED

Bankruptcy is a family responsibility, the Economist declares, and no section of the community can avoid its hardships.

Longer hours and more output at the same wages, heavier taxes or limitation of profits, sterner rationing of coal, cuts in overseas spending, slashes in the armed forces, cutting down of Government employees by one-fourth, and cut-backs in capital spending for schools, hospitals, and housing are among the economies advocated by the Economist.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorial by Mr. Allen Griffin, owner and publisher of the Monterey Peninsula Herald, Monterey, Calif., Thursday, February 5, 1948, on Universal Military Training. The article follows:

DO WE FOOL OURSELVES?—ONE OF THOSE THINGS—WHAT IT PROPOSES AND WHY WE STAND

If universal military training is a lost cause in this political year, it isn't the first lost cause advocated by this column. And we dare say there will be more.

One reason why the public generally may favor a measure such as this and yet permit its defeat is because of the overweening egotism of the American people and their sense of superiority over the foreigner.

There is the assumption, particularly by those who have had little or no combat experience, that the average American, once put into a uniform, is the best, gosh-durned soldier in the world.

Well, maybe he isn't. Some of us have had quite a lot of that kind of egotism knocked out of us, even with most of the artillery and air power on our side.

There is also the old hang-over from the optimism of that vastly ignorant but colorful patriot William Jennings Bryan, who swore that "a million Americans would jump to arms overnight" (more successfully, we suspect, to the arms of Venus).

There is the pert assininity that points to the last 2 wars and asserts that the record proves that the drafted armies always lost. There's an approach to a coincidence there, but not an argument. However, there is no use arguing this one except in the presence of a proponent; and in that case it is best first to wipe such a person behind the ears. But there are lots of them and some wear high stiff collars, too.

There is always the good democratic faith espoused by Micawber, that in an emergency "something will turn up." Something always has, particularly time, thanks to those that have given us time.

Yes, we're mighty egotistic—back home among the ice cream counters.

On the other hand, there is no reason for anyone to be enthusiastic over the thought of UMT or any other expensive and wasteful military preparation, all of them being expensive and wasteful because that's the very nature of this obsolete fetish that perpetuates itself to this day because international sanity is still a goal rather than a fact.

We see no sense in a military establishment for its own sake, because on such grounds it doesn't make sense. We find justification in it only because of necessity, and we hope as much as anyone that the necessity is temporary. It is a hideous thought to contemplate, that well over half of the Federal revenue must be devoted to the costs of past wars and preparation for the one that may not happen.

Nevertheless, supporting a military establishment on the surface of land and sea and in the air, sufficient to sustain this Nation's present and growing world responsibilities—obviously built on power—is still one of those things as necessary as going to work to support a family—and many of us don't like to work, either.

There is a job to do or to mess up or possibly to fail in the doing; and there is a definite adversary that doesn't shudder and retire at someone else's weakness.

What does universal military training mean?

It does not mean what universal military service means. The latter means that the inducted person belongs to the service and may be employed here or abroad at the will of the high command, under the law.

Under UMT the inducted youth is a student being trained in the business of soldiering, in order that a reserve of trained or partially trained men may be established, to be called into service only at the will of the Congress of the United States.

In general terms this period of training is divided into two phases.

The first phase is 6 months of basic training of the individual and of small units. It is to instruct young men how to live together, to obey commands, to learn the fundamentals of weapons, to harden their physiques, to act together in group teamwork, to respond to leadership, and to develop the capacity for leadership. It is also to permit an examination into their various capacities, so that their future training may be directed according to their abilities, intelligence, and education.

The second phase, largely based upon the knowledge derived by the soldier-student and about the soldier-student, leads to selection of his reserve capacity for which he has been oriented in an entirely democratic way.

In this phase the young man by his own volition, may elect to become a member of the National Guard, for instance. If he has discovered that he likes the service very well, he may join the Regular service for which he believes he is fitted. If he has the capacities for a technician and chooses to prepare to be a technician, he will simply carry on with his school work, taking on radar, electronics, motors, chemistry, radio, or whatever phase of specialized training prepares him to be a specialist or technician in the Organized Reserves.

In short, in the event of an emergency, instead of being called unprepared to the colors, he will respond in the branch of the service or the specialty for which he has had

some preparation. He will already know what the life of a soldier is like; he will already have been oriented to discipline in barracks and in the field; he will already have had preliminary training in his specialty.

The matter is particularly important. No matter how rapidly science advances and its gadgets change and improve, the hand and mind already accustomed to the proper approach and understanding of instruments of science have gained a great advantage in time and speed in further acquisition of skills. Time is of the essence. Time has caught up with America.

The program is first of all to create a reserve, secondly to interest young men in the professional service. But let us make it clear that under UMT the trainees would not belong to the Army, they could not be employed for anything but training; they could not be sent overseas. This is not conscription in any form that this or any other country has had.

We have favored UMT as probably the best compromise that could be worked out in a democratic way. It is a compromise because universal military service would be militarily more practical.

It is not a substitute for other military programs, such as the need for maintaining a constantly superior Air Force, a Navy capable of prompt action in any sea, and a Regular Army at the strength needed for any outpost duty required of it (Trieste today, Palestine tomorrow), for occupationary duties, for training obligations, and with efficient mobile forces each unit of which is at full authorized strength.

What is the good of it all at this terrific cost to the victor of the most recent war.

The good of it lies exclusively in national security, which itself gives the other democratic nations of the world a feeling of confidence in us and in their future, until such a time that a responsible and stable peace may be organized and this maddening waste sharply curtailed.

We have never yet presented a front that a competent adversary would consider it suicide to attack. We believe that such a front is our best bid for peace, together with our willingness to dismantle it in cooperation with other governments prepared to exercise good will and make of United Nations an effective organization.

We therefore line up with the scientists and educators that have recommended such an integrated program, of which UMT is an essential part.—A. G.

Columbia Ups Tuition, Rent of Veterans

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. REED of New York. Mr. Speaker, I felt sure that the increase in the subsistence to GI's attending school, under the bill recently passed, would be nullified by the educational institutions now attended by the GI's. All that the bill has apparently accomplished is to furnish a subsidy to the educational institutions with no benefit whatever to the GI students.

Under leave to extend I am inserting an article which appeared in the veterans' edition of the Army Times of February 14, 1948:

COLUMBIA UPS TUITION, RENT OF VETERANS

NEW YORK.—Columbia University this week just about wiped out the small subsistence increase granted by Congress to GI bill students.

The university announced a 33 percent hike in tuition fees and a 17 percent boost in men's dormitory rents. Women's room rents were increased 7 percent. The new fees take effect next fall.

Columbia's 15,000 veteran students will be forced to pay the increased dormitory fees directly out of their own pockets.

The one-third increase in tuition will automatically shorten the period of each students' eligibility for GI bill study by faster consumption of the $500 yearly maximum tuition contribution of the Government.

A recent New York Times survey showed Columbia's present tuition rate of $450, which the increase would raise to $600. Men's dorm rent at present is $221; this would be hiked $37.57. The Congress-approved subsistence increase is $10 a month for students without dependents.

The Partition of Palestine

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me to the National Conference of American Zionist Emergency Council, Washington, D. C., February 15, 1948:

Mr. Chairman (Dr. Neumann), Dr. Silver, distinguished guests, ladies and gentlemen, my fellow Americans, I am one of the hundreds of Members of Congress, one of the many millions of Americans, who felt profound relief and gratification on November 29 of last year. I thought—as you all did—that the decision on Palestine taken by the United Nations on that day marked the end of one of the greatest tragedies in human history and the beginning of new life and new glory for Israel and the Land of Israel.

Henceforth, we said to ourselves with hope and pride, the Jews will not have to protest any longer; they will be busy building their new state, absorbing all the displaced and homeless Jews of Europe. The Jewish people will be a full-fledged member of the international family of nations, an equal among equals. And the friends of the Jews—all those Christians, among whom I am proud to count myself, whose minds and souls smarted at the shame of Jewish suffering—they, too, would have a respite from unending protests and indignation on behalf of the Jewish cause.

I thought so and you thought so, and God knows that it was not mere wishful thinking on our part. After the United Nations decision on Palestine, coming as it did as a result of a protracted and fierce debate between the advocates and the opponents of Palestine partition; after our great country agreed to support partition; we all had the right to feel optimistic. We knew how difficult it had been to bring about the international decision on Palestine, but after the decision was adopted, we had no doubts as to the future course of events.

Why then am I standing once more before this gathering which has assembled not to celebrate the new Jewish state, but—I am sorry to say—once again to voice indignation and bewilderment?

Only 2 months have passed since November 29, 1947, and great anxiety is once again upon us. There are strong indications, and even more than indications, to the effect that powerful opposing forces are actively at work to scuttle the United Nations decision on Palestine and to kill the Jewish state even before it is born.

A powerful antipartition alliance (most of which is anti-Jewish) is now engaged in a war, in part a declared war and in part an undeclared war, on the United Nations decision. It is a strange and unnatural alliance which is ready and willing to employ every means to block the United Nations decision.

Every partner in this alliance has a job of his own. The Arab potentates in the Middle East do their share by encouraging anti-Jewish riots and massacres in their lands, by supplying money, arms, and manpower for attacks on Jewish Palestine, and by threatening the United States with oil and other sanctions if the partition decision is implemented.

The British partner does his full share. In Lake Success, Great Britain temporizes and slows down the workings of the United Nations with regard to the implementation of the General Assembly's decision. In Jerusalem, the British Administration and armed forces prevent the effective functioning of the Jewish defense forces while apparently condoning Arab riots and attacks. In London, Mr. Bevin's government continues to supply arms and ammunition to the Arab states in the Middle East. In general, Britain continues to act as if no United Nations decision on Palestine had ever been adopted. Not one of the many positive recommendations of the General Assembly has been carried out by the British Government. A port has not been placed at the disposal of the Jews of Palestine; nor has the ban on immigration into Palestine been eased; nor has the British Government ever offered honest cooperation to the United Nations Commission of Implementation.

And here I come to that part of the alliance about which I cannot speak without a sense of deep shame and humiliation. I refer, of course, to the American members of this strange and unnatural alliance. Some of these Americans, it has been stated, fight for their vested interests, very tangible interests, translatable into the language of dollars and cents, or rather of millions of dollars, where cents hardly count, certain big oil interests in America. They are neither the first nor the last men in this world prepared to sacrifice peace and progress in order to make their profits secure, or to make more profits. They should realize what they are doing before it is too late, and withdraw from this strange and unnatural alliance.

There have been rumors in the press, and elsewhere, that the position of our Government has changed since the vote in the United Nations which provided for the partition of Palestine. Secretary Marshall and Secretary Forrestal have denied these rumors insofar as they apply to themselves or to their departments. Secretary Marshall's denial also applies to our governmental policy, as the State Department is the Department mainly responsible for our policy on foreign affairs. We are thankful to Secretary Marshall and to Secretary Forrestal for their recent statements which were most timely. We hope they will be made effective. Inso-

far as both Secretaries and their departments are concerned, if it has not already been done, they should see that any lesser officials in their departments act affirmatively in accordance with their recent statements and avowed policy of our Government in relation to Palestine.

When our representatives in the General Assembly voted for partition and our Government did everything it could to get the necessary two-thirds vote for its adoption, that action definitely committed our country to a policy of seeing that partition in Palestine became successful. For partition to be voted, as it has been, and then for partition to fail would result in a catastrophe that would stun the world, and would destroy the United Nations organization as an effective instrument for the maintenance of international peace and security in terms of the UN Charter. I have no knowledge of any, but if there are any of our officials, directly or indirectly linked with this strange and unnatural alliance, they should withdraw from it at once. It is their duty to do so. Their position is inconsistent with the definite and avowed policy of our country in relation to Palestine.

If the Arab nations, the Arab Higher Committee for Palestine, and the Arab League, or any group or groups of people can successfully defy the mandate of the United Nations, then all governments and all groups would be encouraged to do so. As I see it, unless proper action is taken to carry out the decision of the United Nations Assembly; unless partition is effected successfully, and it must be done at once, the United Nations organization will be destroyed. Like the League of Nations after World War I, when events transpired that were in violation of the League and its covenants, the League died. So will the failure to carry out the partition of Palestine result in the death of the United Nations.

President Truman and Secretary Marshall kept faith with the vital interests of our country when they provided American backing for the report of the United Nations committee and for the decision of the United Nations Assembly to partition Palestine into Jewish and Arab independent states. It was not mere sentiment that dictated this American policy on Palestine, but the realization that freedom and democracy in the world, justice in international relations, world peace, and the legitimate interests of America would best be served by the establishment of a Jewish state in Palestine and by a solution of the problem of Jewish homelessness, which has been a festering sore in international relations for such a long time.

Nothing has happened since November 29, 1947, to warrant a revision of this American policy on Palestine, which has been endorsed time and again not only by our Chief Executive but also by the two Houses of Congress, by the two political parties, by the governors and legislatures of most of the States of the Union, and by American public opinion. Nothing has happened in these 2 months which could not have been foreseen with absolute certainty. Has any new element, any unforeseen element, appeared in the picture—any element of such significance as to change our entire attitude, shaped over a period of many years?

The only true answer to all these questions is an emphatic "No." On November 29, any man, even moderately acquainted with the Palestine situation, could have given us a blueprint of future events which would have corresponded with great precision to what has since actually happened. We all knew that the Jews would abide by the United Nations decision and do their utmost to bring about its speedy and orderly implementation. We all knew that the Arabs, especially the ruling cliques of Arabia, would do their utmost to oppose and sabotage the United Nations decision. The Jews and the Arabs have behaved in complete accordance with these expectations. During the General Assembly's deliberations on Palestine, the Arabs issued one threat after another, announcing that a United Nations decision on partition would be followed by armed Arab rebellion in Palestine; that Jews in Arab countries would be massacred; that the Arab states in the Middle East would place their forces at the disposal of the fight against the United Nations decision.

The United Nations and the United States Government heard these oft-repeated threats, and proceeded to adopt the decision to partition Palestine. The Arabs, on the other hand, proceeded to carry out their threats.

There is no justification for any revision by the United Nations or by our Government.

If any efforts are made to bring about a revision of our pledges and commitments on partition, we will make vigorous protest. For even a child can understand that the issue before us now is much deeper and wider than Palestine and the Jewish people. It is the existence of the United Nations that is at stake. If we let down the United Nations on the question of Palestine, it will never recover. The United Nations is our hope for world peace.

We are now faced by a most serious situation in Palestine in which those who are fighting for freedom and democracy are seriously handicapped by this strange and unnatural alliance.

Men and women are fighting for their lives in Palestine. Boys and girls are forced to bare their chests to Arab bullets because they do not have the armor to protect busses on the street; houses are raided, looted and burned to the ground because householders do not have the rifles they need to defend themselves against Arab gangsters.

The United Nations and our country have a great task before them. Our country has imposed an arms embargo on the Middle East. Under this embargo as it now stands we cannot send arms and ammunition to the States of the Middle East. But Great Britain is still disposing of excess war material in the Middle East—and a swift transmission belt makes certain that a dozen submachine guns, unloaded today in Alexandria or Port Said, tomorrow will be in Arab hands spitting their loads of death into Jewish buses and Jewish homes—murdering a little people whose only fault is that they do not wish to be exterminated, and who have signified their willingness to accept the decision of the United Nations.

The result of this embargo is decidedly unjust. It is tantamount to arming Arabs to attack Jews and the authority of the United Nations, while preventing the Jews from receiving arms to defend themselves and thus defend the United Nations.

The embargo in this form must go.

Those whom the United Nations Palestine Commission certifies as abiding by its verdict and needing arms for defense, should not be denied through the action of our country the power and right to arm and defend themselves.

This is the first step to be taken. In addition, our delegates in Lake Success should support, and if necessary, lead a demand that no member state be allowed to sabotage the international verdict. We should give our support to the speedy establishment of a militia for the Jewish state, and of an international police force for Jerusalem and the rest of Palestine.

Such an attitude on our part would immediately tend to quiet down the forces of disorder, just as vacillation on our part would serve to encourage those forces.

This change is necessary in the interest of Palestine. It is necessary in the interest of the United Nations. But—above all—it is necessary in order to vindicate the integrity and the good name of America. Any talk of compromise is out of the question.

In the first place, the partition of Palestine voted upon by the General Assembly and agreed to by the Jewish agency constitutes a compromise, and one on the part of the Jews. It must be remembered that western Galilee, and a substantial part of Negeb and Jerusalem, were large Jewish concessions made to the Assembly.

Furthermore, a compromise would only be made where both sides to a question claim more than they expect, or where both sides were aggressors. This is not so in this case.

In Palestine, the responsibility for bloodshed is not divided. It rests squarely on the shoulders of the Arab leaders and the Arabs. They are the aggressors.

The Arabs have rejected categorically the decision voted by more than a two-thirds majority of the General Assembly of the United Nations, the vote taking place on November 29, 1947.

The Jews have accepted the decision of the Assembly. The Arabs have not. The Arabs challenge this decision and have arrogantly stated they will resort to force and military power, if necessary, to prevent the partition agreed upon. To permit the Arabs to get away with that will result in the destruction of the United Nations, and it will constitute international anarchy.

The Arabs have used force and are threatening the use of military action to prevent the United Nations from carrying out the decision of the General Assembly.

So there is nothing to compromise.

As a matter of fact, the Arabs would not be satisfied with a complete reversal of the action of the General Assembly. They have demanded, in addition, that the international bases of the Jewish homeland in Palestine established by the Balfour declaration and the League of Nations mandate, be wiped out, leaving the Jews in Palestine a defenseless minority.

The Arabs should be informed in no unmistakable terms that by the United Nations organization and the powerful countries who are members of the United Nations the decision voted by the Assembly will be carried out.

Firmness means strength and success: Appeasement means trouble and defeat.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. LECOMPTE. Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD, I desire to include therein copy of a resolution adopted by the fifth district of the American Legion in Iowa urging the immediate adoption of universal military training:

Be it resolved by the members of the American Legion in the old Fighting Fifth District of Iowa, That we unanimously favor the immediate adoption of universal military training, H. R. 4278, and request our United States Senators and Congressmen to vote for and aggressively support the passage of H. R. 4278 in the second session of the Eightieth Congress.

Unanimously passed by fifth district of American Legion, in convention assembled at Creston, Iowa, October 13, 1947.

L. J. RITCHELL,
Acting Adjutant.
ED POWERS,
Commander.

The Late Mohandas K. Gandhi

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. MORRIS. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a recent tribute to the late Mohandas K. Gandhi by the noted columnist, Hon. Sam P. Pettengill, which I think is most excellent.

The article follows:

GANDHI

When a million people come to a man's funeral—more, perhaps, than ever before in history—you ask yourself, what was the secret of his power? Did he hold high political office? Was he a military hero? Had he purchased a cheap popularity by scattering billions to his retainers? Had he left a pyramid of skulls as proof of his might?

The man who died in India was none of these. He had "neither purse nor sword." He had only a breechcloth and a faith. Yet some think he was the greatest man of our times.

The fact that a million people gathered at his funeral pyre seems to prove that mankind is weary of bloodshed, the brutality of power politics, and the appeal to force.

Force! It is everywhere today. Goon squads at home, and armies abroad. Navies, air squadrons, the atom bomb, lethal dust rained from the sky, strategic bases, military conscription of the world's youth, bankrupt treasuries, hundreds of thousands of veterans in psychoneurotic hospitals, and after "winning" a war, more being spent in preparation for the next Armageddon than ever before.

Where are the Gandhis of the western world—the "Christian" part of the globe? Name me, if you can, someone in Washington, London, Paris, Berlin, Moscow, who even thinks as Gandhi did—or that other great man, also assassinated, Abraham Lincoln, who just before he died appealed for "malice toward none, charity for all."

In what dark stinking pit will the appeal to force exhaust itself?

A Catholic poet wrote in 1918:

"After 2,000 years of holy Mass
We've got as far as poison gas."

Having deserted God, has God deserted us? No, not so long as there are left even a few with the spirit of Gandhi. And there are those few. I refer to the Quakers who, year after year, against all odds, hold that killing is wrong. And here and there others are scattered. But why so few? One reason, I think, is that we have lost faith in the power of the individual. We say, "What can I do?" We say "We must organize—we must join some pressure group to get things done." Pressure. That fatal word.

Gandhi proved that one ugly little man, weighing 80 or 90 pounds, one among hundreds of millions, could light a fire upon the mountain where it could be seen from afar. Gandhi did not say, "Don't stick your neck out." He stuck his out. He spent a dozen years in jail. He stuck it out until he was killed.

He had faith "as a grain of mustard seed." Like Stephen, he was a "man full of faith." He "continued in the faith." He had the "mystery of faith." Strange mystery of faith. Strange in its strength. Strange to men.

It was said "of old time" that one with faith and charity "could remove mountains." Gandhi, with faith and charity, moved men.

The men with purses and swords have died, and none visit their graves. Nations with purses and swords have been corrupted by their wealth and have perished by the sword. But the men of faith, the Christs, the Lincolns, and the Gandhis, live on. They are the only ones who do not die.

"King and queens are facile accidents of time and chance;
Chance set them on the heights, they climbed not there.
But he who from the darkling mass of men
Is on the wings of heavenly thought upborne
To higher ether, and becomes a voice for all the voiceless,
God annointed him. His grave shall be a shrine; his name a star."

Address by Hon. Katharine St. George, of New York, at St. Louis, Mo., February 7, 1948

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. SHORT. Mr. Speaker, a few days ago, on February 7, 1948, our distinguished, attractive, and very able colleague, the Honorable KATHARINE ST. GEORGE, of New York, delivered a most instructive and inspiring address before the Federation of Republican Women's Clubs of Missouri at the Jefferson Hotel in St. Louis.

For many years I have attended these annual gatherings, but this was perhaps the largest crowd, assembled from all over our great State, and no speaker was ever more cordially or enthusiastically received than was Mrs. KATHARINE ST. GEORGE. Her address was so timely, so sincere and logical, so full of hard, common sense that it literally lifted the vast audience of admiring and appreciative Missourians out of their seats. Not only Republicans, but many Democrats from all over the State were so impressed by her thrilling message that they requested a copy of her outstanding address.

Under leave granted me to extend my remarks, I include her address which I hope to have reprinted, in order that I might send a copy of it to many of the thoughtful, patriotic citizens of our great State. My personal wish is that every voter in America might read it before he casts his ballot this coming November:

We are met again to celebrate the birthday of the first Republican President and one of the greatest Americans.

This is primarily a Republican celebration, and in this year of 1948, when we are preparing for a Republican victory, it is perhaps well to take stock once again of those things for which we stand and wherein we differ from other political parties.

It is the fashion among many so-called independent voters to say that there is really no difference between the two major parties in the United States and that they therefore vote for the best man, as they see him, and let it go at that.

Nothing could be more completely un-American than this reasoning. Our Government is a government of law and not of men, of principles and not personalities. It is unique in this and the more we depart from these two fundamentals the more likely are we to see our republican form of government collapse.

There is a fundamental difference between the two major parties today. We stand clearly as our name implies, for the Republic as opposed to a democracy. We stand for majority rule, with curbs furnished by the checks and balances as set up by the Constitution so that although the majority rules (as is its right), still the minorities' rights are protected and Government is for all the people.

Lincoln, in his great Gettysburg Address, asked a question that still remains unanswered: Whether a nation conceived in liberty can long endure. Today again that question must be answered in the affirmative, tomorrow may be too late.

We have seen during the past 16 years what happens under the democratic system of our opponents. First, the party was taken over by the radical wing known as the New Deal; they did not represent the majority of the party, but they did represent the well-oiled political organizations of the eight key cities of the country. The leader of the party once boasted: "Give me the eight key cities of the United States and you can do what you want with the rest of the country."

Another contrast is the tremendous stress laid on personalities. This, of course, was greatly helped by the moving pictures, radio, and television. A speaking voice became of paramount importance.

I have often wondered what Abraham Lincoln's voice was like. Maybe if we had stood on the field at Gettysburg and heard him deliver one of the greatest speeches in the English language, we, too, would not have been impressed just as the men and women on that field were not impressed—so much so that the President was slightly hurt and as he left the platform with the two thin pieces of paper in his hand, he started to tear them. His secretary, John Hay, took them from him saying: "I will keep the papers, Mr. President."

No, there were no mimeographed copies of that speech handed out to every newspaper in the country; there were no file copies, there were just two sheets of paper that didn't match, one having been taken from the White House and the other picked up on the train, and the words written in long-hand by the President. This Address would have perished if John Hay had not suddenly been prompted to take them from his hands.

Yes, that great Address may not have been delivered in a mellifluous voice, with faultless diction, but it will endure long after they are forgotten and it is also possible that many things that are written and said today will endure long after present day headlines makers have been forgotten.

We have seen how a majority was taken over by a militant and aggressive minority. This has been done in the democracies of the whole world sooner or later. Next, we have seen this minority taken over by a few brilliant and ambitious personalities. That has happened sooner or later in every democracy in the world. And now what is the next step? You know what has happened in every democracy in the world: out of these brilliant, ambitious personalities rises one leader, the man on horseback, the dictator. Look at the democracies of the world. It is always the same story and the same thing can and will happen here under democratic rule.

We have already lost many of our rights as individuals during the past 16 years. We have seen our Constitution flouted and set at naught by the party in power. We have seen our Chief Executive advocate the passage of legislation in spite of its being doubtful constitutionally. All these are dangerous signs, all these are black clouds on our country's horizon.

Another thing that has come into our country within the last 16 years, a thing that never belonged in America, is class hatred and

the distrust and vilification of anyone who has or has earned property. It was Abraham Lincoln who said: "Property is the fruit of labor; property is desirable; is a positive good in the world. Let him not who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built." That was and still should be America.

We Republicans are very much to blame for the serious conditions that have developed in the last 16 years, we cannot lay the blame at the door of the Democratic Party. Our trouble is also that we are led astray by the modern mania of attaching ourselves to a political leader because we like him personally and completely forgetting the great fundamentals of the Republican principle of government that is far greater and far more important than any individual that the party may nominate.

I have heard Republicans say: "Oh, if so and so is nominated, I would sooner vote for Truman." This is a shocking point of view, it is the point of view that has kept the Democrats in power for 16 years.

How can we counteract these distressing handicaps? Only in one way: by realizing that the words of Benjamin Franklin are as true today as the day they were uttered—"You will have a Republic if you can keep it."

We have fought two world wars to maintain freedom in the world and yet we must admit that National Socialism has won more ground than before we ever started to fight. So that a young Englishman, who spent 2 years of his life in a German prison camp, after returning home wrote: "For St. George has slain the dragon only to find that it is the dragon's features which confront him when he looks into the glass."

The fateful hour for keeping it is here. In fact, its integrity has already been seriously attacked. It seems that we, who are Republicans, must be the leaders in maintaining the Republican philosophy of government alive and progressive in the modern world.

We have allowed ourselves to be scared by a lot of noisy, incorrect propaganda. I had a young college girl in my office the other day who had been obviously very thoroughly indoctrinated with the New Deal version of the Republican Party. She was, therefore, politely shocked when I spoke of it as the party of progress. So I asked this question: What was the first reason for the founding of the present Republican Party? She told me she did not know. I said: "To eradicate human slavery from our country and the world." Surely that was progress.

Under what party were the laws curbing the excesses of big business passed? Under the Republican Party. When our party is true to its traditions and true to the Republic, it is and must be the party of progress and of reform. We have a great task of progress and reform ahead of us this year. First, we must reestablish the proper balance between the three branches of Government; we must restore government by law.

We hear a great deal these days about the importance of keeping the Democratic Party in power because if the administration changes it will be bad for and may change our foreign policy. I think, quite frankly, that our foreign policy needs a change. I believe our State Department needs a thorough overhauling. It is time our career diplomats were made to understand that their job is to represent the United States and her interests abroad and not represent the policies and interests of foreign nations to us at home.

I had a case brought to my attention recently of an American citizen who was arrested on a false charge in South America. He called his consul but the latter was too busy to do anything for him. He called the Embassy and was told that the Ambassador had only recently arrived and would have to familiarize himself with the work first. This American was kept for 14 days in a primitive jail up in the jungle, most of his clothes were taken from him, including his shoes. Wormy meat was thrown in to him through the bars once a day; he lost 35 pounds in 14 days before he finally was rescued.

This sort of thing is inexcusable. We should learn from the British diplomatic service how they care for their nationals. Even today a British subject is respected all over the world, and the Union Jack is a protection that no one violates save at his peril.

We can also say to these nations abroad: Yes, we know that your democracies have failed, that they have lapsed into weak Socialist governments or into dictatorships, but let us show you a system of free government that can and will succeed, the system that has made our country great, not democracy, but the Republic.

Our party has a great rendezvous with destiny this year because we are the party that is best fitted to strengthen and keep the republican form of Government at home and to teach and promote it abroad. We will have many recruits from the Democratic Party. After all, they know as well as we that Thomas Jefferson called himself a Republican and that he was one of the greatest and clearest exponents of that philosophy of government. It was Jefferson who said that the best government was that government that governs least. It was Jefferson who wrote, "I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude." He would indeed be amazed if he could look down today and see the party that claims him as their founder and patron, who give dinners annually at $100-and-more a plate to fill the political war chests, in his name, and who have now built up the biggest bureaucracy the world has ever known, where the executive branch alone has 2,008,485 employees and the people of this Nation, every one of them, are working one-third of his or her time for the state. No, it is doubtful if that was the ideal of government that Thomas Jefferson looked forward to for his country.

We are here determined to maintain this Republic, being very sure that only so we can weather and triumph over the waves of national socialism that have engulfed most of the world since World War II—knowing that our form of government, though imperfect as all human efforts must be, is the nearest thing to perfect government yet contrived by man.

But, to accomplish this great task and to achieve our country's destiny, we here as individuals must work hard and diligently. We must not rely on Henry Wallace or the ineptitude of our President, who has never been elected to his high office.

No, we must be positive of our facts. We must determine to carry out our great destiny. We must be able to say that we have kept the faith, that we have saved the Republic not only for ourselves but for future generations, not only here but everywhere in the world.

We are the salt of the earth, but if the salt have lost its savor, wherewith shall it be salted? It is thenceforth good for nothing but to be cast out and to be trodden under foot of men.

We will be cast out and justly so, if we do not stand fast, inspired by those who labored so well and so faithfully to give us this most perfect instrument of government. And among them none was more true to those ideals, none put his country above individuals more than the man whose birthday we celebrate today. The man to whose shrine we must repair each year in awe and wonder that such simplicity could express so perfectly the aspirations of a people that such modesty was coupled with such courage, such tenderness with such strength.

In his name and in his honor let us resolve not only to keep this Republic but to make her greater and freer along this pattern that has been given to us, so that this great American hero, this martyr to the cause of a united free Republic, shall not have died in vain.

Estate Tax on GI Insurance

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communications on levying estate tax on GI insurance:

NEW YORK, N. Y., *February 10, 1948.*

Hon. DANIEL A. REED,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN REED: We are the attorneys for the widow and children of a soldier who died in the war. The Treasury Department is contending that the face value of the GI insurance (national life insurance) payable in installments to the soldier's widow and children, are subject to estate tax because the Internal Revenue Code contains no specific exemption therefor.

We believe it is unconscionable for the Government of the United States to levy a tax upon the proceeds of GI insurance in the case of a soldier who gave his life in the war.

Enclosed is a copy of a letter which we have this day sent to the Honorable Colin F. Stam, chief of staff of the Joint Committee on Internal Revenue Taxation. In this letter we have commended to his attention a recommendation that section 812 of the Code be amended so that this inequity in the law may be cured.

We hope you will agree that remedial legislation is required respecting this matter and that you will lend your support to an amendment which will exempt from estate tax any GI insurance payable in the case of a soldier who died in the war or from injuries incurred therein.

Respectfully,

AARON HOLMAN.

FEBRUARY 10, 1948.

Hon. COLIN F. STAM,
Counsel to Joint Committee on Internal Revenue Taxation, House Office Building, Washington, D. C.

DEAR MR. STAM: We are the attorneys for the executrix of the estate of a soldier who died in the war. A problem has arisen in connection with the determination of the estate tax which, we believe, calls for some action on the part of Congress.

We are informed by the Bureau of Internal Revenue that the proceeds of a national life insurance policy payable to the widow and children of a soldier who died in the war are includible in his estate for tax purposes. Our attention has been directed by the Bureau to the case of *U. S. Trust Co.* v. *Helvering* (307 U. S. 57), which involved the question of the taxability of similar insurance proceeds payable upon the death of a soldier

who died in World War I. It was there held that since the statute did not specifically exempt such insurance from the tax, it was includible in the estate for tax purposes. The Bureau proposes to follow that case in view of the fact that the Internal Revenue Code contains no specific exemption.

Most Members of Congress to whose attention this matter has been brought have expressed great shock upon learning that the proceeds of GI insurance payable to the widow and children of a soldier who died during the past war, are taxable. Most members of the Bureau of Internal Revenue are likewise surprised to learn that there is no specific exemption therefor and that it is the intention of the Bureau to impose an estate tax on such proceeds.

We believe that the very thought of the Government imposing a tax upon the proceeds of GI insurance and depriving the widow and children of soldiers, who gave their lives in the war, of such funds will shock the sensibilities of most people. While some may urge that the $60,000 estate tax exemption is an adequate protection for the families of decedents, the argument loses sight of the fact that most soldiers who died in the war were young and the opportunity has been lost to them to increase the estates which they might otherwise have left to their families; also, that since the widows of deceased soldiers will in most cases lack the ability to manage effectively the estates which are left to them, the assets will usually be invested in securities paying a small fixed return, and the families of the soldiers will have to subsist on fixed incomes whose purchasing power has been materially reduced during this inflationary period.

It may also be urged that there is no need for remedial legislation since relatively few deceased GI's left estates which are subject to an estate tax. We respectfully submit that this also is a poor argument since the inequity of the law should not be permitted to affect the families of any soldiers who died in the war, no matter how few they are.

We respectfully submit that this matter should be brought to the attention of the joint committee and that an amendment should be proposed to section 812 of the Internal Revenue Code which will exempt from the estate tax any proceeds of national life insurance payable on the lives of soldiers who died during the past war or as the result of injuries incurred therein.

Respectfully,

AARON HOLMAN.

Distribution of American Research Funds

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD portions of an article on the subject Distribution of American Research Funds, by Clarence A. Mills, of the University of Cincinnati, which appeared in the magazine Science for February 6, 1948.

Mr. President, this article proves the contention of many appearing as witnesses on subjects related to the science foundation bill, showing that funds given or appropriated are not uniformly or widely distributed. If we are to have a science foundation law, and if the Government is to use its funds for research, it must see to it that the funds are distributed for all of America, and not for a favored few. If scientists know only how to take care of themselves first, I wonder where in America we can get persons who can look after the general welfare first. There is real food for thought in this article.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

DISTRIBUTION OF AMERICAN RESEARCH FUNDS

(By Clarence A. Mills, laboratory for experimental medicine, University of Cincinnati)

Equity and wisdom in the distribution of Federal research funds seem of paramount importance in the years ahead. * * *

There exists no evidence that native intelligence is better in one part of the United States than in another. * * *

In order that future funds may be distributed to the best advantage of the country as a whole, I have sought information from past distributional techniques in the field of medical research, with which I have been most closely in contact during the past 30 years. My findings bring out very disturbing inequalities in the granting of such funds—inequalities so pernicious in end results as to indicate the need for an entirely new basis of action with the large Federal outlays in future years.

* * * * *

MEDICAL RESEARCH FUNDS STUDIED; METHODS

Because of the long-term dominance exerted over medical research by the older institutions of the eastern seaboard (Harvard, Yale, Johns Hopkins, Columbia, Pennsylvania), the following Northeastern States have been set off in a group by themselves: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Delaware, and the District of Columbia. Although this small corner of the United States contains less than 30 percent of the country's total population, it gets 50 to 80 percent of all research funds.

* * * * *

American Cancer Society

Of the $14,138,897 raised by this society during 1945 and 1946 by public subscription all over the country, only 35.9 percent was contributed by the Northeastern States listed above; but in the distribution of these funds for research purposes up to February of 1947, this same northeastern section received 66.7 percent of the total. The remainder of the country, which contained over 70 percent of the total population and contributed 60.5 percent of the funds, received only 33.3 percent of the research money distributed. Of the research fellowships supported by these funds during this period, 34 were for work at institutions in the northeastern section and only 14 for work in the remainder of the country.

Let us glance now at the membership of the committee on growth of the National Research Council, which handled the allocation of these research grants and fellowships. Before July 1, 1946, 10 of its members held posts in institutions of the northeastern section and only 2 elsewhere; since July 1, 1946, the proportions have been 16 and 3. Similar disproportion exists in its associated research panels set up for channeling requests for funds: 53 from the Northeast against 24 from other parts of the country up to July 1, 1946, and since then, 68 against 36. Four northeastern institutions with representation on the committee (Harvard, Johns Hopkins, Yale, and Columbia) received 29 percent of the total distribution and 21 percent of the research fellows, while the best any top four institution not so represented could do was only 11 percent and 10 percent, respectively. Over half of all research allocations and 63 percent of the research fellows went to institutions represented on the committee on growth (with its present 19 members).

National Research Council (1941–42 annual report)

Membership on the council in 1941–42 included 174 from the northeastern section and only 44 from the remainder of the United States. Its medical fellowship board in 1944 had 11 members from the Northeast and 10 otherwise, while its fellowship board in the biological sciences had 32 and 23, respectively, and the board in physics, chemistry, and mathematics, 23 and 13.

* * * * *

Rockefeller Foundation

In its appropriations of 1944, 1945, and 1946 for the support of medical teaching and research and for research in experimental biology, the foundation awarded 77 percent of the United States total to teaching and research institutions in the northeastern area.

John and Mary R. Markle Foundation

Of the payments made in 1944, 1945, and 1946 for medical-research grants in the United States, 58 percent were to institutions in the northeastern areas, 42 percent elsewhere.

Commonwealth Fund

Over the 5-year period, 1942–46, this fund granted 74 percent of its United States medical-research funds to institutions in the northeastern area and only 26 percent elsewhere.

International Cancer Research Foundation

The report of activities for 1943 indicates that 18 grants (69 percent of United States total) were made to workers in the northeastern area and 8 (31 percent) to workers elsewhere in the country. Of the 24 United States members of the advisory trustees, 22 (92 percent) are located in the northeastern area and 2 (8 percent) elsewhere.

Josiah Macy, Jr., Foundation

Of the grants for medical research in the United States during the 5-year period, 1937–41, 81 percent went to the northeastern area and only 19 percent elsewhere.

Ella Sachs Plotz Foundation

During the 5 years 1941, 1942, 1944, 1945, 1946, 48 grants (54 percent) were made to northeastern institutions or workers and 41 (46 percent) elsewhere in the United States.

Life Insurance Medical Research Fund

This recent addition to the medical research funds has a medical advisory committee of eight members—five located in the northeastern area and three elsewhere. Two committee members are from Harvard, two from Yale, and one each from Columbia, Vanderbilt, Minnesota, and Southern California Universities. Harvard received 16.5 percent of the funds distributed; Yale, 9.4 percent; and Columbia, 7 percent—a total of 33 percent thus going to these three institutions with top rating as recipients. Five institutions in the Northeast received a total of 43 percent of all funds distributed, while only 20 percent went to the luckiest five elsewhere. The Northeast received 51.3 percent of all funds—48.7 percent going to the remainder of the country.

Similar inequity occurred in the distribution of fellowships granted by this fund. Sixteen fellowships were granted to workers in the northeastern area, 22 to men elsewhere, but 22 spent their year working in northeastern institutions and only 16 in institutions elsewhere in the country—a net loss of 6 out of 22 young scientists from the West. Harvard received 16 percent of the fellows for their year's work; Yale, 11 percent; and Columbia, 5 percent—a total of

32 percent of all fellows thus going to work in these three institutions.

National Foundation for Infantile Paralysis

Annual Nation-wide money-raising campaigns provide funds for distribution by this foundation, and, for once, less than half of the funds (48.7 percent) went to the northeastern area with its 29.7 percent of the total United States population. In 1946 its general advisory committee consisted of 6 members from institutions in the northeastern area and 7 from institutions elsewhere in the United States; the committee on virus research, 3 and 5, respectively; and the committee on research for prevention and treatment of after effects, 4 and 13, respectively. Taking all the foundation's advisory committees for the whole 9-year period (1938–47), there were 21 members from the northeastern area and 28 from the remainder of the country. This represents the most equitable geographic distribution of membership thus far encountered in committees dictating the disbursement of research funds.

* * * * *

United States Public Health Service

The Service's report of roughly $2,000,000 in grants approved March 26, 1946, revealed fairly equitable geographical distribution of funds—only 38 percent to the northeastern area with 30 percent of the population. Membership on the National Advisory Health Council, which recommends the distribution of these funds, is composed of 14 members: 4 from the USPHS, 2 each from Harvard, Columbia, and the University of Illinois, and 1 each from the Universities of Wisconsin, Michigan, California, and Tulane University in New Orleans.

Here again, however, the evils of committee representation show up clearly. Seven institutions with committee representation were among the 13 highest on the recipient list, these 13 receiving 47 percent of all research funds distributed. The 6 highest on the list received 31 percent of the total. The 2 northeastern institutions with committee representation received 23 percent of all funds allocated to that section, while 22 percent of funds allocated to the remainder of the country went to the other 5 represented on the committee. Harvard, Columbia, and Johns Hopkins were, as usual, among the country's top 6 recipients.

DISCUSSION

"For unto everyone that hath shall be given and he shall have abundance; but from him that hath not shall be taken away even that which he hath."

* * * * *

The author is well aware of the justification usually given for present distributional inequality—the larger research institutions receiving the lion's share of funds are best equipped for the prosecution of research. Such justification was very appropriate with the emergency needs for quick results during the war years. In peacetime, however, the basic need is not for quick results but rather for the broadest possible distribution of research opportunity to the country's whole population, especially where governmental funds or those collected from the whole country by popular subscription are concerned. There can be little real justification, for instance, for the New England and North Atlantic States with 30 percent of the country's population and contributing 39.5 percent of the cancer funds collected, receiving 66.7 percent of the research funds disbursed (by a committee on which they have a disproportionately large representation).

* * * * *

Corrective measures, however, must go beyond restoring a proper balance between East and West. The present tendency to benefit representation on disbursing committees must be broken. Scientists themselves have demonstrated a most unfortunate inability to act without bias in overseeing the distribution of funds in their own fields. No one believes that the politicians would themselves do any better, but theirs is the duty of so legislating that the proper end will be accomplished where public funds are concerned.

In the long run, the greatest good to the greatest number would probably be served by securing the distribution of Federal research funds—or those collected by public subscription—on a State-population basis. Perhaps the less wealthy States should even receive an added bonus to stimulate development, instead of being almost completely cut off as at present. Distribution within the State would present the next problem, for State committeemen would still be inclined to favor the institutions they know best—their own.

Pay and Retirement Benefits for Postal Employees

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on Saturday, February 14, 1948, at the annual meeting of Eastern States Postal Employees' Councils, in Harrisburg, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I think I know something about your business. There is hardly a job in or around the post office that I haven't had some personal contact with or with which I was not made thoroughly familiar in the discussions around the dinner table in my father's home.

For, you see, I come from a postal family. My father was a career postal employee. On vacations and after school hours all through my early years I worked in the post office; I carried the mail; I sorted mail; I jumped on and off the package trucks. I have had sore feet and an aching back in my time in the same cause in which you fellows have had the same occupational diseases.

When legislation comes up in the Senate involving postal employees and the postal service I can therefore look at it, I think, in much the same way any of you would look at it. It's real to me. By association, it's mighty personal to me, too.

When your representatives go before the committees of the Congress as they have been doing recently in support of better treatment for the postal employee, better retirement features, or higher pay, I can think back quite easily to a period of inflation right after the First World War, when my family was dependent on my father's post-office salary while the cost of living was shooting out of sight. On this matter of more realistic retirement benefits, I only have to recall how my parents were expected to get along on a retirement benefit of not much more than about $25 per week in the years between the time my father retired and his death. This was his reward, this pension of about $25 per week, for about four decades of service in Uncle Sam's post-office system.

So when the postal employees of Pennsylvania began to bombard my office not so long ago with telegrams and letters urging better retirement benefits and a cost-of-living pay increase enabling them to a certain extent to run after, but never quite catch up to, the soaring cost of existence in this inflation, I did not need much urging in declaring my support.

You have that support and you will always have it. And perhaps what I have just said might explain to you why I have from time to time raised the roof down in Washington with supposedly intelligent persons who sometimes appear before our committees and make bland and casual know-it-all remarks about the lazy Federal pay-rollers, the bureaucrats, the loafers, gobbling the tax dollars out of the trough of Uncle Sam's pay roll and giving nothing for their pay but just sitting around throwing away the taxpayers' dollars and enjoying life at the taxpayers' expense.

Who do they mean? Do they mean the postal employees? Well, no, they don't actually mean the postal workers because they do see the postman out plodding around in the slush and the cold and the snow and in the heat and the hail and the rain; they know that their packages and business letters get through promptly; they concede, grudingly sometimes, that they guess they don't mean the postal employees.

Now I am very proud of the postal service just as you are all, I am sure, mighty proud of it too. But it strikes me that by and large—sure there are some exceptions, but by and large—the devotion to service of the postal worker is matched—mind you, not exceeded, but matched—by career employees in many of our Federal agencies and departments. I just do not like these blanket accusations and condemnations of the Federal employee because they are not justified; they are libelous and slanderous and unfair, dirty misrepresentations.

Does this mean that I think everyone who works for the Federal Government is a shining example of dedication to the public trust? Of course not. There are incompetents on the Federal pay roll too, just as perhaps there might be some in the Congress. I personally have raised all sorts of uproar with some of the bureaucrats myself over inefficiency and lack of imagination which are bound to be found in any organization.

I think the postal employees have succeeded more than any other group of Government employees in refuting these slanders on their efficiency and enterprise and initiative. I can tell you that you have sold yourselves as a group to all the people in the country and even, I might add, to a super-economy-minded Congress. Washington is full of lobbys and lobbyists but very few of them are as effective as the postman who carries the mail so faithfully, the clerks who handle it and the railway mail and motor vehiclemen who transport it all over the country. Your excellency of service and devotion to duty are the most effective lobbying activities in your behalf. When your representatives come before Congress, they find the good will has already been created for them by the rank and file back home in every post office and in the postal service.

That does not mean that you have always gotten from the Congress the things that you want and have a right to expect or gotten them promptly enough when you did get them. The delays in acting upon employee benefits of all government employees including the postal employees and sometimes particularly the postal employees have at times verged on the tragic side.

Right now we have this pay increase legislation under consideration in committee. Most of the bills recognize the horrible injustice to postal employees and to all government employees represented by their fixed preinflation wages and the shooting star level of living costs. Without doubt before the Eightieth Congress completes its work it will have acted on a pay raise bill, perhaps not the thousand dollar raise which I favor but at least some raise. I am hopeful and pretty sure we will also see the final

enactment of improved retirement legislation. These things will help the postal employee.

But every postal employee and every government employee and a lot of us in the Congress certainly recognize that the help that comes now is long overdue. The moment price control went out of the window the government employee and the postal employee along with every other American who lives on a rigidly fixed income started losing ground financially at an alarming rate. There is not yet any clear cut sign of an end to this over-all upward trend in prices although optimists the last few days have been reading all sorts of significance into the dip in the commodity and stock markets. These have been taken as signs that the peak has been reached and the downward turn begun. There are those who counsel us now that all our fears about inflation can be thrown aside because inflation is ended.

I am not an economist, I am not a soothsayer or a prophet or a fortuneteller, but as a member of the Joint Congressional Economic Committee which is supposed to be keeping close scrutiny on all of the economic facts of life as they affect our prosperity, and which has been given the advantage of all sorts of expert testimony from business leaders and labor leaders and economists and Government experts, I have seen nothing in this market dip and in the momentary flurry of price reductions of a few cents here or there in certain commodities to convince me that the upward inflationary trend has in fact come to an end.

There has been a great to do over the sudden drop of a few cents in livestock and meat prices. Meat has become something of a barometer to our over-all well-being. It is true that a tremendous sudden surge of livestock to market a few days ago following the drop in corn and wheat led to some dramatic drops in some cuts of meat. But it is significant that within a few days the volume of livestock marketings suddenly dropped. The meat which came to market at such a flood all of a sudden appears to have been livestock normally due to hit the market in the spring and summer. Much of it, I understand, was underfed livestock.

Now here is the alarming thing about it: We have known for some months that our meat animal population in this country has fallen off substantially as a result primarily of the bad corn crop and the very high corn prices. All of the responsible experts told us several months ago that we faced a severe shortage of meat this coming spring and summer. No one has denied this although some of the industry representatives have attempted to make it appear that the shortage will not be really severe in terms of per capita consumption—that the amount of meat per person will be reduced only a few pounds, say 10 pounds or so. This sounds mild until we remember that we have 140,000,000 people in the United States, most of whom like to eat meat and most of whom now feel that they have not been getting a fair share of meat because their budgets do not allow them to buy as much meat as they feel they need. We have had witnesses come before our committee in Congress and tell us frankly that they can afford meat for their families in some cases only as often as once in 3 weeks. These people are not relief clients, or charity cases. They are working people. In many cases they are making more money than ever. And now as a result of this drop in commodity prices a few days ago we had a sudden delivery to the stockyards of animals which normally would not have been marketed for several months. When the pinch really arrives in the spring and summer on meat supplies those animals prematurely marketed now will mean that many less animals coming to market then, thus aggravating tremendously the shortage that we had previously expected had the normal flow of livestock not been disrupted as it was a few days ago.

I therefore do not see how, in regard to meat anyway, we can expect any continuing decline and stability of prices. I seriously believe that meat prices, in the absence of any Government control, will not only shoot right back up to where they were but will just keep on climbing until one thing happens—the people have no money to buy it. It is one of the last items that our citizens will resist buying.

When prices start coming down only for the reason that people no longer have the money to pay them—I'm not referring now just to buyer resistance based on the belief that prices are too high, but rather on the pure and simple fact that the mass of our people don't have the money any more with which to maintain a decent standard of living—when prices, as I said, start coming down for that reason, then, my friends, we are really in for some tough and frightening experiences.

How close are we to that point no one seems genuinely able to say. The statistics show an alarming shrinkage not only in the purchasing power of our people as reflected by current wages and current prices but also an alarming shrinkage in the savings of our people—the backlogs. War bonds in the last few months have, as I recall, been cashed in at a higher rate than the rate in which they are being purchased. This never happened before except perhaps in the days immediately after the ending of the war, when a lot of people felt that they could not wait another minute to buy some of the things that for patriotic reasons they had put off purchasing during the war. But the lack of availability then of some of the most wanted items led to a reversal of that trend and savings in war bonds consistently increased over redemptions.

Those savings were what we had been counting on to help us to sustain indefinitely the tremendously high level of industrial activity we have been enjoying. As those savings shrink and become intermixed with current income and outgo and made a part of the daily budget and used for current living expenses and not for capital expenditures, the ability of our economy to sustain anything like the current level of production and employment becomes seriously threatened.

Every American has a tremendously vital stake in this issue. Rich or poor, every American will be seriously affected by any substantial drop in our economic level. We have many methods these days that we did not have in 1932 to ameliorate the hardships of unemployment and business stagnation, but, believe me, a depression, or even a recession, is no fun. It's no fun at all. A lot of people get hurt. Some get hurt badly. Our democracy begins to verge on thin ice in times of economic travail. Right now when just about the entire civilized world depends for its eventual recovery on the continuation of a prosperous America and a stable America and a free America, an America which can lend its tremendous weight toward the establishment of a decent world in which freedom can live, this country cannot afford economic upheaval. The world cannot afford to have it in America. Yet this inflation, if it is not halted, invites that upheaval.

The wage increases which you people expect and deserve may to a certain extent be considered inflationary in that it will put some additional purchasing power into your hands. If prices are allowed to continue to rise unchecked, then your increased purchasing power will be temporary and the net effect of your raise inflationary. That must not be allowed to happen. Your wages will be raised because the price rise has already driven many of you against the wall financially. You need the raise. But as much or more than you need this raise in pay, you and all Americans regardless of level in life absolutely must have a sane economy restored to our country. This must never be lost sight of.

I hope that I have not been a messenger of gloom here today. It is always a pleasure to meet with the postal employees because the postal service is so close and personal a thing to me. I just want to say in closing that I thought President Truman had performed one of the finest services possible for the whole postal service and for Government service as a whole in selecting as his Postmaster General a career postal employee. I heartily concur in that appointment.

United States Stand on the Palestine Situation

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. BREWSTER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "United States Stand on Palestine Viewed as Starting UN on League's Path," written by Sumner Welles and published in the New York Herald Tribune of February 17, together with a memorandum which I have had prepared dealing with the legal problems involved.

There being no objection, the article and memorandum were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of February 17, 1948]

UNITED STATES STAND ON PALESTINE VIEWED AS STARTING UN ON LEAGUE'S PATH—SUMNER WELLES ATTACKS COUNSELORS OF CAUTION, SAYS HOLY LAND WAR WOULD REALIZE THEIR FEAR—SOVIET TROOPS IN THE MIDDLE EAST

(By Sumner Welles, former Under Secretary of State)

It is hard to arouse a democracy to impending danger when the clouds on the horizon still seem no larger than a man's hand. Even Winston Churchill could not waken the British people to the menace in the rise of nazism. The peril to us in Japan's aggression against China and in Mussolini's invasion of Ethiopia went largely unperceived. But even if the tragic lessons of the recent past are to be so easily forgotten, the clouds now looming are no longer on the horizon. They are hanging over us.

This Government has repeatedly announced that the United Nations is the foundation of American foreign policy. Yet because of the failure of the United States to adopt a consistent and courageous policy on Palestine, the United Nations is today faced with the gravest dilemma in its history.

Save for Britain in the days of Baldwin, it would be difficult to find a more sorry instance of a major power refusing to face facts.

The decision to partition Palestine was taken after full investigation and debate. It was in strict accordance with the provisions of the Charter. The United States was in great part responsible. This country played a leading role throughout the events that led up to that decision.

LACK OF ENFORCEMENT

The American Government failed, however, to insist that the United Nations must be enabled to enforce its decision, and to protect life and property in Palestine until

the independence of the two new states had been finally established.

For lack of any United Nations police force, the members of the Palestine Commission have now been told by the British that they will be assassinated if they set foot in Palestine. Major hostilities between Jews and Arabs are imminent. The United Nations cannot carry out its decision. Because the United States has during the last 2 months renounced every semblance of leadership, the smaller countries are increasingly reluctant to assume any responsibility.

The Palestine Commission has at length been compelled to ask the Security Council to determine that there is a threat to the peace and to take action under the Charter. And Washington still remains silent.

It is notorious that there is a sharp cleavage of opinion within the Government. The Army and Navy, supported by some officials of the State Department and of other departments, insist that the United States must take no action to back up its words. They allege that our growing controversy with Russia makes it unwise for us further to antagonize the Arab states or jeopardize this country's access to Middle Eastern oil.

SOVIET TROOPS?

Such arguments are wholly unconvincing. The British Government cannot prolong its mandate in Palestine. Once British forces withdraw, war will result unless the United Nations can send an international constabulary to Palestine. If hostilities break out, the Soviet Union will undoubtedly insist that its vital interests require it to send its own forces to maintain order in its neighborhood.

Should our service departments prevail upon the administration to refuse to exercise any leadership within the United Nations to maintain peace in Palestine, they will pave the way for what they fear most, namely, the extension of Soviet control over the Middle East.

The arguments on oil are just as unrealistic. If a new war breaks out, the middle eastern oil resources would certainly not be available to western Europe nor to the United States. Should peace be preserved, since the Arab governments depend upon the royalties from their oil concessions, they are hardly likely to oppose their exploitation.

But we are face to face with a far more fundamental issue.

Japan defied the League of Nations in 1932 and was permitted by the great powers to do so with impunity. The Italian aggression against Ethiopia, the civil war in Spain, and the rape by Hitler of Austria and of Czechoslovakia were the inevitable result.

The Arab states have now defied the United Nations.

UNITED STATES-SOVIET CONCURRENCE

The partition of Palestine is the one major question upon which the policies of the United States and of the Soviet Union have coincided. Yet this Government has so far failed to initiate any measures within the United Nations to guard against the Arab aggression which is under way, or even to protest the flagrant violation of their Charter commitments by the Arab states.

If the United Nations is, in fact, the foundation of American policy, the United States must support the United Nations, not only when that is convenient and easy, but quite as much so when such support implies effort, sacrifice and risk.

The League of Nations collapsed because the major powers then members of the League supported the League only when it suited their own ends. They failed to support the League when it seemed that their selfish interests might be prejudiced.

We are seeing exactly the same trend. The Palestine question is a test case. Should the United States persist in its present blind inaction it will be preparing the way for the failure of the new international organization. And if the United Nations fails, the one hope humanity today possesses for the rule of law rather than the rule of force, for the freedom and progress of mankind, and for the establishment of a peaceful world order will vanish with it.

FEBRUARY 17, 1948.

Memorandum for Senator BREWSTER.

Subject: Palestine—Embargo and restrictions on arms shipments.

House Joint Resolution 306 (the Neutrality Act) adopted November 4, 1939, establishes a National Munitions Control Board and authorizes the Secretary of State to administer that Board. Section 12 (d) of this statute provides:

"It shall be unlawful for any person to export or attempt to export, from the United States to any other state, any arms, ammunition, or implements of war listed in a proclamation referred to in or issued under the authority of subsection (1) of this section, or to import, or attempt to import, to the United States from any other state, any of the arms, ammunition, or implements of war listed in any such proclamation, without first having submitted to the Secretary of State the name of the purchaser and the terms of sale and having obtained a license therefor."

This statute is administered under regulations published by the State Department, which bear the following preamble:

"Pursuant to the authority vested in the Secretary of State by section 12 of the joint resolution approved November 4, 1939 (54 Stat. 10; 22 U. S. C. 452), sections 1 and 2 of the joint resolution approved January 31, 1922 (42 Stat. 361; 22 U. S. C. 409, 410) and proclamations issued pursuant thereto the regulations governing the international traffic in arms, ammunition, and implements of war, heretofore promulgated by him, are hereby superseded by the following regulations."

Section 201.12 of these regulations provides:

"Export licenses: The Secretary of State will issue export licenses to appropriately registered applicants upon the presentation of applications for license, properly executed, unless the exportation of arms, ammunition, or implements of war for which a license is applied for would be in violation of a law of the United States or a treaty to which the United States is a party (see secs. 201.37-201.40 and pt. 204): *Provided, however*, That export licenses shall not be issued in any case when it shall have been determined under the authority of the President, in accordance with the provisions of section 6 of the act of Congress approved July 2, 1940 (54 Stat. 714; 50 U. S. C., app. 701), that the proposed shipment would be contrary to the interest of the national defense."

Published with these regulations are copies of proclamations issued by the President forbidding shipment of arms to China, Honduras, Nicaragua, and Cuba. No such proclamation has been issued by the President precluding the shipment of arms to Palestine.

The State Department has published no order or regulation prohibiting the licensing of arms to Palestine. It published a news release on December 5, 1947, declaring that "in view of the current disorders in the Middle East, the United States is discontinuing for the present licensing of all shipments of arms to the troubled areas. The shipment of arms and ammunition licensed to the countries of the Middle East area affected during 1946 and the first 10 months of 1947 are as follows."

The table which follows in this release indicates that no shipments of arms or ammunition were made to Palestine.

I have quizzed the officials of the Munitions Division of the Department of State specifically and exhaustively on this point and they assure me that their directions to withhold license for shipments of arms to Palestine come to them by interoffice memorandum from the Secretary of State.

It will be noted that the Department's regulation provides that license will issue "unless the exportation of arms, etc., would be in violation of a law of the United States or of a treaty to which the United States is a party."

I have asked the Munitions Division to cite the law or the treaty which would be violated were shipments of arms permitted to Palestine.

Mr. E. T. Cummins, who is Chief of the Munitions Division of the Department of State, and Executive Secretary of the National Munitions Control Board, called my attention to the President's message of April 15, 1947 (H. Doc. 195), pursuant to which the Department of State is asking for a revision of statutes under which it derives its authority for munition controls. I find in this document the following very interesting language:

As long as section 12 of the Neutrality Act is in effect that requirement of impartiality is still the law, and the Secretary of State must treat aggressor and aggrieved, peacemaker and troublemaker equally by granting every application for a license for the exportation of any arms, ammunition, or implements of war unless such action would be in violation of a treaty. Such a provision of law is no longer consistent with this country's commitments and requirements. We have committed ourselves to international cooperation through the United Nations. If this participation is to be fully effective, this Government must have control over traffic in weapons which will permit us to act in accordance with our position in the United Nations and will be adaptable to changes in the international situation. Therefore there must be new legal provisions enabling the exercise of discretion in the granting or rejecting of applications for export or import licenses for arms, ammunition, and implements of war and related items."

You will note that this statement is an admission that the Department does not have the authority it needs to deny export licenses where no treaty would be violated. Mr. Cummins suggested to me that the agreements of the United Nations have the force of treaties.

The United Nations has not, however, by resolution or other action directed or requested its member nations to withhold shipments of arms to Palestine. I have checked this point thoroughly with the local office of the United Nations. Mr. Cummins was unable to cite any specific law or any treaty which would be violated by arms shipments to Palestine. He falls back upon the general authority to control exports contained in the act of July 2, 1940. the pertinent portion of which reads as follows:

"SEC. 6. Whenever the President determines that it is necessary in the interest of national defense to prohibit or curtail the exportation of any military equipment or munitions, or component parts thereof, or machinery, tools, or materials, or supplies necessary for the manufacture, servicing, or operation thereof, he may by proclamation prohibit or curtail such exportation, except under such rules and regulations as he shall prescribe. Any such proclamation shall describe the articles or materials included in the prohibition or curtailment contained therein. In case of the violation of any provision of any proclamation, or of any rule or regulation, issued hereunder, such violator or violators, upon conviction, shall be punished by a fine of not more than $10,000, or by imprisonment for not more than 2 years, or by both such fine and imprisonment. The authority granted in this section shall terminate June 30, 1942, unless the Congress shall otherwise provide."

The proclamations issued by the President under this section merely describe the items to be treated as arms and ammunition. He has issued no proclamation under this authority to withhold shipments of arms to Palestine. The Department of State's action in denying export licenses for arms shipments to Palestine is therefore a high handed, arbitrary, and wholly unwarranted usurpation of legislative authority. The request made by the President in his message of April 15, 1947, transmitting a proposal for legislation to control the exportation and importation of arms, etc., admits that the Secretary of State must grant every application for a license for the exportation of arms unless such action would be in violation of a treaty. No action has been taken by the Congress to grant the authority asked for. Nonetheless this Department, presuming to know what is good for the world and this Nation far better than the Congress, proceeds to exercise that control without authority.

Recent precedents which may be cited to show that our State Department has not always stood on the side lines as an impartial observer are: (1) The assignment of 50 cruisers to Great Britain before our entry into the war, but after Great Britain had declared war on Germany; (2) the shipment of supplies of arms and ammunition to the Finns during their encounter with the Russians in 1939; and (3) the Flying Tiger episode in connection with which we supplied large number of airplanes equipped with machine guns and bomb racks, set up a factory for the manufacture of military aircraft for Chiang Kai-shek government and continued to supply this factory with the machinery and tools for the construction of military aircraft, all with full knowledge and consent of the Department.

American Principle Applied to a Joint European Recovery Program

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "American Principle Applied to a Joint European Recovery Program," which I delivered at Peoria, Ill., on Saturday, February 7.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN PRINCIPLE APPLIED TO A JOINT EUROPEAN RECOVERY PROGRAM

(By HOMER E. CAPEHART, United States Senator from Indiana)

INTRODUCTORY NOTE

For 30 years our international efforts have failed to accomplish the purpose claimed for them.

The Marshall plan, as now proposed, faces the same result unless aid to Europe is divided into three phases:

1. Restoration of European economy on a business principle—private enterprise to private enterprise.

2. Direct relief to the needy peoples of Europe through government-to-government gifts.

3. Stabilization of European currency through the International Monetary Fund and the International Bank for Reconstruction and Development.

This report tends to deal only with phase 1 and the methods by which it should be applied. The success of phase 1, however, will have an indirect effect on the success of phase 2 and phase 3.

HOMER E. CAPEHART.

EXPLANATION OF HOW TO APPLY AMERICAN PRINCIPLES TO EUROPEAN RECOVERY

President Truman and Secretary of State Marshall said to the Congress: "Give all or nothing."

I say: "Do it right or don't do it at all."

Our failures

For 30 years the United States has experienced nothing but failures which have grown out of hasty, ill-advised action based on emergencies which found this Nation lacking in courageous leadership.

We fought World War I to save democracy. Then came the Versailles Treaty and the Disarmament Conference. The Kellogg-Briand Treaty was like the others—it never accomplished what it was designed to accomplish.

Then came the depression and that destructive philosophy of scarcity which is still with us today.

Prewar farces

War again threatened and we had the Neutrality Act, cash and carry, and finally lend-lease; we were only fooling ourselves. Then we gave 50 destroyers to England with the silly belief they would keep us out of the war.

Business as usual was being carried on with Japan while our diplomats were edging closer to war with that nation.

Here we go again

The war clouds engulfed us. American free enterprise went into high gear. American people fought for survival both abroad and at home.

In the meantime we signed the charter of the four freedoms which were to be the terms of an allied victory for the world.

The United Nations was born as the savior of world peace. Bretton Woods and the Export-Import Bank were proclaimed the harbingers of permanent international prosperity.

War's end came with the birth of the atom bomb and a new fear of what the future has in store for the restless world.

Scraps of paper

Four Freedoms, United Nations, Bretton Woods, Export-Import Bank; scraps of paper as we began getting the returns from Tehran, Yalta, and Potsdam.

The Morgenthau plan and the division of Germany boomed into the faces of those hoping for a quick return to the peaceful ways of the world.

Russia began grabbing. We began fearing. Then came the Greek-Turkey loan to stop Russia's march to the Mediterranean oil pool.

Now the Marshall plan.

We face another problem

It is not controversial that Europe is in need of economic recovery.

The 16 nations which have indicated a desire to participate in the Marshall plan could, as healthy, prosperous nations, form a great obstacle to a future war.

But today the threat of international conflict grows from the clashing of two ideologies: government by the people and government by dictators.

The United States has become great on the principle of free government and free enterprise. We believe this system could and should be applied with equal success in the distressed European nations if they are to become prosperous.

It is the principle for which we fought in two great conflicts. It is the principle upon which we base our hope for a lasting peace. It is the principle which should guide us in any efforts to aid Europe.

Without this principle the Marshall plan, or any other plan, will fail and we will have weakened the very structure of our own system.

Are we to be consistent?

Under the Marshall plan it is proposed the things Europe needs to restore production and stability in economy will be procured by a representative agency of our Government.

That agency, directed by an administrator, will distribute the materials—and even money (reference: Senate Foreign Relations Committee report of December 19, 1947) into the hands of the governments of those nations with whom aid treaties are signed.

Those governments then will distribute the materials into the channels of their own choosing, effecting a form of state socialism bordering on that ideology of government with which we are clashing today.

Government to government

Under such a plan of government-to-government operation, we fail to inspire the individual effort which America has found to be the bulwark of prosperity and greatness.

Such a procedure shrinks the will of private capital to invest in the resources of its own country. If a nation is worthy of assistance by the United States it must be worthy of investment by its own nationals.

The very crux of any plan for relief of any European nation should be the worthiness of that nation for assistance. If its own people are wary of its worthiness, should not we be wary of its worthiness?

The dollars are there

We need have no concern over the ability of practically all of the 16 nations to avail themselves of monetary assistance in a recovery program.

In short- and long-term investments and bank balances in the United States alone these 16 nations have $13,000,000,000 in good credit dollars (reference: Senate Foreign Relations Committee report, December 19, 1947, and statement by the committee for the Marshall plan).

Authoritative information has been accepted by those studying the Marshall plan that other vast holdings by the 16 nations and/or nationals of those nations exist in South and Central America and Switzerland.

Then there is Bretton Woods

Each of the 16 nations can turn to the International Bank for Reconstruction and Development for a loan to meet at least a share of the needs. That is what the bank was established for by the 44 participating nations in 1945.

The bank's capital was fixed at $10,000,000,000 of which the United States share was $4,175,000,000. The bank's power, under the treaty approved permits it to make direct loans and to guarantee loans of foreign countries or private foreign corporations sold to private investors.

At the same time, the International Monetary Fund of $8,800,000,000 was established to maintain orderly exchange rates and to eliminate arbitrary exchange restrictions and discriminations. The United States contributed $2,750,000,000 to this fund.

Hailed as the answer

President Roosevelt, in an address to the Seventy-ninth Congress on February 12, 1945, said of our membership in the International Monetary Fund:

"The United States should act promptly upon the plan for the International Bank, which will make or guarantee sound loans for the foreign currency requirements of important reconstruction and development projects in member countries."

He also said:

"This measure, with others I shall later suggest, should go far to take care of our

part of the lending requirements of the postwar years. * * * As confidence returns, private investors will participate more and more in foreign lending and investment without any Government assistance."

It is important to note that Russia was not a member of the fund.

Here is business approach

We must, therefore, assume with all the right of one willing to help, that the 16 nations of CEEC can also help themselves to a goodly degree.

It is important to the success of their recovery that those nations and their nationals have a stake in the progress toward recovery. The risk is great. Mr. Marshall said on December 10: "The imponderables are many. The risks are real."

Are the American people to assume those risks alone? Or are the 16 governments and their wealth-holding nationals ($13,000,000,000 in United States) willing to take the risk with the Americans?

Common cause—common effort

If Americans are willing to invest $1 in the future freedom and prosperity of any one of those 16 nations, the peoples of that nation should be willing to invest another $1 toward the same end. This should be particularly true if Americans are willing to make an outright gift of huge proportions of sufficient necessities to relieve the physical hardships of the hungry and cold in those countries.

Americans were willing to take the same risk in their own country in 1932 when a Republican administration said that formation of a Reconstruction Finance Corporation would save American economy and the free-enterprise system.

Americans have that same confidence in the free-enterprise system succeeding in those nations where the people are confident the American way is best.

An international RFC

Let those nations where confidence prevails step forward with funds to help themselves; then Americans will step forward with an equal number of dollars to aid in the industrial recovery of that nation.

With these dollars will be formed a vast pool of dollar credit which can be loaned for the purpose of restoring the production of that country.

Money can be poured into private enterprise in the foreign nation through a credit allowance against the RFC in that nation. This will entitle applicant to an equal credit against the American RFC.

Armed with his purchasing credit, the businessman moves into the world market to procure the materials he needs to restore production so badly needed in his country.

Eliminates government buying

By this method we free the market from the destructive influence of over-all government purchases which tend to drive prices high and which prevents the orderly processes of free enterprise.

Elimination of Government buying also inspires the interest of private investment and restores the faith of people in foreign nations in the processes of a free-enterprise system.

If we are to make industry subservient to the government in each of the foreign nations we defeat the purpose and intent of our willingness to help.

Greater control over risk

With private capital and private gain involved in the movement to restore the economy of those nations we have greater control over the chances of success. This feature is the contended goal of the greatest minds which have been consulted in the matter.

Bernard Baruch told the Senate Foreign Relations Committee that the 16 nations should form an economic unit. Former President Herbert Hoover told the committee the Government's only concentration for spending at present should be toward direct relief. John Foster Dulles told the committee the United States should stipulate that the amount of aid from the United States should depend upon each nation's cooperation in attaining these goals.

Three top foreign-affairs advisers are interested in how much the foreign nations will help themselves and how we can more competently assure success of the venture.

Experience is best teacher

Since July 1, 1945, the United States has made available to the Marshall plan countries and western Germany (figures to November 1, 1947) a total of $11,014,000,000, of which $9,570,000,000 has been utilized. This is more than half of the total now sought for the Marshall plan in a 4-year period.

All of this aid has been on a government-to-government basis except in the case of UNRRA costs of $1,585,000,000, which was in part by direct distribution to the people by agents of our Government.

This 2-year direct expenditure for foreign recovery by the United States is more than half our total Federal debt in 1930 and is more than the entire cost of the United States Government in 1940. Yet the economy of those nations has gradually dipped to the point where it is now admittedly a great risk to additional investment.

(Sources: Report of Council of Economic Advisers to President, November 1947; Congressional Joint Committee on Reduction of Nonessential Federal Expenditures; Report of Committee of European Economic Cooperation, vol. 2; State Department Bulletin, May 18, 1947.)

We used plan during depression

Our experience in restoring our own industry and free-enterprise system at a critical time places us in the position of knowing best how to meet Europe's crisis. We used the Reconstruction Finance Corporation plan during the depression and are still using it.

We used the RFC to finance worth-while capital improvements necessary to a progressive production system at a time when private enterprise was pressed financially. We also used the RFC effectively to meet the great war-time production expansion.

In my judgment, the same system can be utilized to meet Europe's needs in the most businesslike manner to reduce the risk to the Americans who are being asked to invest in Europe's ability to restore its economy.

THIS IS THE AMERICAN WAY

We should create an international division in the Reconstruction Finance Corporation. Each European nation seeking to participate in the plan would likewise create a reconstruction finance corporation.

The American Congress should authorize the new RFC division to purchase not less than 50 percent of the stock in the RFC of any of the 16 countries which meets the participating requirements. At this point we should definitely include western Germany as a seventeenth nation of the CEEC, since sufficient German credit dollars are available outside Germany to permit compliance.

Each participating country would form a corporation in an amount of capital to be approved by the American RFC.

The stock purchased by the American RFC would consist of preferred stock and would have equal voting rights with the common stock which would be owned by the participating European country.

American RFC would have the right to sell its preferred stock at any time on the open market.

The preferred stock would be retired no later than 40 years from date.

Congress would appropriate $——— to the credit of the American RFC for use in purchasing stock in any participating European RFC.

PATTERN FOR EUROPEAN RFC

The corporate organization of each European RFC could be similar to that of the American RFC with the addition of preferred and common-stock provisions in their charters. The division of stock should be as recommended by the American RFC.

At all times each European RFC should issue common stock equal to the investment of either the participating government or its nationals.

WHAT EUROPEAN RFC WOULD DO

Equipped with the dollar credits of the American RFC and those made available through the collateral of the participating country or its nationals, each European RFC would be prepared to aid in the financing of agriculture, commerce, and industry, including the facilitating of exports of agriculture and other products.

It would be empowered to make loans or furnish credits to: (1) Individuals, firms, or corporations; (2) political subdivisions of the country; (3) banks, mortgage agencies, and insurance companies.

The board of directors of each European RFC would determine the conditions and terms of the loans which could extend from 60 days to 40 years. No loans would be made after 10 years from the time of organization of the RFC unless the preferred stock owned by the American RFC has been retired.

We can do more with less money under this plan because interest and principal payments can be used as a revolving fund to make additional loans.

Any European RFC should be prohibited from making any loans to political subdivisions of government for the purpose of financing the acquisition of any Government-operated industry or utility. This restriction, however, should not prevent the loaning of funds for the purpose of erecting a Government-owned public utility.

It should also be the duty of each European RFC to perform such other functions as will effectually carry out the purpose of promoting industrial and agricultural production in the participating country.

Each European RFC could employ engineers, technicians, secretarial help, advisers and legal counsel. It should establish and staff regional offices in the participating country.

Each European RFC should be governed by a board of directors of seven members, three of whom should be selected by the holders of the preferred stock (American RFC); the other four members by the holders of the common stock (participating country and/or its nationals). Upon retirement of the preferred stock the common stockholders should name the entire board.

Each European RFC should be required to submit a quarterly report to the American RFC.

BENEFITS OF THE AMERICAN WAY

By this plan, Americans call upon the Europeans to share in the risk of saving their country in a cooperative manner. It inspires the confidence needed to successfully preserve freedom and independence.

This plan is the answer of the free enterprise system to the ideology of government by dictators.

It preserves our principle. It preserves our pledge to protect Americans and American resources.

If we are right in our system in America, then our system is the greatest force with which to oppose communism.

CONCLUSION

We have not attempted in this report to deal with the merits or demerits of an outright gift to European nations to meet the needs of the hungry and cold peoples of those nations.

That is a separate phase of European relief and should be dealt with separately even

though the Marshall plan as proposed fails to do this.

We have not attempted to deal with the monetary stabilization phase of the over-all program other than to point specifically to the provisions contained in the Bretton Woods agreement and the International Monetary Fund.

It was felt that each phase of the complete problem should be dealt with separately since the requirements are so vastly different that to join them is only to confuse the issues involved in each.

By this plan to restore the economy of each nation we have not called for a weakening of the present monetary position of any nation, but we have sought to preserve those existing dollar assets for each nation.

The importance of a single feature of this plan to attain recovery through free enterprise rather than through Government dictation is best described in the words of the Committee for the Marshall Plan: "self-respecting peoples, who believe in a free, democratic process, will not accept foreign dictation."

HOMER E. CAPEHART,
United States Senator of Indiana.

Civic Problems, Civic Bodies

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have published in the Appendix of the RECORD the article by Jesse C. Suter in the Sunday Star of February 8, 1948, entitled "Civic Problems, Civil Bodies." It is such an able article that I feel it should be brought to the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD as follows:

CIVIC PROBLEMS, CIVIC BODIES—KIND OF VOTE OUR PEOPLE NEED MOST; HOME RULE DISTRICT WANTS AND NEEDS

(By Jesse C. Suter)

WHAT KIND OF GOVERNMENT IS NEEDED BY THE DISTRICT?

Lord Bryce, in the American Commonwealth, says: "The people of the United States, owing allegiance to State and Nation, have two patriotisms, two loyalties." To this Theodore W. Noyes added: "We of the District of Columbia, owing allegiance only to the Nation, have only one patriotism, one loyalty. We are Americans and nothing else. Our allegiance is undivided. Our Americanism is the more intense for its concentration."

Continuing, Mr. Noyes said: "Since the Washingtonian is a national American and a national American only—an American in a peculiar and unique sense—he is surely entitled to all the rights and powers which belong to the national American, except those (if today there are any) which he should sacrifice to meet a national necessity or to protect the national safety." These quotations were taken from an address by Theodore W. Noyes at a dinner of the Society of Natives of the District of Columbia, April 17, 1922, held in celebration of the one hundred and thirty-first anniversary of the laying of the first cornerstone of the District of Columbia.

The Auchincloss-Ball bill, now pending before subcommittees of the Senate and House Committees on the District of Columbia, is entitled "A bill for home rule and reorganization in the District of Columbia." It overlooks completely in its text any recognition of the fundamental truths stated above.

The framers of this bill, H. R. 4902, and its Senate companion, S. 1968, explain that the omission to include any recognition for national representation for the District of Columbia is due to being entirely beyond the designated scope of the committee. However, advocates of representation in the Congress and among the electors of President and Vice President are unable to see any impediment to recognition that it would not be home rule without such representation.

Another reason for the omission of reference to such fundamental Americanism was that it would require an amendment to the Constitution which would be considered by an entirely different committee. However, it is still not too late for the committees to recognize that home rule without District voting participation in the controlling Congress would fall far short of anything deserving the name of home rule.

The point of beginning of District home rule

Senate Joint Resolution 6, introduced in the Senate on January 6, 1947, by Senator ARTHUR CAPPER, Republican, of Kansas, is the first cornerstone of genuine District of Columbia home rule. Upon this foundation may be erected a structure of true Americanism which may be extended broadly so far as it does not impair full protection of the interests of the United States. The full text of Senate Joint Resolution 6 follows:

"Joint resolution proposing an amendment to the Constitution of the United States empowering Congress to grant representation in the Congress and among the electors of President and Vice President to the people of the District of Columbia.

"Whereas in recognition of the fact that the District which is the seat of the Government of the United States is a populous and permanently separate political unit which, in keeping with its special purpose, is not and should not become a State or part of a State; and with intent that the effective rights of citizens resident in that District, including their participation in the Government of the United States, shall be as nearly similar to those of citizens resident in the several States as may be without impairing the supreme authority of the said Government over its Capital: Therefore be it

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein)*, That the following amendment to the Constitution of the United States be proposed for ratification by the legislatures of the several States which, when ratified by the legislatures of three-fourths of the States within 7 years of the date of its passage, shall be valid as a part of said Constitution, namely:

" 'The Congress shall have power to provide that there shall be in the Congress and among the electors of President and Vice President members elected by the people of the District constituting the seat of the Government of the United States, in such numbers and with such powers as the Congress shall determine. All legislation hereunder shall be subject to amendment and repeal.' "

Congress governs the District

Under the Constitution of the United States the Congress is given the power to exercise exclusive legislation in all cases whatsoever over the seat of the Government of the United States. No matter what form of local government has existed in the District of Columbia, it has operated under this overriding authority of the Congress.

The existence and exercise of such power would continue under the proposed reorganization plan of the Auchincloss-Ball bill or any other form of local government which the Congress might erect. It is therefore most important that these voteless and unrepresented people of the District of Columbia be given the right and privilege possessed by other Americans in the States of electing Senators and Representatives in the Congress and of participating in the selection of the President and Vice President.

The rule of the District by the Congress is, of course, through legislation, and the President is a most important factor in the legislative procedure. His approval makes legislation by Congress effective. To override the President's veto of legislation requires a two-thirds vote by each House of the Congress. Lacking such two-thirds vote, the veto is sustained. This has the effect of giving the President's veto a weight equivalent to at least one more than a third of the Members present and voting on a veto. If all Members of both Senate and House of Representatives were present and voting on a veto, the President would be wielding a power equivalent to 141 Representatives and 33 Senators.

Participation in ruling body essential

Participation by the Americans of the District, through their duly elected Members of the Senate and House of Representatives, would in no way lessen the control by the Congress over the seat of Government. It would only mean that each isolated American of the National Capital would have the same fractional part in such control by the Congress as is possessed by each American of the sovereign States.

Until these voteless and unrepresented people are accorded these fundamental American rights of voting representation in the Congress and among the electors of President and Vice President, they will not possess the influence and respect among their fellow Americans, in or out of Congress, which they justly deserve and require. They have the same vital interest in all legislation as well as in all policies of their Nation. They are Americans with no divided allegiance and entitled to all of the rights and powers possessed by other Americans.

Reorganization is due

The consensus appears to be that some type of a reorganization of the District of Columbia government is due. But such reorganization plan should be formulated by the people of the District and confirmed by a Congress in which the people of the District of Columbia are represented on an equal footing with other American citizens. Such procedure would parallel that which operates in the sovereign States, where charters become law through the action of the State legislature, in which the people of the affected community are fully represented.

In the consideration of this entire question there crops out frequently an expression of fear that under changes which have been suggested from time to time the interests of the United States may be endangered. Having in mind the history of the seat of Government and its relation to the Nation, it seems impossible to envision any manner in which the Federal interests may be endangered except through the neglect of the all-powerful Congress to safeguard properly the interests of the United States.

THE HOME RULE THE DISTRICT WANTS AND NEEDS

The question of home rule for the District of Columbia was discussed briefly in the 1928 hearing before the House Committee on the Judiciary by the late Henry H. Glassie,

a prominent Washington lawyer. Mr. Glassie was a native Washingtonian, at one time a member of the United States Tariff Commission, and over a considerable period a special assistant to the Attorney General of the United States. In the course of his argument supporting a proposed amendment to the Constitution of the United States empowering Congress to grant national representation to the people of the District of Columbia, he said:

"Now, the constitutional provision for exclusive legislation means the same to every man. It means one legislation, not a divided legislation; not a superior and a subordinate legislation; one single sovereignty, one law.

"You have it now. You will always have it. How will our having a voice in the making of that law—by having one or two Representatives or one or two Senators—change that obvious fact? In other words, the constitutional provision for exclusive power of legislation has nothing in the world to do with the composition of the legislative body.

"One other principal ground or suggestion in the way of opposition is that we are not quite open, and that we stultify these American principles by not claiming the right of local self-government; that we come into court, so to speak, weakened by not claiming that right.

"Now, if the gentlemen of the committee please, coming from words to facts, what was the claim of the Americans to full participation in the Government before the Revolution? Participation in local government? Not at all. They had that. It was participation in that sovereign imperial parliament which made the law.

"We have been reproached with the idea that we do not want local government and therefore do not want self-government. But mark the distinction. Local government may be a mere matter of municipal administration. But what self-government means is that the people who are to obey the laws shall have a share in the making of the laws. You make the law. Under the constitutional provision you will always make the law. Under the principle that the Federal Government shall be supreme, you must continue to make the law.

"Therefore, when we come to you humbly and say, 'Admit us to participation; admit us to your councils in the making of this law,' we are asking for local self-government.

"True it is that we do not ask that we shall appoint the dog catcher. True it is that we do not ask that we shall elect the school board. True it is that we do not ask at this time, coming as a united body, for any of those usual municipal functions as to which it is still a question, after 100 years of self-government, whether they are better done by a vote, or by a city manager, or by a commission.

"So I say to you gentlemen, with profound deference, that these two things, first from one side and then from the other, which are continually thrown against us, will hardly bear scrutiny. We do want self-government, and the essence of self-government is the right to send a man from your community into your legislative representative body which can send you to war, tax your property, do what it pleases with your will, control your domestic relations, your relations to your family, your wife, and children, and do all those things which make a government a government touching intimately the life, as the learned gentleman suggested—and I thank him for the suggestion—which touch intimately the life of the community. Those are the things that are dearest to you, and those are the things which, in your respective States, you insist upon having, and which you will never surrender." (House Judiciary Committee hearing, 1928, 70th Cong., on H. J. Res. 18, serial 22, pp. 71, 72.)

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The St. Lawrence Seaway," from the Daytona Beach Evening News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ST. LAWRENCE SEAWAY

Sometime late this month the United States Senate may vote its approval or disapproval of a vast shipping and power project that has been kicked around in Congress since 1909. This is the proposed St. Lawrence River seaway and power project, which must be approved by the Canadian Parliament as well as by the United States Government before it can begin to be a reality.

Several times the project has been defeated in the Senate; it may be defeated again this time. There are sectional and business reasons. Eastern interests centering in New York, Philadelphia, and Boston are opposed to the project because the seaway, when completed, would offer Midwest interests additional transportation facilities that would compete with those seaports. Railroads oppose it as they oppose all inland-waterway projects.

On the other hand, the Midwest and Canadian interests favor the project because it would enable them to ship their goods to the East and overseas at much less cost. And then, of course, there is the electric-power-production angle.

The St. Lawrence seaway would enable oceangoing vessels to navigate 2,347 miles from the mouth of the river on the Atlantic to Duluth, Minn., on the western tip of Lake Superior. This would be accomplished by digging a 27-foot channel through 119 miles of rapids from Montreal to Ogdensburg, N. Y. These rapids are the only part of the entire route through which big ships are unable to go now. To complete the deep-water channel there would have a revolutionary effect on midwestern agriculture and industry and would benefit Canada in the same way.

Then there is the power-production angle. Power facilities would be developed with a total generating capacity of 2,200,000 horsepower by harnessing the 119 miles of river water that drops 223 feet in level in three series of rapids between Montreal and Ogdensburg.

This new fund of electric power would be available in the USA within a radius of 300 miles from the dams, which means that it would be available in New York, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, northeastern Pennsylvania, and northern New Jersey. And in an emergency power could be transmitted as far as Chicago and Washington.

Total cost of the project based on last May's construction prices has been estimated at $884,000,000. But the United States has already spent $32,000,000 on parts of the plan and Canada has spent $133,000,000. Engineers estimated $720,000,000 in new money would be needed of which the United States would supply $492,000,000 and Canada $228,000,000. All this money would be paid off by collecting tolls from shipping interests and charges for electric power.

For these reasons the cost of the project is not being used as the grounds for opposing it. Opposition is based on one thing—fear of competition. Eastern interests fear it will hurt the business of the ports of New York, Baltimore, and Boston. Privately owned power companies within the radius that would be served by the new power dams are fighting it too. So the St. Lawrence seaway and power project is facing the same kind of opposition that the TVA had to face before that great project was completed in the early years of the New Deal. Fear of competition is contrary to the spirit and purpose of our system of free enterprise, but some of the loudest spokesmen of free enterprise fight competition the hardest when it comes their way.—F. B.

The Oil Muddle

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Oil Muddle," from the Exeter (N. H.) News-Letter of February 5, 1948. This editorial points up well the situation in New Hampshire and New England generally this winter as a result of an inadequate supply of fuel oil. It was just such situations as that to which the editorial refers that prompted me recently to introduce Senate bill 2073, by the terms of which exports of petroleum products, except for our armed forces abroad, would be halted, as an assistance to furnishing adequate petroleum supplies for the northeastern area of the country. The people of the New England States have been for several winters the victims of the Government's failure to adequately plan ahead, so far as gasoline and fuel-oil supplies for them are concerned.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE OIL MUDDLE

When it is revealed that the flow of fuel oil to New England has ebbed to the point where it is necessary in some communities to issue edicts curtailing the temperature in public establishments and business places to 40 degrees, then it becomes time for some plain questions and answers about our fuel-oil supply.

It takes only common sense to know that normal work cannot be carried on at a temperature of 40 degrees when the mercury is flirting with zero outside. Nor can health and well-being be maintained for any length of time at 60 degrees in the home.

The rigors of New England winters are well known. For many years New Englanders have been encouraged to turn to oil as a more comfortable and efficient means of heat. Many were encouraged to join at great expense, the oil-heating ranks within the past year. In their turn the heating contractors were encouraged to sell and install new oil-burning heating units; oil dealers were not dissuaded from taking on new customers.

Why, if an oil shortage were foreseen, was this business allowed to continue? Many of these people lack the means of converting to other methods of heating at the present time. Why, if these conditions exist, must oil continue to be shipped abroad?

If a national emergency exists in the preservation of our oil supply (it is said that the United States has 33 percent of the world's proven crude-oil reserves at the present time) the New Englander will be found in the front rank in withstanding the hardship.

We can see no greater emergency, at present, then warming cold New England homes. We've had zero temperatures for over a month. Our hospitals are full.

So, let's have the oil.

Economic Problems

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on February 12, 1948, at the annual banquet of the Pennsylvania State Association of Township Supervisors, in Philadelphia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate very much the opportunity to meet with you tonight, you as the representatives of more than 1,500 townships in Pennsylvania with a population today, I dare say, well above the figure of the last national census. A substantial portion of Pennsylvania's population continues to live under the township system where they are, perhaps, closer to the day by day municipal and civic issues facing them than are, perhaps, any other group of Pennsylvanians.

Our whole political system in America and in Pennsylvania grew out of the township system and it is indicative of the strength and the value of the township system that even with all the so-called improvements over it which have developed in the field of political organization, the township system itself continues largely unchanged and as virile as ever.

Frankly, it was a source of some surprise to me to find out the other day in preparing a few notes for this meeting, that the assessed valuation of our townships in Pennsylvania, as of the last figure I found, was substantially greater than the assessed valuation of the State's boroughs. The combined assessed valuation of townships in many of our counties exceeds, as a matter of fact, the total assessed value of all the property in some of our other counties, including township, borough, and city. It is, therefore, pretty obvious that although you gentlemen represent what are regarded as small political subdivisions, your responsibilities are anything but small.

I, on the other hand, as a Senator of the United States, represent one phase of the biggest business in the world today, a $40,000,000,000-a-year business, a business in which you and the people in your community, as citizens of the United States, have a very vital stake.

Sometimes it may seem to you that we in Washington are very far removed from your local communities, not much aware of what goes on in them, and perhaps not much concerned either. I know that is the popular conception. I read it in my mail all the time. There isn't a township representative here tonight, I am almost sure, to whom I could not go and say such and such a citizen or group of citizens in your community has written me in the last few weeks on this or that subject.

I might say parenthetically that from one standpoint—the amount of work it gives us in the Senate—the high degree of literacy in Pennsylvania is sometimes alarming. Every one of our ten million or more citizens seems to know how to write and at least one time or another in his lifetime—sometimes frequently—writes to me. You know, sometimes when we get up legislation having to do with Federal aid to education, it occurs to me we might be doing the Senators from some of the so-called backward States a great disservice by making it possible for more of their constituents to learn how to write.

Seriously, though, out of this flood of mail which literally pours in upon us every day, including Saturdays and Sundays and holidays, and days when the Senate is in session and days when it is not in session, I do manage to get a fairly good picture of what is bothering people all over the State. Usually people write to their Congressman or to their Senator only when something is bothering them. Many have the idea that when they send off an indignant letter or telegram to Washington it will be thrown into a heap with a lot of others on the same subject, weighed, and then thrown away—certainly not read by anybody, and positively not read by the Senator himself. Now they are all wrong on that, at least as regards letters sent to me, but even if they were right, even if the letters were thrown away unread, I detect in those letters—for you see we do read them—I detect an obvious inner glow of satisfaction on the part of the writer in getting the subject off his chest, whether anyone reads it or not.

Oftentimes the writer will say, "Of course, Senator, you will never get to read this letter, but if you do, this is what is eating me—" etc. The letters which really get me angry, however, are those which come in unsigned or with no return address. Many of these letters are frustrating because the writer may be urging me to support certain legislation or oppose certain legislation or to do something about some issue or other, completely ignorant of the fact that I may be beating my brains out doing exactly what the writer urges me to do, and there is no way that I can write him and tell him to relax in the knowledge that things are going to turn out all right. The more apoplectic in tone the letter may be, the more I worry about this poor fellow having a heart attack without ever finding out that I am on his side and anxious to see the issue resolved the way he wants it resolved.

This is all a somewhat roundabout way of saying that I do have a fairly good idea of the status of public opinion throughout Pennsylvania without benefit of the Gallup poll. Knowing the things which generally are bothering our citizens, I think I have a pretty good idea, also, of the problems facing their elected representatives, in the townships as well as in the cities and boroughs. I should say the biggest problem right now is money—as usual.

And yet, it shouldn't be usual, for the times are not usual. We are now experiencing the greatest level of economic activity in our history. More people are employed than ever before, doing more things and making more things than ever before, and receiving better wages and profits and incomes than ever before. One might think that this might make for greater happiness than ever before. Actually, however, the problems arising out of this high level of activity are becoming more and more difficult and happiness is a state of mind I seldom find reflected in the faces of our people.

I am not speaking only of the persons on fixed incomes, the pensioners and others who are still trying to get along on prewar incomes, or on incomes fixed and constant since the inflationary spiral really got under way a year or two ago. I am speaking also of the great bulk of our people whose incomes have, to a certain extent, followed prices upward and, in some cases, may have risen faster than prices. As a member of the Joint Congressional Economic Committee, which is assigned the formidable task of keeping our fingers on the Nation's economic pulse beat and proposing legislation to maintain this high level of employment and of industrial activity by heading off depressions before they start, I have heard voluminous testimony from all levels in our economy that we are today in a pretty dangerous situation which might blow up in our faces if something is not done to halt this upward spiral before it gets further out of hand.

It is not just as individuals that we have been feeling the pinch of inflation. Equally as seriously, and in many cases, perhaps more seriously, our political subdivisions have been feeling it, too. In your street repairs and your highway building program, in your local services and in your public pay rolls, you have been finding that your tax dollars just do not stretch far enough. The solution which most frequently must present itself to you is that of raising taxes and of instituting new taxes. And yet, your citizens, and you yourselves, already burdened with high living costs and shrinking purchasing power, are hard put to find places where those increased taxes could come from.

Your problem is further aggravated by the fact that the expansion in population and in construction in your townships necessitates large-scale improvements which are of urgent nature. This work would have to be done at present inflated costs. The dilemma is very real.

I have no magic formula to offer you at this time, no trick solution. Federal aid is often a helpful remedy to a distressed community, but Federal aid by itself is no solution to this over-all problem of the steadily increasing cost of local government and the steadily decreasing purchasing power of local government tax dollars.

The Federal Government, as I said, is a $40,000,000,000 business this year. When the budget was announced last month, screams rent the air over the extravagance and the waste, so-called, of this allegedly bloated budget. But the screams were decidedly mild when compared to the uproar which greeted last year's $37,500,000,000 budget, a budget we were told could be cut and would be cut by $6,000,000,000. As it turned out, the Congress voted in total about $200,000,000 more in the fiscal year than the President's budget of thirty-seven and one-half billions, a budget which was supposed to have been cut by $6,000,000,000.

I mention this ancient history only to point out that it is very easy to make blanket statements about the extravagant cost of Government—including local government—but that when it gets down to the point, item by item, of exposing the extravagance and making reductions, the chances are our public budgets—local as well as national—seldom provide even a minimum of the things which we as Americans expect from our governments—local as well as national.

On the national scale we want and insist on adequate military establishment and that is costing us literally billions of dollars each year. In the hopes of one day achieving a goal which mankind has sought for at least 2,000 years—and that is real and enduring peace—we are spending other billions in support of the United Nations and on programs designed to restore some semblance of economic recovery to nations which, once they get back on their feet, can do a full share

with us toward achieving peace and preventing war. These two items, national defense and foreign recovery, take a major, almost an overwhelming bite, out of our $40,000,000,000 budget. Depending upon how effective these outlays are, it is money either completely wasted or it is the best investment we could ever hope to make. We must never forget that the last war cost this Nation hundreds and hundreds and hundreds of billions of dollars—the figure is so stupendous it is just about incomprehensible.

Out of the remainder of our budget we are delivering the mail, collecting taxes, helping you build highways and airports, keeping an eye on the health of our people, keeping the railroads in operation, guarding our natural resources and helping to develop them, and doing hundreds and thousands of other things which all of us as citizens not only expect from our Government but insist on our Government doing.

And then, all by itself, is the simply huge outlay each year for our veterans, an obligation we certainly have no intention of repudiating.

That's our problem nationally. On a small scale, but along the same lines each township in Pennsylvania has a similar problem.

Not so long ago I made a speech here in Philadelphia before representatives of shipping interests in the Eastern States. One of their major problems, and one in which I had and still have a close association, has to do with boxcars. As you no doubt know, the terrific expansion of industrial activity since the end of the war led to a great crisis in railroad transportation. We were junking each month more boxcars than we were building. The railroads were working day and night at the job of moving this great flood of goods in interstate commerce, but the job was just too big in terms of available equipment. One of my committees in the Senate, the Committee on Interstate and Foreign Commerce, assigned a subcommittee to the job of investigating this shortage and recommending remedies. I was appointed to that subcommittee.

Early in our investigation, more than a year ago, Senator REED, of Kansas, the chairman, and I came to the conclusion that although we could no doubt find many instances of inefficiency and delay in the use of available boxcars, the only solution, the only real and effective and enduring solution, was the production of a lot more boxcars than we had, of a lot more boxcars than we were junking. Therefore, instead of conducting the kind of Roman holiday which congressional investigations sometimes resemble and in which the main concern seems to be to find a villain or to make headlines, we set out to get more boxcars. In the absence of Government controls, which by then had lapsed, we had to depend on the voluntary cooperation of three industries—the railroads, to order the cars that they needed and to put their orders down in black and white; the steel companies, to provide the steel that was needed and to provide it in preference to other enterprises often offering all kinds of premiums for steel; and the boxcar builders themselves, to get down to work and turn out boxcars. Happily, we got agreement; we got a plan and a program and everyone went to work and boxcars have been rolling out of the mills at a rate which now exceeds for the first time in years the rate at which old boxcars are being junked.

The point I made in speaking to the shippers group here last month was that the big villain in the boxcar shortage situation, if you could call it a villain, was the unprecedented, simply amazing level of industrial activity in America, which made all of our facilities too small, inadequate. That villain is present in most of our bottleneck situations today. We are producing more than ever and it is not enough, and so we have shortages of one kind or another—shortages which will continue as long as demand continues at this simply terrific level.

When we reach the point where we have all the box cars on the sidings adequate to meet all the needs instantly and promptly without delay, when we have all the houses built that people are interested in buying or renting, when we have all the automobiles even a high level economy can sustain in operation, when there is enough oil for every need, and all the steel is being turned out so that no one has to wait on his order, then we are heading into a different kind of trouble, a different kind of shortage, a shortage of customers.

What we are going to need then, perhaps more than we have ever needed it, is real and genuine faith in the free enterprise system, enough faith to make us want to work hard at the job of making free enterprise work. It's easy to talk about free enterprise when the profits are rolling in and employment is at a peak and there are more orders for goods than there are factories to fill the orders. In a situation like this, some of the worst enemies of free enterprise have been found in free enterprise itself—in a lack of restraint, in greed, in the old theory of dog eat dog economics.

The result has been this inflation. The result has been a shrinkage of our purchasing power among the mass of our people, a shrinkage which is hurrying up the day when we may have more goods available than customers because the customers can't afford to buy. That will be a sorry day for free enterprise because it is under circumstances such as those that we find the workability of free enterprise increasingly subject to suspicion.

There is little that the officials of a Pennsylvania township can do to protect the purchasing power of the township's tax dollars during a period of inflation. You can cut expenses and you can cut services only so far. The only solution for you as elected officials and for the solvency of your communities is to help bring about on a national scale conditions and sentiment which will halt this inflation before it gets further out of hand, and bring prices down, and once again make your local tax dollar adequate to buy a dollar's worth of service for the people of your communities.

It has been a pleasure to be here with you. It will be a pleasure at any time to do anything I can to help your communities on any problems which may arise in which I may be of assistance. I want you to feel free to call on me. I want you to know that I share your concern over the problems of local government, problems which, although smaller in scope than our national and international issues, are, nevertheless, real and significant and important and very, very close to home in every community.

Statement of Ernest O. Thompson, Chairman, Railroad Commission of Texas

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. JOHNSON of Texas. Mr. Speaker, the other day a great Texan appeared before the Oil Subcommittee of the House Armed Services Committee. His remarks were so worth while that I want all the Members of Congress to have the benefit of them.

That man was Col. Ernest O. Thompson, chairman of the Railroad Commission of Texas. Colonel Thompson was a distinguished soldier, in both wars. He was the youngest lieutenant colonel in the AEF in the first war. He trained two regiments in the last war. He has either been chairman or a member of the Railroad Commission of Texas for about 15 years. He was one of the founders, and three times chairman, of the interstate oil compact. He was personally appointed by President Roosevelt to represent this country at the World Petroleum Congress in Paris in 1937. Former Secretary of War Patterson appointed him as his representative to make a study and inspection tour of Europe and the Middle East in 1945.

Since Colonel Thompson knows more about oil than just about anyone in the country, our committee benefited greatly by his advice and suggestions. I include a summary of his statement in the CONGRESSIONAL RECORD. It follows:

STATEMENT OF ERNEST O. THOMPSON, CHAIRMAN, RAILROAD COMMISSION OF TEXAS, BEFORE THE ARMED SERVICES COMMITTEE OF THE CONGRESS, FEBRUARY 5, 1948

1. That the oil policy of the United States should be one that will call for and do all possible to insure a vigorous, healthy domestic oil-producing industry.

2. Imports of oil should be allowed only to supplement the oil that can be produced by a vigorous, healthful, domestic oil-producing industry. A flood of foreign oil could ruin our oil-producing industry.

3. There should be free play of price; in other words, the price should be free to increase exploration and improve conservation. There should be a minimum of government interference with the maximum of information furnished on improvement in technique of production and technique in discoveries and explorations. Bulletins from Bureau of Mines on new techniques.

4. The Interstate Oil and Gas Compact should be given permanent congressional approval, because it has been useful in occupying that no-man's land between State and Federal jurisdiction. (It is now approved for 4 years only.)

5. The Federal Government should demonstrate its own idea of conservation on Federal public land; for example, it should stop flaring of gas from oil wells drilled on Government public land. I say this because the Federal people are always criticizing the States for flares and yet do nothing about flares on public lands.

6. The only truly dependable reserve of oil in wartimes is an active, producing reserve. Setting aside probable oil land is not a dependable reserve for war. The wells must be drilled and producing and should be where we can protect them.

7. Texas has always produced all of the oil that has been indicated as needed by the Bureau of Mines in its monthly certified estimate of crude needed for the current month, month by month. For example, the Bureau of Mines of the United States certified last month that the amount of crude Texas oil needed every day in the month of February 1948 was 2,360,000 barrels per day.

Texas is now producing 2,385,000 barrels per day, or 25,000 barrels daily in excess of market demand as indicated by the Bureau of Mines. During 1947 Texas discovered 161 new oil fields. Texas has always filled every demand for oil. We look forward hopefully to fulfilling all requirements for oil, provided the price is left free to react to the law of supply and demand and enough steel pipe is made available for drilling the necessary oil wells.

When more oil is discovered the price of oil and gasoline will drop down according to the old law of supply and demand. We do not want price control nor rationing.

Palestine Problem

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. GWYNNE of Iowa. Mr. Speaker, one of the difficult problems now before us has to do with the Palestine situation, and we are all indebted to anyone who throws light on it.

I am including a copy of an editorial from the January 13, 1948, edition of the Waterloo Daily Courier and also a letter from Rabbi S. H. Epstein, of Waterloo, Iowa.

Both the writer of the editorial and Rabbi Epstein have given considerable thought and study to the problem, and their views are worthy of great consideration.

The editorial and letter are as follows:

EXPLOSIVES FOR PALESTINE

The Jewish Agency for Palestine, a responsible group promoting the Jewish homeland, acknowledges that it has been purchasing explosives in the United States for shipment to the Near East. A spokesman said the agency believed that the purchases were legal, although shipment of arms and munitions to the Near East was banned by the State Department on December 5.

American public opinion generally is unfavorable to the export of munitions in the belief that it is more difficult for people to fight if they have difficulty obtaining the arms to fight with. But there are factors which make the Palestine case an exception.

As the spokesman for the Jewish agency pointed out, the United Nations in approving the partition plan for Palestine made no provision for an international police force or other protection for the present inhabitants. The British, with their empire resources strained to the limit, are in no position to offer that protection.

The Jews, therefore, are compelled to take steps to protect themselves. It is natural that they should attempt to purchase surplus munitions in the United States. While any attempt to evade State Department export restrictions cannot be condoned, the need for a change in United States policy is evident.

Arab groups are engaging in open warfare against the Jewish settlements in Palestine. The United States is irrevocably committed to the partition plan. Does it make sense to deny arms to the group which is attempting to carry out the principles of American policy?

It would obviously be better—in terms of long-time Arab-Jewish relationships—for the UN to do the policing of Palestine. But since no UN police force has been formed, it is only fair to allow private Jewish agencies to purchase surplus American arms.

ARMS FOR PALESTINE

WATERLOO, IOWA.

To the EDITOR:

I wish to commend you on your excellent editorial "Explosives for Palestine" in the Courier of January 13. The writer shows that he fully understands the issue involved in the Palestine problem. If the United Nations' decision on Palestine is not realized and made an actuality, the Charter of the UN is a dead letter and all the world's hopes for peace go a-glimmering. If the UN does not convert their first major decision into action and submit to the threat of force by the Arab feudal states, the world will have another debating society similar to the late League of Nations.

For the sake of peace and a better world, the United Nations must be supported by the United States to bring order out of chaos and abolish the rule of brute force.

May I touch upon another aspect of this problem of arms for Palestine. It is the indisputable fact that while the Jews are refused arms, the Arabs, who aggressively oppose the UN decision and launch a series of murderous attacks on the Jews, are supplied with arms and manpower by the Arab states bordering on Palestine.

These states have purchased $41,000,000 worth of weapons from United States Army surplus since the middle of 1945. Even now, while the United States has established an embargo on shipment of arms to the Middle East, the British continue to send arms to the members of the Arab league, the sponsor and instigator of violence in Palestine. Even now the Arab Legion, recruited in Transjordania, officered and armed by the British, have been brought into Palestine where they attack Jewish convoys and commit excesses against Jewish settlements, while the members of the Haganah, Jewish defense corps, are disarmed by the British.

Is this fair play? Is this in keeping with the principle of sportsmanship of giving a fighting chance?

Editorials and pronouncements of right thinking people will do much to rectify the wrong and give a tortured people a chance to live and develop. May I in conclusion thank you for your forthright stand and enlightened position.

RABBI S. H. EPSTEIN.

Dismantling of German Industrial Plants

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial pertaining to the dismantling of German industrial plants, from the New Hampshire Morning Union of February 12. This editorial strongly supports the position which I have taken regarding the urgent need for halting indiscriminate dismantling in Germany.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIDGES IS RIGHT

Senator STYLES BRIDGES is fully justified in his demand for a full airing of the question of dismantling of German industry. Recently, Secretary Marshall has turned down the proposal that the United States stop dismantling German plants on the ground that it would jeopardize the unity of purpose and feeling essential to European recovery. He insists that the dismantling program will aid rather than hamper European reconstruction.

Marshall's stubborn insistence on this position in the face of the widespread protest against the dismantling program is annoying. The dismantling procedure was authorized by the Potsdam agreement which decreed that German reparations should be made by the removal of capital equipment from Germany rather than from current production. Under this process, reparations were to be paid to Russia and Soviet satellite states, as well as western Europe. BRIDGES points out that in 1947 90 percent of the machinery and facilities dismantled went to iron-curtain countries, with 85 percent to Russia.

Does this make sense today when the whole German situation has been changed by Russia's refusal to carry out the basic features of the Potsdam agreement, and when the dismantled industries might help provide the goods so essential to the reconstruction of western Europe? Today Germany is divided by Russian obstinacy, with the west cut off from the agricultural products of the east, and dependent on exports to provide the essentials of life. The United States is asked to provide goods that the Germans might produce themselves, which means that the dismantling process is carried on at the expense of the American taxpayer.

There is some justification in dismantling German industries geared to war purposes. But the facts show that out of 918 plants scheduled for dismantling, 600 cannot be classed as war plants in any way. Moreover, Secretary Marshall has himself admitted that there is a tremendous loss in efficiency in the removal of industrial plants from Germany.

Virtually every one of the Congressmen who visited Europe last summer came back outraged by the absurdity of the dismantling program, and demanded that it be stopped. Senator BRIDGES was one of these visitors, and he speaks not from hearsay, but from first-hand knowledge. If Secretary Marshall is determined to continue a program so widely pronounced absurd, simply for the reason that the United States should keep its word in the Potsdam agreement, which has already been shot to pieces by the Russians, the situation should be examined thoroughly.

This is not the first policy obstinately followed by the State Department in the face of reason and protest. Congress is asked to make heavy appropriations for the recovery of western Europe, to which western Germany belongs, and it should know whether it is asked to spend hundreds of millions of dollars to repair the damages of ill-designed administration policies. As chairman of the Senate Appropriations Committee, Senator BRIDGES has a right to know all the facts.

Report on Conditions in Germany

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to Hon. Harry S. Truman, President of the United States, by Hon. Joseph J. Moriarty, a district judge of the State of Minnesota:

FRANKFURT, GERMANY,
January 26, 1948.

Hon. HARRY S. TRUMAN,
President of the United States of America, White House, Washington, D. C.

MY DEAR MR. TRUMAN: On December 31, 1947, a military permit was issued to me to enter the United States zone of Germany to survey my son's activities with the Bremen Boys' Club and other like clubs organized and inspired by Army leadership in that area. By virtue of this authority, I entered the zone on the 9th day of January 1948 and with unceasing labor and effort conducted a survey and course of observations which led me

to many cities and places for conversation with not only the troops and officers of the Army and the department heads of the military government but also the courts, spiritual leaders, lawyers, doctors, educators, mechanics, laborers, farmers, and other people of Germany, with the result that I am in possession of definite facts and sound opinions gained from trusted persons in the military forces and outside of the military forces and some impressions and opinions of my own arising from what I saw and heard here and before I came here which you, as President of my country, should know, if you do not already know, to help you in leading our Nation toward the sanctuary of full security and world peace.

Every American who pays a visit to this area cannot but feel a high sense of pride in the morality, devotion to duty, and qualities of leadership displayed by the entire personnel of the military force of the United States assigned to this zone of occupation. The task which fell to their lot is a trying and difficult one, calling for patience and continuing sacrifice in aiding the people of this nation as it struggles with the problems of reconstruction and rehabilitation. They are entitled to every consideration of our country, and they are performing a service which should not be forgotten as they work out the problems of security for us and for the German people and spend their leisure time and money in missions of mercy among the sad and discouraged people of this land.

It was my privilege to confer with the various department heads of the military government, and here, too, I found men and women possessing outstanding qualifications to perform the work allotted to them, and to my great satisfaction, I reached the glorious conclusion that none of these department heads was as yet affected with that dreaded malady which at home we call bureau spasms, the symptom of which is a violent change of course and policy at every point.

In Mein Kampf, Hitler divided the German people into three classes—leaders, potential leaders, and idiots. It was the leaders and potential leaders who destroyed this great German country and attempted to destroy the rest of the world as well, and now the burden of running down these leaders and bringing them to their just due rests upon the group which Hitler branded as idiots but who, in reality, were the finest people of Germany and a valuable and essential factor in the things of the world which promote the best order of society.

Nowhere in Germany do I find any respect for the Nazi Party and nowhere have I found any picture, statue, or even the name of Hitler, save in proceedings to prosecute his followers and supporters. Of course, the spirit of democracy destroyed these things but such movement received the support of the better classes of Germany. It seems that the brutal crimes committed at Dachau and other places of death and suffering where innocent men, women, and children were brutally tortured and murdered, had so shocked the people of this country that nothing short of death or severe discipline awaits every single individual responsible for the ruthless extermination of those hundreds of thousands of persons of this area and other areas as well. These crimes also shocked the civilized world and the courts of the world, including the courts of our country, are still engaged working out justice in each and every case in keeping with the laws of nature and of God.

The denazification courts of Germany are daily in session identifying, trying, and passing sentence upon Nazi Party criminals and party members, and fixing by judgment, terms of segregation and discipline, and while it is a slow process and without doubt some guilty persons may escape just punishment, yet, from my observations the German people are to be commended for the way they administer this type of justice.

The courts of general jurisdiction are making a heroic struggle to reestablish a uniform system for the administration of justice and to change the letter of the law practice which prevailed under the Hitler administration and which gave effect to the precise word of a ruthless dictator to one where the principle of right and justice and the judicious conscience play a proper part in the deliberation and final judgment of the court. I find the judges to be men of learning and fairness, leaning toward a judicial reform in the direction of the judicial system of the United States of America.

While I find the antireligious orders, decrees, and regulations of Hitler had and still have a profound effect in leading the old and driving the young away from God and religion, yet everywhere churches and chapels are among the first buildings to be repaired and, under American regulations, receive priority in many instances, proving to me that the conscience of the German people is not dead, as one infidel said to me, but to the contrary, it is stimulated anew by the long persecution of a Godless state and is expressing itself in a positive manner in laying the foundations of a new and truly religious Germany.

The most gifted writer will fail miserably to convey by description the destruction which the war caused in almost every city of Germany. My survey led me to and through Frankfurt, Kassel, Berlin, Giessen, Munich, Regensburg, Nuremberg, and many other cities some 90 percent others 60 percent in total ruins. Thousands of bodies still buried in the heaps of broken, burned brick, stone and twisted beams of steel; trains of cars and locomotives, tanks, and military equipment, wrecked, burned, and driven into the ground by the force of bombs and the fury of war. Yet in the face of all of this the poorly clad, half-fed, and punch-drunk German workmen, with courage and hope and with a few simple tools, have begun the almost superhuman task of restoration—a sad fate not of the people's making but the fault of one Godless dictator whose name was Adolf Hitler.

The physical reconstruction of Germany, hard as it may seem, is light compared with the political, social, educational, and spiritual rebuilding of Germany, for the old curse of national socialism still lingers in hidden form in the souls of many people, awaiting the opportunity to spring forth like a demon and seize control of this country and again wreck and ruin this Nation and the world at large. The majority of the good German people recognize this danger and the danger of Nazi and Communist union under another dictator and take the position that Germany must pass through a long course of conditioning before safety for itself and for the world would allow her national sovereignty. In the meantime, Germany must work out its salvation by its own planning and industry under a political organization possessing all essential powers of democratic government but short of complete national sovereignty, and Germany looks to America, and America alone, for security, liberty, and protection from now until the day it meets qualifications for national sovereignty. As I survey the field of international complications, America has no other safe course to take except to stand firmly by this course of action.

A great fighting general advised me that America must remember and instantly realize that the prewar position of our country has entirely shifted. In 1930, we of America were the pivot upon which was balanced the Allied Powers on one end of the balance beam and Germany on the other end. The movement of America in any particular direction cast the balance for or against a particular side. Today America is on one end of the balance beam, Russia is on the other, and Germany occupies the pivot central position. The movements of Germany are and will be a determining factor in throwing the balance to one end or the other, and such shifting in all probability may determine the future fate of civilization. This position of America, which was not of our choosing but cast upon us by the force of a foreign government, which went all-out for destruction of democratic ideals in the whole world, is one which demands of America a fixed, positive, long-range policy for self-preservation and world peace.

This is the first time in my experience that I had the privilege to view my country from a position thousands of miles removed from the immediate security of my Government and at the same time study first hand the operation and work of foreign governments with the result that I now take a broader view of, and see more clearly, the things which in the end mean freedom or slavery for us at home.

After reaching here I visited the Russian sector of Berlin to consult with the burgomaster, Louisa Schroder, and there observed the Communist's contempt for citizens of my country and the same old Hitler political ritual in full sway, the same sullen and uncompromising attitude which characterized the Communist representatives at the various United Nations conferences, the complete absence of any kind of freedom and the fear-stricken attitude of the Germans and other peoples whose unhappy lot it is to live in complete isolation from the rest of the civilized world. This dark world of communism to the east, fortified by isolation of political thought, yet spearheaded by a determined will to rule the world by fire if necessary, is a direct challenge to America to meet and solve without delay, the problems which confront us here and at home.

Friends of America here view with alarm three dangerous factors forming weak points in the political armor of America; namely, isolation, inflation, and the happy old-soul policy in dealing with Communist forces behind and in front of what someone has properly called the iron curtain.

Any one of these weak points may at any time give rise to an emergency which would place the whole American people in jeopardy of the expanding greed of the forces of communistic Russia. It is the duty of our Government and people to proceed without delay to remedy these weak points. First, by some proper democratic method of sensible price control; second, by the adoption of a sound, definite, long-range policy which will meet the aggression of Russia in a positive manner in true American fashion. It is said here in many quarters that America has delayed this action already too long. It is said that America must understand that Russia did not appreciate receiving what it asked for during the war and what it received after the war. This constant aimless American giving has reached the stage where many here and multitudes at home consider it a weakness in our National Government.

This sound policy and a self-political reconditioning of European nations along democratic lines of thought, recognition of each other's problems and mutual effort and determination to carry Europe through this world crisis, must precede any large-scale American plan for financial aid to Europe. For example, why should America pour money into France and England while both of these countries in their respective zones are slashing down the German forests and transporting the timber to their respective countries, upon the ground that it constitutes a German war potential, while America is attempting to rebuild Germany and sorely needs this vast natural resource to accomplish its purpose. I have not the time or facilities to here enumerate the numerous measures inconsistent with America's plan of

relief, but to the ordinary rational American, many things were agreed to by America and are now permitted under our American policy which does not make sense.

It is fundamental that the future hope of Germany lies in the mental and social attitudes of the German youth. Through no fault of their own they were doped and led to form pagan attitudes of cruelty and taught by the Nazis to hate God and every Christian concept of morality in order to wean German thought away from democratic channels of thought. This generation of German youth deserves guidance and fair treatment from America. This guidance and fair treatment must come through religion, training, and teaching, and temporary relief from the hunger and starvation that threatens the health and life of the German youth. America has no right to teach religion, but America has a right to teach God. The American soldiers here of their own initiative launched a program to train the German youth and at their own individual expense and sacrifice of off-duty time, put in motion an institution known as the German Youth Activities.

This program in due time received military recognition and was later elevated to the dignity of a department of the military government. This department is recognized here and at home as one indispensable to the proper readjustment of the German way of life, and the only true foundation for a free and peaceful national order of things. Yet, I find that this movement has not received from the government at home the financial and moral support which it is entitled to. This institution must be established on a sound basis entirely under the Army or as a separate unit of the Department of State, with proper facilities for full-scale operation with trained and competent personnel and adequate financial support and without delay, or America will lose one of its greatest means to elevate Germany to a truly democratic nation.

America has a displaced person problem on its hands here, fed and quartered by the American taxpayers and by the German economy. Before I left home, I heard a speech by a very prominent advocate of the conservation of human resources, in which this social leader said, "Let us receive into our bosom the 600,000 displaced persons in our zone of Germany, so that they may have the American sanctuary of peace and an opportunity to work with the fullness of life." This good lady was totally ignorant of the character and origin of these people. She did not know: (1) that the other nations of the world have already picked and repicked this group on the basis of character and talent; the musicians, men of science, professional and tradesmen, were long ago in other countries, and what is left now consists principally of the nontalented class; (2) that these people are not refugees who reached the zone in flight from the pursuing persecutor, but principally people of all classes and types of character, caught in the shifting chances of a roving life; (3) that this group has among them many persons capable of adopting and living good and useful lives, but in the great majority are a collection of lazy, worthless persons, totally devoid of any notion to earn their way by honest industry or effort and resting from day to day on the assumption that the world owes them a living; (4) that many of these persons were people attracted to Germany by Hitler policies and who took part in the Hitler economy against their own countries, and now are afraid to return to the people whom they betrayed; (5) that many of these people live in elaborate quarters at American expense with German people as maids and attendants while anxiously awaiting the day to enter into America to engage in profit-making commercial manipulations; (6) that many of these people are in the black markets of Germany sucking the lifeblood out of the German economy and deliberately robbing the German people of whatever little means in their possession; (7) that many of these people are avowed Communists and Nazi adherents, and are daily being detected by the authorities; (8) that many of these people swarm on the streets like vultures to take advantage of the weak and the hungry for their own personal gain; (9) that many of these persons lack the moral fiber to adapt themselves to democratic ways of life; (10) that if America shall take into our country these people without a thorough process of screening, break-down and culling out, we at home will suffer, not for a while but always, from such a national mistake. If this good lady took time out to come here and investigate these facts, I am sure that she would keep these persons far away from the loving bosom of America.

The German people and the entire military forces of the United States, and all American civilians employed on behalf of our Government in Germany, are in one way or another the helpless victims of the black markets. These markets are owned and controlled by the racketeers who supply such markets by downright deception, open and aboveboard commercial oppression, and interception of American supplies as they pass through the channels of distribution in the German economy. The black-market system originated in the Hitler economy and its operators were the favored class of the dictator. It continued over into the present German economy. It has monopolized the food supply and controlled the distribution of the necessities of life, and fixes the prices of commodities. For example, the price of a pound of bacon is 300 marks and the average German workman receives 150 marks a month. The salary of a judge, whose jurisdiction and work is comparable to that of a district judge in America, is 1,294 marks, or 7 packages of cigarettes or 4 pounds of bacon, and so on through the entire list of the things which make up, what we at home call, the necessities of life. These markets must disappear from the German economy and the procedure to effect this objective forms one of the most perplexing problems of the German people. It would be well for America to take notice of the German system of black markets so that, in the event that America should adopt a price-control system, ample provision and safeguards shall be enacted to prevent the invasion of a similar system of black markets into the American economy.

The food supply in this zone of Germany appears to be and is, as far as I can discover, entirely inadequate to serve the proper needs of the people. This problem must be solved now in order to preserve the health and life of the entire population. This aid must come from America. The burden of feeding the people may be to a large extent lifted from our shoulders if America now and before planting time supplies seed and fertilizer to the farms and gardens and gives Germany a chance to reap a crop in 1948. Connected with this problem of adequate food supply and a part of it is the control and total abolition of the black markets. This is one phase of the war against greed which America, so far, failed to win. The German courts, police force, and in fact the whole German economy is still too weak to cope with the power and wealth of the black markets. It rests with America to use the strong arm of the law to solve this problem, and a definite program for this purpose must be adopted.

This in part covers my investigation of the situation in the American zone of Germany. I have takeh a deep interest in all the things that I saw and heard, because my family has paid a high price for peace thus far achieved in the world in the loss of our young Navy pilot, who gave his life to keep the skies clear over America against an invading enemy.

I have defrayed the expenses of my trip to Germany out of my own resources. I ask nothing from the Government in return for this expenditure. I will be available at all times to make good any statement which I have here made and I have desired, Mr. President, to call upon you at Washington and personally leave you this report and give its contents to the press of America, which I consider the great bulwark of democratic freedom and security so that the people at home may know something about what is transpiring in this unfortunate land.

Respectfully submitted.

JOSEPH J. MORIARTY,
District Judge of the State of Minnesota, Shakopee, Minn.

How Much Does Government Cost?

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Pontiac Daily Press, Pontiac, Mich., of February 9, 1948.

In will shock some people to learn that the cost of the Federal Government in 1946 equaled the incomes of all the people in 19 States. In 1929, the cost of Federal Government was less than the total income of all the people of the State of California. In 1939, 9 years later, it had already increased to such an extent that it equaled the total incomes of all the people in 10 States.

If the appetite of the administration for spending money continues, it will soon total the incomes of half of the States in the Union, or until the utter collapse of our economic system stops this wild orgy of spending.

The Pontiac Daily Press is to be commended for pointing out to the people what is happening. I hope that every Member of Congress reads this editorial.

WHY WORRY ABOUT BUTTER?

Of course you know you're a victim of ruthless Federal taxation and have been for years.

This isn't a secret.

Washington can't hide it.

Just recently President Truman sounded a strident tocsin note heralding the need for reducing the price of food. We believe the President is serious.

We are, too.

We want food prices down.

But Mr. Truman blandly and grandly ignores governmental costs. He still itches to get your tax dollars—all that he can rake into Washington. Hasn't he vetoed one tax reduction bill already? And hasn't he threatened to do so again? We're still under the spell of a Federal Government that longs to rule mankind "from womb to tomb.' '

We are intrigued by a pamphlet that comes to our desk headed "Octopus on the Potomac." It uses a striking example of what the Federal Government is costing every taxpayer in this section and everywhere else.

In 1929 the cost of Federal Government was less than the total income of all the people of the State of California. In other words, if all the income of all the people of California had been sent to Washington, it would have supported the Federal Government,

leaving all the rest of the income of all of the rest of the people for the people to use themselves.

This was back in 1929 when that extravagant Mr. Hoover was in office.

Remember?

Nine years later, in 1939 and before we were in the war, the New Deal dynasty had raised this Federal bite until it equaled all the incomes of all the people in California, Oregon, Washington, Nevada, Utah, Arizona, New Mexico, Colorado, Wyoming, and Montana.

That's bad enough.

In fact, it's much too bad.

Tax strangulation was here.

But according to the Octopus we should examine the record for the year 1946. The war was over then, you know. In that year the cost of Federal Government in Washington had arisen so high that it equaled the incomes of all the people in California, Oregon, Washington, Idaho, Nevada, Utah, Arizona, New Mexico, Colorado, Wyoming, Montana, North Dakota, South Dakota, Kansas, Nebraska, Oklahoma, Texas, Minnesota, and Iowa.

And you can add half of the State of Missouri.

This includes every State west of the Mississippi River except Arkansas and Louisiana.

To quote: "(the equivalent of) every dollar received in 1946 by every individual American citizen in this vast area has been taken by the Octopus on the Potomac."

That means Washington, D. C.

Yet Mr. Truman worries about butter.

Well, so do we.

But we are much more worried about wartime taxes when the war is long since ended. And, furthermore, we're worried about the excessive peacetime taxes the New Deal saddled on this country as the bands played The Star-Spangled Banner, and they slaughtered little pigs and paid huge sums for not raising crops.

They made you like it.

Are you worried about the price of butter? So are we.

But let's worry more about an administration that gouges every living wage earner out of wartime taxes when the shooting's over, just because it is committed to a program of "spend, spend, spend."

British Views on Palestine

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. MULTER. Mr. Speaker, the American press for days has devoted much space to the tragic situation as it now exists in Palestine.

It should be of interest to Congress to note some of the British reactions in this important matter. The following is a critical statement of the British policy as it appeared in the New Statesman and Nation, commenting upon the violent overthrow of the pro-British cabinet in Iraq, indicating that it was exactly what was to be expected.

I quote from that newspaper:

The fact is that the appeasement of the Arab states has been no more effective in 1948 than it was in 1939. British abdication of responsibility in Palestine, though it may be calculated to assist the Arabs, does not impress them with our strength. It merely increases nationalist xenophobia directed not merely against the Zionists but against all westerners. This is still the motive force of the pan-Arab movement.

The following editorial from the issue of the Answer dated February 6, 1948, sheds light upon the situation in its quotations from the Observer, known as a Tory paper, and from the Tribune, known as a Laborite paper:

LONDON COMMENTARY—A LITTLE TRUTH LEAKS OUT

"When rogues fall out," an old saying tells us, "honest men come by their own." To judge by a number of little hints which have been dropped in official circles here during recent days, it would appear that there has been just the tiniest bit of "falling out" amongst the "rogues" engaged in implementing the Foreign Office Palestine and middle eastern policy. The system of all-in blackmailing, which is diplomacy in the Middle East, has produced some results not altogether pleasant for the British Raj. So the Foreign Office has revealed just the fraction of an inch of claw beneath its polite velvet glove, and has closed the tap of Arab violence in Palestine, a fraction—just for the moment.

Two highly revealing contributions in the British press, published, one in a Tory and the other in a Left Wing Laborite paper within a couple of days of one another, bear further witness to the latest moves in diplomatic rascality. In both of these articles for the first time a little truth about British Palestine policy has been allowed to leak out in the British press. In both cases, the leakage can be attributed to the falling out process to which I referred above.

The Tory article appeared in the Sunday Observer. It warned bluntly that the Middle East remained "Britain's most vital base outside the United Kingdom." And it told the Arabs with brutal frankness: "The presence of strong British forces to cover the eastern Mediterranean as well as the Arab countries and Persia are even more important since the British left India." After quite openly hinting at the British Foreign Office policy of supporting the Arab feudal system it reminded these Arab rulers (over one of whom, Ibn Saud, Anthony Eden has recently been slobbering with fulsome praise) that the alternative to indulgent British control is the "terrifying designs" and "ruthless domination" of Russia. The article is plainly playing up for continued British military domination of Palestine, and by way of mollifying British popular feelings, which are bent on British withdrawal, the article threatens that if disturbances continue in Palestine, the Marshall plan (which, in the eyes of the British people, secures Britain as Uncle Sam's remittance man) cannot succeed.

The article in the left-wing Laborite paper Tribune, in which the whole of the master plan of the Foreign Office to destroy the Hebrew nation in Palestine is brazenly admitted, owes its origin to a different falling out. These left-wingers of the British Government's Labor Party regard Bevin as in the pocket of Tory policy. The unbridgeable cleavage between trade unionism, which can get along quite consistently with Toryism, and the socialism of these left-wingers which cannot, is always threatening to smash the Labor Party as it did in 1931. The left-wingers were anticipating a triumph by Bevin and their other internal enemies by means of the foreign affairs debate and the Bolshevist scare—a success which in fact certainly sent up Bevin's stock. Hence, they decided to unmask the Foreign Office Palestine policy which Bevin champions, in all its revolting rascality. This is how they describe what they discreetly label as "thoughts among what might be called the entourage of Mr. Bevin's entourage:"

"Even if the Arab attack does not overthrow the Palestine Jews entirely (so that they would have to ask for British support), it will force them so much onto the defensive on the coastal plain that there will be no prospect of any stable Jewish state. The United Nations Implementation Committee will soon see, after the last British have departed in August, that there will be no way of implementing the United Nations decision without a strong force—which it cannot have, for such a force would have to be Soviet-America, and this is out of the question.

"The Committee will therefore appeal either to the Assembly or to the Security Council for new instructions. By the time either body meets, the American elections will be over and pressure from the Arab interests in the State Department will be growing. Mr. Truman and Mr. Marshall will be able to 'do a munich' on the Zionists, and either something like the Morrison plan of Jewish and Arab cantons, without large-scale immigration, will be enforced, or a scheme of a much smaller Jewish enclave around Tel Aviv in a larger Arab state—either a Greater Syria or a Greater Transjordan—will be carried through. And southern Palestine—the Negeb—will, by way of incorporation into Transjordan, come back under British control."

There you have it, straight from the mouth of the Government's own party, published for the first time in the British press in a paper over which one of the ministers of the Crown is known to exercise predominant influence. It might interest Americans, considering the Marshall plan, to learn from this same article the belief that as much as a quarter of the last American loan to Britain was squandered on the Foreign Office's Palestine adventure.

This illuminating article concludes by pointing out that the British-organized Arab attacks on Palestine had, it was felt in official circles, gone a bit too far and too quickly. There was the risk of war, and the Security Council, and Russia. Hence the lull in the British-controlled disorders. I hope the honest men in your State Department and your Congress friends will ponder these astounding revelations and confirmations.

Two Hundred and Forty-second Anniversary of the Birth of Benjamin Franklin

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on January 17, 1948, in connection with the ceremonies marking the two hundred and forty-second anniversary of the birth of Benjamin Franklin.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

General Eisenhower, Governor Duff, Mayor Samuel, distinguished guests, members of the Poor Richard Club, men and women of Philadelphia who have assembled here to honor a great American of our time and to pay homage to the memory of a great American of the early days of our Republic who

became Philadelphia's most distinguished citizen.

It is most appropriate and fitting that we should choose ceremonies commemorating the birth of Benjamin Franklin as the occasion to honor a great soldier. For, although Franklin was not a military man, he was in the real sense of the word, a soldier—a soldier of democracy. Looking back over Franklin's attainments, one is struck by the fact that almost the only area of human activity in which he did not distinguish himself was as a military man. He achieved distinction as a statesman, scientist, philosopher, publisher, inventor, and philanthropist. There was, of course, a good reason for this. When the war for American independence broke out Franklin already was an elder statesman. After a lifetime of service to his fellow citizens, no one would have begrudged him a deserved rest.

He was 26 years older than Washington, 30 years older than Adams, and 37 years older than Jefferson. But, at great personal sacrifice and risk, he cast his lot with those hardy spirits who were determined that America would be free and tyranny could not be endured. He served his country on dangerous missions abroad. If he had been captured he would have been hanged.

Therefore I think it is most fitting that on the occasion of the two hundred and forty-second anniversary of his birth we should honor Franklin by honoring an American whose achievements in the great war as directing genius of the allied invasion of Europe will mark him as one of the great military commanders of all time.

Although Franklin did not wear a military uniform during the Revolutionary War, he was a soldier in the sense that Franklin Roosevelt was a soldier. He exhausted himself in the service of his country, he won powerful allies for the new American Nation and who shall say his contribution to final victory was not as great as Washington's. And as we review the wartime contributions of Benjamin Franklin and General Eisenhower at different periods of our history we are struck by their similarity.

Great as was General Eisenhower's contribution as a soldier I think it was overshadowed by his accomplishments as a diplomat and ambassador and able representative of the American people—a diplomat who with infinite patience and tact and persistence, welded together the forces of freedom composed of nations and peoples with different backgrounds and interests into the most formidable weapon for the preservation of liberty and the crushing of tyranny ever forged.

A century and a half earlier that was the essence of Franklin's wartime contribution as the representative of the young American Nation in the courts of Europe. How General Eisenhower must understand and sympathize with Franklin's efforts to get guns and ships and soldiers from allies of the struggling new Republic.

Franklin and Eisenhower have this in common. They both recognized at different periods of our history that America needed allies—that America needed friends. Both Franklin and Eisenhower understood this fact at critical stages of our history. It is a fact as true today when we are rich and powerful as it was when we were a struggling new nation with only an ideal and a devotion to freedom and democracy to hint at our future greatness.

Franklin and Eisenhower both realized also that to have the understanding and friendship and good will of the world it must be earned. It cannot be coerced or bought—it must be earned.

Franklin and Eisenhower both realized, too, that we can neither isolate or insulate ourselves from the rest of the world and if we are to live in peace we must demand the existence of a world in which freedom and decency can survive unchallenged.

That is the essence of the Marshall plan. It is designed to enable the freedom loving peoples of Europe to revive their economies and regain their economic health, so that they will be able to stand on their own feet and make their contribution to the prosperity and peace of the world.

I think the Poor Richard Club could not have made a more appropriate selection of the man to receive its gold medal of achievement than General Eisenhower. He and Franklin were kindred spirits, representing the best of the ideals and aspiration and character of the American people.

On behalf of the Federal Government I join in congratulating General Eisenhower on the addition of this award to the many he already has earned in the distinguished service of his country.

"We Must Achieve a Greater Responsibility in Government; We Must Drive Out Monopoly in All Its Forms; We Must Rid Our Country of the Plague of Price Fixing, for It Is Only in a Free Market That Democracy Can Attain Its Full Destiny"—Mr. Saul Cohn

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. GEARHART. Mr. Speaker, this great land of ours is now experiencing economic stresses that demand the soundest thinking and wisest action of which its citizens are capable. It is true that we have weathered other economic storms in our history but it is vitally important that the lessons of those experiences be not lost upon us during these days of crisis.

In extending my remarks in the RECORD, today, to include a speech recently delivered by Mr. Saul Cohn, president of City Stores Co., a famous retail outlet, I am making available to the Congress and the country the considered expressions of one of our country's greatest merchandisers, one whose judgment in economic matters is held in the highest esteem. Mr. Cohn has not only a sound but a refreshingly unusual approach to the problems he discusses. In analyzing the situation of the moment, he visualizes us as heading toward an economy based upon consumption, rather than production.

This well-known and highly respected business executive, an outstanding leader in his field, is strongly of the opinion that our salvation, that is, our ability to achieve economic stability in the future lies in the unshackling and the expanding of our distributive machine. According to his convictions, we have laid entirely too much emphasis upon production when, as he contends so convincingly, an efficient productive capacity means little in the absence of an equally efficient distributive system.

Mr. Speaker, I commend that which Mr. Cohn has written to the careful consideration of everyone whose eyes scan these columns. The text of his address, delivered initially at a luncheon meeting of the National Association of Retail Secretaries in New York on January 12, 1948, is the following:

PRICE MAKING IN A DEMOCRACY

The two big issues that confront us in 1948, and which have always been great undercurrents of influence in our lives, are peace and prices. And while the two are interwoven, I shall confine myself in the main to the matter of prices.

But price making today is more complex than ever. To see this clearly we must divide price making into its component parts.

Broadly speaking, every price contains two major elements—the tangible and the intangible. The tangible is the yard of cloth represented in raw material and labor, the value of which can be more or less measured because it is visible and subject to appraisal. The intangible comprises what cannot be seen or measured and makes up a considerable portion of the price. Among the intangibles are included the acts of government and the acts of producers. And it is these that we should think about today, for though viewed singly they indicate but little, seen in their totality they reveal the full and staggering impact upon prices.

ACTS OF GOVERNMENT

It would be futile today to list all the acts of government which find their way into the price structure, but a few are sufficient to indicate the powerful effect they have on prices:

A. The tax structure

Income taxes, State taxes, royalty taxes, sales taxes, license taxes, occupational taxes, and many hidden taxes.

In our kind of economy a tax structure must be judged by its effect upon consumption. When a tax bears down so heavily upon the price that consumption is arrested, with its subsequent effect upon production, that tax structure is a failure. Ours is a dynamic economy, based not only upon freedom of spirit but on a satisfaction of needs and desires. Taxes which arrest production are an interference with the dynamic flywheel of a democracy; an arrest of consumption is an arrest of production. For example, see the effect of one phase of the tax structure as it appeared when published by a leading New York newspaper on January 11, 1941:

Hidden taxes paid with purchases of goods

One hundred and twenty-six different taxes on a pair of shoes.

Seventy-eight different taxes on a quart of milk.

One hundred and forty-eight different taxes on overalls.

One hundred and ninety-one different taxes on a fence.

One hundred and forty-two different taxes on a plow.

One hundred and fifty-four different taxes on a cake of soap.

Two hundred and one different taxes on a gallon of gasoline.

It is needless to point out the cumulative effect of excise and consumption taxes, as well as taxes in general. These are purchase taxes which are all a part of prices, but in many instances they are not only this, but a foundation for profit on taxes. They seriously impair the national income and reduce the job opportunities available.

B. Subsidies

But if some of these taxes can be defended on the basis that they are a legitimate source of Government revenue, on what basis can be defended the artificial support given to prices through Government subsidies, such as tariffs, farm prices, and numerous others.

Our subsidies and sanctioned monopolies and exemptions make but a trapeze of our commercial system, on which the various lobbies engage in a good deal of acrobatics,

but with a balance that tips in their favor at the expense of the consumer. We, as retailers, have never fully understood the effect of these tactics upon the economy and have therefore neglected to make our influence properly felt, nor effectively joined our forces with the consumer in the safeguard of his interests.

C. Price-maintenance laws

And as if these were not enough, we have a long list of market legislation, such as the Miller-Tydings, Robinson-Patman, and numerous other State laws, which affect the free movement of goods into the market, producing a rigidity and inflexibility of price, notable among which are the price-maintenance laws.

ACTS OF PRODUCERS

Add to this the various methods in which cartels and monopolies have further managed to impose upon production administered prices and other kinds of contraptions, all calculated to increase the price of goods, and you begin to have some idea of how the freedom of the market is being destroyed.

As an example, only recently the head of one of our stores (a business which does over $20,000,000) was asked "how many items and lines in your store are controlled by the manufacturers, i. e., how many items are you required to sell at a price without your consent fixed by someone in the line of production?" The answer was "at least 30 percent of the items."

Producers who insist that the marketing of their products shall be done in a way which represents their requirements rather than what the retailer knows to be the consumers' requirements frequently result in enslaving the market.

COMPETITION

Competition is an easily mouthed word in this country. But is it competition to set specific retail price lines, so that an article which cost the retailer $10.75 must be sold for $16.75? And while the merchant may have some leeway over the price line for clearance or seasonal distress periods, if he attempted to be more freely competitive in price at other times it would be difficult for him to secure goods in a period in which there was an undersupply. Price fixing is a hurt to the economy.

Democracy means the right to choose, as well as the right to buy. It is for this reason that our economy is favorably contrasted with almost every other economy in the world; and for this reason it has had a turnover and an element of dynamics unequaled anywhere else. But this was achieved by a freer market, and to the extent that our market is free, to that extent will it continue to be achieved. Goods improperly restrained from coming into the market result in a deprivation of the economic liberty of the individual—and ths applies not only to consumer goods, but also to raw materials, to heavy goods, and to capital goods.

RENTALS AND LONG-TERM LEASES

There is the matter of rentals caused by competition for the limited number of desirable central locations and long-term leases which may, or may not, take into consideration the gradual decentralization of custom and trade. These have a serious impact on the retail dollar.

The percentage lease, which grew up during the depression, has served to inflate the price structure and returns to owners are too frequently disproportionate to the real value of their properties. The percentage lease does not merely give to the landowner a return on his investment—it more nearly constitutes a partnership with the merchant and an added burden on the buying power of the community.

While there is a natural opportunity inherent in the site of a store, sales volume depends upon the resourcefulness of the merchant and the capital he invests. Does the percentage lease encroach upon the merchant's power to raise wages or reduce prices?

Since we moved up to new economic plateaus because a worker takes so much more of the national product now as compared with prewar, would it be timely to inquire whether the percentage lease attacks a normal power of consumption?

COOPERATION

There is a vital need of greater cooperation between the makers of yardage and garments and the makers of sales. The lack of this is reflected in the effect on the price of fashion goods. There seems to be little faith on the part of the mill converters, the cutters or manufacturers, as well as the retailers. No one is willing to take a chance and order goods in time. The result is some goods are delivered too late, causing markdowns and losses which must be compensated for in the price of the goods arriving on time.

All of these problems can be dealt with in periodic discussions which may help to coordinate the activities of each group, at the same time working out economies in production, stemming from a better standardization of goods and from the removal of wastes which find their way into the price. In a world which needs production so badly, we must strive unceasingly from year to year to find ways and means to accomplish this.

ENGINEERED APPROACH TO CONSUMMATION OF TRANSACTION

Today's prices represent an inflated expense dollar. There must be greater production in the distributive fields which in this respect have not done as well as manufacturing.

There is also the need of management and personnel working together to simplify procedures so as to produce a better, more efficient and pleasant job; a job in which the employee shares with management the creative character of performance. This not only makes for efficiency, but like all good things reaps a good byproduct; and this is the dignified status of the employee, who achieves a sense of personal worth and pride of achievement, rather than the feeling that he is only a cog in the wheel.

1948

Nineteen forty-eight will be a fateful year, a year of great problems, but also a year of great opportunities. It will probably determine whether the whole of the twentieth century will be known as the century of fear and defeat, or as the century in which vital problems were met and successfully overcome.

At the moment we are beset by a snarl of prices, wages, and taxation problems, each with an interlacing effect upon the other. There is that segment of opinion, of course, which sees the answer in greater Government controls; in the prolongation of taxes; in the expansion of social security; in the raising of beneficial payments to the unemployed, and in the fiscal policy for deficit spending of Government-made work. The answer does not lie in any of these measures. The answer lies in some hard-headed ways of improving turn-over and buying power. But there is not enough bold statesmanship as to the price-making policy. We in retailing, must provide it or inspire it.

The most constructive thing we can do is bend our efforts toward the strengthening of our economy; make our Nation exemplary for those who have not yet worked the way of their own chaos, and prove to them that democracy can work. And a free market is the hub around which democracy revolves.

We must achieve a greater responsibility in government; we must drive out monopoly in all its forms; we must rid our country of the plague of price fixing, for it is only in a free market that democracy can attain its full destiny.

Since the retailer is in effect the buying agent of the consumer, since he most nearly knows what the consumer wants and the price level at which the consumer will take goods, he must assume a more aggressive role in the making of prices, and insist upon authority equal to his responsibilitiy. All these things must he do if we here in America are to survive as a free society with a free-enterprise system.

Palestine Question

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Charles A. Wells, writer, traveler, lecturer, and cartoonist, writing in his publication Between-the-Lines makes some pertinent observations on the Palestine problem. Mr. Wells has traveled extensively throughout the world and he should have some knowledge and insight to this problem. It is not necessary to agree with his point of view to recognize that he is presenting some irrefutable facts. Under leave to extend my remarks, I am including his article which appeared in the February 9 issue of Between-the-Lines:

The Palestine question is not a problem of just Jews versus Arabs as the average American assumes. In the first place, powerful Jewish factions are opposing the Zionist movement to establish a Jewish homeland in Palestine. They reject entirely the theory that the only hope of the Jew is in the establishment of a homeland in crowded Palestine. The non-Zionists believe that the Jewish destiny can best be achieved as the Jew becomes a valuable and honored citizen in the country where he resides. They believe that the true nature of zionism is spiritual and not nationalistic—that Israel should be bound together by the ties of their great religion and thus be a light to the world wherever they are.

But Zionists bitterly reject this interpretation of their destiny. They demand that the Jews must reestablish their national life, that they must have a country, a national capital, and an army and navy—and that this country must be Palestine and that the capital must be Jerusalem. Zionists have been increasingly accepting the philoscphy of violence to achieve their aims. Many non-Jewish people who have been sympathetic with the Zionist aims have been shocked and their sympathy for zionism greatly shaken by the violent methods of Jewish Palestinian groups who have bombed, ambushed, and terrorized Arab communities * * * often in retaliation but with a savagery, desperation, and efficiency that far outstrips the usual medieval half-barbaric Arab thrust.

These violent Jewish factions, working with the devotion and fanaticism of the anti-Nazi underground of Europe, have recently been involved in attempts to ship large quantities of munitions from this country to Palestine. Working secretly in this country, they have raised large sums of money among American Jewish communities and have undertaken to arm the youth of Palestine for a military defense of the new Jewish national state.

British shipments of munitions have also been made to the Arab nation during the past months as is widely known in diplomatic circles. Why hasn't the American press, which gave big headlines to the discovery of the Jewish shipment of munitions

to Palestine, given any space to the news of British munitions going to the Arabs? Is it because the powerful American oil interests, endeavoring to hold the cooperation of the Arab states in matters of oil, in spite of the Washington endorsement of Zionism, have had a large hand in the British secret support of the Arabs? There are ample grounds for this assumption in view of the congressional investigations that revealed how these giant American oil corporations, endeavoring to hold their Near East oil concessions during the war, paid vast sums to the Arab states through secret arrangements with departments of the British Government (see Between-the-Lines, December 8, 1947). In spite of whatever policy the White House or the London Labor government might seek to maintain, there are always departments of both Governments that are under the control of these powerful commercial groups.

Another unfamiliar factor in the Palestine situation is the presence of Christian communities in the Holy Land that are made up of both Arab Christians and Jewish Christians—as well as other races—who are subject to persecution by both Arab Moslems and Jewish Zionists. These Palestine Christians and their rights are being ignored entirely in the war between the Jews and the Arabs. A recent report in the Christian Century by Robert Root gives considerable detail of this astonishing situation. The question is being raised among both Protestant and Catholic leaders in Europe and America as to what will become of the Christian shrines in Bethlehem, Jerusalem, and elsewhere in the Holy Land, long revered by the millions of Christendom, which are to come under the complete control of the Jewish Nationalists. UN commission reports on Palestine have already mentioned Zionist industrialization crowding ruthlessly on sacred Christian sites.

The British surrender their mandate this coming May. Then Palestine goes under the supervision and protection of the United Nations. It will no doubt be one of the most dramatic months in the history of this ageless cradle of the world's spiritual life.

The irony is that the larger portion of the Jews who have migrated to Palestine are actually nonreligious. There are few religious establishments of any kind in the new Jewish communities, rarely even a synagogue. Great numbers of the Jewish youth in Palestine are Communists—which explains somewhat Russia's unique relation to Palestine. Russia, though a Communist state, has a large Moslem population in some of the southern Soviet republics. That means that Russia is the only great world power with close ties to both the Jewish Communists which largely dominate Jewish Palestine and to the Arab Moslems of Palestine. And Russia is very close by. How long will the United States and Britain be able to hold the upper hand on Palestine when Russia begins to play fully upon these factors?

A Call to Congress To Lead, Not Follow

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 2, 1948

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks, I wish to include an article by Mr. Jerry Voorhis, one of the most respected and outstanding men to ever serve in the House of Representatives.

In an article appearing in the New York Times, Mr. Voorhis has this to say about the obligation of Congress to lead and not to follow.

What he has to say should be of interest to the Members:

A CALL TO CONGRESS TO LEAD, NOT FOLLOW—AN EX-CONGRESSMAN DISPUTES THE VIEW CONGRESS SHOULD MERELY ECHO THE VOICE OF THE PEOPLE

(By Jerry Voorhis)

The United States Congress has a decisive role to play in this year of decision. How is it to act so that the best interests of the Nation will be served? On what should it base its decisions? As Representatives of the people, should Congressmen follow the people's will or lead it? This is a dilemma as old as democracy.

The danger is that Congress will take the time-worn course of following the Nation, as it does today, instead of setting such standards of courageous and farsighted leadership that all of us will be inspired to meet America's grave, new responsibilities. The danger is acute because unless Congress leads, the job America must do—at home and abroad—will not be done.

To a great many persons the phrase "representative government" means that Senators and Representatives are sent to Washington, not to use their own judgment and to be guided by their knowledge of the needs and problems of the Nation, but rather to reflect in their votes the opinion of a majority of the people in their districts. This is the dominant attitude of Congress itself, and it is worth while examining for a moment how majority opinion is arrived at and how the vote of the average Congressman is finally determined.

To begin with, public polls, newspaper and radio commentaries, and similar contemporary phenomena provide a fairly accurate picture of majority opinion; they can tell, at a given time on a given topic, what the people are thinking. But these are rather loose and general appraisals, with or without specific reference to a Congressman's own district. Reports from trusted lieutenants and the views of leading citizens in one's district get closer to home and are continually utilized. There are still other means.

The mail is a familiar voice from home which Congressmen listen to and they know how to "weigh" it. It is not hard to ignore the multigraphed postal cards or the identically worded telegrams that sometimes pour in. But it is a far different matter with the letter in longhand beginning "Dear Joe" or even "Dear Congressman" and appealing to you not to "let us down" on a certain bill. It is still more impressive if the letter represents the views of a local organization, which may even have sent an emissary, or lobbyist, to Washington.

It would seem that the Senator or Representative who heeds such appeals as these—so simple, so direct, the voice of the people back home—was performing his duties in the loftiest spirit of representative government. But what shall he do when all his knowledge and convictions on a significant issue lead him to one point of view and the apparent opinion of the majority in his district directs him to the other? This is the fundamental question with respect to representative government.

The easy answer, the safe one, is that the opinion of the district should prevail. This removes, for one thing, the necessity of thought. A still easier course is for the Congressman to make an early commitment as to how he will vote. From then on in legislative forum, he can argue rather than reason.

The philosophy behind such a policy—other than the view that representation means simply echoing what appears to be majority sentiment—lies in the realm of practical politics. After all, it is said, every Congressman was elected to office in the first place because his ideas corresponded most nearly to those of the majority in his district. If he is to remain in office to do as much as he can for the welfare of his constituency and the country at large, he must not lose sight of this basic political fact.

Is this, however, a proper standard of statesmanship? And is it the only way to endear one's self to the electorate?

To me, such a theory of representative government seems woefully inadequate and unrealistic. We are just beginning to realize that there are vast fields in which there is no real public opinion—even on crucial issues—because many voters do not have enough information about them.

To fill this vacuum a constituent may fall back on a prejudice or an old maxim. The bigger the problem is, and the more confused he becomes, the more likely he is to cling to the past; the more susceptible he is to the eloquence of special-interest pleading and the half-truths of propaganda. This is especially true when Members of Congress do not supply the leadership which most constituents need and many would welcome.

The Congress of the United States does not have to be a mere echo of what "inquiring reporters" and poll-takers say the people think. It is just as possible to lead and inform public opinion as to follow it. Surely there is an obligation binding on every Senator and Representative to make his views known to his constituents, to explain his reasons and appraise the issues honestly. Just as surely it is his duty to cast his vote in the best interests of the whole Nation, as he sees them. And this even though the majority opinion among his constituents may, at the moment, be on the other side.

The truly valid conception of representative government holds that the people elect their representatives because they expect from those representatives better, more farsighted action than the people as a whole, with their limited access to all the facts, can provide.

It holds that the representative is supposed not so much to reflect the opinions of his constituents as to serve (or represent) their best and highest long-run interests.

If Congress is to be nothing but a mirror one is almost tempted to conclude we could do without it. The people cannot pass judgments unless they have something to judge. Democracy cannot and does not work—particularly in times of crisis—unless the public opinion of the time is the result of the pull of concrete proposals by men daring to offer leadership to the people.

It can be done. Every successful politician worthy of that much-abused but perfectly good name knows that he owes his election, in part at least, to the organization of public opinion behind his candidacy. If this can be done to win elections it can be done to gain support for a statesmanlike course of action.

In every community in America there are men and women to whom others look for guidance on public questions. They possess qualities which have given them the opportunity to help mold the opinion of that locality. Most Senators and Congressmen know who these people are.

Direct communication with them, regardless of party affiliation, should lead them to rally behind the sound position of their representatives, or else the whole theory of democratic government is questionable. It is, as a matter of fact, at least as easy to mobilize public opinion behind true leadership as it is to attempt to gage the thinking of the people and then tag along behind it.

Members of Congress have access every day and every hour to information about both domestic and foreign affairs which, in the nature of the case, the average citizen cannot know. Unless, therefore, the Senators

and Representatives act in the light of this information, the country is compelled to operate without any fully informed action (except of course, that taken by the President and his Cabinet). Even if there were no other arguments for Congress leading rather than following public opinion this one would be conclusive.

To this higher concept of representative government Congress can rise, if it will. Confronted by unquestioned responsibility for the future welfare of this Nation—and indeed in times like these, of the world—it is fervently to be hoped that the membership of the House and Senate will be lifted in vision and courage to the point of genuine leadership.

We have had such men in Congress. I have seen them take their political fate in their hands and vote in accordance with their mature conclusions even when they knew they were in effect telling the majority opinion in their district that it was, at the moment, mistaken. And I have seen such men—not all of them, but some—returned to office by people who, on second thought, saw that they were right.

Some of the brightest pages in the history of the Congress are those which record the career of George W. Norris, of Nebraska. First as a Member of the House, later as a Member of the Senate, Mr. Norris consistently led the people's thinking, instead of following it. He awakened national interest in constructive reformation of the rules of the House; he led the battle for the TVA, for rural electrification, for a one-house legislature in Nebraska, for a dozen other measures of lasting benefit to the Nation.

Norris challenged the voters of his State to follow him or to defeat him. By his forthright action he gave direction to the thinking of the people, and so won their confidence that he was reelected over and over again. At his death all America hailed him as a great man.

Less well remembered, perhaps, is the speech delivered in the Senate by Prentiss Brown, Senator from Michigan in the midwar debate on the OPA. For days Senators had been carrying to the Senate floor the opinions of well-knit special-interest groups each of which desired concessions in the bill.

Public opinion was, without much doubt, indifferent if not hostile to a continuance of price control. Admittedly mistakes had been made and poor judgment used in some cases. Yet every informed Member of the House and Senate knew how disastrous the results would be to the Nation if price control were rendered ineffective at that particular time. It remained for Senator Brown to cut through the fog of half-truth and challenge the Senate to act on the larger issue that lay before it. And the Senate did.

Afterward there were those who believed he had so offended certain powerful organizations in his State that he could not be reelected. Perhaps they were right. Brown never ran again, for he accepted the post as OPA Administrator and retired from the Senate. But the reelection of Senator Brown was for one golden hour at least—and probably for longer than that—of less importance to Prentiss Brown himself than safeguarding the economy of the United States. The press and the people of the United States understood this and appreciated it.

We do not yet know the ultimate fate of the Marshall plan for western European recovery. But we do know that specious isolationist arguments and opinion were dealt a heavy blow when Senator VANDENBERG, of Michigan, in defending the interim-aid bill a few weeks ago, gave his graphic illustration of throwing a 12-foot rope to a drowning man 15 feet from the pier. The Senator from Michigan had some of the most powerful figures in his own party against him. He spoke against every cliche that has hampered American foreign policy since this country came of age as a great power. But he gave public opinion a simple rallying point.

Perhaps most important of all for the future of mankind are those members of Congress, led by freshman Senator MCMAHON, of Connecticut, who literally spent sleepless days and nights to inform the American people of the true scientific facts regarding atomic energy, to discredit the false promises of their vote-hungry opponents that America could keep "the secret" locked up somewhere in the Pentagon Building, and to pass the McMahon atomic energy control bill in the closing days of the Seventy-ninth Congress.

There are men and women of this stature in Congress today. The question is, are there enough?

If there were enough to change the course of Congress from one of following Mr. Gallup et al. to one of offering leadership to the Nation based on the hard facts of the present world situation, it would spell the difference between confused forebodings and renewed hope.

The average American citizen has learned to expect a generous seasoning of partisan politics with every dish the present Congress serves to him. Suppose he learned from experience that Congress was no longer adulterating its legislative action in that way? Suppose he learned that there in Washington was a group of representatives of the people seeking with singleness of purpose to serve the long-run welfare of the Nation? Then both American citizens and the other people of the world at large would know that there was a new dynamic salutary force at work around which they could rally.

Rent-Ceiling Fight

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Sylvia F. Porter, which appeared in the New York Post on February 13, 1948:

RENT-CEILING FIGHT

(By Sylvia F. Porter)

I know one way Congress can turn a mild shake-out into a full-dress depression. It just has to let rent controls die February 29. I know how Congress can break the financial backs of millions of us. It just has to force us to pay up to 50 percent more for our shelter. Before Congress falls for the tortuous argument that the commodity slump justifies the slaughtering of our rent-control law, let it decide exactly what it wants to achieve.

And let it be fully prepared for the consequences—not only next November but also in the years following.

Yesterday afternoon I had a visit from a group of real-estate men. We'd arranged the appointment 10 days ago—before the crack-up in the stock and commodity markets.

When their spokesman first phoned, he'd said:

"We think you're getting a one-sided picture of the rent-control situation. We think you don't understand the position of the landlord and home owner and builder."

I'd listened, agreed I could learn plenty from our meeting.

So we met and I learned plenty all right.

I learned that something new has been added to the arguments against extending rent ceilings—the new "thought" going like this:

Since the inflation peak has been passed, there's no longer any justification for punishing the Americans who own or rent houses.

Since the time for controls has passed, the best way to solve our housing shortage is to let free, free enterprise take over.

Since food and clothing will be cheaper soon, tenants will have enough money left to meet their bigger shelter bills.

That's the new argument. And, in addition, I was told that rent ceilings always have been inflationary because they've left people with more cash to buy other goods. (How do you like that.)

And I was informed that ceilings hurt the veterans because they permit people to rent larger places than they actually need and thus the veteran can't get the space.

And I was exposed to the idea that if the higher prices compelled more families to double up, that would be fine because the space thereby released would reduce the shortage.

As you may judge, it was a most educational afternoon.

It defies logic and common sense—this new argument that the recent commodity decline justifies the end of rent control.

For instance, we realize that a painful economic adjustment has become imperative because so many consumers have been priced out of the markets in recent months.

So how do we make the adjustment less painful?

By pricing more consumers out of the market.

We remember what happened to the price level after controls were eliminated in 1946.

So how do we benefit from that lesson in economic management?

By killing the last remaining control—and the one governing a fundamental item in our cost of living.

We understand that an ersatz control law is as bad as no control at all, for we had an experience with a phony law in 1946.

So how does Congress propose to avoid repeating that mistake?

By debating a rent-control bill that is so full of jokers that Senator WAGNER (Democrat, New York) can brand it as "appalling and dishonest."

The facts are these:

We are in grave economic trouble because we have permitted prices of essential commodities and products to get out of hand.

Each inflationary price increase has led to an inflationary wage increase—and the spiral has gone on and on. The result is an economy full of dangerous distortions, of unhealthy rigidities.

The one fairly stable living cost has been housing. But since last June 30, when the present law was passed, the Bureau of Labor Statistics index on rents has risen 6.2 points—from 109.2 to 115.4. (On this index, 1935–39 equals 100.)

The housing shortage remains critical. Secretary Harriman estimates 3,000,000 families are involuntarily "doubling up." Estimates of the shortage run into the many millions. The scarcity of rental housing is particularly serious. The prices of new houses are terribly inflated and out of the reach of countless needy families.

According to Housing Expediter Tighe Woods, rents would rise 50 percent if controls were removed. The experience in decontrolled areas shows plainly that rents jump immediately when the ceilings go off. Even the real estate interests admit there would be "some increases".

Rent control dies at the month-end unless the law is extended temporarily or a new and honest law is passed.

As a tenant, I must confess some prejudice. As a reporter who vividly recalls the forecasts of the dead OPA's enemies, I must confess considerable skepticism of all pretty pledges.

But I did listen yesterday. I did try to be objective.

But the net result is I'm more convinced than ever of the utter necessity for extension of rent control. If you are, too, let Congress know how you feel—in a hurry.

Mr. Speaker, the foregoing is a fair picture of the situation as it exists not only in the city of New York, but in every urban community.

Expansion of Steel Industry

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, many Members of Congress, as well as many other Americans, have been critical of the steel industry in recent months and have been of the opinion that the shortage of steel has been primarily due to the industry's inability to expand its production facilities to meet the tremendous demand for that basic commodity. In view of that rather general belief I was happy to read in the Pittsburgh Press recently that there are four United States Steel projects to be finished in 1948. The newspaper article also lists eight other projects of the United States Steel outside the Pittsburgh area. Therefore, Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWELVE UNITED STATES STEEL PROJECTS TO BE FINISHED IN 1948—FOUR PROGRAMS UNDER WAY IN AREA

(By W. L. Russell)

Four projects in the United States Steel Corp.'s $500,000,000 construction program will be completed in the Pittsburgh district this year.

They are:

1. Increase in the cold-rolled strip and tinplate productive capacity at the Irvin works of Carnegie-Illinois Steel Corp., to be finished in the fourth quarter.

2. New coal washers at Robena mine of H. C. Frick Coke Co., to be completed in the third quarter.

3. New coke oven battery at Clairton works of Carnegie-Illinois to be in operation in fourth quarter.

4. Increased production of silicon steel at Vandergrift works of Carnegie-Illinois to be effective by second quarter.

Nine of the 12 new major facilities now under construction by Big Steel will begin operations this year.

The 12 are the principal undertakings in the $500,000,000 development program in which virtually all operations from the ore and coal mines to sales offices will share.

The following dates have been set for completion of the eight projects outside the Pittsburgh area:

1. Increase in cold-rolled strip and tinplate capacity at Gary, Ind., fourth quarter.

2. Conversion of hot-rolled mill to a cold-reduction mill at Birmingham, Ala., fourth quarter.

3. New research laboratory at Duluth and Trout Lake pilot plant at Coleraine, Minn., to handle lower-grade ores of the Mesabi Range, second quarter.

4. New cold-rolled strip mill at Pittsburg, Calif.

5. New cold-rolled strip mill at Los Angeles, fourth quarter.

6. Construction program at Lorain, Ohio, and additional tube-making facilities at Gary, Ind., fourth quarter.

7. Remodeling of 132-inch plate mill at Geneva, Utah, for manufacture of hot-strip coils, first quarter.

8. Two new modern blast furnaces at Chicago, second quarter.

In addition to the expansion program, the corporation is engaged in a broad program of replacements and improvements to its iron, coal, coke, and steel producing facilities.

Communism Expands Under Roosevelt and Truman

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, "During 1945 and 1946 Russia achieved a territorial expansion greater than in any other comparable period in her history," says Ely Culbertson, in a feature article appearing in the New Leader, of February 14, 1948. He then points out that Russia emerged from the war as a giant Communist empire, from Korea to the Elbe, with vast industrial resources and nearly half a billion humans under one iron will. Said he, again, "In two short years, Communist Russia fulfilled the imperialistic dreams of generations of tzars."

Mr. Speaker, this comes as a shock to the average citizen. So that all may read and have the benefit of Mr. Culbertson's thinking, I am including the whole article, as part of my remarks:

THE STALINTERN AND THE ATOM BOMB—AFTER THE MARSHALL PLAN, WHAT?

(By Ely Culbertson)

During 1945 and 1946, Russia achieved a territorial expansion greater than in any other comparable period of her history. She emerged from the war as a giant Communist empire, from Korea to the Elbe, with vast industrial resources and nearly half a billion humans under one iron will. In two short years, Communist Russia fulfilled the imperialistic dreams of generations of tzars.

During 1947 Russia consolidated her victories of Tehran and Yalta in eastern Europe and laid the groundwork for new advances in China and the Middle East. The Communist tide has been contained, however, on the Greek and Turkish frontiers; it is receding, temporarily at least, in France, Italy, and America. But the Moscow rulers, by postponing practically every basic issue of the world settlement, are gaining precious time in which to advance their industrial rearmament and to make their strategic position in the heartland of Eurasia impregnable.

Meanwhile, the United States is still drifting confusedly toward the fateful hour, sometime after 1950, perhaps even sooner, when 150,000,000 Americans must fear annihilation by atomic blasts from skies or cellars.

Why have we failed?

One reason for the failures of our foreign policy lies in the structure inherent in any real democracy.

The only people who make decisions on war or peace in Russia are the 14 members of the Politburo. Russia's rulers can and do use force and the threat of war as an instrument of policy, and the only effective answer to power policies is counterforce.

But American leaders cannot give this answer—not if they wish to be reelected. The moms and pops of America do not understand the logic of power politics; they only know that they do not want their boys to go to war.

Thus, America finds herself in the greatest psychological trap in history: Our leaders, unable to answer military force with counterforce, must of necessity resort to broken weapons of persuasion, economic pressure, and half measures. Our foreign policy in 1945 and 1946 was one of appeasement, and in 1947 it stopped at half measures designed to "contain" Russia.

The Marshall plan, however worthy, is another such half measure—unless paralleled by effective action on the political front.

It is clear that the Democratic administration has developed the Marshall plan, not only as a new anchorage for United States foreign policy but also as a lever to swing the 1948 elections. From the internal political standpoint, the administration reasons that if the Republicans support the Marshall plan, then they will be placed, as in many times in the past, in a me-too position, which cannot gain votes, and if the Republicans unduly restrict or undermine the Marshall plan, then the economic logic and the popularity of the plan will lose votes for the Republicans. How much validity is there in this reasoning?

The Marshall plan has two points of strength and one basic weakness: First, it is a plan to feed, clothe, and shelter the impoverished peoples of western Europe; second, it is a plan to rebuild western Europe economically, so as to "contain" the Communist expansion into western Europe. These two points alone are enough to leave no alternative for the Republican Party except to support the Marshal plan, with proper safeguards.

But there exists a basic weakness in the Marshall plan, which we must guard against if the Marshall plan, like so many previous plans of the administration, is not to become a gambit for the Moscow rulers. The weakness lies in the deliberate progaganda of the administration that the Marshall plan is the cure-all for the ills of the world and in the consequent failure of the administration to advance additional and more effective measures against the militant Communist state.

On January 5, Charles E. Bohlen, counselor to the State Department, speaking in the place of the Secretary of State, declared that the Marshall plan "offers us the best chance for the eventual achievement of a stable and peaceful world. It is certainly the best chance, and it may be the last."

This kind of grossly exaggerated selling job, if successful, may well turn the Marshall plan into the Maginot line of the American nation. The truth is that the Marshall plan is strictly limited to the counteroffensive on the economic front, and therefore completely ignores the strategically more vital objectives of the counteroffensive on the political front. The Marshall plan fails to solve three fundamental threats to the United States and the world from the USSR.

First, the Marshall plan can do nothing about the atomic threat. Soviet Russia is now feverishly engaged in building atomic plants at the cost of billions of gold rubles and with the help of thousands of scientists from Germany and elsewhere. Leading scien-

tists estimate that by 1950 Russia is virtually certain to have a few atomic bombs. By 1952, which is the terminal point of the Marshall plan, they will have enough atomic bombs to threaten to destroy, in case of conflict, a score or two of American cities.

Secondly, the Marshall plan can do nothing about the consolidation, leading to effective absorption, of Russia's gigantic zones of influence in eastern Germany, Poland, and the Balkans, and the Far East, not to count the incipient zone in the Middle East. In fact, it has been stated by the administration that the eventual success of the Marshall plan in western Europe is largely predicated on the cooperation of the agricultural states of eastern Europe. Unless the administration contemplates eventual appeasement of Russia, such an assumption is obviously fantastic.

Thirdly, the Marshall plan can do nothing about the gigantic rearmament program of Soviet Russia now going on, parallel with her intensified industrialization. Although it may partially rearm Germany and western Europe, it cannot possibly disarm Soviet Russia and her satellites, now engaged in a tremendous program of building new air fleets, new tank and rocket divisions, and new submarine fleets.

Assuming the fullest success of the Marshall plan, with the expenditure of all the amount asked, what will our situation be in the middle of 1952? Western Europe will be economically stronger and in a better position to resist communism from within. But from outside, Russia, recovered and with her strategic zones consolidated, will possess the most powerful war machine of all time, spearheaded very probably by squadrons of atomic bombers and backed by 500 divisions. Today, the American atomic monopoly is the principal deterrent to a sweep by Communist Russia over Europe and Asia. By 1952, Russia will be in a stronger position and America will have lost her atomic monopoly. Furthermore, as with Hitler, the fear of the overpowering war machine at their very doors, fortified by the atomic threat, will probably divide and keep paralyzed the nations of western Europe and Asia.

The Marshall plan may divert the attention of the American people from the fundamental issues between the United States of America and U. S. S. R.; but it will not avert the Third World War. In a world of power politics, America cannot buy world peace on the installment plan. The Marshall plan cannot therefore be the sole basis of United States foreign policy, as proposed by the administration. Something else, of a far more drastic and more effective nature, will be needed in addition to the Marshall plan.

That something else cannot be a preventative war to crush Russia now. In a democracy such as ours either political party is certain to be defeated if enough Americans become convinced that it is a war party.

Is there a way out, which is neither appeasement of Russia a la Wallace, nor half-measures a la the Marshall plan? Such a way exists. It is to anchor the United States foreign policy on the United Nations—not the present, impotent United Nations, but a revised United Nations strong enough to prevent any nation from rearming for aggression with impunity or attacking a divided world with chances of success. The American people are convinced that the hope of the world lies in the United Nations. But since the present UN Charter leaves that body too weak to defend the peace of the world against aggressors, it must be strengthened. We can make the United Nations work by:

Abolishing the veto, but only in specific matters of aggression;

Preventing rearmament for aggression, by world-wide control and inspection of atomic energy together with a quota limitation on the production of other important weapons;

Defending any member-state against aggression with a strong international contingent (police force) recruited from the smaller member-states, supported, if necessary, from the armed forces of the major states.

Should Russia choose to reject this revised United Nations plan (or quota force plan) in spite of its eminent fairness to her, the building of a strong United Nations would proceed without her, under article 51 of the UN Charter.

What are the chances of some such plan being adopted by either of the major political parties? The plan already has been fully approved by a number of national and local organizations from left to right, whose total membership numbers over 5,000,000. Remarkably enough Socialists and liberals like Norman Thomas, Roger Baldwin, and George S. Counts are united with former presidents of the NAM and leading officials of the American Legion in endorsing the revised United Nations plan. The adoption of this plan, therefore, by either political party would secure for that party the votes of millions of those independents to whom the cardinal issues are communism and the atomic bomb.

A question may arise: If this plan for reform of the UN is so good, then why has not the administration itself proposed it? Why is the State Department making great efforts to play down even a discussion of the veto question in the United Nations, as demonstrated by its inconsistent action first in creating the little assembly in a defiant blare of trumpets, only later to bury it shamefacedly as thought it were a still-born child? One reason is that the nostalgic hankering for the happy pro-Communist days is not completely eradicated in official circles. But the more important reason is the fact that a pro-Russian vote is deemed essential by the Democratic politicians in order to win the delicate 1948 elections; and that vote would be lost irretrievably if the revision of the United Nations without Russia were proposed.

With the Marshall plan there is always a hope eventually to reach a friendly understanding with Russia. In fact, if at some future time the Moscow tacticians decide to forgive and cooperate in the Marshall plan, we will have peace in our time—always good at election time. But the revised United Nations plan will finally slam the door to any appeasement of Russia, except on conditions of effective and guaranteed peace. And the present Moscow rulers won't like it at all. For if they agree to the reform of the United Nations not only will they have to abandon any aggressive designs, but they will lose their principal trump which they so assiduously cultivate with their own long-suffering people, which is the bugaboo of foreign imperialist aggression against Russia; and if they lose this trump communism may collapse in Russia. On the other hand, should they refuse to join in the revised United Nations they will be facing a word collective front of peaceful nations that will crush them if they choose aggression.

Thus, reason the Democratic politicians, whose problem is, as with all politicians, how to save the world and yet be reelected. Perforce they follow a tortuous line of being tough enough to satisfy the anti-Communists and yet avoid making the politburo really mad.

However, things have gone too far with Communist Russia for any semiappeasement, however cleverly disguised. Furthermore, the threat of Wallace's third party has been considerably reduced by the defection of all except the Communists and totalitarian liberals. If only the Democratic leaders had enough imagination to take a firm and constructive attitude for the reform of the United Nations, they would gain millions of extra votes.

The Republican Party is not suffering from Wallacitis, but it has other kinds of internal troubles. Fortunately, a healthy and powerful movement is developing within that party against a too slavish adherence to the zigzags of the administration. Many Republican leaders have finally realized that the "Me-Too" policy in foreign affairs cannot gain any votes, and that a bold and practical program for the effective revision of the United Nations, in addition to the Marshall plan, would liberate the Republican Party from the me-too chains which Roosevelt so cleverly put upon it.

Thus the logic of world events and the opposition of the American people to both appeasement and a preventive war against Russia leaves only one way out for both parties. And that way can only be via a revised United Nations. Whether the leaders of either party will have enough political imagination to seize this unique opportunity remains to be seen.

One thing is certain: The revised United Nations plan will be a death blow to the imperialist designs of the Moscow state. And yet the plan is so designed that it offers to a peaceful Russia exactly the same guarantees against aggression as to the United States and the rest of the world. The Third World War need not take place. For if the Moscow rulers choose to stay out they will be all dressed up with no place to go. And rather than risk a war at hopeless odds against the United States and most of the world under a revised United Nations they too will have to join.

Today the Politburo reasons well that American statesmen cannot force guns into the hands of the sons of American Moms and Pops in a cause of power politics. But this is only half the truth. The other half is that American Moms and Pops will support the putting of a gun into the hands of the revised United Nations—not against Russia but against any aggressor—under a higher law, a world judge, and a world policeman.

United States Jews and Palestine

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts of a letter addressed to the New York Herald Tribune by Mr. Lessing J. Rosenwald, president of the American Council for Judaism.

Mr. Speaker, there has been considerable confusion and some misstatement about the American Council for Judaism with reference to its present position on Palestine. I am very happy that Mr. Lessing J. Rosenwald, president of the American Council for Judaism, has seen fit, in a letter which he sent to the New York Herald Tribune, to set the record straight in that respect. In his letter Mr. Rosenwald, writing as president of the council, said, in part, as follows:

On November 20, 1947, the member states of the United Nations met in solemn conclave at Lake Success and reached a history-making decision to partition Palestine into separate Jewish and Arab states. We accept this decision. We wish the new states the greatest possible success, and we hope that they will prosper and develop in peace and harmony.

We opposed the partition plan which was finally approved by the United Nations. Whatever our opposition of the past—time will tell whether or not we were right—we cannot, and do not, set ourselves against the

organized voice of the world society of nations. We have no foreign policy of our own, independent of that of our own government.

* * * * *

I am frequently shocked by the conception that loyalty and devotion to the United States are to be interpreted in terms of abiding by its laws. "I vote, I pay my taxes, I live honestly and decently." Fine! But is that all that is meant? No! National loyalty and national devotion are to be found in the depths of our being. A glowing love of our land and its people and its language. A warmth of heart about its landmarks, and its songs. A trust in its destiny. A pledge to dedicate life and posessions and all that is dear, to the fullest and finest evolution of its institutions. An awesome conviction that here—in the United States of America, and nowhere else in the world—I will live, here I will die, and so with my descendants.

For the last 150 years in all western lands we have striven to abide by the concepts of our religion as that of Judaism, our national loyalty as that of the countries of our choice.

* * * * *

In our national loyalty, attachments and interests, we are exclusively and totally Americans—as the only proper course for those privileged with citizenship of the United States of America. In our religious adherence—and in that alone—we are of the Jewish faith, striving to live by the spiritual, moral and ethical implications of the universal cry: "Hear, O Israel, the Lord our God, the Lord is One."

We trust that these concepts will strike a sympathetic chord in the hearts of all Americans, regardless of their religious beliefs. May it also bring some measure of hope to all those thousands of distressed persons, of all faiths, who look to the United States as a haven and a heaven, where life can again be sweet and natural.

Mr. Speaker, I have always contended that the establishment of a Jewish state in Palestine will not cause in the slightest degree any diminution of the patriotism and allegiance of American Jews to the United States of America. The foregoing excerpts are but one more demonstration of the truth of that statement. Regardless of the differences of opinion that may have existed as to the advisability or feasibility of establishing a Jewish state in Palestine, now that the United Nations has decreed it, the entire world is in duty bound to give it a fair chance to succeed. Every effort must be bent to preventing outside interference.

The next step in that direction must be a positive statement in no uncertain terms by the Secretary of State that any attempt to sabotage any decree of the United Nations will be considered an unfriendly act and a threat against the peace of the world.

Angry South Could Defeat Truman in Civil Rights Row

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herewith an article which appeared in the Washington Evening Star on Tuesday, February 10, 1948:

ANGRY SOUTH COULD DEFEAT TRUMAN IN CIVIL RIGHTS ROW—WITHHOLDING OF 127 ELECTORAL VOTES WOULD MEAN GOP VICTORY

(By Gould Lincoln)

Unhappy Democrats of the South are trying to decide whether they stand to lose more by having a "carpetbag" Democrat or a Republican in the White House. They regard the program laid down by President Truman in his recent civil-rights message to Congress as bad or worse than the program of the radical Republicans in reconstruction days after the Civil War. The Truman program spells the doom of segregation of the white and colored people—which has been practiced in transportation, in schools and colleges, in hotels and theaters and, in many ways, in employment. The issue has become social, as well as governmental and economic.

These southern Democrats went along with the late President Franklin D. Roosevelt at election time, although Mr. Roosevelt at various times advocated practically all the things which Mr. Truman has now advanced. Mr. Roosevelt, however, never lumped them all in a special message to Congress, and threatened an army of FBI agents and a determined Department of Justice to compel the southerners to carry them into effect. They went along in order to keep a Democratic President in the White House—and to keep themselves in office, with jobs to parcel out to deserving followers. They did this although they were opposed to much of the New Deal program, and particularly to the Roosevelt attitude on the race question.

ONE HUNDRED AND TWENTY-SEVEN ELECTORAL VOTES AT STAKE

Except Franklin Roosevelt, who carried every State in 1936, aside from Maine and Vermont, and Woodrow Wilson, who was elected overwhelmingly in 1912 because of the Bull Moose Party led by Theodore Roosevelt, no Democratic candidate for President has ever had a ghost of a show for election without the vote of the solid South. If that vote were taken from Mr. Truman in the coming election, he would be sunk without a trace—and even if he divided States of the North and West with his Republican opponent, and the election were tossed into the House of Representatives, he would stand no show.

So the most aroused southern Democrats are today threatening Mr. Truman with the loss of the 127 electoral votes of the 11 States of the South unless he eases off and fails to press for the enactment of this program. Senator EASTLAND, of Mississippi, for example, gives his own answer to the question, "What can the South do?" It can withhold her electoral votes and defeat any Democratic candidate, he points out. He further asserts that "no candidate would be nominated if it were known that he would not receive the South's electoral vote. The machines of the North which control the party are not crazy," he added.

Mr. EASTLAND presupposes that a Republican candidate for President could not win next fall when he suggests that the election would be thrown into the House if Mr. Truman does not receive the electoral votes of the South, yet Republican Presidents have repeatedly been elected, despite the fact that the South voted solidly for their Democratic opponents. So it is obvious that, while the South might prevent the election of Mr. Truman, it is not necessarily true that a Republican would fail of election without the issue going to the House. Southern Democrats figure, however, that it may well be better to go to the mat now on this race issue with the Democrats of the North and West than to postpone the issue. They hold a powerful weapon if they wish to use it.

MISSISSIPPI LEADS FIGHT

Mississippi, through its Governor Wright, has taken a lead in this fight with Mr. Truman—and unless Mr. Truman retreats on this issue and the Democrats of the North retreat along with him, Mr. Truman will not get the electoral vote of that State, no matter what the other Southern States do. The Southern governors, meeting in Florida, put through a resolution to study the matter for 40 days—during which, it is presumed, they will seek to get some kind of a compromise with Mr. Truman.

If Mr. Truman should yield, he will lose strength in the North and West and will be more vulnerable than ever to the raids made by Henry Wallace as a third party candidate. The position of the prospective Democratic nominee for President seems to be rapidly deteriorating.

Senator EASTLAND, who voices the sentiments of Governor Wright, says flatly: "Common sense demands that the electoral vote of the South be used to protect her people. The stark reality is, however, that our electoral vote is the basis of the movement to destroy our social institutions. Our electoral vote is now being used to promote such purposes. The politicians are expected to keep us in line in the name of party harmony while they stay in office through the dispensation of governmental favors."

The A B C of Inflation in the United States

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. REED of New York. Mr. Speaker, the American citizens have seen their money squandered, depreciated, borrowed, and spent, and their future and that of their children mortgaged by a ruthless gang of New Dealers bent on a planned economy. They have seen higher and higher taxes, larger Government pay rolls, and they now know that the President is demanding controls and regimentation to further aggravate an inflation for which he and his predecessor and the New Deal legislation have been responsible.

I am inserting under unanimous consent, The A B C of Inflation in the United States, written by Roger Amory, chairman of the board of the National Rockland Bank of Boston.

THE A B C OF INFLATION IN THE UNITED STATES

(By Roger Amory, chairman of the board, the National Rockland Bank of Boston)

INTRODUCTION

Every great war has produced an inflation of commodity prices, and after each war the cost of living has rapidly increased. Each period of such inflation has been followed by a period of deflation, bringing financial distress to the borrower and unemployment to the wage earner.

The cause of these inflations has been the same. During the war, expenditures by the Government have exceeded receipts from taxes and from outright sales of bonds to the public. The difference is made up by the creation of new money in the hands of the public. On the termination of the war, bonuses are paid discharged soldiers, and individuals bring forth the savings they have

accumulated from wartime wages or from earnings which under ordinary conditions would have gone into things not available during the war. Bureaucrats, whose numbers have been greatly augmented during the war, are not only slow to get back to civil life and the production of civilian goods, but have become accustomed to authority and lavish expenditures. Their demands on Congress are often arrogant and exorbitant and difficult to curb. The public goes on a buying spree for the things it has been denied during the war, and which, unfortunately, are still in short supply. People bid against each other and drive prices up. Commercial loans increase because of the increased business activity and because of the higher dollar value of those raw materials and finished goods which business must carry during those many months intervening between the time when raw materials come out of the ground and the time when the finished goods are paid for by the ultimate consumer. This increase in commercial loans further augments the money supply. An inflationary boom takes place.

However, the upward surge of prices and wages is not orderly, and as the inflation continues the buying power of an increasingly large section of the public is reduced. Finally demand for goods slows up and prices start falling. The buying spree is over. The future becomes uncertain. Economies are put into effect. Unemployment occurs. Loans are reduced or eliminated, and the supply of money is thereby reduced and its value correspondingly increased. Prices continue to fall, unemployment and stagnation of business set in, and the country is in a depression.

Money, as now defined since the gold coin standard within our country was legally abolished in 1933, is a medium of exchange, of no value in itself, but only of value to the extent that it can be exchanged for goods or services desired. Other things being equal, the larger the money supply, the less a single unit of it will buy, and the smaller the money supply, the more a single unit will buy. In the long run, if you increase the supply of money, prices go up; if you decrease the supply of money, prices go down.

Money is a measure of relative values. If a half a day's labor in a coal mine is equivalent to that labor necessary to produce food for the miner and his family for a day, it is immaterial whether the half day's labor in the coal mine and the supply of food produced by the equivalent labor is said to be worth $4 or $8. It is vitally important that they are represented by the same number of dollars. Whether it is $4 or $8 depends not on the quantity or quality of the labor in the coal mine, or on the quantity or quality of the food in question, but rather on the ratio of the supply of money to a combination of factors in the economy, perhaps best represented by "gross national income."

The spiral of increased wages, increased costs and increased prices is not due to "selfish labor leaders" or "selfish big business" but is a natural adjustment of our national economy to the inflated money supply.

The money supply of the people is composed of: (a) Currency, and (b) checking accounts in commercial banks. Currency, as here defined, consists of silver, nickel, and copper coins, bills representing the deposit of silver in the Treasury in Washington,, and Federal Reserve notes. The latter are I O U's issued by the Federal Reserve banks largely against the deposit of Government bonds. It is not lawful money, but it is redeemable in lawful money at the United States Treasury or any Federal Reserve bank, but none of our lawful money in this country today is redeemable in gold. Only a very small portion of the checking accounts in commercial banks is the result of deposits of currency. These checking accounts are largely the result of credits, which have arisen from (1) loans to the public and (2) loans to the Government.

We have, therefore, the following conditions:

I. Prices are largely governed by the relation of the size of the money supply to "gross national income."

II. The size of the money supply is increased or decreased by:

(a) An increase or decrease in currency.

(b) An increase or decrease in loans of commercial banks to the public and to the Government, and

(c) An increase or decrease in holdings of Government securities, gold, and loans by the Federal Reserve banks.

III. "Gross national income" is directly related to the productivity of individual effort.

INFLATION AND WORLD WAR II

Those in charge of the debt structure of the country during the war were well advised as to inflations and deflations attributable to former wars and the causes leading up to them. They realized that a certain amount of inflation of money was necessary to carry on the war on the gigantic scale desirable. They also were aware of the dangers. Inflation of money through inflation of currency had resulted in the almost worthless "continentals" of the Revolution and in the "greenbacks" of depreciated value of the Civil War. They realized that the inflation of credit, which had resulted by having encouraged the purchase of Liberty bonds with borrowed money, was a contributing factor to the boom and bust following World War I. The Government did finance the recent war 46 percent by taxes, as compared with virtually none for the Revolution, 43 percent for the War of 1812, 23 percent for the Civil War, and 28 percent for World War I. However, the expense of World War II was more than that of any other war, and the effect on our economy far greater. We find that per capita debt in 1812 was $15; in 1864, it was $78; in 1918, it was $240; and, in 1945, it was $1,981. The national debt has reached the stupendous figure of $258,000,000,000, requiring annual interest charges of some $5,000,000,000. In spite of the effort to finance as large a part as possible of the expense not taken care of by taxes through the sale of bonds direct to the public, and in spite of the fact that the provisions of the bonds of smaller denominations were such as to prevent them from being used as collateral for loans from banks, a very great inflation of the money supply did take place.

The money supply, composed of currency and bank credits resulting from loans to the public and loans to the Government, increased 180 percent. In 1940, there was less than $8,000,000,000 of currency outstanding against over $28,000,000,000 in 1947. Checking deposits in commercial banks have increased from something under $30,000,000,000 in 1940 to something over $80,000,000,000 in 1947. The per capita money supply is around $770, as compared with $214 at the peak of 1929. This money supply is the result of private-business activity to the extent of 37½ percent and of Government activity to the extent of 62½ percent. In 1929, the large money supply was the result of private business to the extent of 90 percent and of Government activity to the extent of 10 percent only.

The estimated annual personal income in the United States, of which over 60 percent is wages was in September at its all time high of $210,900,000,000, having gone up from $76,000,000,000 in 1940, and having doubled from the peak of 1929. The amount being paid out in wages alone is 50 percent more than the total personal income of the whole United States in 1940.

It is not surprising that with such income and after the restraints and self-denials of the war, consumption of goods increased. It is the tremendous buying power more than a shortage of goods that causes the present situation. The per capita consumption of meat is 25 percent in excess of that before the war. Not only are we consuming more goods than in the past, but Europe is demanding more goods of us. She hopes for many times the amount of wheat that she took from us before the war.

With this tremendous buying power in the hands of the public, rationing of beef can have but little effect on the economy as a whole. If people cannot compete for beef, they will compete for lamb or pork or chicken, and we would soon find it necessary to ration everything. Black markets would abound. To put on price controls would be equally futile. Price controls are ineffective, if prices are unrealistic. They are like a little boy who only leads the circus parade while he runs in front of it. It would take a tremendous increase of the present vast bureaucratic organization to even prepare and distribute the forms. Enforcement in time of peace would be virtually impossible. Meatless Tuesdays and eggless Thursdays are nothing but gestures, which have a tendency to increase the consumption of meat and eggs the other 6 days of the week.

THE A B C OF INFLATION

The ways to curb inflation are:

A. Decrease consumer spending.

B. Increase production, and increase the supply of goods.

C. Reduce the money supply.

If it were not necessary to consider what was socially desirable and what was politically feasible, there would be many ways to: (A) decrease spending, (B) encourage production and increase the supply, and (C) reduce the money supply.

A. Ways to decrease spending might include:

1. Real, determined, and effective reduction in Government spending. This is the first and foremost essential.

2. Increase of consumer taxes so that other taxes may be decreased or Government debt reduced thereby.

3. Encouragement of saving by increasing the rewards of thrift.

B. Ways to encourage production and increase the supply might include:

1. Reduction of taxes on production.

2. Encouragement of the retention of earnings for the modernization and expansion of production facilities.

3. Encouragement of venture capital.

4. The elimination of rent and other Government controls.

5. Restriction of the exportation of goods.

6. Encouragement of the importation of goods.

C. Ways to reduce the money supply might include:

1. The elimination of those Government aids to borrowing as have developed from the activities of the RFC and FHA and crop control.

2. Increase the sale of Government bonds to the public and retire Government bonds now in the commercial banks and the Federal Reserve banks.

3. Have the Federal Reserve use the ample powers at its command to control the present inflationary boom and insist that the Federal Reserve in its open-market operations not add to its already large holdings of Government securities and thereby increase the money supply and augment inflation.

Although the gradual reduction of the huge Government debt by excess tax receipts over expenditures is particularly desirable, it is by no means the only way nor necessarily the most effective way of controlling the money supply.

During the war our own Federal Reserve, along with the central banks of all major participating countries, came under the complete domination of the administration. This was natural under the circumstances as, in the financing of the war, tremendous

amounts of money had to be raised. However, to insure a sound financial future, it is essential that the Federal Reserve System regain its independence of action and not be dominated by the present or any other administration. The Federal Reserve System was organized by Congress in order that a central independent authority, through its power over bank deposits and interest rates, might keep an adequate but not excessive money supply available for the operation of a free economy. Under existing laws Congress clearly has placed this responsibility squarely on the Federal Reserve, but with the present size of the national debt the Treasury is naturally keenly interested in how Federal Reserve policy affects the markets for Government securities.

The greatest difficulty with which the Federal Reserve Board has been faced in controlling the money supply and the inflation is the danger of starting a sharp deflationary movement which would be temporarily upsetting to the security and commodity markets and would be politically embarrassing to the administration.

No one questions that the administration now has ample powers to control the supply of money and could check the inflation and stop the upward spiral of wages, costs, and prices. However, ways to stop inflation are not pleasant to party leaders, party workers, and Federal employees, nor is it immediately pleasant to the electorate. Higher interest rates mean higher interest charges for the taxpayer to pay. The administration talks against inflation, searches for palliatives and painless cures, but is embarked on an overall program that regardless of its merits is highly inflationary. To influence the economy and politics of Europe with money and supplies is inflationary. To maintain the most expensive Military Establishment in all peacetime history is inflationary. To increase social benefits and advocate higher wages and shorter hours is all inflationary.

On the other hand, no one questions that Congress could refuse the necessary legislation and appropriations to carry out those policies of the administration which are inflationary. However, Congress reflects directly the electorate, and the electorate at times seems to be obsessed with an emotional surge of benevolence and fear which blinds it to all cause and effect. The people at the grass roots are still not yet interested seriously in putting through drastic Government economy and stopping inflation. When they are interested, Congress and the administration will be responsive. In the meantime, the Treasury itself, regardless of its own ideas, must raise the large sums appropriated by the Congress.

What the voters do not realize is that for a nation which has been moving along the road to further and further inflation, there are only two courses of action: to go on, or to turn back. To stand still will inevitably end in drifting toward further inflation. To go on inflating eventually means bankruptcy, and repudiation. To choose the alternative course of turning back means actually deflating. It is useless to deceive ourselves that such a change back to sober and sound economic policies can be accomplished without encountering for a time serious economic discomforts.

CONCLUDING OBSERVATIONS

This emphasizes the difficulty of a planned economy in an unregimented democracy. Man has reached the stage of development where he willingly hires a police officer to arrest any and all, including himself, for violating the speed laws, but he has not reached the stage where he informs on himself when he fails to obey the law, nor does his heart go out to the officer who arrests him.

To achieve permanent success those operating a planned economy must at times put into effect restraints not immediately pleasant to the electorate. Men elected to office are loath to do this and prefer to call for more power to alleviate the pain. That is why planned economy is incompatible with democracy and why it results in continual requests by the central government for more and more authority until the only solution seems to be a police state with its stunted production and low standard of living.

Europe presents many examples of the result of the philosophy of attempted prosperity through planned economy, paper money, controlled money rates and deficit spending—a philosophy which, if followed, always has and always will lead the masses along a glittering path of inflation to a slough of misery and degradation.

ROGER AMORY.

DECEMBER 1, 1947.

Soviet-Nazi Cooperation in the Extermination of Freedom in Poland in August 1944, While They Were at War With One Another

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, there recently was published by our State Department the documentation of the Nazi-Soviet relations from 1939 to June of 1941.

The attack by Hitler on Russia did not really end the relationship between Hitler and Stalin. They could fight with one another, these two aggressors, but when either one of them was confronted with freedom and liberty you will find them fighting side by side against freedom and liberty.

Such was the case from August to September 1944 when Stalin's legions were advancing against the Nazis in Poland. The Soviets broadcasted to the Polish underground to arise in Warsaw and assist in the assault on the Nazis. But the Soviets betrayed the heroic Polish underground. They paused in the suburbs of Warsaw and thus collaborated with the Nazis while the latter proceeded to decimate the civilian population and the underground army. History probably does not contain a much blacker page of vallainy than that which can be written of the Soviet high command as engineered by Stalin. Of course, Stalin had a purpose in collaborating in the extermination of the Polish underground army, his purpose was this: He wanted to set up his own Soviet Poland. He has accomplished his purpose. We now have a Soviet Poland.

Following are two installments of Mikolajczyk's story as contained in the Milwaukee Sentinel:

GENERAL BOR'S ILL-FATED STAND SADISTIC RUSS COUP

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment XVI)

The horse-faced woman Communist, Wanda Wasilewska, had just looked at me in our Moscow meeting (it was August 6, 1944), and told me that there was no fighting going on in Warsaw between the Polish Home Army and the Germans—while the Red army lolled in the suburbs hoping for the extermination of the Polish patriots.

"You're talking nonsense," I said to her, and showed her some of the frantic and heart-breaking communications I had been receiving, through the British, from General Bor-Komorowski in Warsaw since the fight began a week before.

She read through them hurriedly.

"Well, if it's true," she finally said, "the help will soon come. We want to establish ourselves there as soon as possible."

I repeated that I had seen Stalin a few nights before at the Kremlin, and that in addition to showing an interest in the plight of the Warsaw Home Army (his interest, as a matter of fact, had been negligible) he had also spoken about the future boundaries between Russia and Poland.

"If we can get together, here and now, I believe we can gain some advantage for Poland by approaching him as a unit," I appealed to these either sinister or pathetic Communist stooges.

"The Curzon line is most just for Poland," Wanda answered coolly, yielding to Russia the huge territory which the Red army had invaded as an ally of Hitler in 1939.

Andrzej Witos, the frightened little man who had become a fellow-traveler after being spared from a Red purging, spoke up now.

"But Madam," he said to the woman who had hailed the downfall of Poland in 1939 and now was established by Stalin as one of its future rulers, "I think Mikolajczyk is right. Perhaps if we got to him as a body—with you refraining from speaking for us—we can."

That is as far as he got. Rather than reveal to me that there was a difference of opinion among this so-called Polish Committee of Liberation the meeting was abruptly terminated.

I was told again, however, that there was no fighting in Warsaw and that Boleslaw Bierut, destined to become President of Red-enslaved Poland, had been there on August 4, 1944, and had reported there was no fighting. He was not there, as a matter of fact, but a lie means nothing to a Communist.

BELIEVE GENERAL SHOT

After this first meeting with the Lubin Poles, I singled out one of them, Gen. Michel Zymierski, in charge of Polish units serving in the Red Army, and gave him a true picture of the military plight of General Bor-Komorowski's forces, which had been tricked into exposing themselves in open fight against the Germans in Warsaw—a sadistic Russian coup which eventually resulted in the deaths of about 200,000 Warsaw patriots.

He assured me he would do something about this matter, and even promised to release a fine Polish Home Army soldier, General Filipowski, who was arrested by the Reds after helping them free Lwow. But I never saw Filipowski again * * * nor did anyone else, except perhaps his Russian executioners.

MAKES CYNICAL OFFER

On the next day, August 7, I met Bierut, an old-line Communist who had given up his Polish citizenship years before, and urged him to listen to whatever Polish blood was left in him and appeal to Stalin not to take half our country from us—an ally.

"Our relations with the U. S. S. R. are more important than frontiers," he told me.

Then he made me a remarkable cynical offer. If I would return to Warsaw after its liberation, as prime minister of a Communist-controlled Polish government, he would give minor cabinet posts in that government to three other independent party leaders. It would be an 18-member government, 14 of whose members would be Lublin Poles.

"I can't even discuss that with you," I told him. "First of all, I am already the prime minister of a legally formed government which, together with its underground, was fighting the Germans when you—as a Communist—were allied with Hitler.

"I'd return to Poland tonight if I knew that we could sit down with the underground parliament and reach an agreement that would be constitutional and in the best interests of the Polish people."

WARNING FROM BEIRUT

Bierut looked me over, with hostility.

"If you want to go to Poland as a friend, in complete agreement with us, we will accept you," he said. "If you attempt to go as Prime Minister of the Polish Government, which is no longer recognized by the U. S. S. R., we'll arrest you."

I got up. "I have no business here."

NO TRUST IN RED POLES

I saw Molotov and Stalin once more before I left Moscow. Molotov apparently could not trust the Lublin Poles to tell him the truth, so he had me into his office—with them—to hear with his own ears my own feelings.

As for Stalin, he was less hospitable than before, presuming that is possible.

"Can you give me your word of honor," he asked, "that there is fighting going on in Warsaw? The Lublin Poles tell me there is no fight at all."

"I can give my word of honor that there is a fight there," I told him. "It is a desperate fight, and I beg of you—who is in a good strategic position for it—to give us aid."

I had heard from Washington and London that the Russians had asked the Joint Chiefs of Staff not to provide further aid for Warsaw—a request which the western allies rejected—but I still hoped I might reach Stalin's heart.

WE'LL LIBERATE IT

"I had two of my communications officers dropped into Warsaw after I saw you the other day," he said, smoking his pipe, "but the Germans killed both of them." I discovered a few days later that both men had reached the ground safely and had sent numerous dispatches back from underground headquarters.

But at the time I had no information and expressed my regret. Stalin sighed, "I'll still do my best to help Warsaw," he said. "The Germans there are more difficult than we expected. But we'll liberate it soon."

As history knows, he waited until the Germans had killed nearly a quarter of a million of our people in the capital, and then, after the fight ceased, burned and dynamited the city to extinction with a systematic thoroughness which was possible only because the Russians remained rooted in the suburbs and simply looked on.

LIKE SADDLE ON COW

Before I left Stalin, I could not resist telling him a story from our Warsaw underground. It concerned three captured Germans and their views of Germany's future. One of the captured men predicted confidently that postwar Germany would embrace communism so devoutly that it would soon become the foremost Communist state, and then go on to rule the world.

Stalin snorted indignantly.

"Communism on a German is like a saddle on a cow," he said. He added that the Soviet Union, the United States, Great Britain, and France must remain close friends for many years after the war because one can expect Germany to start a new war after about 25 years.

STALIN IGNORED PLEA OF AID TO WARSAW

(Installment XVII)

If Roosevelt and Churchill needed any additional confirmation of the fact that they could no longer do business with Stalin—they, of course, had never been able to do so—their efforts to supply the Warsaw underground by air in the summer of 1944 should have taught them.

I besought Anglo-American aid after my successive appeals to Stalin, presented to Soviet Ambassador Lebiedov in London, began to be returned to me unopened.

In Warsaw, our undaunted home army was suffering terrible losses at the hands of the Germans. We were fighting tiger tanks with little more than home-made petrol grenades. The civilians of Warsaw were being shipped by the hundreds of thousands into slavery in Germany. Stalin had promised me early in August 1944, that the Red army would take Warsaw within a matter of a few days thereafter. Yet the Russians remained planted just outside the city, never lifting a finger to aid a courageous ally.

Churchill was the first to act. Through his intercession, the RAF began running critically needed arms, food and medical supplies by air from Italian bases, with many Polish fliers involved in the missions.

The RAF losses were heavy. German night fighters took their toll. Heavy German antiaircraft emplacements in Warsaw, free to operate because the Red Army would not come in, brought down many other relief planes. Red Army guns sometimes joined in the attacks on the relief planes.

I told Churchill of the existence of Russian-held Polish airstrips only a few miles beyond Warsaw and suggested that he make arrangements with Stalin to permit the RAF planes to land there instead of trying to fly back over those interminable miles to Italy. Many were running out of gas on the long flight home.

STALIN IGNORED PLEAS

As far as I know, Stalin never answered the appeals.

In despair, I turned then to the United States and asked Roosevelt to run a special Eighth Air Force relief mission from the British bases then being used. But I pointed out that because of the distance involved this could not be done successfully unless the American planes could land on the Polish fields adjacent to Warsaw.

Negotiations between Washington and Moscow opened in mid-August of 1944, by which time General Bor-Komorowski's forces were in tremendous peril. They were being held together by the precious crumbs the RAF dropped, some of which landed so far off the mark—the RAF missions were at night—that the supplies had to be carted as many as 80 miles to the capital, at great risk.

The American planes, which flew by day, might have a better chance of hitting their targets with supplies. But there was the imposing obstacle of Stalin to surmont.

NEGLECT TO NAME DATE

After ignoring a number of messages from Washington, the Russians consented during the first week of September to permit the American planes to run a shuttle mission.

But even after consenting, the Kremlin delayed in naming a specific date for the mission. The days grew shorter, and the prospects for relief dimmer.

In mid-September, word came from Moscow that the Eighth Air Force could come immediately. But almost as the planes warmed up for the take-off, laden with arms and other sorely needed supplies, the permission was withdrawn. "Technicalities" had arisen, Stalin said. There would have to be a delay of 3 or 4 days.

During that delay, the Red Air Force suddenly appeared over Warsaw on the night of September 13–14, after the forty-fourth day of the uprising, and dropped supplies.

AMMUNITION USELESS

The ammunition they dropped did not fit the guns they dropped. The food they brought—American lend-lease rations—was dropped with either defective chutes or no chutes at all. It smashed against the ruins of Warsaw and was wasted.

But Moscow, having beaten the Americans to the aid of Warsaw, crowed happily through its propaganda mills that the Union of Soviet Socialist Republics was the true friend of the Polish people, and that the Americans were long on promises and short on deliveries.

The Americans finally were permitted to come on September 18. They drummed over with 104 B–17's, escorted part of the way by 200 fighters. Two of the supply-laden bombers and two fighters were lost. The desperately grateful people of Warsaw came up from their ruins and sewers to cheer the Americans. They could fight the Germans a little longer.

Simultaneously I broadcast from London:

"Today you've seen the American forces bringing help to fighting Warsaw. This is a symbol of how the Allies are trying to help you in your desperate fight. * * * I hope this help will bring you some relief in your historic fight against the Germans * * * your fight for a really free and independent Poland."

The only land attack on Warsaw made by the nearby Red Army in support of our home army was turned in by one of General Berling's Polish Kosciusko divisions. There had been some Red Army artillery shelling of certain German positions in Warsaw, spotted by home army men. But as the Kosciusko Poles forged across the Vistula to help their blood brothers in the city, that artillery fire suddenly ceased.

With no cover, the advancing Poles were annihilated by the defending German forces. General Berling was promptly removed from his command and returned to Moscow for "further training."

MOSCOW ASSAILS BOR

In September the Moscow radio opened a vicious attack on General Bor-Komorowski. The Moscow radio itself had enticed the home army to rise against the Germans on July 29—to facilitate the entry of the Red Army. But now it accused the general, and myself, of ordering a "senseless uprising."

The Americans were not permitted to run another shuttle mission. The British, too, were forced to give up in despair. Beyond all human endurance, General Bor-Komorowski surrendered to the Germans on October 3, 1944, with one last heart-breaking message from the capital:

"This is the stark truth," a shaken voice said. "We were treated worse than Hitler's satellites, worse than Italy, Rumania, Finland. May God, who is just, pass judgment on the terrible injustice suffered by the Polish Nation, and may He punish accordingly all those who are guilty."

HAILS POLISH HEROES

"Your heroes are the soldiers whose only weapons against tanks, planes, and guns were their revolvers and bottles filled with petrol. Your heroes are the women who tended the wounded and carried messages under fire, who cooked in bombed and ruined cellars to feed children and adults, and who soothed and comforted the dying. Your heroes are the children who went on quietly playing among the smouldering ruins. These are the people of Warsaw.

"Immortal is the nation that can master such universal heroism. For those who have died have conquered, and those who live on will fight on, will conquer and again bear witness that Poland lives when the Poles live."

From London I broadcast:

"Heroes of Warsaw, the 63 days of fighting will not be in vain. Through your heroic resistance once again the world has come to know that Poles prefer to die rather than live in slavery.

"You are now oppressed from both sides. In addition to the Germans, there are now

those who try to make profit from attacks on your leaders.

"I take full responsibility. A fight against an enemy occupying your country could not be avoided. It was our duty. It was in our national interest.

"We have lost one more battle, but we have not lost the war. The fight against the Germans is going on, and the victory was never as near as it is today."

A million people were living in Warsaw, or existing there, when the insurrection against the Germans began. A quarter of a million human beings were killed, wounded, or were missing by late September. Some 350,000 were forcibly evacuated, mostly to Germany, during the fighting. When the Russians finally came in the following January, they found human life only in the Praga suburb—120,000 Poles who remained there while the retreating Germans systematically leveled the city.

"Traitors. They surrendered to the Germans," the Moscow radio said of the dead and deported. And the Red Army marched into the ghostly place, bringing in their wake the NKVD men and Polish stooges, who, protected by Red Army guns, claimed the streets made sacred with the blood of a free people.

Address of Hon. Joseph C. Grew, Former Ambassador to Japan

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix of the RECORD, I wish to submit a copy of an address by Hon. Joseph C. Grew, former Ambassador to Japan, which was delivered today at a meeting at the Waldorf Astoria, New York, attended by more than 400 mayors, city officials, and others at the meeting of the United States conference of mayors.

The address of Mr. Grew follows:

On January 8, 1790, George Washington, in an address to the Congress, said: "To be prepared for war is one of the most effectual means of preserving peace." Please let that simple but profoundly significant statement sink in. It came over a century and a half ago from the fount of political wisdom. It is just as true today as it was then. It should be written in letters of gold all over our country. It should be broadcast in clarion tones throughout the length and breadth of our land, until our people, all our people, come to realize that peace in our time inevitably depends upon a strong America. Please allow me to repeat an observation that I made in a talk to some 3,000 people in New York about 10 days ago, that what we face today is not a world governed in orderly fashion by international law but a world governed by the law of the jungle. In the jungle it is the fittest and the readiest who survive.

Gentlemen, it is a very great privilege to address you today because you represent in your persons and offices an important cross section of the American people, and in your several capacities you have an inestimable opportunity for patriotic service by squarely and straightforwardly meeting the doubts that assail so many of our people, first, as to the necessity of military preparedness; second, as to the wisdom of military preparedness; and, third, as to the means of military preparedness.

I speak today in support of the plan for universal military training. That plan has many opponents, although I find that much of that opposition, apart from the antagonism that springs from subversive elments within our gates, arises simply from a lack of understanding as to just what universal military training is. The inaccurate, indeed the utterly false conceptions of the plan that come to me from many sources and that are widespread in our country are little short of appalling. Unless overcome those misconceptions may well prove disastrous. Let us remember that it is the Congress that is going to decide whether we shall have universal military training—indeed whether we shall have any kind of adequate military preparedness—and that the Congress is the interpreter of the people's wishes and cannot and will not move very far ahead of public opinion. It is therefore public opinion that must be brought to understand the facts and not remain hamstrung by imaginary bogeys of its own fabrication.

Thank heaven for our kind of democracy in which the people have the right and the freedom to know and understand the facts, all of the facts, not only about universal military training but about what is going on in the world around us. There have been times when our Government was reluctant to tell our people the whole story because it knew that the publication of all the facts would complicate the situation by antagonizing and provoking certain foreign countries. That is one of the best arguments for preparedness that I know. This subject is far too serious to lend itself to humor, but I can't help feeling that there's a good deal of sound philosophy in the story of the dying colored man. The parson, who was kneeling by the bed, said: "Rastus, does yo' believe in de Lo'd God Almighty?" "I sho' does, Pahson." "Does yo' renounce de debil and all his works?" "Now look a-here, Pahson, de way I'se feeling right now I don' want to antagonize nobody." In a strong America our Government can afford to publish the whole truth, whether by so doing we antagonize anybody or not.

Now, as to universal military training, I have no sympathy whatever with those who have made up and closed their minds against it without understanding just what it is. There are people within our borders who oppose universal military training simply because they don't want a strong America. Some of those people I would characterize as intellectually dishonest. Others I would class as outright disloyal. But there are in our country good, substantial Americans who, even though they support military preparedness, do not believe that universal military training is the best means of achieving it. Those people deserve accurate, intelligent, and comprehensive information to meet and, it is hoped, to relieve their honest doubts.

At this point we need a little history. Do not forget that on the Archives Building in Washington, Confucius' admonition, "Study the past," and Shakespeare's reminder that "What is past is prologue" are etched in stone. I commence with the flat assertion: Without preparedness, diplomacy, democracy's first line of national defense is bankrupt. Let me give you two illustrations to support that statement.

The scene is Berlin in the winter of 1914, a few months before the outbreak of the First World War.

Some celebration was being held at the mess of one of the Prussian guard regiments to which I had been invited by a German friend. Champagne and beer had flowed freely during the evening, and, finally, with a great clanking of steins on the wooden mess table, the officers solemnly proposed a toast and drank to "der tag"—the day of war. My host was in communicative mood. I said to him, "Your group reminds me of nothing so much as of a football team which is tired of constant practice and wants a game." "You have hit the nail on the head," he replied. "Of course, we shall have that game, and it will be with our old traditional enemy, France. The French Army is weak; we shall have no trouble there. We may have to go in through Belgium; but, of course, the Belgians won't fight; they will lie down at the very start. England is a decadent nation; her military and naval power is at low ebb, and even if she wanted to fight, she knows very well that with her labor and Irish troubles, she couldn't possibly do so. No; we can count Great Britain out. And as for you in the United States, you are a pacifist nation, anyway, and how in the world could you get a single soldier across the ocean? Of course, we would torpedo every transport before it got halfway across the Atlantic." I have put his remarks in quotation marks, but, as he spoke in German, this is merely a record, though a close record, of the substance of what he said that night. How clearly I remember it today. It seemed then as merely the usual arrogant braggadocio of the Prussian officer, but I remember it on July 31, 1914. That was the thinking in Germany.

My point is this. If during those pregnant years before 1914 England had followed the sage advice of Winston Churchill and had built up Britain's power on land and sea, and if, when war threatened, Sir Edward Grey had been in a position to say to Chancellor von Bethmann-Hollweg: "If Germany crosses the Belgian frontier, Great Britain will be in the war within an hour," might not history have run a different course? Would the Germans have dared attack with the certain knowledge that they would have had to fight not one but two powerful nations, one of them a naval nation? Alas, Sir Edward Grey was in no position to issue such a timely warning or to convince the Germans that he could back it up with adequate force if issued. There were 4 or 5 days of fumbling, and when finally Great Britain did enter the war on August 4 it was too late to arrest the tide. Diplomacy was bankrupt. So much for that phase of history. The lesson is there for all to mark.

We move to Japan in 1931. The Japanese military people also were tired of practice and wanted a game. They also wanted to emerge from the shadow in which they had been placed by the enlightened diplomacy of Shidehara, aiming primarily at international friendship and cooperation. So they invaded Manchuria. At first they looked anxiously over their shoulders as does the ganster emerging from a pilfered storehouse, wondering whether they were going to be allowed to get away with it. Notes of protest were written—lots of them—but action? No, neither the United States nor Great Britain was prepared for action—not even for the sort of demonstration in force which might have convinced the Japanese military that they could not get away with it, nipping in the bud the trends that ultimately led to war. Another foundation stone (the first was Mussolini's attack on Corfu) had been removed from the structure of international peace, and no effective step was taken to preserve that structure from eventually toppling.

After arriving in Japan in June 1932, some 6 months after the invasion of Manchuria, I spent the first 2 months sizing up the situation and Japanese psychology, and then I wrote on August 13 to Mr. Stimson, then Secretary of State, who had clearly recognized the danger:

"Such a national temper is always dangerous. The German military machine, supported by a carefully nurtured war psychology, took the bit in its teeth and overrode all restraining influences in 1914. The Japanese

military machine is not dissimilar. It has been built for war, feels prepared for war, and would welcome war: It has never yet been beaten and possesses unlimited self-confidence. I am not an alarmist but I believe that we should have our eyes open to all possible future contingencies. The facts of history would render it criminal to close them."

That was 9 years before Pearl Harbor. If, in the light of that warning, continually repeated during my 10 years in Japan, our country had been willing properly to assess the lessons of history; if our Government and people had been able to read and correctly to interpret the handwriting on the wall which was there for all to see; if in those intervening 9 years before 1941 we had built up and strengthened our military force and had created a two-ocean navy—which was just plain common sense—and had been in a position to tell the Japanese in no uncertain terms that the carrying out of their expansionist plans through aggression would not be tolerated—since they threatened not only our vital interests in the Far East but the security of the Philippines and our other possessions as well—might not a very different story have developed in the Orient? Might not even the Japanese military extremists—and there were plenty of intelligent leaders among them—have realized that they could not possibly afford to risk war with the United States? Might not the Emperor and the peace-minded elements in the Japanese Government have been given the support they so dreadfully needed, in the face of continual political assassinations, to curb the expansionist ambitions of the hotheads? I believe that history when all the evidence is available, will unquestionably corroborate this view.

But during those critical years, whenever our Government or clear-visioned men and women among our people, publicly advocated preparedness, shouts of warmongers arose all over our country. Speeches and articles by our isolationists and pacifists were prominently displayed in the Japanese press, often in banner headlines, so that the Japanese people, and especially the Japanese military people, assumed that the United States would be stopped by its own people from ever building up a military and naval force capable of fighting total war. In such circumstances, how could diplomacy, still our first line of national defense, hope to obtain a respectful hearing? Assurances were given, plenty of them, but concessions by the military were made with tongue in cheek. They were simply biding their time. Diplomacy was bankrupt. The lesson is there for all to read. History is prologue.

Let us remember that bullies do not attack the strong; they attack the weak. Let us remember the boasts of Hitler and Goering and Ribbentrop that Germany would bring England to her knees in short order, because England had allowed her military strength to disintegrate. They simply miscalculated the bull-dog tenacity and moral staying power of the Anglo-Saxon race, but it was touch and go all the same. The Japanese boasted that the United States, being militarily weak, could never survive the knock-out blow that was to be given at Pearl Harbor. Again, Japan miscalculated our tremendous potential strength. If another war comes, potential strength and bull-dog tenacity and moral staying power may not mean very much. Unless we are militarily prepared to act immediately, the play may be over before the curtain is half up.

Now a few facts about universal military training in an effort to meet honestly some of the honest doubts that assail the opponents of the plan.

First of all, what is universal military training?

Last year the President appointed a commission of nine distinguished Americans who made an exhaustive study of the problem, hearing hundreds of witnesses over a period of 6 months, and finally recommended the adoption of a plan for universal military training with a clear, strong, and unanimous conviction as an urgent military necessity. This recommendation was embodied in what has become known as the Compton report, named after the chairman of the Commission, Dr. Karl Compton, president of the Massachusetts Institute of Technology. It is available to all. That report is certainly required reading for every American citizen. It states the problem in clear, simple language, and answers many of the questions and doubts that have been raised. Briefly, the report calls for the establishment of a National Security Corps, whose personnel would undergo training in the various armed services, but who would not become members of the armed forces in time of peace. These trainees would not be soldiers. They would not be in the Army or part of the Army. They would be civilians under Army supervision for military training and under civilian guidance and counsel in nonmilitary matters.

Every young man on reaching his eighteenth birthday or, at the option of the individual, with parental approval, on his seventeenth birthday, would become a member of the National Security Corps and would receive 6 months of training in camp. Any youth who was still in high school or undergoing a similar course of study could be deferred until the completion of his studies or his twentieth birthday, whichever occurred first. Exemptions are provided for those physically unfit and in cases where induction would cause financial hardship. Upon completion of the 6 months' training in camp, the trainee would be required to participate in one of several alternative defense programs, to be chosen by himself so far as quotas might permit, the majority of which could be undertaken in connection with any course of study or occupation in which the trainee might be engaged in civil life. A civilian commission is to be set up to administer the program which would provide numerous safeguards for the moral and spiritual welfare of the trainee. The UMT experiment unit at Fort Knox has been widely publicized and is a living example of the plan in action.

A bill to establish universal military training is now before the Congress. It was introduced on July 18, 1947, and is known as H. R. 4278, sponsored by Representative TOWE, of New Jersey. Referred to the Armed Services Committee, it was favorably reported by the unanimous vote of 20 to 0. At the present time this bill is pigeonholed in the Rules Committee of the House and can be brought to the floor to be debated and voted on only by consent of a majority of the members of that committee.

By refusing to place universal military training on the agenda, the House Rules Committee is denying the representatives of the American people the right to vote on this vitally needed legislation. If they and the majority leaders from whom they presumably take their cue, persist in this high-handed and intransigent course, they may well become responsible for the downfall of a free nation.

Now, its cost.

It has been said that the cost of universal military training would be prohibitive. I have the figures here, officially issued by the War Department last year, giving the actual costs of World War II, as well as the costs of universal military training as estimated by the Compton Commission. Broken down, those figures indicate that the whole cost of universal military training for 1 year would be less than the cost of 7 days of war. Let that fact sink in. If universal military training, as we who support it earnestly believe, will prove to be a powerful deterrent to war, can we afford in such a case to be penny wise, pound foolish? Is a 2-percent premium—and that is what it would amount to—too much to pay for an insurance policy against war?

Would not another world war, in this age of science, be but a push-button affair in which trained manpower would be useless?

That hypothesis can be answered in a single, simple sentence. No country, short of surrender, can ever be conquered without physical occupation, and from what I know of the American spirit I don't believe that the United States is ever going to surrender to anybody. Our cities might be destroyed, our main industrial plants might be bombed out of existence, our protecting Navy might lie at the bottom of the ocean. But American soil would still remain, and when the enemy parachutists or the enemy marines or fifth columnists within our gates swarmed over that sacred soil, then, and only then, would come the show-down. With a great reserve of trained manpower ready to be thrown into the conflict, wherever and whenever it might occur, do you believe that push buttons—short of utterly annihilating our people—could possibly bring about the conquest of the United States? Or do you believe, with William Jennings Bryan, that when in case of war "a million men would spring to arms between sunrise and sunset," those untrained men could save our country? Alas, that comfortable philosophy no longer makes sense, if it ever did make sense. Experience has shown that the casualties among untrained men are appallingly greater. An untrained, undisciplined mob of thousands would be utterly helpless against a trained and disciplined force of a few hundred men.

Why should we not place our faith in the United Nations?

The answer to that question is equally obvious and simple. The United Nations is a body of tremendous potential power to guarantee world security and peace but, alas, as the political world is functioning today, that power has not yet been achieved nor is it likely to be achieved in the foreseeable future. Let us do everything that we properly and practically can do to help give the United Nations that power; the machinery is there; all that remains to be done is to make that machinery work effectively. But until the United Nations reaches a point of development where it can convince us all that it possesses the power, the ability and the determination to guarantee peace between nations it would, I submit, be the height of folly to let down our guard in the years ahead. Rather, let us strengthen that guard by every possible means if we expect to continue to survive as a Nation.

Why shouldn't the Regular Army take care of our defense?

The Regular Army can never be maintained in time of peace at sufficient strength to win a war. Voluntary enlistments will never be adequate, nor would our people stand for peacetime military conscription. UMT is not military conscription. The young men in training would not be soldiers. They would not be liable for any peacetime service in the armed forces. They would form a pool of trained men all over our country, available to protect our own communities in case of disaster at home, and available in the National Guard and the Organized Reserves if and when needed. Barring a national emergency declared by Congress, the whole project would be subject at all times to civilian control.

Would not UMT create the danger of militarism in our country?

Definitely, no. The character, ideals, and history of our people is the best answer to that question. In the aggressive-minded countries, militarily trained forces were built to implement prior plans for war as history has clearly revealed. In our country, no one wants war, least of all the 15,000,000 men who have served in the armed forces. The war veteran is our most sincere advocate of

peace for he knows the horrors of war about which the pacifist talks. He is the greatest proponent for universal military training because he knows that it is the best means of preserving peace. The major veterans' organizations are unanimously for it. A mercenary army can easily become the tool of a dictator. A people's army cannot be so used. Throughout the life of this Republic, we have had what is known as the militia in which every male citizen capable of bearing arms is charged with the responsibility of protecting his country in the hour of need. Let us not forget the minutemen of Lexington. Universal military training vitalizes and brings this doctrine up to date. Such training has not made militaristic states of Sweden, Denmark, Norway, Holland, France, or Switzerland. Our military leaders, such as Marshall, King, Arnold, Eisenhower, Nimitz, Bradley, Halsey, MacArthur, are not Junkers. They are Americans, believing in and practicing the American way of life. Military pomp has no appeal to these men nor to the American people. No general or admiral ever requested Congress to declare war, nor does the Army have the power to mobilize the Nation's Reserves. Only Congress can declare war or authorize the mobilization of military forces.

But is universal military training not still conscription, opposed to our way of life?

Our jurisprudence does not rest on a voluntary jury system. Our taxes are not based on a voluntary taxpaying system. Our educational system is compulsory. Universal military training would simply be compulsory education in self-defense and in the defense of home and country—a purpose much more significant in consequences than many other forms of compulsion. Men lie dead in Europe and the Pacific today because their fellow Americans were not trained in time or in sufficient numbers in peacetime to come to their assistance.

Interruption of education: Our GI's have answered part of that question. After long interruption of their academic education, they are back in schools and colleges with renewed determination to learn. Experience in the armed forces has whetted their desire for an education. They have seen the stern side of life. They are determined to face it courageously. They have responded with an earnestness and performance well above the peacetime average.

Time spent in military training is not lost. Anything that constructively employs the mind or body contributes to their development. In the business of military training, the field of leadership is wide open. The boy in training who shows leadership qualities soon becomes a corporal. He may have 10 men under him. He is responsible that they keep their living quarters in order, that they comply with sanitary measures. He leads them on the drill and training field. As a sergeant, he takes on additional responsibilities. There are few comparable opportunities in civil life for a youth of the same age to develop his latent leadership ability.

Not all men possess the qualities of leadership. But business, industry, and the professions and the armed forces are all crying for men who do. They are in great demand. They command high compensation in civilian life. Military training will not make a leader, but it will serve to develop one who has the basic qualities for leadership.

This training, too, would certainly contribute to civic consciousness. Civic irresponsibility is a major problem in our democratic way of life. Civic discipline is needed. The men trained under universal military training would supply it. In returning to school or college at the end of their period of training, they would make better students because of greater maturity and because of a greater incentive and eagerness to learn and to develop ability. This has been proven. Universal military training would make them better citizens with a better sense of responsibility and of the importance of teamwork in the community, and it would make them better men, physically, mentally, morally, and spiritually. Safeguards against moral looseness will be part and parcel of the plan, while religious opportunities will be amplified and emphasized. There are things to be gained in life over and above mere academic education.

Would universal military training cause international distrust?

The statesmen in whom this country has confided its representation in the United Nations and who have taken the lead in making that body an instrument of peace are unanimous in asserting that the very best guaranty of a successful United Nations is a strong United States. Demonstrated military weakness on our part now will definitely detract from the possibility of attaining permanent world peace through United Nations action.

Certainly the peaceful peoples of the world, especially the smaller, weaker nations, will feel much more secure if the United States remains strong militarily than if it does not. It requires little imagination to understand that.

We have repeatedly demonstrated our nonaggressive attitude and have proved our peaceful intentions. We have twice come to the rescue of victims of aggression by powerful nations, in our own interest as well as theirs. We have carried the banner of humanity in wars for civilization—the goal toward which we direct the progress of this Nation, asking nothing for ourselves but the right to live as we wish in a world of free and friendly neighbors. Who would come to our rescue if we were attacked and overrun?

No nation has cause to distrust our purposes, nor to believe that we want war or would provoke war. In the United States, universal military training would be a peace program, not a program for war.

Should we not devote to the building of planes and air power the money that would go for universal military training?

Planes and air power are absolutely essential in any program of defense. But air power alone cannot win a war or even guarantee the safety of our country from occupation by enemy forces. In the final show-down in any war, it will be trained manpower on foot that will either conquer or prevent conquest. Let there be no doubt whatever about that.

And, finally, the net result.

It is my considered view that universal military training, in conjunction with other elements in a comprehensive security program, may, even in the lifetime of many of us here today, mean the difference between the conquest and totalitarian enslavement of the United States on the one hand and, on the other, continued peace and a continuance of our democratic way of life.

All or Nothing

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. REED of New York. Mr. Speaker, I hope that those people who are urging the spending of $17,000,000,000 under the Marshall plan for European recovery and to prevent communism will examine carefully the amounts allocated to each of the various countries under the plan.

Under leave to extend my remarks, I am inserting the following copy of a broadcast made by Henry J. Taylor on January 16, 1948:

ALL OR NOTHING

Is the latest European recovery plan—calling for over $17,000,000,000—primarily an anti-Communist measure, necessary because civilization is at stake? How many people know that a third of the money goes to England? Let's hear some facts that affect us all.

I've been traveling around our country a good deal. In the last couple of weeks alone I covered several thousand miles. There's a feeling of frustration across our land about sending new billions abroad, regardless of how good our objective may be. We want to help Europe. But we feel we are getting a hooking, like a fish, all the time we're doing it.

From the workingman's viewpoint I think the reason why we feel this way is because we don't know what we're doing. We are not told honestly

We've already spent $22,000,000,000 abroad since the war. That represents a charge of $450 against every family in America. Yet do most of us know where that money went? We do not. Now, on the new $17,000,000,000, it's been a case of dig, dig, dig in the dark in the State Department, even to get the break-down of which countries get the money.

WE ARE ENTITLED TO KNOW

Yet who is more entitled to that information than the working people of our country, who pay the bill? We are at least entitled to know where the new billions go.

Let me give you a little background on this picture. When I was in Paris in September, while the 16 European nations were deciding among themselves what their shares would be, and were adding up the total under the direction of British Foreign Secretary Bevin, I had their figures showing what each country intended to get. But since I've come back to our country, the State Department has been insisting that it would be inaccurate to use those Paris figures in describing where the money would go, because the figures would be changed. They were not final. Wait and see, said the State Department, until the Marshall plan is finally and officially presented to Congress, and the appropriation is asked for. It sounded fair enough.

FIGURES UNDER WRAPS

But when the plan was officially presented on December 19, and the money asked for, even then the figures as to how much of our money the individual countries were to get were left out. I was unable to get these figures officially until last Saturday. Only then did the fact come out that a third of the whole $17,000,000,000 is slated to go to England—$5,438,000,000 to be exact. Only then was it revealed that $2,436,000,000 goes to little Holland.

Why were these figures kept under wraps? It's the same old story, I'm afraid, of thinking that the end justifies the means.

THE PROPAGANDA POLL

Here is what took place. When the State Department was getting ready to present its latest European recovery plan, the Department's publicity people took a private poll across our country to find out what the public's reaction would be. They quietly made a survey, for the Department's own propaganda guidance, on how best to present the plan to Congress and the people, in order to persuade us to take it and like it. What feature would have the biggest pull?

"STOP COMMUNISM" NOT SOLE MOTIVE

They discovered that the new $17,000,000,000 proposition would sell best if the whole thing were presented on an anti-Communist

basis. It would be most successful if it was offered as a means of forestalling communism in places where communism would otherwise spread.

Perhaps a sound case for spending this amount of money could have been made out. I doubt it. But I'm not sure, because those questions are very complex. But in any event, they did not make out a sound case. They chose their propaganda line and stuck to it.

Yet the argument was valid only in certain places like Italy. It had no application, for example, to the half billion they proposed to give to Ireland—which is about as little on the verge of voting Communist as any place in the world, and where western civilization is no more crumbling than it is in Saginaw, Mich., which was still standing intact when I left there last night.

PROPAGANDA MISLEADLNG

Nevertheless, you'll notice that the whole build-up of the presentation was on that anti-Communist feature—and on an all or nothing basis. This presentation simply did not jibe with the country-by-country figures I obtained in Paris. But as I said, the State Department refused to let the cat out of the bag.

After a series of huddles, the planners decided it was absolutely impossible for them to reveal, even in the official presentation to Congress, what countries would get the money. These figures were fundamental in constructing the 131-page plan itself. But to avoid completely crossing themselves up on their own propaganda, they had to toss the whole thing out in a lump total for all 16 countries.

WHO GETS THE MONEY?

Now, nobody thinks England is on the verge of voting communistic. For reasons like this, the list simply could not pass inspection. The vital question is, "Who gets the money?" That's what I spoke about on my broadcast January 12.

After that broadcast, telephone calls and telegrams began to come in from Washington, and from all across the country, because the people—and many Senators and Congressmen, too—had been in the dark about the simple truth.

"I've been invited to appear before the Senate Foreign Relations Committee and the Senate Appropriations Committee in Washington. I shall be very glad to do so.

AS NOW WRITTEN

Who gets our money under the plan as now written? In addition to what I have already said about certain items, let me give you the whole list tonight:

England, $5,348,000,000.
France, $3,701,000,000.
Italy, $2,913,000,000.
American and French zones of Germany, $2,499,000,000. (Now, that has a legitimate Communist angle.)
Holland, $2,436,000,000.
Belgium and Luxemburg, $1,419,000,000.
Austria, $713,000,000.
Denmark, $582,000,000.
Ireland, $497,000,000.
Greece (extra), $473,000,000.
Norway, $234,000,000.
Portugal, $150,000,000.
Iceland, $38,000,000.
Turkey, $18,000,000.

Sweden and Switzerland, praise be, asked us for nothing. They may, in fact, end up with a favorable balance, totaling $176,000,000.

Along with the International Bank's contribution, which is also, incidentally, 80 percent our money, that's where our hard-earned money is scheduled to go.

IMPROPERLY PRESENTED TO THE PEOPLE

Now, I ask you to look a little ahead. When the facts are fully exposed, I'm sure you will see that the State Department will switch away from the anti-Communist angle, as quickly as possible, and call in the military. We'll be told that the European recovery plan is cheaper and better than fighting another war—as if anything were not better than that, and as if $17,000,000,000 could save us from another war if Russia wants to have one. What an unfair and misleading choice for them to present to us.

The objectives of the Marshall plan are good. But there are great weaknesses in it as an actual proposal and commitment. Nor has it been properly presented to the American people. The air should be pumped out of it. The propaganda should be shelved.

I'm convinced that Congress, now getting the facts, and with more facts to come, will not pass the Marshall plan as presented. It will not approve the amount requested on an all or nothing basis. It will completely alter the proposed methods of administrating the undertaking—if it is undertaken at all.

We are all entitled to the facts. For all of us, every one of us, is called on to pay the bill in your land and mine.

QUESTIONS AND ANSWERS

CAN INDUSTRY STABILIZE JOBS AND INCOMES?

Question. What can be done to help stabilize the jobs and incomes of workers in production industries?

Answer. With new products and processes constantly displacing old ones, things are changing awfully fast. The constant change in customers' tastes and demands also complicates the problem of stabilizing employment and income in many production industries. These problems are affected by consumer or supplier practices, or customer habits. We all live a much more seasonal life as buyers than we realize.

Stabilization of employment is further complicated by many conflicting governmental and trade-union practices. However, progress is never made in any field simply by saying that nothing can be done. Within the area of management, much can be done. A good deal is being done. Furthermore, the possible benefits are more than worth the effort.

To the extent that management makes progress in employment stabilization within its own operations, in its own community, progress will be made across our land.

But there are two legal complications in the development of forward-looking plans and programs to stabilize unemployment and income. First, present tax laws make it difficult to establish and operate plans that naturally require setting aside reserves. These laws do not recognize such reserves as an ordinary operating business expense at the time they may be set up. Again, rigid provisions of the wage-hour law, with respect to the payment of overtime, severely restrict the possibility for employment and income stabilization for many companies.

We want a progressive, forward-looking economy. We want the best security we can muster. To that end, these laws should be modified so that they will promote and stimulate, instead of restrict, constructive management efforts toward employment stabilization.

A PRIMER ON AMERICANISM

Question. Is there such a thing as a down-to-earth, simple, elementary primer on Americanism versus collectivism?

Answer. There are very few clear, concise, good books dealing with the fundamentals and the human advantages of our country's unique economic system, which gives us the highest standard of living in the world. However, I've been reading a new and important book that fills the bill and costs only $1. It's entitled "Mainspring," by Henry G. Weaver. It's published by the Talbot Books Co., Detroit.' I found it fascinating reading.

Let me give you an idea of the author's approach. He says in the introduction, and I quote his words, "I realize that America is far from perfect, but in recent years the negative side has been so much overstressed that I make no apologies for concentrating on the doughnut instead of the hole."

I'm for that.

Address at Dinner of B'nai B'rith by Hon. Edith Nourse Rogers, of Massachusetts

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me Monday, February 2, 1948, Hotel Statler, Washington, D. C., introducing Admiral Louis E. Denfeld, Chief of Naval Operations, at dinner of B'nai B'rith:

ADDRESS OF HON. EDITH NOURSE ROGERS, OF MASSACHUSETTS

Mr. Goldman, Admiral Denfeld, Colonel Niles, members and distinguished guests of B'nai B'rith, it doesn't seem quite possible a year has passed since your last annual dinner when you invited me to be your guest of honor. That evening 1 year ago was a memorable occasion for me and one of the great events of my life. It was at this annual dinner 1 year ago that your late distinguished leader and president of B'nai B'rith, Mr. Henry Monsky, praised my work for the veterans of our country.

Since this time 1 year ago you have elected a new president, Mr. Frank Goldman, of Lowell, Mass., to take up and carry on the wonderful work of Mr. Monsky. I cannot tell you how delighted I am with your selection. Mr. Goldman has lived in my city and his city of Lowell all of his life. We have known each other many years. We have been interested in many of the same activities. We have worked together and have accomplished many benefits for our city and Commonwealth. Today Mr. Goldman is one of the outstanding lawyers in Massachusetts; is a highly respected citizen and an honorable gentleman. You may call it local pride if you wish, but I want you to know all of us are very proud of Mr. Goldman in Lowell. We know his ability. We know his accomplishments. We know his leadership. We know his honesty, integrity, fairness, and untiring efforts to always help when help is needed. Under the leadership of Mr. Goldman, B'nai B'rith will march ahead for he brings to your great organization wisdom, reasonableness, consideration, courage, honesty, and fairness. Thank you, Mr. Goldman, for your fine tribute to me in your introduction. In reply I can say I am delighted you have the honor to be the leader of this great and fine organization. Our city of Lowell is proud of you. So is our Commonwealth of Massachusetts.

I am delighted you invited me to introduce your guest of honor this evening. I know that in spite of many thrilling and memorable events in his life that he too will look upon this occasion as one of the finest in his life.

As many of you here this evening know, I have had the privilege for many years to serve our disabled veterans. I am devoted to these men and their problems—these men who have suffered for the glory of their country—these men who have felt the bite of enemy's steel. I shall strive to help them so long as I live. Regardless of the service I have given, however, I want you to believe

me, ladies and gentlemen, when I say to you, I wish there were no veterans of any war. I wish mankind could have avoided war. I wish that mankind had sheathed the sword, a long time ago. I hate war just as all of you do. As we turn our faces and thoughts toward the future, however, we know most certainly that regardless of our hatred for war we must be completely prepared to meet war if it should come. We know we must be ready with every modern weapon and technique to resist and successfully meet the challenge of any foolish enemy resorting to war.

In the past during World Wars I and II, our allies were sufficiently strong to hold the enemy until the United States could get ready. Regardless of American efficiency a long period of time was required for the United States to reach the peak of its war potential both in industry and training. This brings me to a very important point. It is this: When the next war begins there will be no time for America to prepare. Our country will be in jeopardy and the enemy will be attempting to strike our great industrial centers and our Capitol in an all-out effort to suddenly destroy our war-making potential and force us to our knees. We will not have any precious months in which to prepare. We will not be able to make our plans then. My point is this, ladies and gentlemen: We must make our plans now, we must prepare now, if we are to be able to prevent the enemy from destroying our country. These are the days—today, tomorrow, and the next—when we should be preparing. This is the time and the only time we will have. These are precious hours.

The question arises how can we accomplish this necessary preparedness. I believe it is the duty of the free people in this great country, to demand that Congress provide the funds for strong, adequate, military forces.

Tonight we are honoring a great naval officer, so I shall invite your attention to what naval preparedness means to the security of this country. Don't be fooled or misled by anyone for selfish reasons trying to make you believe the day of the great navy is over. On the contrary, it is just beginning. Such foolish statements, and I have seen quite a number of them lately, if intentionally and seriously made, are vitally interfering with the Nation's security and are on the level of sabotage. Persons making such statements should not be permitted the honor of serving our country.

The Navy today is the country's first line of offense. The development of huge modern carriers, which can withstand any kind of an attack or bombardment, give the Navy floating air bases from which its airplanes can strike the enemy at any time, anywhere in the world. The fact these carriers can move from one place to another—that any number can be concentrated in a certain place or dispersed to several different places—provides the Navy with the method of concentrating power where power is needed.

When war comes the airplanes of the Navy's huge mobile air bases, constituting a completely organized fighting system, will be the first to strike the enemy. They will carry the fight to the enemy instantly. They will not have to capture bases first before they can fight because in these carriers the Navy will possess a completely organized mobile air base that is practically indestructible.

In addition, the Navy of the future will possess subsurface fleets able to inflict great damage on the enemy. The modern submarine can travel very deep in the sea and shoot at its target without coming to the surface. The important point is that due to modern invention it will not miss the target.

These great ships and airplanes which mean so much to the security of the United States are of little value in the planning stage or on the drawing boards. We do not want phantom ships. They must be real. They must exist, fully equipped and completely manned. This is preparedness.

To be prepared, however, costs money. It is very unwise for the Congress to limit the necessary funds to provide adequate military strength because of politics or trumped-up duty elsewhere. We must first be certain of our own security. We must be able to protect our country and our freedom, or we will lose both. The Congress needs your support and the support of all patriotic citizens throughout the Nation. With such support, I believe that sense, rather than politics, will prevail.

The guest of honor tonight is a naval officer of vast experience. He has served on every type of naval ship. He has been in command of both surface ships and submarines. He has commanded destroyer divisions and battleship divisions. In the First World War, as a young naval officer, he was attached to a destroyer force operating in the North Atlantic. In World War II his flagship, the *Wisconsin*, operated in support of the Okinawa landings and participated in shore bombardments of Hokkaido and Honshu, of the Japanese home islands. In addition, he has held a number of top positions in the Navy Department, such as Chief of Naval Personnel and Deputy Chief of Naval Operations. He knows the sea and knows the problems of a fleet fighting at sea. Likewise, he knows the business of naval operations.

I have known the guest of honor and his charming wife for many years. His professional ability as a naval officer has been demonstrated in his excellent performance of duty in the most responsible assignments in the Navy. His complete fairness in dealing with complicated issues is outstanding, while his understanding of people with his ability to properly evaluate the human element involved in decisions is a remarkable quality. His consideration of everyone from seaman and office boy, to flag officers and the most distinguished individuals with whom he has personal contact, illustrates his friendliness and warm human quality. He shoulders a great responsibility, but he is equal to the job which must be accomplished.

Ladies and gentlemen, I have the high honor to present to you, a veteran of three wars, one of the most distinguished sailors in the history of the United States Navy—possessor of the Legion of Merit, the Distinguished Service Cross, and other decorations—the Commander in Chief of the United States Fleet, the Chief of Naval Operations, Admiral Louis E. Denfeld.

ADDRESS OF ADMIRAL LOUIS E. DENFELD, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS

I am very much honored at being introduced by so charming and distinguished a lady as Mrs. ROGERS. It was my privilege last year to join you in tribute to her, and I welcome this opportunity to express once again my admiration of her outstanding accomplishments. I know of no one else who has the interest of millions of veterans more at heart, or who is working with greater vigor, determination, and wisdom to insure them the happiness they so richly deserve. I wish her every success in her continuing efforts to make the United States an even better place in which all of us may live.

I feel very strongly that it is the membership of B'nai B'rith, and not myself, who should receive the plaudits tonight. Few organizations contributed as much as yours during the war to the comfort and welfare of naval personnel. I wish everyone could hear of your Serve-a-Ship program. I wonder how many people know that the officers and men of over 800 naval vessels were beneficiaries of that program? The radios, games, musical instruments and dozens of other items you gave did more than fill up the idle moments of fighting men and make life at sea a little easier—they helped to win the war. The checker game that relaxed a man on the eve of battle enabled him to shoot down a suicide plane and save a ship. Multiply that instance a thousandfold and you will have an idea—but still only an idea—of the value of your contribution.

I am glad that Col. Eliot Niles is here tonight, for as originator and director of the Serve-a-Ship program, I want to thank him publicly for all he has done. I remember that while talking to him sometime ago about those 800 ships the B'nai B'rith helped to outfit, he remarked, "Admiral, if you fellows had let the war go on a little longer, we would have taken care of every ship in the Navy." Now that would have been a pretty large order because at the peak of our wartime strength we had over 7,000 ships in commission. But with all the vigor and determination Colonel Niles possesses, I'm not sure but what he would have made good his promise if we had given him half a chance.

It's difficult for me to talk of the Navy's welfare and recreational programs without mentioning the men whose time and energies are largely devoted to supervising and furthering them. I refer, of course, to the Navy Chaplain Corps. I doubt if there is an officer or man in the Navy or Marine Corps who cannot tell you of at least one instance in which a chaplain contributed directly to his mental, moral, or spiritual welfare. Our ministers, rabbis, and priests are as much a part of the Navy as a captain in command of a ship—and just as important. We want to strengthen our Chaplain Corps and bring it into even greater prominence, for the men and women who serve in the armed forces today are self-respecting, honorable, and proud, and they are entitled to the same spiritual guidance and comfort as other young Americans. Only with the help of chaplains in all branches of service, can they continue to be mentally, physically, and spiritually equipped to resist successfully any threat to this country's freedom.

I know all of you are interested these days in the general state of efficiency of the armed forces and their ability to defend the United States against attack. The world situation is far from what we would like it to be, and even though we continue to plan for peace we can't overlook the possibility that another emergency may arise. We hope we will never have to go to war again, but if we do we want to be prepared. We were caught short twice before, and suffered badly as a result. Today, with all the new weapons that science has invented, we can hardly afford to get ready after hostilities have commenced. We might lose the war before we were even ready to fight it.

The various branches of the armed forces are now down to their normal peacetime size. The Navy went from a force of over 3,000,000 officers and men down to one of approximately 42,000 officers and 350,000 men. As I said before, we had over 7,000 ships at our peak wartime strength. Today there are approximately 300 combatant types on active duty.

Fortunately, we are a little better off than these figures would indicate. For one thing, we have 2,400 vessels in the reserve fleet, berthed along the east and west coasts. For another, we have more than 900,000 officers and men in the Naval Reserve, and we hope to increase this figure in the near future to the full 1,150,000 authorized by Congress.

The ships and personnel we have in reserve constitute a safety factor which increases our strength considerably. If we could put them into action at the drop of a hat we wouldn't have much to worry about, but, unfortunately, this isn't possible. The ships have to be made ready for sea, trained crews have to be put together to man them, and aircraft and pilots have to be provided for our strong air arm. This could take from

3 to 9 months, depending upon circumstances.

Because of this anticipated delay in getting the reserve forces mobilized, our emphasis is placed upon keeping the active fleets ready to go. We have stripped our shore establishments of all the men they could spare, and put them aboard ships on active duty. This enables our fleets to operate at nearly full strength. We are also giving them priority in essential equipment. We want the forces available today to be ready to go, and without a moment's delay.

Those of us in the Navy fully realize that somewhere between considerations of national economy and national security a proper balance must be struck. We don't want to place an additional load upon a taxpayer who is already overburdened. At the same time, we share with the other armed forces a responsibility to protect this country against attack. The best way I know of to insure that neither security nor economy suffer at the expense of the other, is to give the public all the facts pertaining to both.

The Navy in its present size is a mobile force for taking care of our commitments in the Mediterranean, the Far East, and other parts of the world, and guarding our vital trade routes. But it is still a force capable of delivering powerful blows. We learned during World War II that the fast-carrier task force is one of the most effective ways of hitting an enemy hard and often, and our peacetime Navy is built largely around the carrier. We have two main fleets, one in the Atlantic and one in the Pacific, and each of these contains all the air, surface, submarine, amphibious, and supply units necessary to a balanced Navy.

I should like to stress the word "balanced" in talking of the Navy, because unbalanced naval forces are nearly as ineffective as none at all. It used to be that a Navy consisted of surface ships and nothing else. The submarine and airplane have changed all that. It was first thought that the submarine and then the airplane would do away with the need for surface ships, but to the surprise of everyone except Navy men, it turned out that they only helped the surface ship do even greater damage. Most of you probably remember the last few months of the war, when our battleships approached to within a few miles of the Japanese coast and dropped 16-inch shells into many vital targets. They wouldn't have been able to do that if carrier-based aircraft hadn't first swept the skies of enemy opposition, and destroyed planes on many fields in Japan. At the same time our submarines were lying just off the Japanese ports and sinking vessels loaded with imports essential to the enemy's war production. Seapower is no longer expressed by surface ships alone, but by aircraft, submarines, and surface ships all trained together and acting together to defeat the enemy in any part of the world.

Germany made a great mistake when she tried to win control of the Atlantic with submarines alone. Her Navy was a prize example of an unbalanced naval force. If she had had the surface ships and carrier-based aircraft to back up her submarines, she would have given us a bad time of it. As it was, her efforts were foredoomed to failure.

I can assure you that we are not going to make the same mistake. We have a well-balanced Navy today, and we intend to keep it that way.

The same principle of balance which is so important within the Navy, applies equally well to our entire defense establishment. The Navy is only one member of a team composed of the armed forces of the United States. No one member of the team can win a war by itself. Each must coordinate its efforts with those of the others. This becomes even more important as science devises newer and more effective weapons of warfare.

A much needed step to facilitate and further the coordination between the various branches of the armed forces was taken with the passage of the National Security Act of 1947. For the first time in our history we have a closely integrated defense organization, and we can't help but benefit by it. I had a chance to see unification work out in the Pacific, just before returning to Washington this time, and I was deeply impressed. At my headquarters at Pearl Harbor I met with representatives of the Army and Air Force at least once a week. During those discussions we talked over each others problems and decided how we could best act together to overcome them. We always knew each others viewpoint and there were no secrets kept from anyone. As a result, we were able to accomplish much more than we could have by acting independently. We not only obtained greater economy, but greater efficiency as well.

I am glad that as Chief of Naval Operations I will have the opportunity to do even more to further the spirit of unification. Only with closely knit and well-balanced fighting forces can we hope to safeguard our freedom.

The Navy is not just ships, planes, and submarines. It is a group of men—skilled, alert, and intelligent young men—who are trained in the ways of the sea and who use whatever tools are at hand to do their job. Yesterday they used machine guns, torpedoes, and shells to accomplish their mission. Tomorrow they may use rockets, jet-propulsion, and atomic energy. Whether or not they always have all the tools they need depends entirely upon you and other Americans. I said before that a well-informed public was our best guaranty that our national security would never be jeopardized. In line with this, I intend to see that as much information as possible about the Navy continues to reach the people of this country. There are certain things we can't talk about, but there is much that we can tell you. When you understand the job the Navy would have to do in the advent of another emergency, and realize how many men and how much equipment it would take to do that job, there will be no question in your minds about spending the money necessary for national defense.

I wish more people and more organizations would display the same interest in the Navy and its personnel that B'nai B'rith does. It would make our job a lot easier. I know I speak for every officer and man of the naval service in thanking you for all that you have done, and continue to do, for them. The type of public-spirited and patriotic action you demonstrate, be made our country the great Nation it is today. It is this same type of public-spirited and patriotic action that will enable the United States to remain always a great, free, and proud Nation.

End the Steel Famine

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harold J. Ruttenberg, from Harper's magazine:

END THE STEEL FAMINE

(By Harold J. Ruttenberg)

(Harold J. Ruttenberg is probably the only man who has seen steel from three points of view: Management, union, and government. He was research director of the steel workers' union, then an Assistant Director of the WPB Steel Division, and now is vice president of the Portsmouth Steel Corp.)

The Marshall plan, now creeping slowly for lack of grain, will be stopped cold this year for lack of steel. While the politicians can temporarily get some people to eat less and get everybody to pay the same price for a smaller loaf of bread to launch the Marshall plan, they can't do that with steel. Workers won't vote themselves into unemployment and industrialists won't vote their companies into the red by shipping the steel abroad that they need at home to provide jobs and profits. An Emergency Food Committee can appeal to Americans' inherent humanity in 1947, but an Emergency Steel Committee in 1948 would only draw boos from the Nation's workers and a sit-down strike from the industrialists. And the politicians would support both—witness their present outcry against exporting steel pipe that their farmer and oil-company constituents are short of because there is not enough steel capacity in America or the world.

This persistent steel shortage has the big names of the large steel producers dizzy. For the past 2 years they have semiannually predicted the end of the steel shortage in 6 months, only to find it persisting at the end of each 6-month period since VJ-day. Now they give the steel shortage two more years of life. Is their new prediction any more trustworthy than their previously discredited ones?

Gen. George C. Marshall saw his military plans delayed at the war's start for lack of steel. Is he also going to see his peace plans delayed for lack of steel? I say that he will. The American Iron and Steel Institute and its big names from its big-company members say, "No." Which counsel should the general and America heed?

But, you may ask, isn't the whole controversy about the adequacy of steel capacity settled anyway by the industry's announcement of a billion dollar expansion program? Unfortunately not, because, as I shall reveal later, this announcement carried in newspaper ads is a phony.

At times like these the record is always a valuable thing to examine. These prognosticators of the American Iron and Steel Institute, to be sure, are the same men who "out of 40 years of personal, practical experience in the steel industry" predicted that there was enough steel in 1941 to fight the war; who contended during the war that the new steel capacity under construction would not be finished in time to help win the war; and who prognosticated that building steel capacity to over 90,000,000 tons a year would result in ever so many idle steel plants in the postwar era. I shudder to ponder where our economy and the world would be today if we did not have the 10,000,000 tons of pig iron and 14,000,000 tons of steel capacity that were built during the war.

Why have these men of such great practical experience in steel been so wrong on steel capacity? Old Andrew Carnegie could tell them. One has to know more than the steel industry to know whether and when there is enough steel. This is a basic question of world-wide economics and international relations. The present steel crowd lack the insight of their greatest predecessor, the venerable Andy Carnegie. In fact many of them are quick to point how little old Andy knew about steel, and his knowledge of steel was limited. But his success grew out of his profound knowledge of the relationship of the iron and steel industry to the economy as a whole and to the world. It is here that the current-day leaders of steel are demonstrating their abysmal ignorance in public, and have been doing so since their Gano Dunn reports of early 1940 (which discounted the need for additional steel capacity)—reports so obviously shortsighted that even an insignificant research director of a steel labor

union knew they were dead wrong, and said so.

Two personal experiences are revealing. After I had had the benefit of a year as a top official of the steel division of the War Production Board, I freely said that the postwar world would use all of our steel capacity (so greatly expanded during the war) and still cry for more. The president of one of the largest steel producers warned me that I was going to look silly for making such loose statements. I replied, "yes, but if I'm right, look how much more silly you are going to look."

"Not a chance, boy, not a chance," laughed this man, who said steel would be lucky to run at 70 percent of capacity after VJ-day.

After I became vice president of one of the country's integrated steel producers, I spent an afternoon in this president's office. "How do you like the steel business, Harold?" said he.

"Fine, just fine," I replied, "but what happened to your 70 percent forecast?"

"I was right about steel, but I didn't fully take into account all the outside factors," he answered. This steel firm head is beginning to understand what was old Andy's chief stock in trade.

Experience No. 2. The War Production Board Steel Division is trying to perpetuate itself, and so far has succeeded. At its second annual reunion in Pittsburgh last May I was eating lunch with a dozen of my WPB associates including two of its former directors who are steel company presidents. With us was an ex-college professor turned personnel man. He was talking about broader steel items than prices, the demand for stainless, and rails.

"What we need, and nobody has yet done," he said, "is a definitive statement of our industrial culture."

"What's that?" he was rudely interrupted. And another brilliant mind chirped, "How much does it sell for a ton?"

I did not join the belly-laughs, but looked at each tormentor of the ex-professor.

Too smooth over the wisecracks, a steel man of 40 years' experience asked "What do you mean by industrial culture?"

The tormented man went on and he sounded a little like Lewis Mumford, whose Technics and Civilization ought to be required reading before anyone is allowed to learn about steel metallurgy.

"Very interesting. I never heard it called industrial culture before," replied the man with 40 years of steel experience.

But fully 40 years before, old Andy had given speeches and written articles and books about (and even given money for) things that had to do with a culture that was being radically changed by the industries that these how-much-a-ton fellows manage.

The mere fact that a man has 40 years of practical steel experience behind him does not qualify him as the supreme judge of the adequacy of his industry's capacity. These men whose foreheads are wrinkled with years of steel experience were wrong in 1941 not because they didn't know steel, but because they lacked the imagination to envision the insatiable appetite for steel of a total war. Yet an historical knowledge of what the Civil War did for our then struggling iron industry, of how the Spanish-American War brought our budding steel industry to maturity, and of how short we were of steel in World War I led me to the obvious conclusion that there was not enough iron and steel capacity to wage a new world war that was to make a rehearsal of its predecessor. So I ventured the assertion that our 1940 steel capacity was inadequate, and campaigned through the CIO and the Truman committee to expand it before Pearl Harbor. Steel and iron facilities were not only expanded during the war, but enough of them were completed to help win the war.

I urge General Marshall, whose military plans were delayed by the well meaning but shortsighted leaders of the steel industry, not to be misled again by the same type of best-intentioned shortsightedness. There is just not enough steel capacity to carry through the general's peace plans and also operate our own economy adequately.

I would like to ask my fellow steel executives how many automobiles, tractors, and tin cans our economy would be producing today if our steel industry were without the iron and steel facilities built during the war. And also whether we would have over 60,000,000 jobs today if we could produce only 75,000,000 tons of steel ingots instead of the present 85,000,000 tons?

The 60,000,000 job debate just before war's end sheds light on the current steel-capacity debate. The 60,000,000 jobbers (I was one) said that (1) unless the Government did so and so, plus several other things, (2) 60,000,000 jobs could not be created in the postwar years. The opponents said that (1) no matter what is done by Government or anybody else, (2) 60,000,000 jobs were a pipe dream and could not be achieved in the immediate postwar years. Both were wrong. The program of action so essential to get 60,000,000 jobs was not adopted, yet the 60,000,000 jobs that could not be furnished are with us today.

Why? I don't pretend to know (for sure), but I suspect that the answer lies in the same factors that are causing the enduring postwar steel shortage which has every promise of persisting.

When I was in Washington I had access to reports and people who knew what was happening to the steel industry in other countries. They were unanimous: While the United States produced 43 percent of the world's steel in 1940, after the war she was going to have to produce well over 50 percent of it. This, combined with a little historical look at our own economy, led me to the forthright conclusion that after the war the steel industry would be in for a boom that would make the industry's heads dizzy. And they have been seen to appear dizzy in recent months.

I recently heard one of the more publicized large steel company heads ask, "But what will we do with the new capacity 2 years from now?" I remember hearing him ask during the war, "What will we do with all this new capacity after the war is over?"

II

A brief historical look at our domestic economy reveals that it has been starved for steel for almost 2 decades. In the thirties the railroads didn't rebuild and the people didn't buy the cars they could have operated if they had had the income to buy them. The economy was depressed. In the farmer's case, there was underconsumption of steel going back 10 more years as their depression, we all know, began in the twenties. When they were coming out of the depression in the early forties and industry began to recuperate at the same time, along came the war that kept them from buying the steel they then had the money to buy.

I recall the plaintive plea of a steelworker: "In the thirties I didn't have the money to buy a car; now in the war I have the money but I can't buy a car." I wonder if he is among the millions still waiting for his car to be delivered 2 years after the war's end.

What comfort does he get when he hears Henry Ford II say, "The steel industry does not have the capacity to make all the steel that many of us desperately need and want"? How does he feel when he hears his SOHIO broadcaster say that there will be a petroleum shortage because there is not enough steel pipe for transmission lines? Will his coldness or pocketbook be relieved any this winter when he will be idle or shy of dividend checks because manufacturing plants will be closed or curtailed for lack of gas caused by inadequate pipe lines that could not be enlarged for lack of steel pipe? An industry trade journal reports, "almost 6,000,000 tons of steel is needed in the next few years to make the 27,220 miles of pipe lines which are to be built."

Farm fence is even a more revealing example. In 1947 the steel industry shipped over 350,000 tons of fence to keep cattle, hogs, and chickens penned in before marketing. And the demand is getting farther and farther ahead of supply, because the farmers are fencing in the fields they couldn't afford to fence during the twenties and thirties and couldn't get the fence for during the war. Furthermore, as farming becomes more specialized, fields within fields are being fenced. It will be well into the fifties before the farmers' demand for fence drops to the level of supply.

Idle automobile plants—for lack of steel—are daily headlines, and these will persist. General Motors' head sees automobile demand holding at capacity for several years. Car production is not even replacing normal obsolescence, let alone filling the gap caused by 4 years of no automobile output. And I believe that America will be able to support 10,000,000 more vehicles on the road in 1950 than it had in 1940. There is just not enough steel capacity to fill such domestic needs.

The conclusion is overwhelming:

When you combine (1) a big industrial nation like ours that has been starved for steel for almost 20 years, with (2) a world whose steel industry has been decimated by a war, which (3) created an unprecedented postwar need for steel, a steel boom and shortage seems inevitable for the only country that suffered no physical damage in history's most destructive war.

"But where's the money coming from? Who is going to pay the bill for all these exports?" is the present plea of those practical industrialists who said their combined industries could not give jobs to 60,000,000 gainfully employed.

General Marshall has already answered this question. In the forepart of 1947 our exports were running around one and a quarter billion, against imports of around a half a billion. This is a $750,000,000 monthly deficit, and herein lies a basic contributing factor to America's current prosperity. Cut exports down to the level of imports, and there may be enough steel in due time, but there won't be 60,000,000 jobs. A steel surplus can be created quickly by severing America from the world, but America can no more live so severed than an amputated arm. The domestic economy is being primed (yes, this is pump priming) at the annual rate of $9,000,000,000—far more than the great F. D. R. ever dared do. And General Marshall has made it clear why America has no other defensible alternative.

Steel is making around 85,000,000 tons of ingots this year, which is about all its present facilities will do despite their theoretical capacity of a little over 91,000,000 tons. More than 10 percent is being exported as steel products, and half again as much in the form of cars, trucks, tractors, and other essentials made of steel that the world needs. This is over 12,000,000 tons of steel ingots a year—one "whale" of a lot of steel is being exported directly and in fabricated form even before the Marshall plan is started. And these exports can no more be stopped than can the exporting of wheat. Like it or not, the United States is the hub of one of the two worlds on our planet today, and she is going to have to keep her world going with steel and wheat and dollars and a lot of other things.

Last April I said in the pages of Life magazine that the United States cannot meet domestic and world steel needs with 91,000,000

tons of capacity and called for "a steel industry that can produce 100,000,000 ingot tons of steel a year * * * now, not in 1950 or 1955." I also advanced the idea that higher steel prices would make it profitable enough for the industry to finance this expansion out of its profit dollar after taxes. But United States Steel, the price leader, was afraid to raise prices enough even to cover cost increases, let alone enhance profits, and the public seems to approve high profits for other industries but feels that somehow steel profits are sinful. This is a dangerous attitude for a people who are living in the steel age.

Charley White, the lanky, tireless heir to Tom Girdler, in opposing steel expansion, argues that new facilities cost so much today that the steel produced in them would have to sell for $20 a ton—a cent a pound—above present levels. Instead of being a reason for not expanding steel capacity, this is a good reason for raising both steel prices and steel capacity. Are steel profits too high? Look at United States Steel. In 1937, no excessive profit year, United States Steel netted $95,000,000, since when the value of the industrial dollar has dropped at least 40 percent. To earn the same profits in 1937 dollars would take $158,000,000 in 1947. United States Steel netted around $130,000,000 last year. A cent-a-pound increase in steel is a small enough price to pay for 10,000,000 additional tons of capacity, and—with Phil Murray's CIO steelworkers' union hot in pursuit of a just share of corporate earnings—will not unduly raise steel profits.

The big names in my industry publicly disputed my pleas for steel expansion last spring, and my steel friends said I would be the laughingstock of the industry by Christmas. Now that Christmas 1947 has come and gone, the end of the steel shortage has been postponed not for another 6 months but for all of 2 years. And in 1949 it will be postponed still again—unless there is cyclical recession. It will take a real depression to bail the big names' prediction of sufficient steel capacity out of the bucket. My steel friends did not laugh at me this Christmas, and by the coming Christmas they be in the throes—for better or for worse—of another great iron and steel expansion.

III

But are they not already expanding steel capacity by $1,000,000,000? This belated expansion announcement is a phony, and I will tell you why. It provides for only 2,500,000 tons of ingot capacity, while 4,500,000 tons of capacity have been abandoned since VJ-day.

By far the largest part of the $1,000,000,000 is for finishing mills, not the much-needed raw steel and iron-producing facilities. The big sheet producers are greatly expanding cold rolled sheet mills, whose product is more profitable than hot-rolled sheets. Most of the steel for these new cold-rolled mills will come from hot-rolled sheets. This will give the country more cold-rolled sheets, but it won't provide any more steel over-all—just a case of robbing Peter to pay Paul.

When this $1,000,000,000-expansion program is completed the industry will be lucky to be able to make 90,000,000 tons of ingots a year. The domestic and world need is clearly for a hundred-million-ingot-ton American steel industry.

Lastly, virtually all of this billion-dollar program was under way last spring when the American Iron and Steel Institute was using its annual spring reunion as a sounding board for its big names to tell America and the world, that are short of steel, that our steel capacity is adequate. A few weeks later, on June 19, 1947, Wilfred Sykes, president of Inland Steel, the official institute spokesman, told a Senate committee, "I believe we are going to have real relief—from the steel shortage—by the end of this year."

The next scene was in mid-September before the same Senate committee. Then Mr. Sykes and his fellow big steel company presidents gave the steel shortage two more years of life. Whereupon the case for expanding steel capacity, underlined by the Marshall plan, could no longer be denied. That is when the institute announced the billion-dollar-expansion program, and backed it up with paid advertisements.

The program is a phony because (1) it is largely devoted to rounding out finishing facilities; (2) when complete it will still leave us close to 10,000,000 tons below the needed annual capacity of 100,000,000 ingot tons; and (3) it was all under way last spring when the institute argued publicly against steel expansion. True, the industry is spending a billion dollars, but it is primarily to round out its finishing facilities and not to expand its basic capacity.

It is the latter that is so urgently needed, and I have a practical suggestion to get this steel capacity debate off dead center and to start to build more blast furnaces, steel works, and the necessary raw-material facilities behind them.

Before getting into this suggestion, however, there is one alibi and one dumdum argument against expansion to be waylaid. The alibi: If it were not for the 18,000,000 tons of ingots lost in the past 2 years because of strikes, there would be few complaints about the steel shortage now. As long as the leaders of the American Iron and Steel Institute contended that the steel shortage would be over in 6 months, this point had some weight. But now that they give the shortage two more years to run, it loses its force. Eighteen million ingot tons is 10 weeks' production, and if we had this steel we would be 10 weeks closer to the end of the steel famine. Too bad that we lost this tonnage, but its loss is hardly reason sufficient to claim that the steel shortage would now be over if we had not lost the 18,000,000 tons (incidentally, an exaggerated figure).

During the war, the last straw which the anti-steel expansionists grabbed, ran something like this: It takes 1 ton of steel to build 4 tons of capacity, and since the new capacity won't come in for 18 to 24 months, this 1 ton should not be diverted from tanks and guns. I was one who had to contend with this argument during the war, and it did stop some expansion and delay most of the rest. The facts are accurate. Current steel consumption has to be sacrificed to get more steel tomorrow. In the war we wisely decided to slow down the armament program to get more steel later, and it paid off. Whether this should be done again in the current situation is clearly a matter of judgment. Mine is to repeat the wartime performance, and I believe any steel sacrificed today to get more steel tomorrow will pay off in large dividends to our domestic economy and foreign policy.

IV

If old Andy Carnegie were living today, he would go ahead and build a half dozen more blast furnaces and a score more open hearths, and he would make another fortune selling the products of these furnaces. But he would have to contend with taxes that did not hinder him in the last third of the past century. And these Federal taxes are a real hindrance.

So I have a practical proposal to make. Uncle Sam should give some assistance to us poor steel producers to help finance the expansion of iron and steel facilities. Out of every dollar in profit we make today, we have to pay Uncle Sam 38 cents. It costs millions to build iron- and steel-making furnaces, and especially now these facilities are costly to erect. Any money we spend on them must be capitalized, which means that Uncle Sam leaves us only 62 cents of each profit dollar for such purposes. I say that Uncle Sam should let us use the full profit dollar to finance expansion, and not just 62 cents of it.

Here is how the proposal would work. It should apply only to primary expansion, such as coke plants, iron ore and coal mines, blast furnaces that make pig iron, converters and open hearths that make steel, soaking pits that preheat steel for rolling, and basic rolling mills such as blooming, slabbing, and billet mills. These are the new facilities that cost so much and without which finishing facilities are of little value. The cost of all primary facilities enumerated above should be treated the same as operating expenses, but the cost of finishing facilities should be treated as capital expenditures, as is the present practice. This proposal should be effective with all primary expansions begun since VJ-day and continue for all others undertaken within 6 months after Uncle Sam gives the go sign.

I specifically exclude finishing facilities, for which most of the billion dollars is going, because they increase a company's earning power so quickly, and are now capable of rolling over 100,000,000 tons of ingots a year. The industry is already expanding these facilities still more. The trouble is that they are not being backed up with the necessary raw iron and steel. At the Portsmouth Steel Corp. we are spending around $2,000,000 on new finishing facilities to increase our earning position. The other companies are doing likewise, especially with cold-rolled sheet and strip mills. But we at Portsmouth hesitate to build another blast furnace which we could use, and to a large extent this is true of the other steel producers. A major reason is the high cost of new facilities, which can be overcome by Uncle Sam letting us write them off fast. Beware of the proposal to accelerate the depreciation of existing facilities as this would freeze out the new fellow. Only newly built facilities should receive accelerated depreciation treatment by the Federal tax people.

It may be sounder to finance basic primary iron and steel facilities out of new investment money. Some of it will be done that way, as in the case of Wheeling Steel's recent bond issue for coke- and iron-making facilities. But this is the exception. Uncle Sam needs to step into the breach and provide an incentive to expand these costly primary facilities.

I say that a new 3-year amortization plan will end the steel capacity debate and lay the foundations for a hundred-million-ingot-ton steel industry by 1949–50. Tom Girdler may doubt that there will be a need for this increased capacity in 2 years, but he was wrong about the new capacity built during the war, and he can be wrong again.

Up to mid-September the American Iron and Steel Institute stoutly rejected all thought of expansion. Then, as I have shown, it announced that a few companies were expanding basic steel facilities to the extent of 2,500,000 ingot tons.

This public reversal would seem to indicate that some of its leaders are getting mixed emotions about expanding. But they are full of fears; first, that new facilities cost too much; second, that there may be no demand for the steel once the new facilities are completed. Here is an opportunity for Uncle Sam to give the steel industry some tax encouragement, and tip the scales in favor of making America a hundred-million-ton steel country by 1950.

The Place of the Retired Officers in American Life

EXTENSION OF REMARKS
OF

HON. WILLIS W. BRADLEY
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. BRADLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the biennial convention of the Retired Officers Association, at the Mayflower Hotel, Washington, D. C., February 14, 1948:

Brother officers, today I have the rare privilege of talking to a group of Americans of which I am one from the triple viewpoint of a citizen, a retired officer of the Navy and a Member of Congress. It may be that will not agree with some of my observations but I assure you that they are sincere, friendly and intended to be helpful.

Let me commence by stressing the value of an association such as this. It is worthwhile from many angles. The individual retired officer is not likely to have much influence either in the righting of grievances or in moves for the betterment of retired officers as a whole. The saying "In union there is strength", is truthful not only in the operation of a ropewalk, wherein fibers of hemp or manila are brought together to form a hawser capable of towing a heavy ship, but also in almost every walk of life as we know it today. You may never use united strength to obtain additional benefits, but you may need it to protect some of the things you now enjoy—to protect them from sudden flurries of ill feeling caused by such an unfortunate instance as occurred recently in connection with retirement benefits for physical disability. Standing together—with a calm hand at the wheel—it is likely that you will weather the tempest without disaster. Standing alone—without an authorized spokesman to present your side of the picture—you might well be damaged so heavily that homes will be lost, children compelled to leave school, or other near-tragedies come upon you or your family.

You have built up a worthy and a worthwhile organization in the Retired Officers Association. Many of you have been in it from scratch—some 19 years ago—and you have reason to be proud of your handiwork; to be gratified by accomplishments of the past, and to be happy at the opportunities for service which are ahead. And here let me stress, my friends, that I use the word opportunities, in so far as the future is concerned, for much that you may accomplish will be due to conscientious efforts on the part of this association. We in America seldom give something for nothing. I wish I could say that we never give something for nothing, but that would not be true for there are times when a totally unexpected legacy from some unknown relative drops into the lap of a surprised heir. The retired officer, however, will be wise indeed if he expects nothing more than he has earned through service to his country.

There may be some who feel that you are supporting a lobby in Washington and that it is neither proper nor ethical to do so. Perhaps I can put your minds at rest on certain aspects of this situation since I deal with these so-called lobbies nearly every day.

We all realize that the officials of this association are retired officers of the armed forces and are bound by the usual regulations of those services. You cannot properly use this association to put pressure on the Congress, or on any other governmental body, in behalf of your members. You can, however, quite properly, utilize this association, and its officials, for the purpose of explaining the needs of retired officers to the Congress. You can, quite properly, endeavor to justify or oppose proposed legislation when it is in the formative stage of committee hearings. You can, quite properly, present requests of individual members to governmental bureaus or agencies, or offer resolutions adopted by your board of directors as the reasoned conclusions of retired officers as a whole.

And here let me mention lobbying activities around the Congress as I see them. A proper lobbyist, more correctly called a business representative or business agent, is a valuable man both to his own employers and to Members of Congress. An improper one is a nuisance and an obstruction to good legislation. I am glad to declare that, almost without exception, the business agents with whom I have come in contact have been gentlemen well versed in their own lines of endeavor, polite, considerate, and interested chiefly in having an opportunity to present their views, without recrimination or bitterness. In plain fact, I have learned to appreciate these gentlemen so much that I call them far more often than they call on me.

A Member of Congress can't know all the details of thousands of laws—he can't have all kinds of statistics filed away in his head so they are on call at any moment.

So on my part, I turn largely to the business groups which have representatives in Washington when I want detailed information regarding their respective specialties, and not once has any of these agents given me incorrect information or attempted to mislead me. When I am stuck with a complicated question of pay for a retired enlisted man or a fleet reservist, I frequently refer the whole question to the Fleet Reserve Association. If the problem concerns a matter embedded deeply in the maze of officers' retirement laws, I send it to the Retired Officers Association and your legal counsel ponders and perspires over it until he has prepared the answer. If I am troubled about merchant-marine matters from the viewpoint of ownership or operation, I turn to the exceedingly competent staff of the National Federation of American Shipping or to the equally competent staff of the Maritime Commission—a Government agency with which I have the most pleasant relations. When the question involves seamen or other merchant marine sea-going personnel, my lines of communication run into the offices of the National Maritime Union where their well-trained research analyst soon produces the elusive facts or figures I am seeking. And so it goes right down the line as I utilize these private agencies in conjunction with the established governmental set-up.

I have given you this picture because I want to put your minds at ease, once and for all time, in regard to the status of your own officers here as they go about their work with the Congress and other branches of the National Government. There is nothing wrong about their efforts in your behalf. They deserve your wholehearted support.

Now for some of the aspects of retired officers of the Military Establishment. Why should such officers be retired? Are they of any value to the Government? Should they be utilized in other governmental positions to reduce the cost of the retired list or to make use of their experience?

First. Why should an officer be retired for age or physical disability? Fundamentally, as an act of justice after his service to the Nation. Practically, because every sound concept of national defense requires that officers of the armed forces be men of high character, ability, integrity, and education, and such men cannot be held in military service, during the best years of their lives, without the certainty of financial security. A military career offers almost no opportunity to build up a profession or a business which will take care of one in his old age or in the event of physical disability. Yet, the military profession requires all a man's adult years up to comparative old age, without regard to his personal desires as to time or place of residence, as to associates, as to working conditions, or even as to the presence of his family at the station of his employment. It may be said with truth, that the commissioned officer of the Regular Military Establishment actually gives his life to the Nation during his years of active service. Yes, my friends, such officers should and must be retired, for disability or for age, as a matter of common justice to the individuals and of safety to the state.

Perhaps you may be thinking of the question so frequently propounded by civil employees of the Government: Why should military personnel have retirement privileges without pay deductions when other Government employees must build up their old-age benefits through contributions to a retirement fund? The answer to this is simple indeed. The retirement privilege is given full consideration in arriving at pay scales of military forces. It is one of the inducements needed to persuade men to enter military service and to devote their lives to it. An increase in service pay would not be anything like as great an inducement as the privilege or retirement now is, because military men realize that money is quickly spent and that people such as they—people who are ordered hither and yon during all their years of active service—would have small likelihood of establishing a home and a competence for their old age.

Second. Are retired officers of value to the Government? The answer to this question is a decided yes. Every such officer is subject to recall to active duty in time of war or national emergency if physically fit. This reservoir of retired officers constitutes a tremendous reserve strength when the need for men especially trained in the profession of arms is greatest. It provides hundreds of inspectors, instructors, and administrators for both home and overseas posts. It provides men who are conversant with the details of procurement, with the building of ships, and with the assembling of munitions. It provides steady hands for civilian wartime community tasks, such as air-raid wardens, draft boards, and security patrols. It furnishes the know-how and the leaders for local bodies set up to cope with large-scale disasters in both peace and war. As I recall the figures, the Navy utilized approximately 86 percent of its retired officers for some sort of active duty during the recent World War. The contributions of these officers were a decided factor toward victory. They made it possible for our small Regular Naval Establishment to expand rapidly without great loss in efficiency.

In every modern war the retired officers of our armed forces have rushed forth to serve their country in its hour of need—they have kept faith with America.

And, third, Should retired officers be employed in other branches of the Government in time of peace to reduce the cost of the retired list or to utilize their experience? This is a debatable proposition, but my own answer is—only in specific positions where technical training makes their services necessary.

Regardless of what many of you gentlemen may believe, I have come to the conclusion that there is a distinct "military mind" or "military conception" on the part of most professional officers. This military mind differs materially from the civilian in its way of doing things, and it quickly builds up resentment and lack of cooperation on the part of the public. The American Government is a civilian Government—it wants no part or parcel of military management or military ways during time of peace. Civilians pay the taxes on which the whole Military Establishment depends for its existence. Civilians prefer possible sacrifice of efficiency to obedi-

ence to directives of a mind which has been indoctrinated in the art of command.

A retired officer could hardly be expected to perform civilian Government work unless he were paid a total sum equal to his active duty pay and allowances. In general, since he would be new in the job, this would put his earnings above those of a civilian in a comparable position and would cause discontent and demands for increases in pay in civil branches of the Government. It is likely that increases brought about by such demands would exceed savings to the Government due to the employment of retired officers in civil jobs.

Civilian office holders, in general, would soon come to look upon officers of the armed services as contenders for their jobs and we should thus build up such suspicion and distrust that the maintenance of adequate national defense might be impaired thereby.

These are only a few of the reasons why the military man should not be utilized to replace the civilian in time of peace. However, if you are a retired officer and you are able to establish yourself either in business, or professional life on your own, rather than through assignment by the Government, you will find yourself welcomed into the world of civilian workers on an equal footing with your contemporaries. This is as it should be in America.

I am in receipt of hundreds of letters from retired personnel, of both the military and civilian components of the Government, in which demands for increases in pay are the dominant theme. I do not recall that I have ever received such a letter in which appreciation has been expressed for the benefits now being received as a reward for faithful service. It is not difficult to understand why one wants more pay. Practically all of us want more pay—feel that we earn more than we are getting—think that our pay should be increased materially. But not one in a hundred gives a moment's thought to the sum total of what even a small individual increase means in this day of vast armed forces. Probably not one in 500 gives serious thought as to how the money to finance additional pay scales is to be obtained. And so, let me say right here that there is only one source of income for the Government, and that is taxes of one sort or another. You can call them what you like, but they are still taxes and you, the people, pay them. It seems that each one who demands more pay figures that he'll get more than he'll lose in taxes. He has an idea that someone else will get nicked for the extra dollars and that he'll just ride along on the gravy train. Usually, he is merely fooling himself. The Nation's workers have found that to be the case during the last decade. A general boost in wages soon causes an advance in the cost of living such as to absorb the wage increase. Now, these workers are getting smart enough to declare they would prefer a reduction in cost of living, rather than an increase in earnings.

When some of us older people entered the service, the total number of commissioned officers was only a few thousand—probably less than 10,000 if we include every category in the whole national-defense establishment. An increase in pay or allowances didn't mean very much then to the National Treasury. Now, however, conditions are totally different. The number of active officers of the Army, Navy, and Air Force must be at least 125,000. I haven't any idea of how many retired officers there are. Also, we have applied the laws for pay and retirement to the Coast Guard, the Coast and Geodetic Survey, and the Public Health Service. The grand total of individuals who would be benefited by an increase in pay for commissioned officers is great, indeed. An addition across the board of $25 per month will likely mean an additional $50,000,000 of annual expenditures to the Treasury. And we must keep in mind that the Congress cannot increase pay for officers without extending the same sort of relief to the enlisted personnel. That is as it should be, for normally relief is needed in the lower-pay brackets much more than in the higher echelons.

I realize that officers in general have not had a worth-while pay increase for many years and that their standard of living (other than that of those who enjoy additional pay for aviation, submarine service, etc.) has deteriorated steadily when compared to that of civilians with whom they formerly enjoyed parity. I realize also that all important fact, which the civilian seldom understands, that allowances are all lost upon retirement. I am also aware of the fact that a new pay scale has been suggested by a committee of members of the armed services, but I understand that there is little likelihood of its being presented to the Congress during the current year, due to further study in the Department of Defense.

In view of this, the prospects of an increase in pay or the inclusion of some part of allowances in retired pay are not such as to make one optimistic of any probability of favorable action during the current session of Congress.

The great burden of the most gigantic debt in history—the highest annual budgets known to man in years of peace—stare Members of Congress in the face and present the stark realities of reducing expenditures in these postwar years or bankruptcy of government by the people.

It will be well to discuss briefly charges that officers of the Regular services are favored over reserve and temporary officers in transfers to the retired lists. There are specific instances where such charges seem clearly proved, but in any great establishment, or groups of establishments, there are certain to be errors of judgment, cases of favoritism, etc., which are the exceptions to the rule. To claim otherwise would be to maintain that we are not subject to human frailties, a condition I, at least, do not want to maintain, for I have no desire to be superman and I like the attributes of a human being.

Basically there is a difference in the retirement of regulars and reserves; there should be, and I believe there always will be. This difference is fundamental to the character of service performed. The regular has embarked upon a lifetime of service to the Nation. He has a permanent commission and is entitled to retirement when he fulfills certain specific requirements as to length of service, age, or physical condition. Sometimes retirement is at his own request; generally it is forced upon him. Since experience has shown we must have reasonably young men in the middle ranks of the services, and since officers neither die, resign, become physically unfit, or retire voluntarily in sufficient numbers to keep up that healthy flow of promotion required to keep age limits down to a satisfactory maximum for proper performance of duty, the services have found it necessary to adopt measures for compulsory retirement or elimination, as it is generally called. Involuntary retirement is a difficult matter. It is accompanied by heartburnings, grief, and feelings of discrimination on the part of those so retired. For the best interest of the services, it should be avoided insofar as possible. Now when a Regular officer comes before a retiring board and that officer is in a grade where elimination is required by law, what more logical result can be expected than that the officer will be retired if he has any appreciable physical deficiency? Such action is only plain common sense. The officer would have to retire soon anyhow in accordance with existing laws, and normally it is to the advantage of the service and to the Government to eliminate him then and there, rather than having him go on to a higher pay bracket as well as having to force some physically fit officer off the active list to provide the minimum flow of promotion.

We have had an unusual condition at the end of the great conflict just terminated. We had many comparatively young men in high grades temporarily. These young men did not care to revert to their permanent grades—they did not like the idea of demotion—so they set about to obtain retirement in their temporary ranks. If they could accentuate some disability or ailment to the point where a retirement for physical disability could be obtained, they did so. That was to be expected. If they didn't obtain a physical retirement, some went out after 30 years of service—at the discretion of the President.

Let us think of the Reserve or the temporary officer who comes up before a retiring board. If he has a decided physical disability—definitely service-connected—he should be given the same consideration as is accorded to a Regular under similar circumstances. I believe that such has been the case. Frequently, however, such an officer has been in active service only a short time and there is little to connect his disability to his military service. He complains of nervous disorder, stomach troubles, high blood pressure, and claims that his short military service has brought this about and has disabled him to the extent where he should be pensioned by the Government. Unlike the Regular, the Government has no obligation to him in the way of retirement except what may be due to service-connected disability. Could you maintain, for a moment, that a retiring board should be as liberal in its interpretation of disability in such a case as in that of a Regular officer whose eventual retirement is assured in any event, and whose retirement at the time might be of advantage to the Government? Undoubtedly there have been cases of injustice to temporary and Reserve officers seeking retirement for physical disability. But let's not confuse the issue. Let's have these reputed injustices stand on their own feet rather than to accentuate them by critical comparisons with the acts of retiring boards for Regular officers.

Gentlemen, I feel that every organization does better, and advances farther, when it has some mission of service beyond its own restricted circle. I suggest that you undertake something more than benefits for your own membership. You might, for example, consider a program of aid for service orphans in acquiring an education, or of gaining entrance to West Point or Annapolis. You might consider including in this program, however small it might be, a percentage of orphans of enlisted personnel. There are only thoughts—vague thoughts perhaps—but nevertheless, worth while. On my part, I find there is no deeper satisfaction than the knowledge that I have helped some deserving person—that I have advanced him on the road toward the goal he seeks. In helping others, you will help yourselves.

And, gentlemen, the goal of the physically-fit retired officer should not be achieved by a low golf score, a good bridge game, and a carefree life. It should include recognition of his obligation to his country, maximum service to his community, and an honest effort to help in providing for the needs of his own loved ones.

Gentlemen, your future is in your own hands, not, as some think, solely in the hands of the Congress. You must determine the issues in your own lives. You must present these issues to the proper authorities, after you have helped yourself to the limit of your respective abilities. You have, in this Retired Officers Association, an effective instrument for the furtherance of sound and adequate measures for retired military personnel—both officers and enlisted men. You should use it intelligently, and constructively.

I wish you the greatest measure of success in your efforts to be of service to America.

In My Opinion

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following radio address entitled "In My Opinion" delivered by me over the Columbia Broadcasting System on February 16, 1948":

We can best guarantee national security by the rapid achievement and continued maintenance of full and adequate preparedness for defense, on the sea, on the land, and more especially in the air. All the funds required to keep us the strongest military nation on the planet should be unhesitatingly appropriated by the Congress, and then having done this the Congress should insist that the armed services efficiently and effectively move to an early and full realization of this proposed goal. A strong and powerful United States is the surest guaranty for the perpetuation of a society of free nations.

Air supremacy by the United States must for our own national security become an actuality at the earliest possible moment regardless of the cost, the effort, or the sacrifice involved. Air power is peace power. This should be so obvious to anyone who gives even the slightest thought to the present disastrous trend of world affairs as to eliminate wtihout any further discussion any arguments against the proposition. We must achieve an air force equal to any air force or combination of air forces on earth. United States' air power is the key to the future well-being and happiness of the world.

On December 15, 1947, I introduced a bill providing for a supplemental appropriation of $500,000,000 to be expended on the Air Force before June 30, 1948. Beginning with the fiscal year 1949 the Congress should appropriate $6,000,000,000 annually for the Air Force to achieve the absolute irreducible minimum air protection. It should be emphasized and reemphasized that the suggested supplemental appropriation of $500,000,000 and the annual appropriation of $6,000,000,000 beginning with the next fiscal year will provide for this country only the barest minimum peacetime Air Force.

Even with the allotment of funds I have advocated it would be 1952 before the United States can achieve the 70-group program were we to start at once. This 70-group program, according to General Spaatz, comprises 6,869 aircraft, including training; 3,212 for the National Guard; and 2,360 for the Air Reserve. The total amounts to 12,441 airplanes. To keep this force modern and up to date, states the General, would require an annual procurement of 5,200 planes and a reserve of 8,100 planes.

When this 70-group program is a reality we will have only the basis on which air supremacy could be achieved. Were we to be attacked, this 70-group air force would be just sufficient to blunt the enemy's first offensive. We would not have air supremacy, and before we could attain it a period of 18 months would be required. To win a war we must have an Air Force of approximately 175 to 200 groups.

I cannot too strongly emphasize the fact that an appropriation of $500,000,000 for the current fiscal year and a $6,000,000,000 appropriation annually would be necessary to build the 70 groups in four years. Let me call your attention to the fact that the Bureau of the Budget has approved only $3,054,000,000 to be used by the Air Force for the fiscal year 1949. This is only half enough money to even start to realize the 70-group program.

In view of the fact that the Soviet Union is manufacturing bombers equal to or superior to the famed B–29 and is rapidly producing jet planes, the United States should at once move to achieve and maintain air supremacy. Complete control of the air would, in my opinion, be the greatest guaranty of national security.

The status of our air strength is appalling. We are not anywhere near the minimum air strength advised by the Air Force and by the naval air arm as necessary for the protection of this country were an emergency to arise. The United States aircraft industry is producing scarcely over 1,500 planes a year when it should be producing at least 6,000. The industry is sick and is rapidly losing money. The Government should place orders for many more planes.

The cost of constructing a gigantic air fleet will be great. To achieve air supermacy it will probably be necessary to spend $8,000,000,000 annually on the Army Air Force and the naval air arm. The expenditure is huge but if we refuse to pay this price as a penalty for our stupidity in scuttling the finest Air Force in history at the close of the last war, we will certainly have to pay in terms of destroyed cities; in terms of blood; in terms of millions dead; and in terms of the loss of freedom.

Air power—overwhelming is the only possible defense against the atomic bomb. Any nation contemplating an attack upon the United States will hesitate only if she knows that within a period of hours from the time the attack is made there will be delivered in reprisal a knock-out, devastating, retaliatory blow from the air. The United States can be immunized against attack from the air by building a completely unassailable and invincible Air Force.

Let no one imagine that an attack on the United States is not possible or perhaps imminent. The Soviet Union exceeds us in air strength, in the construction of guided missiles, and in submarines. Time is shorter than we think. A-day may not be January 1, 1953, as the Finletter report designates it. The hour of attack may be much nearer.

The Grain-Buying Record

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include an editorial in the Kansas City Star of February 9, concerning the effect of the Government's grain-buying operations in connection with the downward trend of the grain market:

THE GRAIN-BUYING RECORD

Whatever may be said about Senator TAFT's charge that the Administration is deliberately trying to keep prices up for political reasons, there is something to be said about the Administration's record in the buying of grain. It has been bad, almost the worst kind of management.

Of course each party has been trying to hold the other responsible for inflation and each had planned to make it a campaign issue. Now if by any chance the price trend should be definitely lower a decided shift in strategy would be necessary.

But aside from that Senator TAFT and others point to a bit of damaging evidence. It was the announcement of Secretary Anderson, after a sharp 2-day break in the grain market, that the Government planned soon to buy 50,000,000 bushels of wheat. This had all the appearances of an effort to bolster the market when a downward readjustment was strictly in order and when the Government could have profited thereby.

In fact, there was no need to announce then, or at any time, that the Government expected to buy a given amount of wheat. It could only be a market stimulus and cost the Government more when the actual buying took place. This is entirely different from buying that might be an advantage to the Government or from buying that might be justified in support of the market and in the interest of farmers.

Such bungling has marked the whole record of the Government's grain-buying operations. Over a period of months there appeared a series of conflicting announcements as to how much would be bought for relief abroad. The figures were put out by different Government agencies and the extremes varied by as much as 125,000,000 bushels. It might be a total of 570,000,000 bushels or 450,000,000 or less. It was hard to pin down responsibility and to discover what agency had the final word. The markets were kept in turmoil, usually soaring upward as the Government agents came in to buy and traders could see what was happening.

That suggests the record of it whether or not there was any deliberate planning to push prices up and try to hold them there. Under any conditions the foreign-aid program would have had its effect on prices not only of grain but on a wide range of commodities. It will still have that effect.

But responsible management could have aided in holding the inflation in check and could yet do it without the twaddle about restoring wartime controls. Otherwise a trimming of the aid program and the operation of natural economic forces will have to do the work.

Thirty Members Act on Palestine

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. HERTER. Mr. Speaker, on February 10, 1948, 30 Republican Members of the House of Representatives expressing their deep concern with the Palestine issue, sent a letter, set forth in full below, to the Secretary of State, to which the Secretary of State replied on February 12 by letter also set forth below. There is appended, too, for the information of the House an editorial from the New York Herald Tribune of yesterday, February 16, on this exchange of letters. It is becoming clearer daily that the Palestine issue may well prove a turning point for the United Nations. It calls for study and an informed opinion on the part of every Member.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 10, 1948.

Hon. GEORGE C. MARSHALL,
Secretary of State,
Washington, D. C.

HONORABLE SIR: Following the decision of the United Nations General Assembly taken

on November 29, 1947, we have been deeply concerned by the violence in Palestine between Arabs and Jews to which the surrounding Arab nations themselves threaten to become parties, and by the honest worry among many of our own citizens as to our Palestine policy. We are concerned lest the State Department's policy announced on December 5, 1947, "discontinuing for the present licensing of all shipments of arms" to the Arab countries and Palestine, while extensive sales of arms by Great Britain to the neighboring Arab nations are reported, may be misleading alike to those seeking to render inoperative the United Nations decision and to those seeking to sustain it, as to the intentions of the United States. We believe there is grave danger that if the United Nations Palestine decision is rendered inoperative, far more even that this decision may be jeopardized, and the United Nations itself may be made ineffective.

Under the circumstances referred to above, we consider it appropriate at this time to ask the following questions:

1. Is it true that Great Britain is permitting arms to continue to be shipped to the Arab nations, and if so, does the continuance of such shipments interfere with carrying out of the United Nations decision on Palestine?

2. Do the activities of the Arab nations with respect to support of the Arab Higher Committee for Palestine, and the Arab League, or otherwise in their announced violent resistance to the UN decision on Palestine, endanger the maintenance of international peace and security in the terms of the UN Charter?

3. What will be the instructions of the United States to its UN delegate on the questions referred by the UN Palestine Commission to the Security Council regarding the means for making effective the General Assembly's decision on Palestine?

4. What is the United States prepared to do to help in the implementation of the UN decision on Palestine?

On April 22 and July 15, we addressed certain questions to you on the issue of Palestine. We believe that these were helpful in crystalizing the position of the United States on this issue. As we have stated before when addressing you on this subject, we imply in this communication no criticism or direction, but ask only for ourselves and for the people, the necessary information so that the attitude of the United States may be made clear, and the influence of our attitude be utilized to the full for the preservation of peace and the enhancement of the prestige of the United Nations.

Sincerely yours,

ROBERT J. TWYMAN, Member of Congress, Ninth District, Illinois; WILLIAM G. STRATTON, Member of Congress, Representative at Large, Illinois; CHRISTIAN A. HERTER, Member of Congress, Tenth District, Massachusetts; JAMES C. AUCHINCLOSS, Member of Congress, Third District, New Jersey; J. CALEB BOGGS, Member of Congress, Representative at Large, Delaware; KENNETH B. KEATING, Member of Congress, Fortieth District, New York; THOR C. TOLLEFSON, Member of Congress, Sixth District, Washington; THRUSTON BALLARD MORTON, Member of Congress, Third District, Kentucky; EDWARD A. MITCHELL, Member of Congress, Eighth District, Indiana; HOWARD A. COFFIN, Member of Congress, Thirteenth District, Michigan; JOHN C. BROPHY, Member of Congress, Fourth District, Wisconsin; GEORGE H. BENDER, Member of Congress, Representative at Large, Ohio; HAROLD F. YOUNGBLOOD, Member of Congress, Fourteenth District, Michigan; EDWIN ARTHUR HALL, Member of Congress, Thirty-seventh District, New York; ELLSWORTH B. FOOTE, Member of Congress, Third District, Connecticut; MARGARET CHASE SMITH, Member of Congress, Second District, Maine; GEORGE MACKINNON, Member of Congress, Third District, Minnesota; RICHARD B. VAIL, Member of Congress, Second District, Illinois; W. HOWES MEADE, Member of Congress, Seventh District, Kentucky; WILLIAM J. CROW, Member of Congress, Twenty-third District, Pennsylvania; NORRIS POULSON, Member of Congress, Thirteenth District, California; R. WALTER RIEHLMAN, Member of Congress, Thirty-sixth District, New York; JACOB K. JAVITS, Member of Congress, Twenty-first District, New York; EDWARD J. DEVITT, Member of Congress, Fourth District, Minnesota; FRANCIS J. LOVE, Member of Congress, First District, West Virginia; DAVID M. POTTS, Member of Congress, Twenty-sixth District, New York; JAMES G. FULTON, Member of Congress, Thirty-first District, Pennsylvania; FREDERICK A. MUHLENBERG, Member of Congress, Thirteenth District, Pennsylvania; FRANKLIN J. MALONEY, Member of Congress, Fourth District, Pennsylvania; CLIFFORD P. CASE, Member of Congress, Sixth District, New Jersey.

DEPARTMENT OF STATE,
Washington, February 12, 1948.

DEAR MR. JAVITS: I have received a letter dated February 10, 1948, signed by you and 29 other Members of the House of Representatives. This letter expresses your joint concern over violence in Palestine between Arabs and Jews, your worry lest the announced policy of the Department of State of an arms embargo to the Arab countries and Palestine may be misleading as to the intentions of the United States, and your apprehension that if the United Nations Palestine decision is rendered inoperative the United Nations itself may be made ineffective. In reply to your specific questions, I desire to inform you that copies of this letter are being addressed separately to the other Congressmen who signed the communication of February 10.

Taking your questions seriatim, I quote the first:

"1. Is it true that Great Britain is permitting arms to continue to be shipped to the Arab nations, and if so, does the continuance of such shipments interfere with carrying out of the United Nations decision on Palestine?"

On February 4, 1948, the British Minister of Defense made an official reply in Parliament which largely covers your inquiry. He said, among other things:

"There is at present an embargo on the entry into Palestine both by sea and over the land frontiers of all warlike material. The Government of Palestine will enforce this embargo to the best of their ability until the mandate comes to an end on the 15th of May. It is also the policy of His Majesty's Government to refuse permission for the export of military material from Great Britain to any part of the Middle East except under existing contracts which have been undertaken as a result of our treaty obligations to certain Arab governments. His Majesty's Government have no reason to suppose that the material supplied by them under such contracts will be used in Palestine."

This Government has no information in its possessions indicating that to date the continuance of British treaty shipments has interfered with the carrying out of the recommendations of the General Asembly on Palestine embodied in its resolution of November 29, 1947.

"2. Do the activities of the Arab nations with respect to support of the Arab Higher Committee for Palestine, and the Arab League, or otherwise in their announced violent resistance to the UN decision on Palestine, endanger the maintenance of international peace and security in the terms of the UN Charter?"

While it is true that various Arab governments and organizations have announced their determined opposition to the General Assembly's recommendation on Palestine, there have thus far been no overt acts which, in the decision of the Security Council of the United Nations, have been determined to endanger the maintenance of international peace and security in the terms of the United Nations Charter. Meanwhile, the United Kingdom, as the mandatory power, is responsible for the preservation of peace and security in Palestine. The United States has consistently proclaimed its determination to see the provisions of the United Nations Charter complied with, and its representative in the General Assembly, in announcing this Government's policy regarding Palestine on October 11, 1947, said that we assumed there would be Charter observance.

"3. What will be the instructions of the United States to its UN delegate on the questions referred by the UN Palestine Commission to the Security Council regarding the means for making effective the General Assembly's decision on Palestine?"

The United Nations Palestine Commission has thus far submitted its first interim report to the Security Council but the Council has not yet taken action on the report. On February 10 the Council agreed to await the forthcoming special report of the Palestine Commission on the problems of security and enforcement before giving further consideration to the General Assembly's recommendation on Palestine. This report is due February 15. In absence of knowledge as to the contents of the Palestine Commission's next report it has been impossible to formulate instructions to the United States Representative on the Security Council.

"4. What is the United States prepared to do to help in the implementation of the UN decision on Palestine?"

I believe that much of this question is implicitly answered in my response to question 3. Until the Security Council has received and studied the report of the Palestine Commission on security and enforcement and has reached a decision it is not possible for this Government to determine in advance the steps which may be necessary to carry out such a decision. However, the United States has been active as a member of certain other principal organs of the United Nations which are dealing with the Palestine problem to implement the resolution of November 29. The United States Representative on the Trusteeship Council and his deputy have worked with other members of the Council in preparing a draft statute for the trusteeship of Jerusalem. The United States as a member of the Economic and Social Council will be concerned with those aspects of the resolution of November 29 which call for action by the Economic and Social Council. Practically every major organ of the United Nations is concerned under the terms of the Assembly's resolution.

I much appreciate your patriotic interest in this question and your concern for the success of the United Nations. As the President and I have on several occasions made clear, we regard the solution of this immensely difficult problem as a United Nations solution and our contribution to that end will be as a member and steadfast supporter of the United Nations.

Faithfully yours,

GEORGE C. MARSHALL,
Secretary of State.

[From the New York Herald Tribune of February 16, 1948]

CORRECT BUT UNCONVINCING

The reply of the Secretary of State to questions raised by a group of Congressmen concerning America's Palestine policy is technically correct. He does not go beyond the British Government statement on arms shipment to Arab states; he accepts the inaction of the Security Council; he announces that instructions to the United States delegation at Lake Success must wait on the report of the United Nations Palestine Commission. In all of this he has the support of protocol. The matter is in the hands of the UN; there the State Department is satisfied to let it rest.

But no one knows better than Mr. Marshall that the UN is not a mechanical brain, which, if fed a sufficient amount of factual data, will automatically produce an impeccable solution. The UN is a human institution, which responds to human initiative and can be restrained by human doubts and fears. Moreover, it is dealing with a very human situation in Palestine, where passions are mounting, regardless of protocol—where lives are being lost and where every act or omission of statesmen, of soldiers, of fanatics, and of bewildered men and women who see their hopes and their homeland threatened by war contributes to the growing tension. The American responsibility in the premises may and should be shared with other members of the United Nations. But it cannot be simply loaded on the back of the international organization and dismissed. The United States, for a great number of reasons, has too intimate an interest in a Palestine solution to adopt a passive role now.

Therefore, the technical correctness of Mr. Marshall's Palestine statement is basically unconvincing. It does not correspond with the realities of the American position, which demand that the United States do everything which the UN Charter permits to bring an end to the terrible uncertainties which now prevail in the Middle East. It is not enough to sit by while the UN develops its policy; the United States, as is its right as a member of the UN and its duty as a nation which has in the past exerted a variety of official and unofficial pressures to affect the conditions under which Great Britain exercised her mandate, should be seeking actively to expedite and implement the work of UN. The course which Mr. Marshall has outlined is fundamentally a course of indecision, and such a course will neither avert a tragedy in Palestine nor enhance the prestige and authority of the United States.

Housing Situation

EXTENSION OF REMARKS
OF
HON. ANTON J. JOHNSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. JOHNSON of Illinois. Mr. Speaker, with the continued housing shortage problem, it does appear to me that useless red tape could be cut in many places. Last summer it was my privilege to view in detail a new housing project being constructed at Moline, Ill., of 510 housing units from one- to two- and three-bedroom houses, all thoroughly modern with radiant heat and with all conveniences and a beautiful lay-out with curved streets, which is being constructed by the Byrne Associates, with headquarters in Washington, D. C. These were houses selling from between $7,000 and $8,000 each.

When I viewed this last summer, I interviewed many on the project, not only the general superintendent, but also many of the individual workers and while this is a prefabricated project with the prefabrication being done entirely on the ground, there was absolutely no slowdowns because of labor. In fact, many of these union men are known personally to me, and their story was that it was a very happy set-up but it appears that slow-downs and the delays are being caused by agents of this Government according to an editorial in the Moline Dispatch of February 12, and under leave to extend my remarks, I include also this editorial:

THOUGHTS ON HOUSING

One of the ways to solve the housing situation would be for the Federal Government to get out of it bag and baggage, and stay out. To the extent that State governments are involved, they should retire, too. To complete the picture, let the cities get out partially, remaining interested only in the prevention of eyesores and unsafe construction and in the proper installation and maintenance of utilities, such as sewage, power, and water and gas mains.

The multitudinous restrictions on rents, financing, selling, and construction have made housing an unpleasant venture. Houses are in too many instances being built merely because it is imperative rather than because someone wishes to invest his money in them in the hope of making a profit on the expenditure. Competition has been wrecked, and where there is no competition people are apt to go without adequate shelter.

I. A. Bickelhaupt, vice president of the Byrne organization now erecting dwellings on the former Deere experimental farm, has something to say with regard to the possibility of selling houses to certain individuals owing to FHA regulations. In testimony before a congressional committee in Washington, January 14, Mr. Bickelhaupt recited the case of a man and wife who were both working, drawing a total of $3,100 a year, but were not accepted for one of the Byrne houses because only the income of the head of the family was recognized. Mr. Bickelhaupt asked: "Are we denying the right to own a home to those families with the ambition and energy to get together and all work to pay for it?"

Another quotation from Bickelhaupt's prepared statement: "There are many cases wherein a man wishes to buy a home who is the present owner of a home (which has a ready market sale). He makes application to purchase one of our homes but is turned down unless he has income to support both homes or until he sells his other house. We have six cases of this type in Moline, Ill., on record."

Another instance: "A disabled veteran with a permanent allowance from the United States Government of $1,400 a year and with a watchman's job with the ADT at $1,400 a year was refused approval because his income from the Government was not recognized which we think is the most stable income of the two."

Mr. Bickelhaupt in his testimony made reference to the rumored limitation of output by organized labor, he said: "Contrary to the general opinion, we have not encountered any limitation of output among organized labor. We have found an equal or greater loss of efficiency and lower production among the open shop crews or unorganized workers than we have found among the organized crafts—so much so that we have been for some time working out national agreements with the various crafts."

Mr. Bickelhaupt's prepared statement had some remarks on local building codes as encountered in various places where the Byrne organization is building houses. Some restrictions, as we all know, are imposed by FHA itself before the financing can be approved.

"In Moline, only," said Mr. Bickelhaupt, "we were further required to drill holes in the cement and install Rawl plugs whereas it has been standard practice to nail the bottom plate to the concrete with concrete nails."

As to front and rear entrance platforms, Mr. Bickelhaupt said "These platforms were of concrete and it was required in Moline that we form them in conjunction with the grade beam, doweling the steel into them to make a slab integral with the beam of such design as to disregard the support of the earth. This is, of course, excellent construction such as is used in a $50,000 house, but it is not necessary in low-cost housing."

Mr. Bickelhaupt further said: "Sidewalks have been required in Moline leading from the front steps around the house to the rear entrance. This is all in good practice but is it not possible that a man might prefer a walk from his drive to the rear entrance and is it not possible that a workman in the low-income bracket would prefer to save that cost and put in his own walk in his spare time?"

As to paving in the Byrne area in Moline, the witness said: "With houses ready to occupy, we have been delayed in Moline approximately 6 weeks with people begging for occupancy, because of a dispute between FHA and the city. The city requested that we install concrete curbs and gutters and lay a base of crushed rock topped with fines and shot with oil and left to settle for 2 years before the city's specifications will permit the roads to be topped. FHA insists that they will not give us final approval until the road has been completed with a gravel basis and an asphalt top. The difference in cost is immaterial to us but we believe the city's method the better and the city agrees to accept the streets and maintain them as all-weather roads. After a series of delays the question was finally settled."

The quotations given here, and much other information given in the Bickelhaupt statement indicate that a builder is not only confronted with endless unscientific restrictions and a hodgepodge of code variations that make genuine planning of low-cost housing difficult, but that FHA and local authorities do not always agree.

We suggest that the most houses, and the best houses, were built in this country when politicians kept out of the business.

Farmers and Falling Prices

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by Walter F. Renk, secretary-treasurer of William F. Renk & Sons, of Sun Prairie, Wis., the well-known hybrid seed corn growers of my district:

SUN PRAIRIE, WIS., *February 14, 1948.*
Hon. GLENN R. DAVIS,
House of Representatives,
Washington, D. C.

DEAR MR. DAVIS: The severe price breaks in commodity and livestock markets this week

have cost the farmers of this country millions of dollars. Most of us farmers realize that prices were high and bound to recede, but felt such a recession would be orderly. Such a bust as has just occurred cannot help but bring panic to the country.

There has been too much loose talk in Washington from both political parties about the cost of living. The newspapers and radio too have contributed their share. The average housewife has been led to believe that farmers are almost 100 percent responsible for her food budget. Has anyone in a responsible position told the housewife that the wheat in a loaf of bread for which she has been paying 16 cents brought the farmer only 5½ cents? Or has anyone told the Chicago housewife that the quart of milk for which she is now paying 22 cents would still cost her 12½ cents if the bottle empty of milk were placed on her doorstep?

The livestock and grains that the farmers have on hand at the present time have been produced with high-priced labor, high-priced feed, and high-priced machinery. Do the farmers make all these prices high? One of the major reasons that feed has been almost prohibitive in price was the competitive buying for export by the Government. The farmer certainly has been caught in a squeeze. He has had to compete with his Government to buy his feed, helped to pay for this competition through taxes, and because prices were forced so high, has now suffered a terrific financial loss on the food he is producing for the world.

Have the other items affecting the cost of living taken a nose dive? What about fuel, clothes, furniture, doctor's fees, automobiles, building costs, and so forth? Have they dropped 20 percent in 1 week?

I am strongly urging you as a representative of a great agricultural State to use your influence to help correct much of the erroneous information that is being broadcast promiscuously about the cost of living. We farmers do not want a lag in the drop of prices in the things we buy for 8 years, like that following World War I. Our greatest concern now, as farmers, is that other segments of our economy come down with us.

Very truly yours,

WALTER F. RENK.

Quartermaster Corps Research Laboratory at Boston

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I made this morning before a subcommittee of the Senate Committee on Armed Services considering Senate bill 286, to establish the Quartermaster Corps Research Laboratory at or in the vicinity of Boston, Mass.

There being no objection, the statement was ordered to be printed in the Appendix of the RECORD, as follows:

We in Pennsylvania have as fierce a civic pride as residents of Massachusetts, and I should say that for every argument which various gentlemen from New England, including some now or formerly high up in the Quartermaster Corps of the Army, advance to you regarding the merits of New England as a site for this laboratory can be countered with similar arguments in behalf of Pennsylvania and particularly Philadelphia.

During the course of my testimony I will, of course, go into some of these arguments pro and con. I do that primarily to keep the record straight. You know, we in Pennsylvania, and particularly in Philadelphia, just can't sit idly by and allow the record to be filled with dissertations on the glories of some other part of the country, assertions designed to show that Pennsylvania and Philadelphia lack similar virtues.

In fact, this argument between the two regional areas has gone on for such a long time in connection with this legislation and with previous attempts in the Seventy-ninth Congress by New Englanders to take this laboratory from its rightful home in Philadelphia, that the Philadelphia newspapers have become very sensitive. Our newspapers are so sensitive on this score that they resented bitterly last year the assertions made by some proponents of this legislation that Boston was a better location than Philadelphia because the Boston weather is so much worse than the Philadelphia weather, bad weather supposedly being a criterion in this contest. The Philadelphia Bulletin went so far as to make a study of its own into climatic conditions as far back as colonial times.

It reported that New England historians themselves were convinced that Philadelphia had worse weather than New England. The historians to which the Bulletin had referred were supposed to have concluded that some of the credit for William Penn's successful dealings with the Indians in Pennsylvania, in contrast to the stormy relations and the bloody encounters between Indians and colonists in New England, should be given to the severe weather in Pennsylvania which left the Indians too weak and anemic to fight whereas New England weather was much more healthy and made the Indians stronger.

I mention all this not as scientific evidence but rather as an amusing side light of the lengths to which this purely sectional argument can be carried.

Frankly, gentlemen, and seriously there is not that much difference in climate or in the availability of scientific talent or in any of the other purely technical aspects of this geographical squabble to make much of a difference in these deliberations. Any argument raised on behalf of the New England location from a geographical or a climatic standpoint can easily be matched or bettered with similar arguments for Pennsylvania and Philadelphia.

The issue, therefore, comes down to one very simple thing: Government expense.

Does the United States Government have 6 or 8 or 10 or perhaps $13,000,000 to spent at this time in gratifying some Army officers and civilian scientists in their preference of a neighborhood in which to work?

Can the Government of the United States afford to spend this kind of money so that those officers of the Quartermaster Corps in research and development who come from New England or who like Boston, or who miss the ivy-covered walls of Harvard or MIT and who want to go back there, can have their wish granted?

Do we have that kind of money available to spend merely to save an occasional civilian scientist from one or more of the New England colleges the extreme hardships of a railroad or plane journey to Philadelphia? As one who travels frequently, I know that the trains today are substantially more comfortable than the stagecoach or oxcart or horseback mode of travel, and that it really isn't fatal or even too inconvenient to ride a train. I think most of these scientists for whom the New England delegation evidences such concern in pressing for this legislation are in the main a hardy enough breed of men to survive such occasional travel.

Gentlemen, Benjamin Franklin managed to make that trip under much more adverse conditions. I might add that he was quite a scientist, too.

Philadelphia is really not very far by train or plane from any of the areas from which the laboratory attracts personnel and consultants. It is not in Hawaii; it is not in the Aleutians or the Canal Zone or Okinawa; it is right there on the east coast not far from New York and very accessible by any means of transportation. From some of the statements which have been made in connection with this proposed transfer to Boston or vicinity, one would think that we in Pennsylvania, in Philadelphia, were stuck off somewhere at the very edge of civilization.

Now just what are the facts in connection with this legislation?

The facts are that long before the last war certain activities of the Quartermaster Corps in research were conducted at the old established Quartermaster Depot in Philadelphia. Some of these activities were carried on elsewhere. During the war there was some centralization of these activities at Philadelphia. After the war the Army came to the conclusion it would be nice to have them all centralized somewhere. The director of military planning of the Quartermaster Corps, a Harvard man, who is now, I understand, back at Harvard, decided, in his conviction that Harvard and the New England area are the fountainheads of scientific knowledge and the center of all of the worst weather possible to find in any one geographic location, that this laboratory belonged in Harvard's back yard. Some of the members of the New England congressional delegation, heartily concurred and the drive was on. The matter was taken quietly to the House Appropriations Committee during its closed hearings on the Army's appropriation bill back in 1946. The Quartermaster Corps had already worked out the plan to its own satisfaction and had engaged an architect-engineer to substantiate the planning director's own preference for Boston and had then turned over to the Corps of Engineers, which would do the building work for the Quartermaster Corps, the assignment of getting the money for it. The witnesses for the Corps of Engineers pointed out properly to the committee that they build where they are told to and that the selection of a location was the responsibility of the Quartermaster Corps. The testimony was to the effect that the Quartermaster Corps desires to have the facilities erected at or near Boston. Witnesses from the engineers testified that the kind of building desired by the Quartermaster Corps would cost about $5,700,000 with another several hundred thousand dollars necessary to purchase the land. Please bear in mind that these were rough guess of the Army engineers with no plans or specifications on which to base the estimates, nothing more than a square foot estimate of the space, and that these guesses were as of early in 1946 or late in 1945. This bill now before you provides for an expenditure of not to exceed $6,000,000. Presumably the figure is based on that estimate of the engineers which in turn was based on a guess which in turn was based on prevailing construction costs early in 1946 or late in 1945. Gentlemen, that guess would be so unrealistic today as to be ridiculous, absurd, impossible.

In any event, the reports on what was happening in the Army appropriation bill finally came to our attention and the Members of Congress from Philadelphia back in 1946 aided by many of the other Pennsylvania Congressmen obtained an opportunity to present our case before the committee and we succeeded in blocking a $6,000,000 appropriation for erection of this laboratory in Boston. The committee in its report sidestepped

any of the geographical or sectional phases of the controversy and based its action solely on the fact that it was convinced there was no legislative authority for such an appropriation.

Subsequently at the start of the Eightieth Congress in 1947 bills were introduced in the House and the Senate to authorize the construction of this laboratory in or near Boston.

Activities have either been removed from the Philadelphia depot to other locations in an effort to reduce the significance of the Philadelphia depot as a laboratory center or else attempts have been made to do that very thing. Furthermore, the word seems to have been passed down the line from "topside" that all military personnel in any way connected with research and development that Boston is "it" and every effort is to be made to fertilize the soil and condition the air for such a transfer.

One of the significant exhibits of the Quartermaster Corps in testimony before the House Committee on the Armed Services on the companion McCormack bill to this Senate bill was a digest of abstracts from letters from business concerns expressing their approval of the Boston site. It has been called to my attention that the letter from the Quartermaster General's office which inspired these letters of approval in reply did not ask for a preference between Boston and Philadelphia but merely asked if Boston were satisfactory. This is typical of what I have been informed are the strategies of the Quartermaster Corps in pressuring for a Boston location.

As I said, gentlemen, we are armed with masses of documentation and evidence to show that Philadelphia matches or exceeds any of the advantages of a New England site for this facility. But, in the face of a sectional, geographical contest here—and that is what this has developed into—the main issue comes back to one of Government expense.

Every Senator without exception believes, I think, in avoiding any unnecessary governmental expenditures, especially in view of our continuing need for huge military outlays, for vast appropriations for assistance to foreign nations in our efforts to achieve a decent world in which peace and freedom can endure, for terrific expenses for veterans which will no doubt increase as the years go by, for the protection and development of our natural resources, for flood control and reclamation, and for a great variety of other necessary Government needs. The chairman of this subcommittee, Senator BALDWIN, has already indicated his support, I believe, for increases in the wages of inflation-harried Government employees. Many, if not most, of us believe Federal assistance is warranted for our school systems. We are spending now $40,000,000,000 a year, and, although the budget is a source of much controversy, regardless of individual views on individual items in that budget, the fact remains that there is little responsible opinion that it can be cut very substantially. The recent legislative budget resolution drawn by the joint committee representing House and Senate taxation and appropriation committees indicates this.

And now comes this recommendation that we authorize millions of dollars unnecessarily for a new building in New England to do work which can be done and to a large extent has been done and is being done in the quartermaster depot in Philadelphia.

I might say parenthetically that numerous New Englanders, including residents of Boston, Cambridge, Dorchester Center, and elsewhere in Massachusetts have protested vigorously to me against the erection of this building on what appears to be the desired location of the Quartermaster Corps, on park land now providing about the only recreational space for thousands of children living in a congested area.

Far from opposing any expansion of the quartermaster depot in Philadelphia, on the other hand, all of our people in Philadelphia, who are proud of this present facility, wholeheartedly endorse any expansion of the depot which might be necessary to provide the space needed for this laboratory.

Actually, however, we believe that present facilities could be rearranged to provide for the laboratory, and that it could be done with a minimum of expense to the Government while providing a maximum of the desired centralization. It is my understanding that even if the laboratory proposed here were built in Boston or in New England, many research activities would of necessity continue in Philadelphia and you would have the very division of activities this bill purports to correct.

First of all, there is 154,490 square feet of Government-owned space adjacent to the Quartermaster depot in Philadelphia which, if a completely new building actually is needed, could be utilized at a saving of at least the $200,000 or so which the Corps of Engineers—back in 1945 or early 1946—estimated land for the laboratory building in New England would cost. This available Government-owned land in Philadelphia is new being used for a parking lot.

Secondly, Research and Development at Philadelphia is already utilizing about 148,941 square feet—these are inside building measurements—at the Philadelphia depot. Nearly a half million dollars has been spent, I understand, in the construction of these facilities. How much of this expense would be wasted were the research functions to be consolidated in Boston, rather than in Philadelphia, I do not know, but I suspect that much of the money spent during the war on facilities at Philadelphia would be written off in such a transfer.

Thirdly, although the argument has been advanced that space is not available in the Quartermaster depot because the Signal Corps was recently moved into quarters there, I necessarily must bring to your attention the fact that the Signal Corps has tremendous space of its own at Middle River, Md., where an entire bomber plant, as I recall, was taken over by this service. The Signal Corps has flatly stated its intention of consolidating most of the functions it now carries on in Philadelphia down at the Maryland facility it owns and since it is in Philadelphia now only temporarily and can be moved upon short notice, either on its own initiative or to make room for laboratory research, I maintain that it is a thoroughly misleading argument and an untrue one to say that the Philadelphia depot cannot accommodate the laboratory because of the Signal Corps tenancy.

These are dollar-and-cents aspects of the issue. There are more:

The plans for the new laboratory building at Boston provide, I understand, for the construction separately, at additional expense, of a cafeteria and recreation hall. Is there any estimate available on this cost? I ask, because there exists at Philadelphia at the depot an auditorium capable of seating 1,000 persons and there also exists one of the most modern cafeterias in America. These, I repeat, already exist at Philadelphia. This is another aspect of the dollar-and-cents importance of staying in Philadelphia and enlarging the Philadelphia facilities.

The Army speaks of the saving in travel and telephone expenses in consolidating in Boston. Of course it is obvious that with some of the work in research continuing in Philadelphia, there would still be extensive traveling and telephone expenses in communication between the two locations. But even more expensive an aspect of this transfer would be the terrific expense of moving the bulk of the present military and civilian employees of the Philadelphia laboratory to Boston. Expense aside, are there housing accommodations in Boston or vicinity for these reluctant pilgrims forced to journey by this proposal to the great Mecca of Harvard?

While we are on the subject of expense and expenditures—a very compelling subject usually to this Congress—I might point out right now that although the Budget Bureau has expressed no objection as such to the Army's submission to the House and Senate of a report urging authority to construct a laboratory in Boston, the Budget Bureau expressly stated that this was not to be construed as involving any commitment with respect to the early submission of estimates of appropriation for construction of the project.

In view of that, I submit that since the Army obviously has no authority, even if this bill should grant it, to seek construction funds for the project at any early date. It cannot ask for such funds without Budget Bureau approval even if the Congress passes legislation authorizing the project—that the Army therefore has time—it has plenty of time—to give another look at the extent of Philadelphia space available to it; it has time to determine the actual cost of enlarging Philadelphia facilities to be suitable for the consolidated laboratory; it has time to make a realistic survey of the realistic costs of building such a laboratory from the ground up in New England; it has an opportunity to revise this wholly absurd estimate of $6,000,000 specified in the legislation now before us. As a matter of fact, the Quartermaster Corps has had the opportunity ever since the failure of its original end-run attempt of 1946 to get the money from the House Appropriations Committee to make such realistic surveys and it hasn't seemed to have wanted to take advantage of the opportunity. Yet, in the recent House hearings last year, this magic figure of $6,000,000 still holds as the Army's estimate.

That raises the question, In late 1945 or early 1946, when this proposal was first made, was the Army estimating on the basis of 1949 costs? Did it know what they would be? No, of course not. Army engineer estimates on flood-control costs made at the very same time that these estimates were made for the proposed Quartermaster Research Laboratory in Boston, have since been found to be completely impossible in view of the outrageous rise in construction costs. I have a tremendously high regard for the Corps of Engineers, who have done magnificent work in my State on flood control, particularly, and I am inclined to accept their estimates as being pretty reliable. The Engineer Corps estimate on this building was made in late 1945 or early 1946—I repeat. It was no doubt a good estimate at that time. Yet, when the hearings on this measure were conducted in the House last June, all of the testimony on costs came not from the Corps of Engineers, but from Quartermaster Corps officials. I found no mention in the House hearings of any recent cost estimates from Army engineers. General Larkin of the Quartermaster Corps testified in these words:

"Our costs, from the estimate that we have prepared last year, is an estimated cost of $6,000,000."

Perhaps the Quartermaster Corps has little liaison with the Veterans' Administration, which is striving to build hospitals somewhere within buzz-bomb range of appropriations given it in 1946 and 1947, or the engineers who are trying to build flood-control projects under the same circumstances, and both finding it impossible in terms of present-day construction prices. If this liaison did exist and the Quartermaster Corps knows of some of the construction-cost problems of its sister branches of the Army, it would, I am sure, do some rapid revising on its figures.

Now, gentlemen, let's stop kidding ourselves or the public that this project could be built at Boston for anything resembling

$6,000,000. Let's stop pretending that because a certain amount of the field work of the Quartermaster Corps' research work is done at Mount Washington or on the rocky coast of Maine or in the New England wet-cold occurring perhaps a month or two out of the year that the laboratory center must be in Boston. Actually, I understand, a great deal more of the field work is done in places like Attu or the jungles of the tropics. It would, therefore, be as logical to build this laboratory halfway between the Aleutians and New Guinea.

These field teams are mobile units which go where they find the appropriate conditions for the particular test. Regardless of where this laboratory were located, they would make such far-away field trips. And as for scientists and research men, I can promise that our universities and colleges in Pennsylvania and in nearby New York, New Jersey, Delaware, and other nearby States will make it their business to supply as many thoroughly qualified men as are needed in case Harvard and MIT men, for example, shrink in horror from an occasional train trip down to Philadelphia for some consultations or for extended periods of work with the Quartermaster Corps on projects of such great national importance.

It seems the Atomic Energy Commission still manages to attract scientists to the most isolated parts of the country without bringing the entire atomic-energy project to Harvard. If the work is important—and this is—the men will be found to do it.

Lincoln Day Address by Hon. Edward Martin, of Pennsylvania, at Kansas City

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Pennsylvania [Mr. MARTIN] at Kansas City, Mo., February 13, at the Lincoln birthday dinner of the Missouri Republican Club, in conjunction with the Jackson County Republican Committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am proud to have been invited here to join with you in commemorating the anniversary of the birth of one of the world's greatest men—Abraham Lincoln—first Republican President of the United States.

In your State there is so much which is in tune with the life of Lincoln. The romance of Missouri's progress to greatness is one of the most inspiring stories of our Republic. It is a story of rugged independence, self-reliance, patriotic love of country, and magnificent victory over struggle, hardship, and conflict.

Your proud reputation as the "show me" State is honored across the Nation as a challenge and an invitation.

Missouri stands foursquare to the world as a land of vast achievement. It is strong and progressive in industry, agriculture, and mining. It is far advanced in spiritual and cultural attainments. From your cities stem the railroad arteries which haul the Nation's freight and its people to all parts of the United States.

Your fertile farms produce the crops of both the North and the South and the fruit of your orchards has national fame. Your State leads the country in lead mining with an amazing history of development going back more than 200 years. You have rich deposits of coal, zinc, iron, and many other minerals.

But more important than all of these things is the sturdy character of your God-fearing people. Missouri Americanism represents an intermingling of the best traditions of the Old World with the hard work, the courage, and freedom of the New. Your State has produced a long line of famous men—statesmen, military leaders, educators, industrialists, writers, and editors. Their service has contributed so much to our Nation and to the world.

Speaking of Missouri's outstanding sons, let me take this occasion to express my deep appreciation of the honor and pleasure of my association with your two courageous, able, and distinguished United States Senators. I refer, of course, to FORREST DONNELL and JIM KEM. Let me assure you that they are among the hardest-working, most conscientious legislators in Washington. Missouri is indeed fortunate to be represented in the Senate by two Republicans of such exceptional ability, unquestioned integrity, and high character. Their fine legal attainments are serving the Nation well in the fight to restore constitutional government.

They, together with your Republican Representatives in the Lower House, live up to your State motto, "Let the welfare of the people be the supreme law."

Abraham Lincoln believed in that doctrine. He believed in good government, in honest government, as the only kind of government that truly serves the welfare of the people.

This is the way Lincoln felt about good government and the need for respect for the law. In an address at Springfield, Ill., he declared:

"Let every American, every lover of liberty, every well wisher to his posterity, swear by the blood of the Revolution never to violate, in the least particular, the laws of our country, and never to tolerate their violation by others. Let every man remember that to violate the law is to trample on the blood of his father and to tear the charter of his own and his children's liberty. Let reverence for the law be breathed by every American mother to the lisping babe that prattles on her lap, let it be taught in the schools, in seminaries, and in colleges; let it be written in the primers, spelling books, and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice."

If I had my way, this quotation would hang framed in town halls, in city halls, in county buildings, and in the State capitols of our 48 States. It would be displayed in Washington in the legislative halls and most particularly in the office of every bureaucrat.

Lincoln's text is just as alive and as pertinent today as when he uttered it.

Lincoln knew that real freedom could be attained only by a law-abiding people under leaders whose whole careers had been dedicated to good government.

Unfortunately, there are still with us the racketeer in government, the racketeer in politics, the racketeer in business and in labor.

They have been flourishing in recent years. We have seen numerous cases recently. We have seen a powerful leader in the House of Representatives—a Democratic chairman of the Military Affairs Committee—engaged in quiet business deals and fixes, getting war contracts for the boys and plenty of undisclosed business for himself, under the table. The sordid story of Representative Andrew J. May was unfolded in our Federal courts.

More recently we have seen one of the highest Army officers—Maj. Gen. Bennett Myers—in charge of Air Force procurement—revealed as a man who set up a business on the side and influenced Army contracts into his plant. Not only was he making a secret and illegal profit by virtue of this racket—he was making an outrageous profit.

A Republican Senate committee brought out evidence that he had deliberately boosted the cost of the instruments he sold to far above an honest price.

These are just a few cases reflecting a dangerous break-down in morality. In the days ahead more examples will undoubtedly be brought to public light.

Across the Nation we have the corrupt city machines, dominated by unscrupulous men, serving their own selfish interests. These are powerful forces in the Democratic Party and they crush everything in their way. There is the insufferable Hague machine in Jersey City, Tammany Hall in New York, the Kenny-Nash machine still doing business at the old stand in Chicago, hand-in-glove with the underworld.

They have defiled the purity of the ballot.

They have become partners in operations which prey upon the earnings and savings of our citizens.

They have made a mockery of law enforcement by corrupting public officials. In some instances they have made justice a commodity to be bought and sold in the market place.

But here, in Kansas City, I need not tell you how a corrupt political machine operates. You Republicans, with the help of self-respecting Democrats, have fought courageously to defeat the Pendergast machine. You believe with Lincoln that reverence for the law is the charter of your own and your children's liberty.

Local governments are the foundation timbers upon which we have built the structure of our Republic. When political termites weaken that foundation, our whole system of free government is in danger of collapse. We must exterminate them before it is too late.

The examples I have mentioned, which could be multiplied many times, have shaken the confidence of the people in public officials. The word "politician" has become transformed; to many people it implies intrigue, graft, and dishonest dealing.

It is notable that Gen. Dwight Eisenhower, in his recent letter announcing that he was not a Presidential candidate, stated: "Politics is a profession—a serious, complicated, and, in its true sense, a noble one."

The dictionary definition of politician is: "One versed in the science of government." We must return the word again to that definition.

Lincoln was a politician, and he knew that politics must, as a matter of course, be part of any form of government other than dictatorship or anarchy. He knew that politics can be clean and honest and can help to provide good government for all the people. Lincoln knew, and proved by example, that a politician can be an incorruptible servant of the people. He knew, as we here all know, that the party and party regularity can be valuable weapons for good citizenship and for the defense of the Constitution.

It should be a matter of concern to all of us that so many of our citizens—leaders in business, education, and the church—have been so lax in their efforts and guidance toward good government. It is to be regretted that so many have taken the position that politics is beneath their dignity. They should understand that politics is the science of government. If we are to have clean, efficient, economical government, serving the best interests of all the people, we must have good citizenship. That means greater participation in politics and more widespread interest in the affairs of government.

We must join together as good citizens to fight corruption whether in the Democratic Party or in our own ranks.

We should not forget the advice Lincoln gave in an address before the Young Men's Lyceum of Springfield, Ill. The support and defense of our Republic, he declared, depends upon general intelligence, sound morality, and reverence for the Constitution and law.

We should encourage our young men to interest themselves in politics—not in the politics of the corrupt political machines but in politics in its true sense as exemplified by the greatest of all Republicans—Abraham Lincoln. The young men who are attracted by politics are among the greatest assets of our country. The future of the community, the State, and the Nation, is bound up in the course they take. They must realize that success in politics will grow out of what they put into it—not what they take out. They must learn that political work is for public service—not for private advantage; for the public good—not for personal gain. The qualities of highest importance are honesty, sincerity, willingness to work, and a deep sense of obligation to their fellow citizens.

For 15 long years our young people have been taught a philosophy contrary to those principles. They have been taught to depend upon the Government and not that the Government depends upon them. They have been taught to look to Washington, to the bureaucrats for the solution of all their problems. They have been taught the dependent way of life, not the independent way. This false philosophy, combined with the rising tide of corruption, spells danger to the people of our Nation. Unless we act vigorously to check these evil influences, we will be led down the road to destruction. We will lose the freedoms bought and paid for in sacrifice, sweat, blood, and tears in every generation.

I have been deeply concerned over the development of recent years in which men have turned to Washington as the source of all good things.

America's pioneers could build a house or conquer savage enemies with their hands. They were unafraid. The song of America's manifold opportunities was in their hearts. They had faith in God. They believed in themselves, and had confidence in their ability to build a Nation of freedom. That was Lincoln's kind of stock.

Abraham Lincoln was the great prophet of opportunity. His rise to immortal fame teaches that in this land, no matter where you start, there is plenty of room at the top for those who strive upward.

As never before in our history we need the example of Lincoln to teach this generation and those that follow the importance of keeping the avenues of opportunity free and open for every youth in America.

Much of the attitude of leaning upon Government to do for us what we should be doing for ourselves, comes from a feeling that the opportunities of the old days have gone.

There never was, there never will be, a falser premise. The opportunities are here. But the new philosophy of Government, with its tax roadblocks, its regimentation and socialistic paternalism, temporarily bars the way.

We will clear away these obstacles to opportunity. We will open the road once more. We will restore sound, economical, constitutional government by a smashing Republican victory in November.

Look about—opportunity is demonstrated on every side. In this very room are men of courage who came up the ladder the hard way. Today, as in Lincoln's day, you will find men who, literally, were born in humble log cabins and yet climbed to the stars.

Here in Missouri, you have men of pioneer stock, whose grandfathers and great grandfathers found opportunity, success and honor in the freedom of our soil. Others came to our shores in more recent years, finding for themselves and their sons the right to grow and prosper as good Americans. Some died on the battlefield, fighting under the stars and stripes. All contributed to building and safeguarding America.

No other land on earth offers such opportunities. Let us clean house. Let us get the course of Government back on the main track. Then America will offer the same opportunities to the brave in spirit as when it lifted Abraham Lincoln from an earthen cabin floor to a place among the immortals.

In planning for the future we can seek guidance in the lessons of the past. Have we been vigilant? Have we been true to our trust? What dangers do we face? What remedies can we apply?

First, we have placed too much emphasis upon our rights and too little on our obligations. As a people we have not taken enough interest in government. As a result, we have allowed much of our Government to be dominated by selfish men, grasping for power and wealth at the expense of their fellow citizens.

We have been led astray by political promisers who pretend they are giving something to the people, when, in fact, they are only promising to spend the taxpayers' money.

We have placed spendthrifts in high places—men who squander our substance without regard for financial stability or national solvency. Their way is the easy way—and leads to disaster. We have the pressure groups, large and small, who swarm about Washington serving special interests and selfish purposes. In seeking advantages for themselves they seem to forget that the rights of the whole people are paramount to the rights of any group, organization, or section.

We have permitted the creation of a multiplicity of spending agencies with overlapping authority and duplication of services. Many of them perform functions which should be reduced or eliminated. Their wasteful and extravagant financial operations are so intricate and so intermixed that the most capable expert accountants cannot find their way through the maze of jumbled figures. No one knows where they stand or where the money has gone.

We have seen the creation of an army of bureaucrats, not to serve the public, but to perpetuate in power the kind of government that submits a budget of $40,000,000,000 for a single year.

This is the most tremendous peacetime budget in all history. And the end is not in sight. Next, I predict, based upon existing facts, that unless we defeat this administration, it will be asking the taxpayers for a budget in excess of $50,000,000,000 within 2 years. Such a course can lead only to higher taxes, more and more inflation and, in the end, national bankruptcy and a receivership in the form of a socialistic or totalitarian government.

That is not a pleasant prospect. We can stop it only by continuing and strengthening Republican control of Congress and by electing a Republican President in November. This we must and will do.

The most constructive proposal offered by the Republican Party is its pledge to put our country's financial house in order—to restore honesty and sanity to our Federal spending—to reduce taxes, to postpone unnecessary public improvements and to make a substantial start on paying off the Federal debt.

Since January 1947 the Republican Congress has been doing everything within its power to achieve those ends, but the stubborn short-sighted Truman administration has resisted every effort to restore sound fiscal policies.

The party of Lincoln is committed to these things—and will continue the fight—because we know that freedom depends upon a financially sound government structure. An insolvent nation cannot be a free nation. Economic bankruptcy is the open door to political disaster. History teaches that a debt-ridden nation always sells its freedom for a mess of pottage—and winds up with neither, but only with chains and distress.

In these troubled, confused and perplexing days we need more of the spirit that made Abraham Lincoln say:

"I am driven to my knees over and over again, because I have nowhere else to go."

This great man of ours, this great man who belongs to the whole world and to all history, was not too proud to go to his knees and pray for guidance and comfort.

There is comfort in prayer. There is guidance in prayer. There is wisdom in prayer. The men who made America carried the Bible over the mountains and into the wilderness.

Where have we gone off the right course? Have we turned to false gods? We have the churches, the cathedrals, the temples and synagogues. We have the men of good will and good spirit to lead us back to prayer. Let our church bells ring out across the land, let our people turn again to God for divine guidance in rebuilding and strengthening our spiritual courage and our moral fiber.

With the example of Abraham Lincoln to inspire us, let us go forward to an overwhelming victory in November.

Forward-Looking Republicanism

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Forward-Looking Republicanism, which I delivered in Charleston, W. Va., on February 12, before the Republican Clubs of West Virginia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are many reasons why I am glad to be speaking here in West Virginia tonight. To my mind first comes the thought of the pleasure at the opportunity which this occasion affords me of telling you of the fine standing in the United States Senate of your Senator, Honorable CHAPMAN REVERCOMB. I have served with him for many years. His sincerity, his earnestness, his careful study of public questions, his zeal for the people of West Virginia, and his sense of dedication to the United States gives him a high place in the Senate. He is an able public servant and a fine American. I am proud to call him my friend.

Then on Lincoln's Birthday, it is somehow appropriate to be speaking in a State whose beginnings are so closely tied up with the Civil War in which the great Lincoln led this country to victory and without whose leadership we would not today be a nation to whom the whole world looks for liberty and salvation. It is fitting here in West Virginia, meeting as Republicans, to reflect on Lincoln's loving kindness for his fellowmen, his honesty, his passion to unify the people and finally what one great spiritual leader called his "freedom and radicalness."

Remember it is Lincoln who said: "This country with its institutions belongs to the people who inhabit it."

We cannot be timid or backward-looking and be worthy of Lincoln.

Remember the great words of thunder which come breaking out from the past from Lincoln's brain to help us today: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves."

"Think anew and act anew"—good words for Republicans, indeed for all Americans—to remember.

"Think anew and act anew"—thoughts which the people at the next election will certainly have uppermost in their minds.

We must think anew and act anew because we are meeting under such difficult conditions. In some ways more difficult than those which existed in time of war. At that time, to be sure, our young manhood was being wounded and killed. Thank heaven this is not happening now, but today we face conditions as a people which are of much greater complexity.

In time of war the problem can be simply stated: It is to defeat the enemy and win the war. Today, however, we must make decisions which compel us to look ahead not for 3 or 4 or 5 years but for a whole generation. The acts which the American people take in this year of 1948, either through their Representatives in Congress or by their own direct use at the election in November will in all honesty have a decisive effect for good or evil on the lives of you and me who are here today and also on the lives of those who come after us.

The problems are so full of contradictions that the right answer to one problem, if carried too far, can become the wrong answer. We are often limited merely to choosing between the lesser of evils. Take, for example, the question of helping Europe. There are powerful reasons for helping Europe. There is the reason that we do not want to let our brother starve and shiver with cold. There is the reason that we do not want to see the whole western world outside of the United States engulfed in that godless tide of violence, hatred, and treason known as communism.

There is the reason which comes to mind from the old saying that, in life, the people you meet going up, you also meet coming down.

There is the reason that, out of our aid and out of the ashes, a united and integrated Europe may arise which will give man some hope for a way out of his misery—in other words that we will not have merely resurrected the old firetrap which has involved America in two world wars.

Those are all powerful reasons.

But it is also powerfully important that this help be given in the right way.

In extending it we must avoid the errors of the past. We must not repeat all the mistakes of UNRRA and of the British loan and of the other ill-fated attempts to bring order out of chaos by the simple expenditure of American dollars. We must avoid the incredible errors of bureaucratic operations, whereby we send olives to Greece and coal to Newcastle.

We must provide help for essentials only. Let luxuries be obtained elsewhere and let them be obtained later and not at our expense.

Our help must be conditioned above all on the ability of European countries to help themselves. It would be a foolish and almost a criminal waste for us to send coal abroad, for example, to countries whose principal article of export is coal.

Then, we must get something back in return. If we are to send our machinery overseas, let there be a hard and fast agreement that we will get natural resources (or future rights to such resources) in return, such as bauxite, manganese, and iron ore, and many other things, which we do not have in sufficient amounts in this country. Such agreements enhance self-respect and minimize the chances of bad feeling.

We must be absolutely sure that all assets owned by foreigners are put into the service of this great cause, insofar as this can be done. If, as we are officially told, there are between two and three billion dollars worth of gold in France, this gold must be put to work. If there are wealthy people in Europe, they should be taxed. If there are $8,000,000,000 worth of foreign assets held in the United States, they should be pledged to the operation of the Marshall plan, because the poor here in America must not be made to support the rich overseas.

The Europeans must know that we are giving this help. We should set aside enough money and enough of an organization so that in spite of communistic propaganda they may know the truth about America and then they can take us or leave us. If they know the truth they will embrace the hope and the inspiration that is America and will do so with enthusiasm.

Let there never be a Marshall plan in reverse. That would be worse than no plan at all. What do I mean? I mean a condition in which our funds would be used to promote the separatism and suicidal nationalism of Europe. We should use our influence to achieve a voluntary integration and unity of Europe in which tariff barriers are removed, financial stability and a solid currency are assured and in which the whole European area is treated as a unit, thereby lifting the intolerable military and governmental burdens from the backs of the European people. That is the best hope for avoiding the recurrences of future European war.

We all know that the program which we are confronting makes sacrifice on our part inevitable and we also know that the American people can make sacrifices and have so done many times, but let us remember this: That whatever aid we send, we must never do violence to vital American needs. It must never be at the expense of the food and the heat and the clothing and the housing and the economic system whereby America lives and has its being. A strong America is not only essential to Americans; it is vitally necessary to the world.

If there is one thing which the masters of the Kremlin desire more than any other it is the collapse of the United States. They may even desire this more than they desire the prostration of Europe.

Consequently, if there is one thing which we must preserve above everything else, it is the strength and the vigor of our country.

And, so, no matter where you start in your discussion of public affairs—whether you start in China or Germany or any other remote part of the world—you always come back to the United States. Because a strong United States is not only essential to ourselves; it is fundamental to every foreign policy which we may desire to carry out.

And I tell you no secret when I say that at the present moment the strength of America is in danger of being impaired. What is a strong America? It is, of course, an America which has an adequate army, navy, and air force. That is one kind of strength.

And in that respect we are deficient. Our Army is 60 to 70 percent short of the minimum in combat troops and our Air Force is below th 70-air-group figure which our experts consider the rock-bottom amount. This is discouraging.

But there is another and more fundamental strength which comes from a people whose morale is high, who are having such a good life themselves and see so many prospects for their children that they are enthusiastic about what this country stands for. If, therefore, the standard of living of the American people falls below a certain point, and if the prospects for the American family become dim, you will have a falling off in enthusiasm for what America stands for and a serious weakening in what is, after all, the most important form of national strength.

You know as well as I that today this element of our strength is threatened by the tremendously high prices which everyone must pay for the necessities of life. Prices are high and every American family is being strained to make both ends meet. You also know what some of the reasons are for these high prices. There is the war, which, of course, creates tremendous scarcities and builds up tremendous demands which postwar production cannot meet. There is also the desire of certain groups for exorbitant gain which in turn leads to very high prices. There is the bad weather here and abroad. I mention these three factors in order to be perfectly frank. Yet another factor for high prices is the great added burden placed on our production of foodstuffs by the need for shipping food abroad. Let us be fair.

But it is also true that the party which has been in power since 1932 seems to have overlooked not one single opportunity to push prices as high as possible. Let us just make a list of what they have done since 1932.

1. They have increased the amount of money in circulation.

2. They have cheapened the value of the dollar.

3. They have vastly increased Government borrowing and spending.

4. They have increased taxes, which always leads to increased prices in order to make up the difference of the tax.

5. They have increased the amount of Federal obligations in the hands of the banks.

6. They have failed to curb speculation in commodity markets. In fact we are now reading the not very edifying story in the papers of speculators within the President's official family.

7. They have given price support to many essential commodities in order to keep the price up.

8. They have bought foodstuffs at the wrong time and in the wrong way without taking advantage of drops in the market.

These are not statements which I make out of my imagination. These are not statements which can simply be attributed to the fact that we are having a Republican meeting here tonight. These are statements of fact which are taken from the record and which no serious student of public affairs in either party seriously disputes. There may be members of the party in power who can give explanations of why these things are done. But no one can deny that they were done.

Nor can anyone who has observed the party in power during the last 10 years fail to see the deterioration which has taken place. Ten years ago it was not only possible, but easy, to disagree violently with them, but it was evident that there were many men in Washington of imagination, intellectual vigor, and broad human sympathy—a far cry from the smug hanger-on which, with some noteworthy exception, seems best to describe many of those in the seats of the mighty today.

But there is never much use in spending a great deal of time in fixing the blame. We prefer the constructive attitude of the man who says, "Here's a problem, what is the best way to solve it?" We believe that the Republican Party is the party which can and will meet these issues intelligently and effectively, always remembering that this country exists for the benefit of the people who live in it, and that the economic structure of all segments of the community must remain in balance with the rest. The Republican Party had its birth as the defender of the most underprivileged people that the world had ever seen. It is and must be the defender of the underprivileged today. What then can we expect as a Republican program?

First of all, we can stop the mistaken policies of those who have been in the seats of the mighty since 1932.

This means effective measures:

1. To curb speculation.

2. To call a halt to any extravagant price support of commodities essential to life.

3. To stop the extravagant administration of government. We have, in fact, taken great strides along this line during the very short time that we have been in control of Congress. The Republican Congress reduced expenditures and stopped and reversed the extravagant trend of the preceding years. Congress also passed a law, of which I was an author, setting up a very able Commission to reorganize the whole executive branch of the Government, to throw the light in all the dark places and to overhaul it from stem to stern. This Commission will report in January 1949, and it is my hope and belief that it will pay big dividends in increased economy and increased efficiency for the American people.

4. We can and must reduce taxes and do so in several different ways—by increasing the allowance for dependents under the personal income tax which will give relief to the place where it is most needed and will be most appreciated. We must revise the business-tax structure so as to give encouragement to investment in goods and machinery which will increase production. Serious study should be given to a proposition to give a tax rebate to firms which reduce the price of their product to the consumer. These tax-reduction measures should give some quick relief from high prices.

5. We should be able to make at least a $2,000,000,000 reduction in Federal expenditures, a $3,000,000,000 reduction in the Federal debt, and at the same time maintain an adequate national defense and give proper support to the Marshall plan.

6. You may say that this is a hard thing to do, but that is what statesmanship is for. If these things were easy, there would be no point in the community training men for their whole lifetime in order to cope with these questions. We have trained statesmen, thank Heaven.

7. There should be some assurance given to the people also that really effective measures will be taken to conserve our natural resources. Whether we like it or not, we are becoming a "have not" nation in many of the basic commodities in which we once had a surplus, and which helped materially to make us the strongest power on earth. Remember that our great national strength and productivity is due in part to the intelligence and industry of the American people, but it is also due in part to the great natural wealth which God in His wisdom put in the four square of the United States. We must conserve what we have left and we must seek means of stock piling and acquiring natural resources abroad to make up for the deficiencies which the war has caused.

8. There should be prompt action for setting up a real housing program. The utter impossibility of getting housing at a reasonable price is a blot on our traditional American ingenuity. If the production lines of our country can turn out radios, airplanes, and motor cars, they should also be able to turn out the basic units which go into housing. When volume production gets under way prices will go down. The demand is there. With construction at a sufficiently high level to assure year around work at a decent wage for labor, the restrictive working conditions which are reported in certain trades would disappear over night. The same is true of the collusive practices which we hear of among the suppliers of building materials. These would give way under competition. The Government of itself cannot provide the sole solution, but it can help to break the log jam. The most effective and quickest step toward this end is for the Government to provide part of the cost so that housing will be available to people at prices they can afford, and especially to the lowest income groups whose needs, even in normal times, have never been met by private enterprise. But most important of all is prompt action so that advantage may be taken of the building season which begins in March. We must not lose another year.

9. Our prime reliance for the well-being of the citizen must always rest on having a competitive economy. We believe he prospers better under such a system, and we know that without a competitive economy a political democracy is impossible. The two go hand in hand. Destroy private property by direct or indirect action and you destroy human freedom. But there are chinks which our competitive economy does not always reach, and there are certain things which it is more convenient for us to have government do—and government, we hope, will under Republican guidance become an efficient tool to do whatever the people want it to do. For example, there are useful steps which government can take in the field of public health without in any way bringing to the needy and sick the dangers of so-called socialized medicine. One such step is to make a free distribution to the needy sick of certain medicines, the value of which is proven and which are beyond the financial reach of many persons. Nor is it disputed that government has an obligation toward aged persons who come to the end of their lives without adequate means.

Another way in which the power of government may be used is in instituting a really efficient campaign for voluntary rationing together with adequate appropriations for the organization of statutory rationing, should this be demanded by the people. If rationing of meat, for example, is demanded by the people, it would be inexcusable if the Government were not ready to put it into effect, and did not have really well-thought-out plans. I realize that Congress makes the laws and the President administers them. And there is no way that we can pass laws which will give us efficient administration. If we have administrators of the type that we had before, it is doubtful whether the best laws would work. But at least Congress must be ready with the plans so that if the people decide to go on a certain course, we can do so as effectively as possible.

10. There are many reasons for believing that government funds should be used to facilitate scientific research, but not under conditions which impose governmental dominance of scientific thought.

To sum up:

There are two kinds of strength—military and economic. We are below strength in one because our armed forces are under the minimum. We are below strength in the other because of inflation.

While the war and other causes explain part of the current inflation, the party in power is responsible for eight definite measures which have given prices a big push to their present height. These measures are: Increasing amount of money in circulation, cheapening value of dollar, increasing Government borrowing and spending, increasing taxes (which increases prices), increasing amount of Federal obligation in banks, failure to curb speculation, excessive support of prices of necessaries of life, and buying foodstuffs at wrong time.

A Republican Party program is here presented to curb speculation, halt extravagant price support, cease lavish public spending, enact tax reduction, conserve natural resources, construct housing, promote public health and scientific research, and maintain adequate armed forces to support American foreign policy.

These are a few specific suggestions for constructive, forward-looking Republican action. But while, of course, we must have a Government program, more than that is properly demanded of us. While we must ever be efficient, effective, industrious, farsighted, and incorruptible in our administration of public affairs, more than that is rightfully expected of us. Our viewpoint about our fellowmen is at the heart of the matter. There must be fervent belief in his value, his dignity, and his capacity for development. There must be that passion, as the Constitution so eloquently puts it, "to establish justice"; whatever we do must be done in an atmosphere of active, affirmative faith.

In such an atmosphere and animated by that faith, the Republican Party can lead our country and the world to a richer prosperity and a greater peace than it has ever known. What is more important, in such an atmosphere and spurred by such a faith, we will deserve to lead.

What Labor Expects of Management

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. GREEN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an important address by an outstanding leader of labor, Harvey W. Brown, president of the International Association of Machinists. This organization is made up of the toolmakers, machinists, and mechanics whose skills are the foundation of our machine-age civilization.

Mr. Brown's address entitled "What Labor Expects of Management," was delivered February 18, 1948, before the annual meeting of the American Management Association at Chicago, Ill. In these days when we are struggling to develop labor-management cooperation, Mr. Brown's forthright appraisal of management's responsibility is worthy of careful consideration by every Member of this body.

I have obtained from the Public Printer an estimate of the cost of printing this address. The estimated cost is $213.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been invited to speak to you on the subject of what labor expects of management. To be more specific, what should management do in handling individual grievances, in maintaining stability, consulting with unions in the establishment of welfare programs, and in adopting labor-management approaches to certain types of employment programs.

These are very familiar subjects. I have been talking about them for—well, for more years than I am going to admit. I have been talking about them with men of your standing in management; I have been talking about them with foremen and supervisors in discussing grievances. Perhaps I should be tired of it, but I am not. To me, they are vitally interesting and important subjects, and there is nothing I would rather talk about in ordinary times, but these are not ordinary times. Frankly, the question of what management and labor expect of each other in their daily contacts does not seem to me to be the important issue today. The important issue, the only issue, is: What do the times demand of management and labor?

This year America must make decisions which will shape the course of her future, and of the world's future, for many years to come. You are meeting here to discuss important phases of one of those decisions—how American management may operate our industrial machinery in such a way as to fill the material demands of a nation and of a world whose people want, and in some cases desperately need, the products of our farms and factories. I am here, in response to your friendly invitation, to stress the fact that not only must American industry meet these demands, but it must meet them without sacrificing the industrial democracy which we of organized labor have been building painfully for the past half a century. Indeed, if America is to meet the challenge fully the area of industrial democracy must be constantly expanded.

I appreciate deeply the opportunity you have given me to be with you today. I look upon your invitation as a compliment to the 650,000 working men and women I represent. More important, the invitation is, to me, a symbol of the friendship and of the cooperation which must be practiced by management and labor on every level of contact, if we are to meet fully our democratic challenge.

The tide of totalitarianism, which already has engulfed eastern Europe, and which beats relentlessly at the crumbling walls of freedom in the west, is testimony of the extent of that challenge and the urgency of our cooperation. If we are to maintain free competitive enterprise here at home, if we are to perpetuate our free way of life throughout the world, management and labor must accept that cooperation as a basic part of our pattern of democracy, and must practice it and defend it with the same intensity which marked the practice and defense of political freedom in the early history of the United States.

This is an auspicious time for our consideration of this problem. Next Sunday we celebrate the birthday of George Washington, who led our Nation in its successful fight for national independence and political liberty. Last Thursday we celebrated the birthday of another great American, Abraham Lincoln, who lived and died in a struggle to prove that democracy began, not ended, with the principles for which Washington led a revolution.

It is important that we remember these men, and their principles, as we discuss the question of industrial democracy in today's economy. I have no doubt that American management, which you represent, could meet almost any goal of physical production if it could exercise unbridled authority. You men are experts in your field. You know the techniques of translating raw materials into finished products; you know how to mold the theories of laboratory technicians into practical goods and services. You can do the job.

But just doing the job isn't going to be enough. The matter of how the job is done is just as important. Hitler forgot that; he molded a master management which could proceed unhindered by a consideration of the slaves who ran the machinery. Hitler is gone, but there are others today who place material accomplishment above all else—above humanity, above liberty, above life itself. They will fail, as he failed. And we, too, shall fail if we slip, however slightly, into the mistaken belief that we can sacrifice human rights for material goals, even when the accomplishment of those goals may feed and clothe those whose liberties are denied.

We shall fail if we try that road because the working people of America clothed in the traditions of Washington and Lincoln, manifest in their organized strength, will refuse to remove the garments of liberty when they enter their work place. A man cannot be taught to believe that he is half free and half slave. He cannot be placed upon a pedestal of political liberty, and then told to obey commands blindly when he takes his place at his bench or machine.

The truly rugged individuals of early American management did not recognize this fact. Their failure to recognize it gave birth to the American labor movement. That movement is the expression of the American wage earners' continuing struggle for liberty in every phase of their existence. To condemn organized labor as an institution, the opponents of organized labor criticize the actions of individual leaders and certain practices just as the foes of democracy try to discredit our political system by personal attacks and by petty criticism. But the concept of organized labor, like the concept of democracy, is not open to attack by anyone who believes sincerely in the dignity of man and in his natural right to attain that dignity.

Management must believe in this concept of democracy if it is to do its part in meeting America's challenge in the postwar world, and you, the management, must practice this belief in all of your many dealings with your employees. You must admit democracy to the workshop. If you do, you will find that the processes of industrial democracy, like those of political democracy, are a stepping stone to a better, more efficient, and more productive industrial society.

Some of you may doubt this. It is probably true that the majority of American industrial managers, including many with a record of fair and successful dealing with unions, are only lukewarm in their acceptance of organized labor's full rights. Perhaps at this stage of labor-management relationships, such limited acceptance is understandable. You of management do wear the mantles of men who looked upon organized labor as an unmitigated evil. And I agree that some instances of organized action by wage earners, even today, might seem to warrant that opinion. But perhaps those regrettable actions stem from the fact that many segments of organized labor still bear the marks of battle, inflicted by management which still clings to the brutal traditions of the past. My union will celebrate its sixtieth birthday next May, but within the past decade, and even within the last few months, we have had occasion to deal with managements as ruthless and as unwilling to admit labor's rights, as any with which the union dealt in its earlier years.

This is not the whole picture, and I am happy to say, in making that point, that we also enjoy most cordial and cooperative relations with management throughout the country. During 1947 we entered into or renewed collective-bargaining agreements with some 10,500 individual firms. Yet, in less than 1 percent were we obliged to resort to the strike as a bargaining weapon. This record, of course, reflects as much credit upon the 99 percent of management as it does upon our union.

In spite of parts of the record, on both sides of the fence, I maintain that organized labor is intrinsically sound and basically good, and that by accepting it as such, management will help accomplish its own aims more fully. Let's look at that contention from your viewpoint, and judge whether it will hold water.

First, let us dismiss any ideas that such problems as wages, hours, grievances, seniority, and the like exist because of unions. The contrary is true. These problems exist because of the very nature of modern industry, which operates to deny an individual worker his God-given liberty, and tends also to rob him of economic security. The unions actually were called into being by wage earners to provide machinery by which they could translate into reality their desires for personal dignity, for justice, and for economic security.

Some of you know all of this. Yet many of our citizens, including a large segment of American management, cling to the mistaken notion that labor unions are responsible for the friction in industrial relations, and there are some of these people who believe, even more mistakenly, that without unions this friction would not exist at all.

That, of course, is absolutely false, and the management which preaches that belief, or acts in accordance with it, is either acting in extreme ignorance, or is motivated by a malicious desire to reap some temporary advantage from union smashing, at the expense of its employees and at the risk of injuring the entire country.

As an example of just how untrue the charge that unions cause industrial unrest is, let us consider the 1946 strike record. That was the year of reconversion and produced the worst strike record in recent history. Unquestionably that wave of strikes did much to convince the uninformed that the so-called power of organized labor needed to be curbed. Those strikes also misled many individuals in and out of Congress into supporting the punitive legislation embodied in the Taft-Hartley law. There was considerable strike disturbance in 1946—there was much more in 1919. In that year (1919) more than 20 percent of the labor force was involved in strikes, as against 15 percent in 1946. Yet there were only 3,000,000 members of organized labor in 1919, compared with 15,000,000 in 1946. Plainly, then, unions are not the cause of industrial unrest and they are not the cause of the countless other labor problems which plague the minds and upset the schedules of managers of industry.

A union is, in essence, a line of communication by which employees may let management know what their work problems are, and what they want done about them. A union is also, of course, a means by which employees can translate their wants into demands, and in drastic cases attempt to enforce those demands by economic power. You may resent this economic power, but without it a union would be as useless to employees as is a lathe without a cutting tool, and when you consider the matter closely from your own viewpoint as managers, I think you will find that without potential economic force a union would be a useless tool in industrial relations.

Management, in its daily work, must contend with three different groups—the owners of the business, the customers, and the employees. Both the owners, because of their control of capital, and the customers, because of their control of purchasing power, exert direct economic pressure upon management. Unless the employees have some means of exerting pressure of their own, their wants and needs will be ignored. Management will be too busy responding to the groups which have power to enforce their demands. The fact that the employees' needs and grievances are ignored will not cause them to vanish. Rather it will cause them to fester—like a hidden infection—until they have poisoned the entire structure of employee-management relations.

All of us know the effects of repressed economic demands. They resemble in these days the same force that was represented by repressed political demands in the eighteenth century. In those days the cry of the revolutionary was "political freedom." The twentieth century revolutionary rallies his forces beneath the banner of industrial democracy.

This type of revolutionary preaches the false industrial democracy of Soviet Russia. He speaks of liberty and freedom, but when he has gained the allegiance of a repressed people, he strips from them the last vestige of those civil and political rights which we cherish as the bulwarks of a free society. He, and the nation whose philosophy he represents, are potent forces in the world today. They are challenging the proponents of true democracy for the aspirations and loyalties of men on every continent. And they thrive upon the denials of industrial

democracy even in countries like ours, where political liberty is firmly established.

It is important that America's leaders, both industrial and political, do not reach the false conclusion that because the totalitarian left has seized upon the cause of industrial democracy, that the cause itself is discredited. Remember, in the days of our political revolution, charlatans and dictators espoused the cause of political freedom for their own particular ends. They used that cause, as others are using the cause of industrial democracy today, only because it embodied the hopes and ambitions of a growing mass of the common people. Industrial democracy is the irresistible force of the twentieth century. Wise men, who know the lessons of history, will not seek to stand in its path.

I am not too deeply concerned with the probability that resistance by unwise men will lead to a violent political-economic upheaval in this country. We of organized labor do believe that some business and political leaders would like to misuse the powers of government to force the subservience of the common man to their own ends. But I believe that the majority of Americans, including a majority of industrial managers and investors, are too imbued with the spirit of democracy and too astute to strive for such an end.

I am, however, very deeply concerned with the attempt of management in many plants and industries to deny industrial democracy within their own domains. The path which they choose is rocky and it must end in failure. The employees of such management, deprived of the recourses of industrial democracy, will indulge in all sorts of practices designed to cripple operations. The only recourse of such employees is to be found in individual and small-group obstructionist tactics—the slow-down, make-work practices, even petty sabotage. These are not the tactics of an organized work force which have been accepted wholeheartedly by management.

These individual and small-group tactics will continue until the employees have organized, and until management has recognized and deals with their organization. Sooner or later the employees will organize. They will organize despite every effort of management against organization and, the greater management's opposition, the more liable are its employees to be driven into irresponsible activities. Irresponsibility in unions is a direct outgrowth of management obstruction. Management in many a plant today—honestly trying to practice sound industrial relations—is haunted by the ghost of an autocratic, antilabor policy which was buried years before. The modern manager who practices such a policy is storing up trouble for himself and his successors, and is cultivating the ground for subversive forces. He is the greatest ally of the Communist labor-front in America, and the Taft-Hartley law, with its non-Communist affidavits, can save neither him nor our economy from the tragic results of his folly.

This type of management, unfortunately, still exists, and exerts power, in our economy. There are plenty of signs all around us today that this type of management is deliberately moving forward with a program of destruction. A similar attempt was made by similar evil forces after the First World War. Many of us in this room can recall that program, brazenly called the American plan. It was an attempt to eliminate independent trade unions and to build in their place a spineless, servile creature known as the company union.

The aims of the plan were to push down wages, to lengthen hours, and to rob the American worker of the self-respect and independence which he had gained by his own struggles to build a free labor movement. The tools of the plan were the company spy, the private detective, the hired gun-man, the professional strikebreaker, the yellow-dog contract, and the labor injunction. The plan employed private armies, and even called upon and obtained the services of State and Federal troops to break the ranks of union workers.

By its ruthless use of these methods, the plan attained a measure of success. Organized labor was destroyed in many industrial areas. It was considerably weakened in others. Wage earners, robbed of their strength to ask, and to fight for, a fuller share in the industrial gains of the 1920's, had to be content, like Lazarus, with the crumbs from the master's table.

But what did this success profit industry? What was the harvest for the economy and for the welfare of the United States as a whole? The wages that industry chose to pay were not enough to provide the purchasing power necessary to consume the industrial output. Factories closed, unemployment rose, and hunger gnawed at the bodies and spirits of the citizens of this land of plenty. The depression of 1929 cast a blight over our entire civilization. The strong, powerful antiunion leaders of American industry, like Sampson, had pulled down the temple of our economy, and the rubble of that catastrophe was still in our streets when World War II caught us.

The question now is, Can we learn from history? Labor has learned. It has learned that management can practice collective bargaining and prosper as it never prospered before. More important, it has learned that through collective bargaining, labor receives a fairer share of the products of industry. Fifteen million working men and women organized into trade unions know that, and their ranks are reinforced by the conviction of many sections of the public not directly identified with labor, and among men of learning and men in high places.

The men and women of organized labor remember those other days. They remember that they, who were contented with the wages industry set in the years of its prosperity, were paid off in doles and breadlines in the years of its self-inflicted misery. They know the fruits of the American plan, and they know the fruits of industrial democracy.

They know that the Taft-Hartley law, for all its clever double-talk and empty promises, opens the door to the old methods. That law is one manifestation of a new American plan. That law will not succeed. Labor will not again be pushed down into the valley of want and darkness. We, too, are strong. We, too, are powerful. We have learned from history. We are the forces of the new and real American plan—industrial democracy.

Industrial democracy is the greatest challenge to American management in the postwar world. By wholehearted acceptance of this challenge, management will make it possible for American industry to meet its production goals more effectively and more fully. By accepting this challenge management will enable industry to meet its goals in such a way as to give the lie to the apostles of revolution, who preach that our industry can succeed only by denying to the worker his dignity and freedom. But, of more immediate importance to you men here, by accepting the challenge, management will go far in resolving many of its day-to-day employee-relations problems.

Omitting for the moment such items as wages and hours, what causes these day-to-day problems? The employees don't understand, they are suspicious, they feel that they have been injured. For example, management may introduce a new system of work methods. Perhaps every possible means has been taken to safeguard the welfare of the employees; the system was devised to make the job safer; a training program was developed to enable the employees to learn the new methods as quickly and as easily as possible; the average employee will earn as much or more than he earned under the old system. Management feels proud. The new system is announced. The employees rebel. They see in the system all sorts of evils—speed-up, stretch-out, reduction in earnings, greater accident hazards—everything that management had worked so hard to prevent. Management has two courses open. It may decide to scrap the new system, or at least postpone its introduction until some spade-work has been done on cultivating better employee understanding. Or, it may try to make the system work, despite employee resistance, hoping to iron things out by education and training. The first decision is a set-back for more efficient production. The second may prove an invitation to serious labor trouble.

Management can avoid such difficulties only by dealing with a representative of its employees at every phase of the plan's development. If the representative is to be fully effective, two conditions are essential. First, he must truly reflect the desires and sentiments of the employees. Second, he must have their confidence.

To fulfill these conditions, the representative must be elected by the employees. Management cannot select someone for the job. However objective management may try to be, however capable the representative so selected, the very fact that management made the choice will undermine the employees' confidence in him.

The process by which the representative is elected must be one established and controlled by the employees, without management assistance or interference, and the employees must be voting for a representative to do the specific job required—negotiating with management. It is impossible to use the officers of a management-sponsored "employee welfare association" for the purpose. Such officers may serve well enough in planning social events and in operating an employee newspaper, but how can they achieve force and authority in negotiations with management? The association is not wholly a creature of its members. Management, which helped breathe life into the creature, may disavow it at any time.

There is no substitute for democracy. Consider the record in our political life. As our democracy has developed practically every technique devised to safeguard the common folk from the results of their own free will has fallen by the wayside. The electoral college, which used to select the President for the people, is now but a channel for the expression of the popular will. The Senators, who once were selected by State legislatures, are now elected directly by their constituents, and, with few exceptions, the nomination of candidates for office has passed from the party convention to the direct primary.

If people are to have a voice in their own affairs, there can be no half-way mark. Industrial management cannot seek the cooperation of its employees without eventually committing itself to the industrial democracy of free trade-unionism. There is no other way to know the employees' sentiments and wishes. There is no other way to gain their full-fledged cooperation in developing programs and procedures of mutual interest to employees and management. There is no other way of committing the employees as a group to definite responsibilities in agreed-upon programs. There can be no freedom of understanding—there can be no equality of responsibility—between master and servant. Understanding and responsibility can be achieved only between men or groups who stand upon a plane of equality. Employees can gain equality—and be fully capable of understanding and responsibility—only through the instrumentality of trade-unionism. The only final solution to the personnel problems of management is in industrial democracy, and industrial democracy in a private enterprise

system can be attained by no other road than that of free trade-unionism.

If the attempt to change work methods, which I mentioned before, had been discussed and developed with the officials of a union of the employees' choosing—management would not have come suddenly upon the necessity for final decision. The union might have objected to the concept of the plan—that is true, but in so doing the union would only be reflecting the reaction of the employees—a reaction which management would have to face eventually. By facing it with employee representatives, while the change was still in the formative stage, management could have had the advantage of attempting to prove its sincerity and to educate its work force before the plan was announced as an accomplished fact. It would have been discussing the matter with a few persons, who had some degree of understanding of the problem, instead of with hundreds of individuals entirely devoid of technical understanding and motivated by suspicion and fear of change.

The same benefits of dealing with organized employees exists in every sphere of employee-management relations. Take the problem of grievances. So long as men seek to live and work together misunderstandings concerning rights and responsibilities will exist. As men develop socially and morally they seek three solutions to these misunderstandings: First, by furthering general understanding and good will, they seek to narrow the areas of mistrust and ignorance which give rise to fancied grievances; second, they attempt to define the rights and responsibilities of each man or group of men, in order better to define the areas of individual grievances as they arise; and, third, they establish definite routines by which those individual grievances may be considered and resolved in justice. Those three steps form the pattern of our modern society. They were evolved because men could find no other way in which to live together in justice and freedom. As surely as we adopted them in our political life—so shall we adopt them in our industrial life, and we shall not achieve them industrially until the wage earner has been accorded at the work place, the same degree of freedom which he possesses in his political life. There was no guaranty of justice while men were ruled by absolute political monarchs. The expectation of justice from such a source was scrapped in 1215 when the English barons forced King John to sign his name to the Magna Carta.

The final solution to the problem of grievances can be worked out only between a union and management. The effective functioning of any arrangement must, of course, rest finally upon mutual respect and good will. But even when these factors are present, the formal pattern of the contract should be introduced. The contract outlines the rights and responsibilities of both labor and management. It is, in effect, the body of law upon which industrial democracy rests. The grievance procedure, which is spelled out in the contract, provides a definite routine for the presentation and hearing of grievances. If it is a good procedure, it sets time limits on each step in the routine, and has a definite terminal point, such as arbitration, to dispose of those few grievances which cannot be ironed out by negotiation. Such a grievance procedure, just in its inception, complete in its provisions, and utilized in fairness by both parties, can effectively eliminate grievances as a major labor-management problem. No other method can.

There are numerous other spheres of employee-management interest, such as methods of hiring, promotions, lay-offs, and safety and health, to name a few. There is not time to consider each one individually, but the same general principles apply to each. Labor and management must approach such subjects together. The employees must be represented by a union. The method of dealing with each problem should be outlined in the contract. The rights and responsibilities of each party should be spelled out clearly and completely to avoid misunderstanding, and then some provision, either the general grievance procedure or a special procedure, should be made to take care of any disputes which may arise.

There is one other problem which we might mention in some detail—the problem of welfare funds. With the public attention riveted on the subject within the past 18 months some managers may consider it wise to venture into such activities for the purpose of stimulating better employee relations. The wise management may initiate discussions on this subject, but also make this subject a matter of discussion and negotiation with the union. Freemen do not relish having things done for them. They like to help do things for themselves. The management which tries to institute a welfare plan on its own lays itself open to the suspicion that it is trying to alienate its employees from their union. Such action in itself may well prove a cause of labor-management misunderstanding and make rocky the peaceful way of labor-management cooperation. Management cannot bypass the road of industrial democracy without jeopardizing its relations with labor.

We of labor know that the citizens of a democracy have their responsibilities as well as their rights. We realize that if we are to be worthy of the full industrial democracy which is our goal, we must in fact practice it. As management accepts labor and deals with us as partners in those phases of industry which bear directly upon our liberties and welfare, we must accord to management the respect and good will that such democracy implies. We are willing and anxious to demonstrate our worth.

We regret that, for the time being, we will not be able to apply our most constructive efforts to the work before us. Much of the time we might devote to the discharge of our main duties as citizens of an industrial democracy will be frittered away in complying with the restrictions which have been imposed upon us by the Taft-Hartley labor law. Much of our funds which we intended to devote to constructive uses will be consumed by legal costs which the application of this antilabor legislation imposes upon all unions that try conscientiously to comply with its complicated provisions. We must devote considerable effort to protecting the welfare of our members against the activities of those managements who would like to destroy much of what we have built up.

Some of you here, I am sure, look upon the law, as we do, as an impediment to the practice of sound labor-management relations. We know that you will bear with us until the burdens of this law have been removed. At the local level you, and we, can continue our joint efforts to improve collective bargaining, in spite of the law.

To those of you who do not recognize the evil of the Taft-Hartley law, we ask only this: Study the record of industrial democracy. Consult the records of your fellow managers who wholeheartedly accept collective bargaining and who have committed themselves to this twentieth-century extension of the struggle which George Washington suffered through a bleak and hopeless winter at Valley Forge and for which Abraham Lincoln laid down his life. Do not fall prey to the hopeless cynicism which betrayed Benedict Arnold into deserting a just cause, or to the blind vengeance which squeezed the trigger of a gun in the hands of John Wilkes Booth. Of you, who do not understand, we ask faith, not in labor leaders as individuals but in the righteousness of our cause, and patience, with the sometimes fumbling efforts of those who practice freedom after years of its denial.

Together, we of management and labor can meet America's challenge. Together we can produce the goods. Together we can perfect the pattern of industrial democracy to shine out as a beacon of hope in a dark and groping world where so many forces of evil are now at work, just as our pattern of political freedom shone forth in another time of crisis.

Yes, together we can do these things, and none but we can do them. If we fail we not only lose our present status as free men in industry and labor, but if we fail, then freedom, the very soul of this land of ours, will fail, too. Neither you of management, nor we of labor, nor our sons and daughters for years to come will know the outer warmth of plenty, nor the inner glow of freedom, until some future generation of serfs casts off the yoke and displaces the totalitarian state with a state that guarantees both political and industrial democracy.

Gentlemen, I may have disappointed some of you by straying from the details of the problems which face you in your day-to-day operations. If so, I am sorry. I may have overstressed, in your opinion, the principles of industrial democracy. If so, it is because until those principles are more widely accepted, and until management and labor fulfill their responsibilities under them, there can be no real solutions to your problems.

I could have cited cases from the records of the International Association of Machinists to illustrate examples of good and bad handling of specific problems, but when we had analyzed those cases, we would have found that the important factor was not the techniques applied but the spirit of the company and of the employees involved. Without exception, we would have found that the spirit which produced the good examples was the result of the wholehearted acceptance and sincere practice of the principles of industrial democracy.

If these were ordinary times, we could ignore the principles and experiment with techniques as a means of attaining those principles in practice, but these are unusual times. If the principles of industrial democracy were generally accepted, we could devote ourselves to improving their practice, but the principles of industrial democracy are not generally accepted.

If we take time today to devise techniques while we ignore principles, we shall not meet the challenge of the times. Relations between labor and management will hinder, not help, us in our job of physical production. The denial of industrial democracy will arm the common enemy in its war on our American way of life.

If we devote ourselves to principles, the techniques will evolve naturally. Labor and management, working together, will meet our goals of physical production and will prove to all the world that economic freedom can be achieved under our system of competitive private enterprise.

Humanitarian Work of Dr. J. W. Witten

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the appendix of the RECORD an article that appeared in This Week by Mr. Ralph Bass in regard to the work of Dr. J. W. Witten, who is now a member of the House of

Delegates of Virginia. He lives in Tazewell, Va., and has the love and confidence of all who know him.

I am doing this in the hope that his example will be emulated by others elsewhere.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAN WITH 150 SONS

(By Ralph Bass)

(One of the happiest families in the United States lives in an old brick house in Virginia. It all started 40 years ago when Doc Witten first opened his door to a homeless youngster.)

The two boys had been trudging the dusty, southwest Virginia road all day, and now night was falling. They hadn't eaten since morning. They were 10 years old—and a little scared. They came to a modest brick and stucco house across from the Tazewell railroad depot. It looked promising. They rang the bell and looked up silently at the middle-aged man who opened the door. He didn't seem surprised. "Come in," he said quietly. Ten minutes later two small stomachs were distended to the danger point—and Dr. Jack Walter Witten had two more permanent, nonpaying guests.

He's been doing that sort of thing for a long time. Forty years ago, this great-hearted physician flung open his door—and he's never closed it since. Through that door have walked 150 unhappy, bewildered boys, to leave years later as smiling, hopeful youths.

A white-haired, eye-glassed bachelor, stockily built, Witten at 66 is "dad" to men all over the country, and "granddad" to a growing number. He is much loved, because without thought of gain he shares his home with the most helpless of the homeless—the very young. So that they can have a roof, a friend, education and a chance in life, he gives what he has. And because boys' shoes wear out fast, his medical earnings rarely reach a bank.

But these are the least of Witten's gifts. He knows the "father-hunger" of homeless boys, the need for a male bulwark, a hero. Modestly, quietly, he gives a father's love and concern. Today he has 15 boys from the ages of 7 to 20 living with him in his 10-room house. Two of the 7-year-olds are twins, three of the older boys are brothers.

The spacious old-fashioned rooms are a little crowded with the boys and their gadgets, and the long rows of toothbrushes in the large twin-showered bathroom are almost comic in their number and variety.

When Dr. Witten met me at the station, he had three of his boys with him. One 10-year-old was bursting with news that could not wait. "I got my first whuppin' today," he proclaimed proudly. "I threw a 'tater 'crost the table this mawin'."

Witten winked at me. He knows that childhood, supposedly carefree, can be a bad time. He remembers, when he was a motherless 12-year-old, the feeling that he had reached bottom, that he could never be more miserable. He doesn't want other boys to go through that. If a paternal "whuppin'" makes them feel someone is interested, why, Witten will oblige.

"WHO SENT THAT?"

As we drew up in front of his house, a coal truck had just dumped its load on the sidewalk. "Who sent that?" asked Witten. "Can't say, Doc," replied the driver. Witten shrugged, "Someone thinks we're freezing to death, I reckon."

I didn't fully understand about the coal until next day when I was talking to a wealthly cattleman of the region. "If I hung a ham outside my door," he said, "somebody'd steal it. If Doc hung one out, someone would put another alongside it."

Later I learned that the cattleman had just sent a purebred bull calf to Witten's farm as a gift for the boys. But the doctor's neighbors have all shown what they think of him by sending him repeatedly to the Virginia Senate and to the House of Delegates. They know, too, that he lives for his patients and his boys—that without him the boys would be homeless wanderers or orphange inmates.

Witten sends his boys through school as far as their ability and ambition will take them. At present he has three boys in Virginia Military Institute and one each at West Point, the University of Virginia and Morristown College. All of them were raised from infancy when their parents died or could not maintain them.

A TOUCHY SUBJECT

One day while I was still in Tazewell, the University of Virginia boy sent Witten a football. It was a trophy. He had been voted the outstanding player by his teammates after their victory over Harvard. The football was given a place of honor atop the bookcase.

The same day this letter came from West Point: "At first I got off on the wrong foot, but I know how you dislike demerits. I got back into step. * * * This is a touchy subject, especially since you have so many boys going to so many schools, but I need $15 to clear me of debts * * *."

Also in the mail was a letter from VMI: "Harry, Bob, and I often get together and talk about the things we did at home. Some of the other boys here find it hard to believe everything that we tell them about you, the boys and the house. * * * It is something that is very hard to explain, and no one would fully understand without having lived in your house."

The boy added, "I guess I am still right much of a baby when it comes to staying away from home."

All the letters were signed, "Love, your son."

As Witten carefully scans the lines, you know that they are indeed his sons. In every room he has placed pictures of boys in military uniform. Twenty-four Witten boys served in the war, many with distinction. He won't talk about the dead and the wounded, but the only hatred I ever heard him express while I was with him was for men who want war.

Deeply proud of all his boys, Witten has a special glow for one. A Negro, brought up with the others, this boy is taking a college premed course and doing fine work. I mentioned the Negro lad to the other fellows and heard words of affection and respect—none of condescension. If he makes the grade he will be the second of the boys to become a doctor. The first, who has named a son after Witten, practices in Newton, N. J. A third prospective medic, once doomed to child labor, is doing brilliantly in school.

Some of the younger lads are pathetically fond of their natural parents, and Witten encourages the feeling. "I see my mother every Christmas," a 9-year-old told me importantly. One lad was expecting a visit from his mother. "I won't say she's coming Sunday," he added cautiously, "'cause she might not."

Witten gazed fondly at the two kids. "They were skinny little things when I got them 4 years ago," he said. "First thing, I had their tonsils out—fixed the boys so they'd grow right."

"I like gravy and 'taters and milk, and all kinds of stuff," gravely confided the 9-year-old. That he gets "all kinds of stuff" I know, because I saw Witten shopping for it with the crumpled dollar bills he had collected from his patients during the day.

Witten's boys are the kind you instinctively pat on the head. Eager and friendly, they have an outgoing quality that will stand them in good stead later on. Quaintly courteous, one 7-year-old embarrassed me by lugging my bag upstairs.

From their "dad" the boys get a rare sense of natural decency, for Witten has great respect for people. He recently administered a fierce rebuke to a rich farmer whose laborer's wife had no sheet on her bed when the doctor came to deliver her baby.

"Rich or poor, every mother having a child is a queen," says Witten. "Next time I see that fellow I'll jump on him again."

HE KEEPS TRACK OF THEM

Driving around town, Witten now and again points to neat frame houses where his old boys live. Some he built for them himself. I saw him pay $1,000 for a lot so that two of his newly married boys could build homes. He knows all about their jobs, and can reel off the names of their wives and children. As he stops to chat with a pleasant, smiling man, you see the kind of people his kids turn into.

This loyalty is not one-sided. Witten is a football fan, so most of his boys take to the gridiron. At a recent Tazewell High game a belligerent spectator ran out to argue with the referee. Witten, who was near by, advised the young fellow to return to his seat. Instead he turned viciously on the doctor and drew back his fist. In a flash one of the boys leaped from a spot a dozen feet away and, in the words of a witness, "hit the sorry fellow 10 times before he hit the ground."

Next day Witten's other huskies were out looking for the belligerent one, but luckily he had disappeared.

It was in 1907 that a young doctor of 26 stood at the bedside of a dying woman. A 10-year-old boy was on his knees, sobbing. The woman's eyes, fixed on the boy, held an awful question. Before she died Witten said something that brought a glad smile to her worn features.

"I had no one living with me," says Witten, "so I took him in. He stayed 8 years."

WHERE THEY COME FROM

Witten has been "stumbling over" homeless boys ever since. In a district where many men have died in the mines, leaving helpless widows, such boys are not rare. The mothers often roam away to find work, and Witten gets another son.

As his family grew, Witten adopted a strict routine. The boys get up at 6, make their beds and sweep up. Then the older ones help the youngsters to dress. They take turns in caring for the three cows, the hogs, turkeys, and rabbits.

Witten has a good cook and several housemaids who work hard but seem happy. Every meal is a gala occasion. The dining-room walls are ingeniously fitted with drop-leaf tables for "the little ones." The others eat with Witten at a long table. Sports, school, and table manners are the usual topics of conversation, but while I was there one 7-year-old was showing Witten how well he had learned to count. "Fifty-seven, fifty-eight, fifty-nine, forty," he cried triumphantly. Witten tactfully pointed out that the best authorities ended that particular sequence with "60."

The boys say "yes sir" and "no sir" to Witten, but there is no fear in the house—only laughter. As I got out of the line of fire of a four-boy imaginary gun duel, doing my best not to trip over three dogs, one of the 7-year-olds said, "Gosh, I bet you wish you were us, going to church and school, and having fun." At that moment the last vestige of my mistaken pity vanished.

NEVER CATCHES UP

Witten doesn't bring up sissies. Told a cow had kicked one of the boys that morning, he drawled, "Well, I reckon it waked him up, maybe." But when it comes to clean clothes, daily showers, and lots of milk at meals, he is hawk-eyed. Clothes are a big item, and Witten shops constantly without ever quite catching up. The weekly laundry bundle is always a two-man load.

Once a week the boys go to the movies, hoping for a cowboy-and-Indian picture. A recent discovery of 30 Indian skeletons in a nearby cave has had them all agog. Witten, too, is interested, since he comes from a pioneer Tazewell family. One ancestor settled there in 1771 and "cleared out the bears to make room for the people."

THE CLAN IS DYING OUT

Witten talks a little sadly about the days when the clan was numerous and active. "The family is dying out," he says, "and soon it will be forgotten." It never occurs to him that his name will live until the last "Witten boy" and his descendants are gone.

As I was leaving Witten seemed a little distraught. It developed that he had a letter from an anxious grandmother who wanted him to take in a problem boy of 12. "They say you are so good to young boys and make them mind, too," she wrote. The boy was coming that day, and Witten wanted to make sure everything was shipshape.

Saying good-by, I asked Witten why he had spent his life as he had. He looked at me for a moment and said, "Luke, eighteen-sixteen."

That night I opened a Bible and read the words that entered Jack Walter Witten's heart 40 years ago: "Suffer little children to come unto Me * * * for of such is the kingdom of God."

Lincoln Day Address by Hon. Edward Martin, of Pennsylvania, at Chicago

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address delivered by the Senator from Pennsylvania [Mr. MARTIN] at the Lincoln Day dinner of the Illinois Republican State Central Committee at Chicago, Ill., on Tuesday evening, February 10.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster and my fellow Americans, it is a real honor to be invited to address this Lincoln Day celebration. We Pennsylvanians take pride in the fact that the lineage of the great American we honor tonight reaches back to Berks County in my own State. We are proud that the forebears of the Great Emancipator lived in Pennsylvania.

When I was Governor of the Commonwealth of Pennsylvania, I became well acquainted with your distinguished Governor, Dwight H. Green. He is an outstanding soldier and executive, as well as a courageous American. He is a credit to your State and to our Nation.

Even before entering the United States Senate, I learned to admire and appreciate your Senator C. WAYLAND BROOKS. His splendid military decorations are a tribute to his brilliant record as a soldier. He is one of the powerful leaders of the Senate.

Your Republican delegation in the House of Representatives is one of the most influential in the Union.

Hard work and self-reliance were Abraham Lincoln's way. He climbed from the humblest to the greatest place in America by back-breaking physical and mental toil. Hardship and work were his daily, lifelong companions. He showed they could be used as tools to fashion greatness.

His earliest years were a struggle just to live. He struggled to gain an elementary education. As he grew older he knew defeat—both financial and political. But he did not quit and he did not hustle off to Washington for a hand-out. He worked. He kept his sense of balance, his humility, his tolerance, his loyalty, and his love of God. And he won through to fame that will live forever.

Abraham Lincoln never forgot to practice tolerance and good will. He never thought of inciting class hatred, religious or racial prejudice, or sectional discord to gain political advantage. He believed in American ideals and he practiced them.

In reviewing the greatness of Abraham Lincoln we must remember his genius for politics. His statesmanship represented political action at its best, striving always for good government and to advance the welfare of his fellow Americans.

One of the founders of the Republican Party, he believed in party loyalty and party discipline. Those qualities spell victory on election day. If we practice them diligently we will have a great Republican victory in November. We will restore to the Nation Lincoln's concept of constitutional government by electing a Republican Congress and a Republican President.

We can still find guidance and inspiration in the things Lincoln said and wrote, and we can apply his sound common sense to the problems of today.

Because of its tremendous importance to every American and to the world I should like to discuss this evening the problem of European recovery and the New Deal program for the greatest peacetime expenditure in all history.

I should like to consider how much we can afford to spend—where the money is to go—and the most effective methods to block the spread of Soviet aggression.

The philosophy of Lincoln can help us in this discussion. I believe if Abraham Lincoln were alive today, he would offer a program something like this:

"We must help free people who need help, and are willing to help themselves. Strengthening their hand at this time will help preserve the Union. But we must not buy a pig in a poke. In our willingness to help others we must not sap our own strength. To do so would endanger the liberty of our Republic."

That, I am convinced, is what Abraham Lincoln would have recommended.

As we examine the Marshall plan we should remember it was Lincoln who said: "If destruction be our lot, we must ourselves be its author and finisher. As a Nation of freemen, we must live through all time or die by suicide."

Recent history has demonstrated beyond all doubt that in the modern world, Europe is our next-door neighbor. When the European house catches fire the flaming embers fall also upon our own roof. When nazism and communism blazed up in Europe the destructive flames spread across the United States.

I believe firmly that we should do all in our power to help the needy. That has been the traditional policy of the American people down through the years. We should aid, within the limit of our means, the economic recovery and rehabilitation of Europe.

But let me say—very bluntly—that we should not undertake a program that threatens to be so wasteful of our resources that we may become the authors and the finishers of our own destruction.

I do not agree that we should approve the Marshall plan without thorough study and full debate. I do not propose to accept without question this package wrapped up by the State Department and delivered to Congress labeled as a bipartisan policy.

I dislike being told that I must not question whether we can afford this package or whether it can achieve the desired result.

Our State Department's record does not warrant that kind of blind acceptance. This same State Department has been responsible for many fuzzy-brained decisions that poured out our people's money.

Recently we were told that the $3,750,000,000 loan to England would restore that country to economic stability. Now we know that it has all been spent—much of it wasted—and the people of England still face the same problems as when we made the loan.

No, the Marshall plan in its present form is not the answer. It proposes to prop up European nations which might be in danger of succumbing to communism.

We have been told that more than half of the Marshall plan money will go to such countries as Portugal, Belgium, Holland, Denmark, Luxemburg, Iceland, Norway, and Ireland. I have heard nothing to indicate that any of those countries would go Communist if we did not finance them. I can hardly picture the folk of Eire and Portugal, for instance, embracing Marxism.

A very large share of the money, reportedly a third, would go to Great Britain. I don't believe there is any great danger of Joe Stalin taking over that country.

But then they say: "We want to use the money not only to combat the advance of communism—we want to help some of these nations to get on their feet.

And then we are told: "We must not attach conditions to our help. We must let them handle this money in their own way. We must not offend their national sovereignties."

And furthermore, Congress has received a virtual ultimatum from the President and the Secretary of State: "All the money or none; don't dare to cut a penny."

Since the early 1930's it has been the fashion for the New Deal to tell Congress nothing, to ask large chunks of money, and to spend it in ways that make a believer in the American Constitution shudder. It became the custom in that period for a rubber-stamp, spendthrift Congress to vote the money and ask no questions.

We have a Republican Congress now. The rubber stamp has been thrown into the scrap heap. Most of us in Congress want to know how the taxpayers' money is being spent.

In its best sense the Marshall plan may be described as follows: "The United States is ready to help those who help themselves."

That is fine. But I want to know some things that Congress has not been told up to now. I want to know that the beneficiary country is helping itself to the maximum of its ability and to the limit of its own resources. I want to be sure that the help given by the American taxpayer will be used solely to get the country back on its feet and to assure free, self-government for its people.

In the postwar period from July 1, 1945, to June 30, 1947, America put more than $24,000,000,000 into European relief.

We are now told that the Marshall plan will cost $17,000,000,000.

In other words, postwar relief up to now, plus the Marshall plan, will cost the American people $41,000,000,000. That means it will cost the average American family about $1,248. Think of that.

Let me bring it a little closer to you. The people of Illinois spend a little under $475,000,000 a year for their State government. Money already spent, plus the Marshall plan, would make Illinois' share of foreign relief nearly two and one-half billion dollars, enough to operate your State government for 5 years.

Before we vote such burdens upon our people we must be sure we have a plan that will succeed.

I would like to know whether our money will be spent to perpetuate ideologies harmful to us. Do we want our money to solidify such undesirable groups in power? Or will we impose conditions that will ultimately assure the great masses of their people the rights and privileges of freemen?

I wonder, for instance, how much of our money will be used to foster socialism in Great Britain and to further nationalize industry in the socialistic pattern?

America has the highest regard for General Marshall, but little confidence in many in the State Department who have developed its policy in recent years.

I feel he was wrong in coming before Congress with that ultimatum—$17,000,000,000 or nothing.

I cannot understand how President Truman could make such a demand. When he was a Member of the Senate he said:

"Unless this body and the House of Representatives exercise their perogatives in connection with the purse strings of the Government, much of the money appropriated will be thrown away for no good purpose whatever."

That statement is still fundamental good sense. It is a pity Mr. Truman has drifted so far from his once safe and sound moorings.

There is something else that troubles me greatly. Over the years American diplomacy stood for honesty, fair play, and the right of every nation to foster freedom and liberty.

But today we must face the fact that our Government has departed from that tradition under New Deal leadership that sought only to perpetuate itself in power.

We have discovered that our Government has been digging deeper and deeper into the smelly barrel of the diplomatic school which calls for deals, double deals, and double-cross deals. I regret to say our Government has been led into dishonesty in international affairs.

You know the record. You know the unsavory concoctions we helped to brew at Potsdam and Yalta and elsewhere.

Our Government forgot the truth and frankness of Abraham Lincoln when it dealt treacherously with Poland. It betrayed the little Baltic nations by way of secret pacts. During the war and after, when the New Deal Presidents were making statements supporting a Jewish homeland in Palestine, the State Department was sending secret notes to the Arabs telling them that the public utterances were intended only for home consumption.

Are we now taking the same position with regard to the decision of the United Nations for the establishment of a Jewish state in Palestine? Are we abandoning the citizens of that country to murderous attack without supporting their right to arm in self-defense?

Is the money the administration wants to pour into England to be used to defeat the mandate of the United Nations? If so, the whole structure of the United Nations as the hope of the world for peace and freedom faces destruction.

These are the deals we now know about. But what about the secret deals that have not been revealed? I am not so gullible as to believe that all the cards are on the table, face up, today. Are you?

To what have we been committed? Why can't we be told the truth?

I want to repeat that I feel help must go to western Europe. I realize also that as we improve the lot of other nations, we build American stability.

I have tried to point out that we must be guided by certain fundamental principles. Briefly, I would suggest:

1. We should determine how much of American resources we can give without endangering the solvency of America.

2. We must bear in mind that we will be called upon to provide further funds to restore the health of China, Korea, and other sick nations.

3. If in helping Europe we weaken ourselves, there will be none in the world to help us defend human liberty against communistic tyranny and aggression.

4. Feeding the hungry and bringing relief to the suffering is a Christian obligation of our Nation. Such relief should be administered by an agency separate and distinct from the program for the industrial and economic rehabilitation of Europe.

5. The rehabilitation of Europe should be entrusted to the best business brains of America. This is a job for hard headed businessmen with the American "know how." It is not a job for bureaucrats who do not know the value of a dollar.

6. Full consideration should be given to the investment, as far as possible, of private capital in business and industrial enterprises of western Europe. That will help protect the social and economic freedom of the individual.

7. In return for taxpayers money given by our Government to European countries, we should receive, wherever possible, raw materials available to those countries but which are in short supply in the United States.

8. As a condition for our assistance, we must firmly establish standards of self help and achievement by each European country.

9. We must insist that the help we give Europe be so administered as to bring to its people a greater share of individual liberty—that they be safeguarded in those rights and freedoms that we in the United States regard as endowments from the Creator of all mankind.

The great light of American liberty was the hope and inspiration of freedom loving men and women in all the dark corners of the world. Its shining rays penetrated the densest iron curtain of Europe.

Unfortunately recent diplomacy has created suspicion, distrust, and even hatred of America. If we are to rehabilitate ourselves in the eyes of those who suspect our motives we must carry out the highest ideals of Americanism.

In his historic address at Gettysburg, on the soil of Pennsylvania, President Lincoln called upon all America for high resolve that this Nation, under God, shall have a new birth of freedom.

The memory of the Great Emancipator calls upon us today for a new dedication to liberty so that men and women of good will in all the world shall share in the blessings of peace, with honor and justice.

Radio Networks as Tools of Propaganda

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Radio Networks as Tools of Propaganda," from the Chicago Daily Tribune of February 9, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RADIO NETWORKS AS TOOLS OF PROPAGANDA

Representative SCHWABE, a Missouri Republican, set out a few weeks ago to find out why the vast majority of radio speakers have been plugging the Marshall plan at a time when the majority of the radio listeners with whom he was acquainted were against it. He started his inquiry after a poll of voters in his district showed them 3 to 1 against the plan, or 6 to 1 if it inflicted rationing and price controls on Americans.

He went to the radio networks, officials of which assured him, as they always do in such matters, that they presented both sides of any controversial matter discussed on their chains. But when he set out to find how much of each side they were presenting, the lists of speakers which the chains themselves furnished him demonstrated the debate was loaded 6 to 1 in favor of the Marshall plan.

This is nothing new. It has been going on since the inception of the New Deal. Every radio station, because of the arbitrary power of the Federal Communications Commission to put it out of business, is subject to political pressure. The networks are most vulnerable to bureaucratic blackmail.

Granting permanent titles in wavelengths to individual stations, revocable only upon proof of abuse, would free the stations from intimidation designed to make them follow the line of the party in power. This would help correct the abuse uncovered by Mr. SCHWABE but would not wholly solve the problem.

If radio stations, themselves freed from FCC blackmail, were encouraged to originate a large share of their programs, and the networks were thus reduced to their proper status of service agencies for stations, instead of being dictators of the industry, both radio and the public would benefit. To allow four networks, all with headquarters in New York, to originate and dominate about 90 percent of all the radio discussions of political policy is a dangerous thing for the Nation.

Election Returns From New York

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the RECORD the election returns from New York, as published this morning in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WALLACE MAN WINS SWEEPING VICTORY IN BRONX ELECTION—ISACSON, ALP, DEFEATS PROPPER, FLYNN'S CANDIDATE, BY NEARLY 2 TO 1 IN CONGRESS RACE—REPUBLICAN, LIBERAL TRAIL—UPSET IN USUALLY DEMOCRATIC AREA VIEWED AS BLOW TO HOPE OF TRUMAN FORCES IN FALL

(By Warren Moscow)

LEO ISACSON, the candidate of Henry A. Wallace, was elected to Congress yesterday in a special election in the twenty-fourth congressional district in the Bronx. He scored a sweeping and surprising victory over Karl Propper, candidate of Edward J. Flynn's regular Democratic organization, in a four-man race in which Dean Alfange, Liberal Party nominee, finished third, and Joseph A. De Nigris, Republican, was last.

The vote from all the 159 election districts in the congressional district was:

Isacson	22,697
Propper	12,578
Alfange	3,840
De Nigris	1,482

FEWER THAN HALF ELIGIBLES VOTE

Total vote of 40,597 was light, considering that approximately 96,000 in the area were eligible to vote, and 89,000 did vote for Congress in the same district in 1946.

Mr. ISACSON received 55.8 percent of the vote, against 31 percent for Mr. Propper.

The result was an upset with definite national political connotations. In political circles, Mr. ISACSON never had been considered to have a chance to win, but the percentage of the vote given to the third party forces was to be regarded as an indication of the potential Wallace strength in November.

The result does not necessarily mean that Mr. Wallace will carry the district in the November election over Mr. Truman. Special elections do not forecast the percentages in November. But the result was regarded as certain to strike at Democratic hopes for Presidential victory, and to bring gloom to the Truman high command.

Mr. ISACSON ran on the American Labor party ticket, the group formed to support Franklin D. Roosevelt in 1936, which has since passed into left-wing and Communist control. Mr. ISACSON was supported throughout the campaign by the Daily Worker. The Roosevelt policies, always popular in the area, were stressed as an Isacson asset, rather than a Democratic one.

Mr. ISACSON will take his seat at once in the Eightieth Congress, the second representative of the American Labor party to do so, the other being VITO MARCANTONIO. He will have to run for reelection in November, since the election yesterday was to fill a vacancy.

DEMOCRAT ELECTED TO ASSEMBLY

In a separate special election for the assembly, in the first Bronx district, Bernard McDonnell, Democrat, won easily, scoring 3,525 votes against 779 for Simeon H. F. Goldstein, Republican, and 394 for Jackson Goldman, Liberal Party nominee. The ALP named no candidate.

Mr. Propper conceded his defeat in a one-sentence telegram to Mr. ISACSON, sent at 9 p. m., reading:

"Congratulations on your election to Congress."

A statement by Mr. Flynn, leader and undisputed boss of the Bronx since 1922, issued through Louis Cohen, his right-hand man, said:

"The Communist menace in this country is much greater than most people thought. This election brings home forcibly that those who are opposed to communism do not exercise their franchise. This is a deplorable situation. Regimented Communists vote, while those opposed to communism do not take the trouble to do so. I hope this election will serve as a warning."

The election is regarded as likely to have international repercussions, since Russian official organs have been saying the Wallace forces were the forces of democratic liberalism in this country.

Throughout the campaign, Mr. ISACSON campaigned against the Marshall plan, declaring it to be a plan of the imperialists to cut off democratic forces abroad, while Mr. Propper gave the Marshall plan his full support. The same issue was presented when Mr. Wallace spoke for Mr. ISACSON and against the Marshall plan in the Bronx last Sunday, while Mayor O'Dwyer and Mrs. Franklin D. Roosevelt took the opposite side at a rally last Thursday.

In analyzing the factors that led to the defeat of Mr. Propper, eminently respectable candidate presented by the Democratic organization, politicians and observers felt that the first of these was the effect on voters in a predominantly Jewish voting territory of the militantly pro-Palestine appeal made by Mr. ISACSON, Mr. Wallace, and other supporters.

While lifting the embargo on arms for Palestine was urged by Mr. Propper as well as by Mr. Alfange, the vote unquestionably reflected dissatisfaction with the present United States attitude on implementing the Palestine partition recommendation of the United Nations committee. This was in spite of the fact that the recommendation of Mr. Flynn to President Truman many months earlier was an important factor in the United States support of the Palestine partition move.

A second factor of importance was the light vote cast, which tended to show that the bulk of the Democratic voters in the territory—predominantly New Deal in its voting tendencies—was unimpressed by the Truman administration in general, and would not turn out to support it in a special election. That the Truman administration is weak in the urban centers has been recognized by political leaders for some time and has given the Republicans much confidence about winning with almost any nominee in the Presidential election this fall.

A third factor was that the Communists, out in full support of Mr. Wallace and Mr. ISACSON were able to mass their full worker strength from the entire city in one congressional district. Going from house to house and door to door, they pictured Mr. ISACSON as the real young progressive, favoring peace, prosperity, and Palestine, against a machine candidate whom they charged with being a lawyer for landlords in eviction cases.

In the canvass the left-wingers were able to put in more manpower than the Flynn machine, even though the latter is still the strongest organization of its kind in the city. The left-wingers also overcame the defection of the Amalgamated Clothing Workers, who left the party over the Wallace third-party candidacy and who had normally been counted upon to furnish a substantial part of the American Labor Party vote.

The strength of the left-wingers in what is regarded as a Democratic stronghold is best emphasized by recalling the 1946 election figures when Benjamin J. Rabin, the Democratic incumbent, polled 39,316 votes, or 44.1 percent, while Roy Soden, ALP nominee, polled 24,249 votes, or 27 percent. The Liberal Party nominee in 1946, Bernice Benedick, polled 8,504 votes, or slightly less than 10 percent, and David Scher, Republican, got the votes of 16,931, or 19 percent.

Yesterday's balloting took place in what is normally strongly Democratic territory, with most of the election districts in the congressional district included in the fourth, fifth, sixth, and seventh Bronx assembly districts, where the Democratic Party has ranked first, the American Labor Party second, and the Republican Party third. The newly formed Liberal Party ran fourth in the 1946 election.

The campaign began when a special election was ordered to fill the vacancy caused by the election to the supreme court of Benjamin J. Rabin, who then resigned from his congressional seat.

The American Labor Party forces supporting Mr. Wallace immediately announced their intention to run a separate candidate, who turned out to be Mr. ISACSON. When Mr. Flynn rejected an offer of support from the Liberal Party for his nominee, the Liberals countered by nominating Mr. Alfange, who was their candidate for Governor in 1942 when they controlled the Labor Party and who was thus their best-known vote-getter. The Republicans nominated Mr. Di Nigris, who made virtually no campaign, since he stood no chance of election.

When the ALP forces announced that Mr. Wallace would speak for their candidate, the Democrats brought Mayor O'Dwyer and Mrs. Roosevelt to the Bronx to counteract the effect of the Wallace appearance in what always has been New Deal political territory.

In the electioneering yesterday, while the polls were open, leaflets issued by ISACSON supporters charged Mr. Propper with being a lawyer whose office had represented landlords in at least 10 eviction cases pending in Bronx municipal court. The allegation was promptly denied by Mr. Propper, who said he had never represented a landlord in an eviction case.

Early in the day, Assistant Attorney General Nathan Ginsberg, assigned to tour the polling places, said he had received numerous complaints that ALP observers were wearing small blue ribbons as identification marks.

Mr. ISACSON said the ribbons were "just a method of identification used by the watchers," and that in all cases they discontinued their use when asked to do so.

Mr. Propper, 56 years old, has lived in the Bronx since 1898. He is a graduate of Columbia University and Columbia Law School, was admitted to the bar in 1915, and has practiced law ever since, except when he served overseas in World War I.

Mr. ISACSON, born in New York City 38 years ago, is a graduate of New York University and New York Law School and was admitted to the bar in 1934. He was elected to the State assembly on the ALP ticket with the help of a deal with the Republicans in 1944, but was not renominated by the Republicans in 1946. He then became legislative representative of the American Labor Party and has always been associated with what was its left wing and is now the controlling group in that party.

ISACSON BACKERS JUBILANT—CROWD JAMS HEADQUARTERS TO SHAKE HANDS WITH MARCANTONIO, QUILL

The victory of LEO ISACSON was reflected in the attitudes at the campaign headquarters of the two main candidates in the Bronx special congressional election last night. At the Pontiac Democratic Club, 801 Westchester Avenue, headquarters of Karl Propper, there was gloom as early as 8 p. m.

At the Isacson headquarters in the Hunts Point Palace, One Hundred and Sixty-third Street and Southern Boulevard, the news of the unexpected victory brought hundreds of left wingers to the hall. VITO MARCANTONIO and Michael J. Quill were jubilantly shaking hands with all comers, and the milling crowd soon filled the lower hall of the building, which accommodates more than 700.

Mr. ISACSON said in a formal statement that "this is a victory for Henry A. Wallace and the third party—the people's party." He declared also that it was a resounding repudiation of the policies of the Truman administration, which he declared was leading the Nation down the road to war.

"The people have also gone to the polls to say 'No' to the Truman doctrine, the Marshall plan which plays politics with hunger and orders whole people and nations to vote the way Mr. Truman, Mr. Dulles, and Mr. Vandenberg, the chiefs of the Democratic-Republican coalition, instruct them," he continued.

"The people have shown that Wallace-endorsed progressive candidates for Congress in the coming national election can win and by their vote they have given the answer to the shaky liberals who have raised the false cry that third-party candidates cannot win. The people have spoken—for Henry A. Wallace, the trustee of the Roosevelt program."

C. B. Baldwin, campaign manager for the Wallace third party movement, said the vote was even more than "a clearcut people's repudiation of the subservient do-nothing policy of a President and of an administration which has blithely handed the American Government over to Wall Street and the military."

Capehart's World RFC Plan

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Indianapolis (Ind.) Star on Monday, February 9, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAPEHART'S WORLD RFC PLAN

"Do it right or don't do it at all." That was Senator CAPEHART'S answer to President Truman's demand for "all or nothing" on the Marshall plan. And he was ready with a constructive idea. The Capehart plan, as the Senator says, "injects the American principle of free enterprise into the European recovery program." It was presented Saturday night by Senator CAPEHART in an address to Illinois Bar Association members at Peoria.

Mr. CAPEHART, like many others, has seen the Government spend $11,014,000,000 since 1945 with little success in providing recovery. Plan after plan has failed to accomplish its purpose. And so, while Mr. CAPEHART believes in the purposes of the European recovery program, he does not believe in the method proposed to achieve that purpose.

This is what he proposes as an alternative. Send gifts of food, clothing, and fuel, as proposed by General Marshall, on a government-to-government basis. But beyond these relief goods, the entire approach of ERP should be changed from a government-to-government to a business-to-business basis. In addition, the 16 nations would be required to invest their own American dollars in their own recovery. And a free-enterprise method would replace a Government-control method.

Under Senator CAPEHART'S plan the Reconstruction Finance Corporation would handle all loans for European recovery. Each of the 16 nations (with western Germany it would be 17) would set up its own RFC with Americans in the minority on each board. These European RFC's would lend money to individuals, businesses, government agencies, and industries, just as our RFC has been doing here since 1932. These businesses then would buy the goods they needed to expand or improve production anywhere they wished. They would not have to get government permission either to buy or sell.

These RFC's would get their money in two ways. Roughly one-half would be provided by European governments whose nationals have dollar investments in the United States. These investments, which total $13,000,000,000 now, would be turned over to their governments who would give the owners their nation's currency in return. Then, for every dollar these nations put up, the United States would put up a dollar.

The American taxpayer would be protected. The free-enterprise system would be encouraged and stimulated both abroad and at home. Foreign governments would have less American interference in their economic affairs, less imperialism and there is even a chance that they could end up with a profit from their RFC's after 10 or 20 years, as our RFC did in peacetime.

This is the best alternative to ERP that has yet been presented. It certainly will influence the whole debate in Congress; and it may provide a means of bringing together many Congressmen who formerly were opposed to foreign aid and getting a constructive, workable, adequate, aid plan through soon. Senator CAPEHART has done the country an outstanding service by presenting it.

Radio Address of Earl K. Long, Candidate for Governor of Louisiana

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1948

Mr. HÉBERT. Mr. Speaker, on yesterday the gentleman from Louisiana [Mr. DOMENGEAUX] made the following statement in closing his futile attempt to toss aside the photostatic evidence which I had produced in support of my argument that he was in error when he said unqualifiedly that Earl K. Long, candidate for Governor of Louisiana, had been assessed in excess of $100,000, including a fraud penalty, and had agreed to pay a fraud penalty in connection with his income-tax returns in Louisiana involving the year 1937, 1938, and 1939.

I quote what the gentleman from Louisiana said:

I challenge the gentleman from Louisiana [Mr. HÉBERT] to produce not the amount of tax paid wherein the fraud lies, but the income figures even as admitted by Mr. Long.

I now offer, Mr. Speaker, the speech which Mr. Long made himself on a Statewide radio hook-up in Louisiana on Monday, February 16, which includes the figures which the gentleman from Louisiana [Mr. DOMENGEAUX] has requested. I hope this finally satisfies the gentleman from Louisiana, but if he wants any other documents I will get them for him also.

The New Orleans newspapers have been publishing a great deal lately about my not giving my income-tax figures for the years 1936 through the years when I was Lieutenant Governor and Governor, up to the present time.

The newspapers claim that Sam Jones answered my challenge and made a statement of his income for 11 years, from 1936 to 1947, including the 4 years when he was Governor, 1940–44, up to the present time.

Sam Jones and his candidates have been saying in their campaign speeches that although Sam Jones gave his income figures to the public, that I have not up to this time made a statement about my income during the years before I was Lieutenant Governor and Governor, up to the present time.

As a matter of fact, the people of the State know that as soon as Congressman JIMMIE DOMENGEAUX made his false charges on the floor of Congress against me, I followed up by filing a substantial suit for damages against Sam Houston Jones and Bob Ainsworth, for repeating his slanderous and false charges, and against the New Orleans newspapers, and Sam Houston Jones, for conspiring with JIMMIE DOMENGEAUX in having him make his false charges on the floor of Congress and for having published and repeated his false, slanderous, and libelous statements against me with regard to my income taxes and supposed overassessments and penalties.

Congressman JIMMIE DOMENGEAUX charged on the floor of Congress that I had received an income of over a quarter of a million dollars in 1938 and 1939 while I was Lieutenant Governor and Governor, and that the Bureau of Internal Revenue has assessed more than $100,000 tax liability, at the present time, against me, which I had agreed to pay, but that I had asked them to hold up until after the present gubernatorial election.

Those were the false, vicious charges made against me by Congressman JIMMIE DOMENGEAUX in the House of Congress.

Congressman DOMENGEAUX has been proven to be a falsifier on each and every count.

As you all know, I promptly filed a suit for a million dollars against the Times-Picayune Publishing Co., the Item Publishing Co., Congressmen Domengeaux, Sam Houston Jones, and Bob Ainsworth, his campaign manager, and against Ralph Nicholson and Leonard Nicholson, publishers of the New Orleans newspapers, for their part in spreading those false, slanderous, and vicious statements against me in their effort to hurt me before the people of the State in my campaign for Governor.

The reason why I delayed giving the details of my income, year by year, to the people of the State was that I wanted the New Orleans newspapers and Jimmie Domengeaux, Sam Houston Jones, the Nicholsons, and Bob Ainsworth to file their answers to my suit for damages against them.

I wanted to see if any of them would dare set up that DOMENGEAUX'S statements were true. Truth is the only defense to a damage suit for slander and libel against a man's good name and reputation.

I can now tell you that the New Orleans newspapers—all three of them, the Times-Picayune, States, and Item—and their two publishers, Leonard Nicholson and Ralph Nicholson, have filed their answer, but none of them has dared to plead truth of the Domengeaux false statement as a defense to my damage suit against them.

Bob Ainsworth, the Sam Jones campaign manager, went into court and asked for 15 days' delay after he was served with my suit for damages against him. He has not filed his answer up to now.

Sam Houston Jones has not filed his answer, nor has Congressman DOMENGEAUX.

I guarantee you, JIMMIE DOMENGEAUX will not and cannot plead truth as a defense for his false and slanderous charges which he made against me in the House of Congress. I hoped to have my suit against the New Orleans newspapers and Mr. Jones and his campaign manager tried before the second primary election on February 24, to further prove their false slanders against me. But this suit cannot be tried in court until all their answers are filed.

On today, Congressman F. EDWARD HÉBERT, supported by photostatic copies from my income-tax records in the Revenue Office in Washington, disproved every false charge made by Congressman DOMENGEAUX in conspiracy with the New Orleans newspapers, Sam Huston Jones and his campaign manager. Congressman HÉBERT submitted to the House of Congress and filed in the RECORD for public inspection a full set of photostatic copies from my income-tax records in the Revenue Department in Washington.

My income-tax records show that I did not make anything like a quarter of a million dollars in 1938 and 1939, when I was Lieutenant Governor and Governor. These records from the Bureau of Internal Revenue proved that there was no tax liability or fraud penalty imposed against me in any amount, let alone $100,000 as Congressman DOMENGEAUX, the New Orleans newspapers, Sam Jones, and his campaign manager charged me with, and these records from the Department of Revenue further showed that I did not agree to pay any tax except what I had already paid.

Furthermore, an official letter from the Federal collector of revenue, Mr. Donnelly of New Orleans, showed that I had paid all of

the taxes due by me from the years 1920 to 1946. Mr. Donnelly stated absolutely, and I quote:

"The records of this office disclose that all taxes certified to me for collection for all the years in which returns were filed by you have been paid in full and that no penalties were assessed against you in any of these years."

That letter was addressed to me by Mr. Donnelly, collector of internal revenue in New Orleans, on February 13, 1948, just 3 days ago.

Congressman HÉBERT was furnished with a copy of this letter from Mr. Donnelly, and filed it in the CONGRESSIONAL RECORD, not only for Congressman DOMENGEAUX's inspection, but for publication in the CONGRESSIONAL RECORD, so that anybody and everybody who wants to can get a copy of it simply by writing his Congressman. That is the easiest way for anybody to get a copy of the facts regarding any income taxes for the past 26 years.

You have not seen Sam Jones give photostats of copies of his income-tax records to Congressman DOMENGEAUX to be published in the CONGRESSIONAL RECORD, so that any of you good people in the State of Louisiana can write to your Congressman and get a free copy of them. No!

Mr. Jones made a statement over the radio about his net income and it is published far and wide in his sympathetic newspapers, but he does not give you any details about his income taxes, such as I gave to Congressman HÉBERT for him to use in answering Congressman DOMENGEAUX's false charges against me and to have them published in the CONGRESSIONAL RECORD as a public record, which anybody and everybody in the State can get by simply writing his Congressman for a copy.

Now, let's get down to the facts of my income before I was Lieutenant Governor and Governor up to now, and to Sam Jones' income before Sam Jones was Governor up to the present time.

Right after Congressman DOMENGEAUX made his false charges against me on the floor of the House of Congress, in a plain effort to hide behind his right of immunity as a Congressman, I not only filed my suit against them for substantial damages for libel and slander, but I also issued a challenge to Sam Houston Jones, as the candidate for Governor, to publish the facts about his income before he was Governor, while he was Governor, and after he was Governor, and I said that I would do the same thing, and that we both should give sworn statements of our income to our campaign managers at the same time for publication, so that the people of the State would have all of the facts.

Sam Houston Jones has not accepted my challenge, and he dare not for many, many reasons.

The New Orleans newspapers and Sam Jones and his candidates for State office are trying to fool the people into believing that Sam Jones has accepted my challenge and has given you all the facts, which he most certainly has not up to the present time.

Now, here is the challenge which I issued to Sam Houston Jones:

"I now challenge Sam Jones, as the candidate for Governor, to make and publish a sworn statement of his taxable income for the last 9 years, including the year 1938 to the present time, and to publish a sworn statement of the names of the persons, firms, or corporations who paid him fees, and how much, during any of those years, and how much they are now paying him.

"I am prepared to make such a sworn statement and let the people have all the facts regarding my income, whom I represented and from whom I took fees before and after my short term as acting Governor of Louisiana in 1939–40, up to the present time.

"I defy Sam Houston Jones to accept this challenge and to publish, under oath, how much his income was before, during and after the time he was Governor up to now, and particularly—

"How much the coal interests paid him to prevent the shipment of natural gas out of this State to compete with coal as fuel in the East.

"How much the City Service Refining Corp. paid him to repeal the 1 cent per barrel oil refining tax and put a sales tax on the people in its stead.

"How much the air lines paid him to remove the tax on airplane gasoline, while he left the gasoline tax on the fishermen and trappers' boats and the farmers' farm machinery, and

"How much the large shell corporation paid him for that big State shell reef near Lake Charles, which he leased to that corporation for 4 cents per yard when the State shells were worth $2.50 per yard—quite a difference.

"How much those big interests are still paying him for the favors he did for them while he was Governor in 1940–44.

"If Sam Jones will accept the challenge, let him give his sworn statement to his city campaign manager in New Orleans and I will furnish my sworn statement to my campaign manager, both to be published at the same time."

I leave it to you whether Sam Jones has accepted that challenge.

Did Sam Jones tell you, the people of the State, how much the coal interests paid him or his law firm to prevent the shipment of natural gas out of the State to compete with coal as fuel?

Sam Jones testified under oath before the Federal Power Commission that he was employed by the Kansas City Southern Railroad, the largest coal hauling railroad in the country, and by the big eastern coal interests to prevent the shipment of Louisiana gas out of the State to compete with their coal as a fuel.

Why doesn't Sam Jones tell you how much he got out of the coal interests and the Kansas City Southern Railroad, and how much he is still getting out of them to fight the gas interests of the State of Louisiana?

Did Sam Jones tell you good people how much the City Service Refining Corp. paid him to repeal the 1 cent per barrel oil refining tax? No, absolutely no.

You know, that Judge Bob Kennon and the Lake Charles Kennon campaign committee put that question to Sam Jones many times during the first primary, but Sam Jones has not answered yet. Why not? He can not.

Did Sam Jones tell you, the people of the State, how much the big air line companies paid him to take the tax off airplane gasoline by his order to his State revenue collector, although there is no law authorizing the exemption of airplane gasoline from the regular gasoline tax? No. He never will.

Did Sam Jones tell you, the people of the State, how much that big shell company paid him for thousands of acres of shell reefs near Lake Charles, which he leased to them for 4 cents a yard, when the State shells were worth $2.50 per yard? Had I done this, I doubt if I could have stayed in the bounds of the State of Louisiana. No; he did not tell you that either.

On the other hand, it is a matter of public record that Sam Jones represented that corporation before the Supreme Court and defended the very lease of State shell bottoms which he gave to that company for little or nothing. That was the same case that Judge Bob Kennon decided while he was on the supreme court and held that the Jones shell deal was malum in se, that is, morally and fundamentally wrong and against the best interest of the State of Louisiana.

Did Sam Houston Jones tell you good people how much he got on the cuff and off the record for helping to lobby the bill in the 1944 legislature to deprive the people of their right to hold local-option elections until 2 years after the war? Ask him, didn't he get $25,000 for that.

Did Sam Houston Jones tell you good people how much he got out of the deal when his big Lake Charles Corp. client sold those 13 acres of marshland for the Lake Charles Bridge project to the State highway department for $40,000 when the same land was assessed by his tax commission at only $7 an acre? No, Sam Houston Jones won't let you good people in on any of his secret deals at your expense.

Did Sam Houston Jones tell you, the people of the State, how much those big interests are still paying him for the favors which he did for them while he was Governor from 1940–44? No. He never will.

And I want to let you in on a little secret. Sam Jones won't tell you, the people of the State, how much he was paid for the favors he did for those big special interests while he was Governor, and how much he got for his political influence over the Davis administration from 1944 up to the present time. He has really been raking it in.

Now, I will give you a report of my income, and I don't mind giving it to you from the time I started work way down yonder in 1916, when I was 19 years old.

In my early manhood, from 1914 to 1928, I was a traveling salesman, college student and farmer. When I saved up enough money from work at odd jobs, as most young men did in those days who wanted to get a college education, I would go back to college, first to Louisiana Polytech, then to LSU, then to Tulane, and, finally, I finished law at Loyola in 1926 with a free scholarship.

From the years 1928 to 1932, while my brother, the late Huey Long, was Governor, I was attorney for the inheritance tax collector in New Orleans, and my fees from that work averaged from $10,000 to $12,000 a year. This is a matter of record in the Orleans civil district court.

In 1933 I practiced law and operated a small farm in Winnfield, from which my income was $5,388.72.

In 1934 I became special attorney for the Home Owners' Loan Corporation, at a salary of $3,000 a year, and I practiced law and continued my farm work at odd times, which gave me an income of some $6,131.22.

In 1935 I practiced law, carried on some farm work, and was a candidate for lieutenant governor, and I was elected in 1936 and took office in May of that year. My income for 1935 was $5,999.72 and in 1936, $6,124.80 including my salary as lieutenant governor for 6 months of 1936.

My total net income for the 4 years, while I was lieutenant governor and governor are as follows:

For 1937, $14,185.38; for 1938, $14,975.22; for 1939, $14,010.17; for 1940, $7,134.

This includes the 3 years during which I was lieutenant governor to June 1939 and also includes the income from my farm and cattle business, law practice, and salary as lieutenant governor.

Under the law a lieutenant governor, who is a lawyer, has a right to practice law, which I did in a moderate way.

My income for 1939 and 1940 also includes the 11 months during which I was governor until May 1940.

You will notice, for instance, from my income of $7,131 in 1940, which included my salary as governor for about 4½ months that, I did not receive any fees from corporations or clients which could have been the result of favors performed by me for any special interest, while I was governor during those 11 months to May 1940.

My income for the year 1941 was $6,280.50; 1942, $5,203.50; 1943, $5,675.02; 1944, $3,653; 1945, $4,941.91; 1946, $7,552; and my estimated income for 1947 is $6,950.50.

I am sure no one, not even the New Orleans newspapers, can accuse me of collecting fees from any special interests in the years immediately following my 11 months as Governor of the State of Louisiana, and this income includes that of my wife too.

So you see, good people, I have nothing to fear, I have nothing to hide, and I am ready and willing to publish a sworn statement of the names of my clients who paid me fees for legal services, if Sam Houston Jones will accept my challenge, and I will guarantee you I did not get any fees from the coal interests, or the Kansas City Southern Railroad, or the City Service Refining Corp., nor from any shell company or oil company, or from anybody else for doing them special favors or using political influence for them, either while I was lieutenant governor or governor, or at any time since.

I wish to further assure you that I have never done anything in a public way in my life that I am ashamed of, and as long as my Maker gives me the intellect to fully realize and appreciate what I am doing, I never will.

I would rather be governor and pay those fine old needy folks that $50 old-age pension, open the charity hospitals in the State and build more tubercular hospitals to take care of the poor sick people, restore free-dental trailers and ambulances, build trade schools, restore free hot lunches, to help the children of the State get a better education and grow up to be fine men and women and healthy citizens, pay better salaries to school teachers and bus drivers, give the war veterans a just bonus, and save the road system of the State by repairing the neglected highways, build farm-to-market roads, blacktop and pave highways and widen our truck-line highways which are death traps at this time, to make them safe for people traveling over them throughout the State.

I would rather be governor and work to do all these things and get all of these benefits for the people of the State, than have all the gold in the hills of Fort Knox or the wealth of Wall Street, because when you leave this earth you can only take with you the good deeds that you have done for your fellow men right here on earth.

Statement of Harrington Wimberly, Vice Chairman, Federal Power Commission, on H. R. 4051

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1948

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call the attention of the House to a statement made by Mr. Harrington Wimberly, Vice Chairman, Federal Power Commission, on H. R. 4051, before a subcommittee of the Senate Committee on Interstate and Foreign Commerce, February 9, 1948:

I agree with the explanation made by Chairman Smith regarding the proposals to amend the Natural Gas Act which we have submitted.

We believe that the amendments which we have suggested are needed to clarify issues which cannot be ignored. I am convinced beyond doubt that these suggested amendments are required to guide the Commission in carrying out the purpose of Congress.

I also want the record to show that I continue in my opposition to the enactment of H. R. 4051. My own position has been stated clearly in the reports on the natural gas investigation which have been filed with your committee. These reports were prepared in the first instance by Mr. Behling, Director of the Natural Gas Investigation, and I think they fairly and adequately deal with the issues and problems involved. They also give a fair characterization of the positions taken by all those who participated in the investigation.

My remarks will be confined generally to discussion of the basic issues rather than taking your time now in building up an elaborate case to support my views. I want to be as helpful as I can because the Congress has very important questions before it. For that reason I will point out in the best way I can some of the intellectual and philosophical tests which I have applied in arriving at my conclusions. I am not passing a tin cup for the natural-gas industry, but neither do I intend to promote a theory which produces weird results.

Brief mention of certain matters of record in the Natural Gas Investigation (Docket No. G-580), and in legislative reports to committees of Congress on proposals made last year, are appropriate at this time.

At the Houston hearing in the natural gas investigation in February 1946, an industry witness, Col. George A. Hill, made some rather intemperate accusations to the effect that the Federal Power Commission has grandiose plans for taking over under Federal jurisdiction all of the Nation's energy resources. I replied to him that I thought it should be stated for the record that his statements had not, to my knowledge at that time, any basis of fact and I did not think that his charges were appropriate.

He charged that the Federal Power Commission was seeking to take over powers which I would object to, and my answer was that I knew of no such proposals to be sponsored by this Commission.

In a short statement before this committee on April 29, 1947, I said, in part:

"As far as the exemptions under section 1 (b) as to production and gathering are concerned, I have always been one just to read the English language with care, but yet without attaching implications to it. I would not criticize either the lawyers or the courts, but I think that the language of section 1 (b) is certainly clear and definite. Much reference has been made to a dissenting opinion in the Columbian case, but I have never seen evidence, since I have been on the Commission, that the Commission was going to adopt the philosophy that was pronounced in [that] dissenting opinion."

That was my understanding when I made those statements. I am still of the opinion that the intent of the present act is clear in its limits of jurisdiction, but when there are widely different opinions about it I believe it is time for the Congress to do something to clarify it.

I became a member of the Federal Power Commission in October 1945. As a result of my thinking I do not subscribe to the application of the conventional net original cost rate base principle when applied to gas producing properties of interstate pipe lines, and it is not my understanding that the State commissions have used this depreciated original cost procedure as to gas production.

As to the exemption under the act of independent gas producers who deliver directly to the interstate pipe lines, the Federal Power Commission unanimously went on record last year as favoring amendment of the act to clarify such exemptions and spell them out in definite terms. I joined in those recommendations to the committees of the Congress and there was no question at that time but that the Federal Power Commission considered such legislation desirable.

Soon after the Supreme Court's opinion in the interstate case and immediately following adjournment of the first session of the Eightieth Congress last July, I joined a majority of the Commission in adopting R-106 on August 7, 1947, which was intended as no more than a statement of stop-gap policy. I would like to read one of the paragraphs of that rule, which is as follows:

"The rule herein has this specific purpose and is issued at this time because the Congress has not yet reaffirmed such exemption by amending the act. It is also our intention, in keeping with the position heretofore taken, to continue to recommend to the Congress that it take appropriate clarifying legislative action regarding this matter."

On last Thursday at this hearing Senator MCMAHON asked some questions about that rule, and it is my own opinion that it could be changed tomorrow and the Federal Power Commission could, if it so desired, seek to extend its jurisdiction to the full extent of congressional authority over interstate commerce. What the courts would say is another matter, but I bring up this subject to point out how unsettled the situation is at this time and how important it is that the Congress give guidance. I would not myself be so presumptuous as to tell the Congress—which after all is the final authority in resolving such far-reaching issues—to keep out of this and let us settle it.

I want to make it clear that I subscribe to the principle of a fair and reasonable return on net investment when applied to utility properties. This sound method of determining consumer rates should continue to be applied on utility operations. There is only one major point of controversy and that is whether gas wells, leases, and other production properties constitute a utility operation, and if not, what pricing principle is the most desirable in lieu of the rate base method on those production properties.

I first became aware of how serious these problems are after attending some of the first hearings in the Natural Gas Investigation, Docket No. G-580.

Following one of the hearings, I discussed within the Commission the problem of applying the cost doctrine to gas production properties. After going over the matter step by step, I still could not get over the hurdle that production operations, no matter how much or how little gas the pipe-line company came up with, were put in exactly the same category as the pipe lines, compressor stations, and other utility portions of the property.

The treatment that had been given the profits derived from extraction plants had been bothering me particularly, and I was seeking enlightenment on the methods applied. Under the cost formula, any profits above a utility return, which a pipe-line company or an affiliate derives from the sale of natural gasoline and other liquid fractions extracted from wet gas prior to its delivery into the transmission lines, are deducted from the cost of such gas. In other words, if such profits from extraction operations were sufficient to pay all costs connected with production and gathering of gas, including a return on the investment in leases, wells, etc., the result would be that the gas would enter the transmission lines as free gas at that point.

I carried it on further, and to the extreme, which to my thinking is the only way to fully test a principle. I posed the question as to what the result would be if the profits from extraction operations were sufficient to pay all costs of delivery by a pipeline company to a point of consumption hundreds of miles away. Under those extreme but not impossible circumstances, the pipe-

line company would be delivering the gas to the distributing company absolutely free.

I think these are the necessary implications of the cost formula as applied by the Commission. If the principle is to be applied at all, it must govern in each and every situation no matter how fantastic the economic results might be.

With further reference to the assured return every pipe-line company receives that invests in leases, exploration, well drilling, and other necessary functions in the production of natural gas, I suggest consideration of the following illustration:

Company A and Company B each invests $10,000,000 in leases, drilling, etc. There is not necessarily any relation between the two as to what they get for their money. The owners and investors get the same rate of return, but Company A's reserves amount to 1,000,000,000,000 cubic feet of gas, while Company B gets for its $10,000,000 one-quarter of a trillion cubic feet of gas. The result is that the investors get the same return for their money but the rate payers served by Company B, which owned one-quarter of a trillion cubic feet of gas, pay four times as much as the rate payers of Company A who were fortunate enough to get 1,000,000,000,000 cubic feet.

Independent producers are in no such position as this, and they supply more than 80 percent of all the gas produced and more than 50 percent of all the gas going into interstate pipe lines, which handled about 28 percent of the total marketed production in 1945. These percentages show that most of the gas produced does not move through interstate pipe lines but goes for other purposes.

I am now going to refer very briefly to the Federal policy on the water resources of the Nation as expressed in the Federal Power Act and other statutes relating to the conservation and use of the waters of the United States. I think I can point out an essential difference in this situation as contrasted with natural-gas production.

I doubt if there is a person in this room who would try to convince you that there should be any vested rights in the waters of the navigable streams of the country. For many years I have had an intense interest in that subject, and I hold strongly the view that these waters are public property and that no one should be permitted to capitalize or profit from the use of the waters as such.

That important national policy was expressed with the passage of the Federal Water Power Act in 1920, and it has been reaffirmed from time to time. The Federal Water Power Act was passed partly to encourage the development by private owners of hydroelectric projects on our navigable rivers.

Under the Federal Power Act, a developer of water power under license from the Federal Power Commission may include in its rate base only the cost of those facilities which are necessary for the development of electric energy from the falling water and the delivery of that energy to certain points. What constitutes a water-power project is specifically defined in section 3 (11) of the Federal Power Act, and earnings are limited to a fair return on the depreciated cost of such project. Nothing is allowed, and properly so, for the most essential feature of a hydroelectric project, the falling water itself, because that is a resource that under national policy cannot be reduced to private ownership.

The question appropriately arises as to the point of comparison when it comes to rate making between a hydroelectric project and a natural-gas company. I am convinced that the situations are not analogous, but they have, nevertheless, been given the same treatment in rate making by the Commission.

The water belongs to the public, and no earnings are permitted on its use. Natural gas, also a natural resource, is generally recognized as one that can be reduced to private ownership, just as other minerals.

However, the rule that the production of natural gas shall give to the natural-gas company transporting and selling its own gas only a return on its actual investment for such purposes, it seems to me applies to natural-gas companies the same rule as that applied to licensees operating water-power projects under the Federal Power Act—namely, a limitation of earnings to a fair return on the original cost less accrued depreciation or depletion. The rule, in effect, places natural gas when produced, transported, and sold by a pipe-line company in the same category as the falling water that turns the wheels for the generation of electric energy. The gas itself is essential, but when such a rule is followed no recognition is given to any value it might have if utilized for other purposes.

If the comparison I have made is sound, the question of public policy before the Congress is this:

When natural-gas reserves are dedicated to public use, shall they be regarded as public resources and the natural-gas companies that capture, gather, and transport in interstate commerce such dedicated gas be permitted to earn only on the cost of the facilities necessary for such operations? Or should they be treated as other producers of natural gas?

I should like to pose these further questions that disturb me:

If the Congress does not clarify the act in regard to exemption of independent producers and gatherers, is the Commission free to make inroads in that direction?

If the Congress fails to give further guidance, is the Commission to accept that as indication of congressional approval of its method of price fixing as applied to natural gas produced by pipe-line companies?

I know you will weigh carefully all that is involved. The answer should come from the Congress, because I do not believe that any administrative agency should be permitted to make national policy on behalf of the Congress.

Award by Virginia Junior Chamber of Commerce of Distinguished Service Citation to W. Brooks George

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 18 (legislative day of Monday, February 2), 1948

Mr. BYRD. Mr. President, the Virginia Junior Chamber of Commerce has named Mr. W. Brooks George, of Richmond, Va., as recipient of the distinguished service award as the State's outstanding young man of 1947.

It is my privilege to know Mr. George, and it is my opinion that this was a well-deserved tribute. He is a young man of outstanding ability, fine character, and splendid personality.

I ask unanimous consent to insert in the Appendix of the RECORD a newspaper release explanatory of this action by the Virginia Junior Chamber of Commerce.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

LYNCHBURG, February 15.—The Virginia Junior Chamber of Commerce last night named W. Brooks George, of Richmond, to receive its distinguished service award as the State's outstanding young man of 1947 at a banquet in the Virginian Hotel. The award was made by Henry E. McWane, president of the Lynchburg Foundry Co.

During the past year Mr. George served as cochairman of the Richmond area Community Chest campaign in charge of the industrial division and was a member of its board of directors. He was also cochairman of the Richmond American Red Cross campaign in charge of the industrial division.

Mr. George is a member of the board of directors of the Richmond Chamber of Commerce. Last year he served as president of the Richmond Junior Chamber of Commerce and is a member of its board of directors. He is also a member of the board of directors of the Richmond Citizens Association, Virginia Manufacturers' Association, Salvation Army, and Virginia Junior Chamber of Commerce. He is president of the Windsor Farms Citizens Association.

Mr. George is controller and assistant to the president of Larus & Bro. Co., Richmond, He is a graduate of the college of William and Mary and is a registered certified public accountant.

Judges for the award were Senator Harry Stuart, of Elk Garden; Dr. George Sadler, associate secretary of the Baptist Foreign Mission Board, Richmond; and Mr. McWane.

Speakers on the program were David E. Basten, president of the Lynchburg Junior Chamber of Commerce; Joseph H. Saunders, Jr., of Alexandria, president of the Virginia Junior Chamber of Commerce; John Pearsall, vice president of the Virginia Junior Chamber; George O. Baird, Jr., of Shreveport, La.; national vice president of the United States Junior Chamber of Commerce; Mr. George and Mr. McWane. Kenneth Lane, of Richmond, was chairman of arrangements.

The award is made annually to a young man whose participation, service, or contributions, in one or more fields of activity, with or without compensation, has been so outstanding as to bring honor to young men of the State.

Britain on the Rocks—Facing Bankruptcy

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks, I include a revealing inside story just received by air mail from the authentic and outstanding financial paper of England, the Economist.

It furnishes us a vivid preview of America 4 or 5 years from now should we be so foolish as to adopt the ridiculous American economic Maginot line commonly known as the Marshall plan and if we fail to rid ourselves this coming November of the American socialistic New Deal.

Britain faces bankruptcy. That is the real significance of the Government's latest white paper. At last the British people now know where they stand. In the past 2 years they have as a community overspent their income to the extent of £1,000,000,000 and the rate of overspending was almost twice as large in 1947 as in the preceding year. At the present rate of expenditure (which has fallen since its peak last August, but now shows

signs of settling down at a monthly figure of some £40,000,000), the remaining reserves of about £600,000,000 in gold, dollars, and unexhausted credits may last Britain and the sterling area until midsummer. After that, it will just be impossible to buy either the food or the raw materials which are necessary for Britain to eat and work. The specter of starvation and mass unemployment is now alarmingly close.

To translate the tables and figures of the white paper into more homely terms, Britain has been living like an improvident family which, failing to make both ends meet, first spends the accumulated capital of the past, then borrows from friends—from American friends, from Canadian friends, from South African friends—and when their loans are exhausted, begins to pawn the furniture. How else can one describe the latest deal with Argentine in which the whole capital asset represented by the British-owned railways is bartered away for 18 months 'supply of meat? It is, of course, true that there is nothing discreditable in the events which led the British community to this desperate plight. Alone of the belligerents (except the German aggressors), Britain fought in two World Wars from the first day to the last. The income from overseas investments which nearly bridged the gap between imports and exports in 1938 disappeared in the struggle. Exceptional conditions of world demand created by war devastation added £300,000,000 to the cost of British imports in 1947. But in fact the reasons which have brought the British to beggary are less likely to be remembered than the fact that they are beggars. The old soldier showing his campaign medals at the street corner is an object of pity, not of respect.

When a family faces bankruptcy, either it goes under to a life of perpetual makeshift and pauperism, or it restores its solvency by vigorous action—by buying less, by cutting down every kind of expense and by straining every nerve to sell more of its goods and services. A nation is in no different case and the choice open to the British people is in reality precisely the same difficult choice between pauperism and gruelling recovery. The only question worth asking today when the crisis is, in Sir Stafford Cripps' words, not a matter of years, but of months and weeks, is what further steps the British people can take to consume less and produce more, to reduce their standard of living, and at the same do harder work. The subject is being debated in the Commons as the Economist goes to press, but clearly the Government's plea—it is not much more—that neither wages nor profits shall rise at this juncture is one small part of the much bigger effort that is needed to restore solvency to the British people.

Both wages and profits have to contribute their share. Bankruptcy is a family responsibility and no section of the community can avoid its hardships. The real need for workers and managers alike is longer hours and more output for the same income. In this way, more goods could be produced for export without new financial pressure being created to divert those goods to consumption at home. So drastic a departure from current industrial practice is too much to hope for, but at least the principle of no further wage increases save for cases where workers are genuinely below an adequate level of subsistence must be endorsed. Further, there is certainly a case for increasing the contribution to national solvency by those who, despite their reduced standards, can still afford it best. Heavier taxation or limitation of dividends and the control of expense accounts (upon which so much of the conspicuous waste in the big cities is based) will help politically, and to some extent economically. Even if such steps must wait upon the budget, their announcement would go far to relate the question of wages to the wider action needed to counter bankruptcy abroad and inflation at home.

But, although it will be necessary to temper the cuts by considerations of social justice, the brute fact remains that standards of consumption in Britain do not reflect the insolvency which may lie only a few months ahead. Can it be said that the rationing of domestic fuel has been drastic enough in view of the vital importance of coal as an export? Can Britain afford £200,000,000 for government expenditure overseas, or to feed a million mouths in the forces in return for no productive work? It is easy to make a case for keeping 2,000,000 government servants, but if 500,000 were returned to industry, would the gain in output not ease the burden of the controls? By what yardstick can the overseas expenditure of £50,000,000 on "tourism" in 1947 be justified? It is no longer a question of choosing whether or not to maintain certain amenities. The stark fact is that the means to provide them no longer exist.

In spite of the recent cuts in capital expenditure, it is clear that more has to be done. No one will criticize the Government for wishing to build better schools, new hospitals, and more and better-equipped houses. But this program has added to Britain's insolvency by diverting materials and manpower from the export industries; in that sense it is Americans, Canadians, and South Africans who have been paying for part of the British program of development at home. No one denies the desirability of these things, but it is not usual to add a bathroom to the house just as the receivers walk in.

The last items to cut back should obviously be productive assets, the renewal and modernization of plant. The reductions already announced in these items are severe—probably too severe—but in another field the figures suggest that outlay has been too heavy. The sum of £180,000,000 for new assets overseas, a large part of which must be represented by various schemes of colonial development, seems unduly high in relation to the time which must elapse before they begin to yield their fruits.

These are a few instances picked from a possible list of further cuts and reductions, but simply to set them down shows how painful their execution would be and what appalling stresses it would introduce into the national life. But bankruptcy is necessarily an ugly, painful, and distressing business. It tests the temper of the most united family. It requires not only fortitude and patience but considerable humility to weather it with dignity and success. Yet, bankruptcy is nevertheless the crisis through which this nation may be about to pass. What are its chances of surviving this latest test—a test with none of the glory and solidarity of a nation at war but perhaps more gruelling as a result?

It cannot be said that the outlook is encouraging. In the first place, the country so far has remained in ignorance of the facts. The government's powers of explanation have never been high, but its inability to convey to the public the significance of the gathering economic crisis is beyond all previous failures. And this is not simply a question of poor public relations. The failure goes deeper. It is not only that the government has not talked as though the crisis were serious. Until quite recently, it has not behaved as though it were. In 1946, before the catastrophic rise in American prices and the fierce winter, there was some excuse for believing that Britain could recapture its export trade, police Europe, rebuild its industries, create new social services, rehouse the people and provide cheap food all at the same time. But the writing on the wall was there for all to see after January or February 1947. The fatal flux of gold and dollars had begun. The gap between imports and exports was growing. Home production continued to lag, but the government went on its Micawberish way, waiting for something to turn up. Mr. Dalton was happy with his balanced budget, Mr. Morrison declared that no further sacrifices could be demanded of the people. Today, with the gap wide open and no prospect of filling it from British resources, even Sir Stafford Cripps' realism may be too late.

If the British had been made to realize in 1945 that in many ways the problems of reconstruction facing them were no less urgent than that which faced, say, Poland, they might have set to and worked as the Poles have done; but cradled in illusions, they have advanced in their crisis like somnambulists. It is the illusion either of infinite prosperity or of infinitely squeezable profits that makes it still possible for the trade unions to press for more wages for fewer hours. It is the illusion of wealth withheld by a spiteful government that has turned large sections of the more well-to-do against the controls and restrictions which they recognized as necessary during the war. Yet the reality is of a nation in greater economic straits than at any time since the Napoleonic wars. If the present attitude of the different classes in society cannot be mobilized into something more than the collective and disgruntled selfishness they show today, then the British will be obliged to face their supreme economic crisis without the only assets upon which they could still draw—their political balance, their deep natural unity, their phenomenal staying power.

This statement will no doubt be contested. Why speak of "Britain's only assets" when there is every chance that by midsummer the Marshall plan will have been passed by Congress and assistance will be assured for the next 18 months at the least? Even Sir Stafford Cripps has said that the only hope lies in American assistance, to give Britain the necessary time to bring about the restoration of normal conditions. But herein lies precisely the danger. Continual borrowing can have the same effect as continual drinking. The borrower's—like the drunkard's—sense of reality tends to fade. Britain has already had the American loan and the Canadian loan and will get the South African loan. All have been necessary, but all have helped to mask from Government and people alike the country's true economic straits. A standard of living has been maintained, reserves have been eaten up, expenditures undertaken on a scale which is quite out of accord with Britain's real economic position. And what guarantee is there that the Marshall plan may not be used in the same way? The only proper, the only long-sighted, the only courageous course would be for Britain to pursue now the policy it would pursue if the Marshall plan were reduced to a half or a third and to use the surplus thus created to build up reserves, modernize industry, develop economic integration in western Europe, and undertake now the program of hard living and hard working in which in the long run salvation alone will lie.

Democratic Education—University of Minnesota

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. MacKINNON. Mr. Speaker, as a member of the Minnesota Legislature

from 1934 until I left to serve in World War II, I was privileged to represent my alma mater the University of Minnesota. This great educational institution was located in the legislative district I then represented and is also within the congressional district I presently serve. As the representative of this institution in two legislative bodies I have on many occasions had an opportunity to observe the excellence of its work in many fields. It is a truly democratic institution—and its fundamental aim is to serve the citizens of Minnesota. In this respect it has more than fulfilled its purpose and the people of Minnesota are grateful for the high caliber of the service rendered them. They have responded through their legislature by furnishing the university its primary support. They have also continued to adhere to a sound original program that was established many years ago. Where some other States have diffused their support for higher education, Minnesota has concentrated her efforts. The results of this sound policy are to be seen today in the great university that Minnesota has become.

The president of the University of Minnesota at this time is Mr. James L. Morrill and the educational leadership that he has already evidenced is in the same tradition as that demonstrated by his notable predecessors in this position.

Time has proved the wisdom of the choice of men that Minnesota has selected to head her university and of the course that Minnesota has followed in supporting higher education. For today the University of Minnesota ranks on a par with the finest colleges and universities of the world. It is thus entirely proper that a great national magazine should select this leading educational institution as the first in a series reporting on the outstanding universities of our Nation.

Under leave to extend my remarks, I include the following article by Collie Small which appeared in the January 1948 issue of the Cosmopolitan magazine:

THE UNIVERSITY OF MINNESOTA

(By Collie Small)

The University of Minnesota is a colossal monument to mass education.

Recently it installed its own atom smasher, a bulky cylinder that thrusts its head up from the depths of the campus. An electrostatic generator, turning up 5,000,000 volts, it is the most powerful of its type in the world. Inside, the atom smasher is an ominous tangle of wires, tubes, dials, and switches, all bent to the service of science. Outside, it is dominated by the huge Minnesota football stadium.

And if the football stadium seems to contradict the atom smasher the arrangement is all the more reasonable. A university is many things to many men, and it thrives on contradictions.

Minnesota is no exception. A State university, it is committed to the public service. It is the highest seat of learning in the State. It is passionately devoted to the advancement of learning. Yet, it has suffered the contradiction of being forced to cater to more average students than superior ones, to more students wandering uncertainly through college in quest of automatic degrees than students earnestly seeking the most in higher education. The situation is not unusual. It is a tribute to Minnesota, however, that it has been able to shape itself to the needs of the average student without distorting itself as a university.

Minnesota is a great university. Even physically, it is overwhelming. In sheer numbers it is the largest university on a single campus in America. (California, with several different campus sites, is bigger.) Its red brick and gray limestone buildings, huddled together in scholarly communion on a bluff overlooking the Mississippi River in Minneapolis, shelter some 28,000 students. Future citizens come off its assembly line at the rate of five graduating classes a year. If the faculty and the janitors are included in the census, the university population swells to 36,000 persons, making it the fourth largest city in the State. Only Minneapolis, St. Paul, and Duluth are bigger.

The university operates its own airport for fledgling fliers. And aeronautical-engineering students pick over the skeletons of the several planes owned by the university. There is a university radio station, KUOM, over which professors with microphones on their desks broadcast their classroom disquisitions. An alert student, by enrolling only in those courses which are broadcast, could conceivably win his degree without ever getting out of bed.

Like any community of 36,000 people, the university maintains a police force equipped with radio cars, a crime laboratory, a lie detector, and the right to pursue and arrest fugitives anywhere in Minnesota. Crimes against the campus are committed largely by irreverent outsiders, but there is a difficult traffic problem for the police to handle, and last year they conducted a devastating assault on gamblers at athletic contests.

As a member of the Big Nine, Minnesota has maintained a position of eminence in the conference and on the national sports scene. During the thirties her Golden Gophers consistently ranked the Nation's football teams; however, when the celebrated Bernie Bierman went into service her glory faded. But Minnesota is now building again. In the 1947 Little Brown Jug meeting with Michigan, her sophomores showed unexpected power. The highly touted Wolverines, slated to steam roller the Gophers, barely managed to win, 13 to 6.

The Little Brown Jug classic is one of the oldest, most colorful sports rivalries in the country. In 1903, after Minnesota and Michigan had fought each other to a 6-to-6 standstill, Michigan left on its bench a brown 10-gallon jug which has remained a coveted trophy ever since. In 30 games with the Wolverines, Minnesota has captured the jug 11 times.

The Minnesota Daily, the student newspaper, boasts the largest circulation of any college paper—34,450 at the last count. The university maintains its own student symphony, but defers to more exacting tastes by sewing also as the home of the Minneapolis Symphony, conducted by Dmitri Mitropoulos. This year, the University Theater will experiment with such adventures in Thespia as Oedipus the King, Macbeth, and Lysistrata, having disposed early last season of Electra, Amphitryon, and The Skin of Our Teeth, among others.

All that, of course, is pretty much standard fare at any typical university. But if Minnesota intended to be no more than a typical university, it overreached itself grievously in 1940 when it built its $2,000,000 student center, the Coffman Memorial Union. There is nothing typical about the union. It is a magnificent temple dedicated to pleasure which exceeds by far any possible flight of the imagination.

There are, for example, 20 dining rooms, a post office with 18,000 boxes, an underground garage, 18 grand pianos, a soda fountain, a barber shop, and a bookstore which wisely stocks no textbooks in this frolicsome atmosphere. There are also billiard tables, complete with undergraduate pool sharks, a swimming pool, chess and checker tables, card tables, ping-pong tables, and 16 bowling alleys complete with pastel blue bowling balls. For the faculty, there is an Olympian retreat called the Campus Club, with its own dining rooms, lounges, recreation rooms, and even a "quiet room" of monumental sanctity where tired professors repair to sleep off the effects of difficult classes.

At any university so elaborately equipped, there is always the danger that the students will forget why they are there. Minnesota does not pretend to be teeming with eager young scholars searching desperately for the truth, but there is an enormous amount of studying done.

The curriculum is positively staggering. The university's graduate schools offer advanced study in every field except theology. There is a college of agriculture, forestry, and home economics in St. Paul, on the "farm" campus, which is a short trolley hop from the main campus in Minneapolis. There is a law school, a justly famous medical school partially endowed by the Mayo Clinic, an institute of technology, a college of science, literature and the arts, and a dozen other colleges. There are courses in anything and everything. You can even learn to play the trombone and get from two to four university credits a term for it.

The Minnesota philosophy of education has been described as "democratic" in contrast with the "aristocratic" type of classic education championed by the large private schools. The "aristocratic" school emphasizes the cultures of the past, offers the same courses for all students, largely ignores vocational subjects, and selects its students according to a rigid system that involves little or no consideration of individual needs.

The admission requirements at Minnesota are flexible; there are even a few students without high-school educations. For those with special needs there is University College, a division of the university that manufactures curricula to order. Not long ago a young lady about to inherit a stock farm was rescued from her dilemma of what to study by a course that somehow managed to combine business administration with animal breeding. Another student professed to be in urgent need of a course in "medical journalism," and though University College was baffled temporarily by the proposition, it rallied bravely and turned out a medical journalist, or at least what it assumes to be a medical journalist.

Of all the students who enter Minnesota as freshmen, nearly half have disappeared by the third year. The university does not delude itself that the sole cause of this high mortality rate is a stiff curriculum. Many students simply are not college material; others can afford only a year or two. For such students Minnesota has taken a long stride forward with its general college.

The general college course is for 2 years, and the curriculum places the emphasis on utility rather than on culture or highly specialized knowledge. Some courses in general college are strictly vocational; others have vocational applications and deal with broad, general principles which the college itself hopes will "enable the student to grasp the significance of an area of employment rather than the specific skills required by a particular job."

The university requires some students to enter General College directly, while others are shunted to it if they fail to show an aptitude for university work or if General College appears to be better suited to their needs. As was to be expected, in 1932, when General College was established, the university regulars developed the habit of referring to General College as "All Fools' College," and for a time succeeded in creating a rather bleak and distorted image of it.

The administration countered, however, by sending its top professors to General College, thus silencing the amateur critics.

With rare consideration for its graduates and others in need of occasional freshening, Minnesota also established a center for continuation study. Filled to capacity every term, it invites professional people to return to the campus to refresh themselves with special survey courses and to study new developments in any number of fields.

The faculty at Minnesota is not the elite faculty of a Harvard or Columbia. Nevertheless, it is impressive. Dr. Alfred O. C. Nier, who first separated uranium 235, is on the physics staff; he is currently carrying on experiments similar to those conducted at Oak Ridge. Dr. John J. Bittner, head of the department of cancer biology, operates a colony of 20,000 mice and is noted for his discovery of the milk agent in mammary cancer.

The Nation's insurance companies have been looking nervously at Minnesota's laboratory of physiological hygiene while that department conducts experiments calculated to prove a specific relationship between obesity and heart disease. These experiments involve weighing people under water. If the laboratory proves what it expects to prove, the life-insurance companies may have to change their actuarial tables.

Since it is sponsored by the State of Minnesota, the university is naturally sensitive to the peculiar problems of its benefactor. Dr. E. W. Davis, head of the mines experiment station, for example, is doing research on the processing of low-grade ores, hoping to bolster the diminishing supply of high-grade ores in Minnesota. The agricultural school has developed new fertilizers, a hybrid corn, and a superior strain of farm animal known simply and rather inelegantly as Minnesota No. 1. Minnesota No. 1 is a hog, noted for the lean, succulent flavor of its bacon, pork chops, and ham.

All this, of course, is big business. Last year, the cost of operating the university was roughly $20,000,000. Nearly $9,000,000 was spent on instruction and research alone. James L. Morrill, the former city editor of the Cleveland Press who serves as Minnesota's eighth president, balanced the books neatly, however, with income from the State, the Federal Government (which provided money for research, instruction and extension), and from various funds and fees.

Almost 85 percent of Minnesota's 28,000 students are residents of the State. The university, faced with the problem of educating its own family, does not encourage outsiders to apply for admission; to keep them away, it has established a tuition schedule that is higher for out-of-Staters than it is for residents. Last year, the demand for nonresident admissions was so great that the university had to lock the gates to some 13,000 applicants, enough to stock a new university elsewhere. This year, it was grimly prepared for 29,000 students, but the veterans did not appear as overwhelmingly as predicted, and the enrollment is a few hundred over the 28,000 mark.

Enrollment last year, however, showed an alarming jump of 80 percent over the previous peak year, and the university suddenly discovered that it didn't have any place to put its students, though it had built a village of Quonset huts and trailers to care for the overflow. Formerly, all students were housed within walking distance of the campus. Now, however, Minnesota is a trolley-car university, and it will accept rooms anywhere on the Twin Cities' street-car system for the duration of the emergency. Luckily, many students live at home, in Minneapolis and St. Paul, but this does not alleviate the crush on the campus, where, for example, 1,400 students are enrolled in the same economics class. They hold that one in an auditorium, and if it gets any bigger, they will probably have to move it to the stadium. The classroom shortage keeps lectures going well into the night.

Social life on the Minnesota campus is typical of the social life on almost any campus, but it is complicated by several factors. One of these is an interesting disparity in the ratio of males to females. There are three males to every female, representing either a superabundance of males or an acute shortage of females, depending on the viewpoint.

Immediately following the war years, there was a sharp decline in the tempo of social affairs, but gradually they are coming back. The Mardi Gras, for example, is an all-out party that compares favorably with the best campus celebration, and there is a great deal of interest shown annually in Snow Week, a midwinter expedition to Duluth. But the light snowfall of recent years has put a damper on that activity.

As on other campuses, and for some reason which has never been clearly explained, an astounding number of "queens" are enthroned each year. At Minnesota, the engineers and the foresters are particularly addicted to crowning queens, and the competition has been intense enough to bring out the cops.

The engine school men emerge on St. Patrick's Day bedecked in kelly-green hats and clay pipes; they spend most of the day either kissing the blarney stone or the young lady whom they have installed as queen. Not to be outdone, the woodsmen have a Forester's Day which is presided over by a duly elected "Uncle of Paul Bunyan," and a queen who is provided with four "assistant queens," thereby making her, in the opinion of the foresters, four times as queenly as the engine school sovereign.

Student fashions at Minnesota are dictated by simple standards of convenience and function. Saddle shoes and sweaters are still standard attire for the girls when the weather is good, and the men like lumberjack shirts and GI pants and jackets. In the winter, fashion is no problem at all. With the first hint of snow, the girls jump immediately into sheep-lined storm coats and fur-lined boots, and the men do the best they can with whatever is warmest.

The administration professes to find a certain amount of usefulness in fraternities and sororities, and, as a result, there is no particular pressure on them, as at some universities elsewhere. But the university does keep a restraining hand on rushing tactics. It is definitely against the rules to stampede confused freshmen into joining fraternities or sororities. They are introduced gradually into the mysteries and delights of Greek-letter organizations.

If there is a shortage of anything at Minnesota, it is of playboys. Some 60 percent of the students are working their way through school. It has been estimated that the minimum cost for a year at Minnesota is $850, and the average $1,000, exclusive of clothes and amusements. Unfortunately, most of the students at Minnesota are a long way from having even the $850 minimum, to say nothing of the $1,000 average. If the price seems high, the university points out sadly that even tuition and textbooks are victims of inflation.

University officials are frequently amazed at the lengths to which some students will go to get an education. Not long ago a desperate student approached the university with an offer to sell his body for medical research after his death in return for enough money to finance his way through school. Several years ago, the university discovered an undergraduate working as a street-car conductor in Minneapolis; for 2 years, he had been averaging something less than 5 hours of sleep a night.

Possibly the best student job in recent years went to a young man whose only duty was to close the doors of a fire station after the truck went out. Others worked as waiters, bakers, dishwashers, barbers, models, and chauffeurs. One youth supported himself by driving racing cars on the dirt tracks, and another—a house painter by avocation—hustled enough contracts from faculty members to insure four years at the university.

Most student employment is meted out by the university employment service, which has developed its own "civil service" system of job classification. Students are carefully graded for aptitude. Many veterans returned from war duty with special skills that they are now using to support themselves in college.

Total student earnings on the campus last year came to more than $2,000,000, and it is expected to be higher this year. Veterans, particularly, have shown a tendency to take on heavy work schedules to protect their savings, but they are gradually discovering that they can't work full time and study, too. The university itself recommends no more than 4 hours of work a day.

Before the war, Minnesota students borrowed between forty and fifty thousand dollars a year from the school to finance their educations. During the war, with the campus loaded with Army and Navy trainees, the figure dropped abruptly, but it is now rising again. A student is permitted to borrow only $250 in 1 year, and not more than $500 during his whole college career, except in the case of medical and dentistry students, whose fees and textbooks are higher and who may borrow $300 in any one year, and no more than $600 spread over the college years. A note is dated for 1 year, but as long as the student stays in school and does satisfactory work it is left open, and he pays only the interest until he graduates. Minnesota requires no security and no cosigners, nor does it require the permission of parents in the case of minors seeking loans. Despite the university's liberal attitude, the rate of number of repaid debts is high.

Many students, however, are still permitted to go down for the third time simply because they have exhausted the financial-aid possibilities. Scholarships would rescue them, but Minnesota, like most lowly endowed State universities, is weak in scholarships. One Minnesota official stated recently that no more than six scholarships were available for the whole freshman class, which normally numbers between seven and eight thousand students. Privately endowed universities are likely to subsidize half the freshman class. The situation at Minnesota and other State universities, it appears, will be corrected only by divine intervention or a more generous circle of friends.

It has been fashionable in recent years for university students to govern themselves, or at least to create the illusion of self-government. At Minnesota the "student bill of rights" has granted the students, according to the university handbook, "wide and general privileges which are similar to those enjoyed by responsible citizens in every community."

Actually it is doubtful if any of the student councils are responsible for anything very important. The All-University Council, for example, is the supreme body and is elected by the student body; yet it sets no policies and performs no perceptibly greater function than to designate 1 week each year as homecoming. The Associated Women Students is a large organization for women. Actually the strongest student voice is that of the Minnesota Daily.

Most of the students, like students anywhere, view campus politics with monumental apathy, and, as a result, the workings

of student government, such as it is, are controlled by a few eager opportunists. There are, however, several campus political parties, and the skullduggery frequently reaches a high professional plane. Harold Stassen left behind an illuminating record as a campus politician when he graduated from Minnesota 18 or 20 years ago.

A small group of students, brandishing the spear of intellectual freedom, constitutes the core of the student thinkers. Henry Wallace was sponsored by a student group not long ago, and Senator BALL, of Minnesota, has also appeared on the campus. Senator BALL, unfortunately, was subjected to a barrage of heckling truly remarkable for sustained effort.

The students at Minnesota are not exceptionally concerned with the political state of the Union or with the political state of the world. The campus Republican club, for example, claims only 350 members. The United World Federalists, an organization devoted to world government, numbers some 200 at the outside.

The left-wingers on the campus concentrate their forces mostly in the Minnesota chapter of the American Youth for Democracy, a group which includes 87 of the university's 28,000 students. The University of Illinois banned the AYD from its campus last August, but Minnesota feels that the group exerts so little influence it is best to ignore it rather than call attention to it and thus incur the displeasure of a lot of students who, being traditionally idealistic, would be inclined to support an under dog. Minnesota further feels that a university is the one place that can afford to support a conflict in ideas, and, in this sense, at least, the AYD serves a definite purpose.

Since the war, Minnesota has experienced much less of the collegiate rah-rah and coonskin spirit generally associated with a university. The students appear to be more serious now, and the only real outburst last year came when a group of veterans buried the legendary Kilroy in front of the student union. It was an elaborate ceremony, and Kilroy lay in state on the campus for several days with an ROTC guard of honor.

Even the campus humor magazine, the Ski-U-Mah, has sobered, and is not carrying the usual quota of jokes. This will come as a distinct relief, incidentally, to old college-humor magazine readers who have suffered through an endless rotation of bad jokes for years. All good college men will remember: "Waiter, there's a fly in my ice cream." "Serves him right—let him freeze."

The returning veteran has had much to do with this new attitude. All students appear to be much more concerned with post-college security than ever before, and in the case of the veteran, the problem is particularly acute since, as often as not, he has married and has taken on new responsibilities. Age is overtaking him, and the ominous signs of a possible business recession are prodding him to greater effort. It is significant that, at Minnesota, at least, his grades have been appreciably higher than the grades of nonveterans.

As for the university itself, it hopes to endow its students with judgment, perspective, and the skills to make a living. Dr. Morrill has said that Minnesota is attempting to impart a strong commitment to public service and "an understanding loyalty to the kind of political, economic, and social order which made possible the opportunities students have had at Minnesota."

Dr. Benjamin Fine, an authority on education, recently paid the University of Minnesota the supreme compliment.

"In many ways," Dr. Fine wrote, "the University of Minnesota may serve as a typical model for the democratic college of the future."

Joe Martin in Iowa

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Council Bluffs (Iowa) Nonpareil by Mr. A. M. Piper, editor, in connection with Speaker MARTIN'S visit to Des Moines, during which he addressed a large gathering of Iowa Republicans.

In this editorial Mr. Piper voices the sentiments of millions of Americans who know our Speaker best or have followed his services to the American people during his many years as a loyal public servant.

JOE MARTIN is held in the highest esteem by not only his own party members in Congress but also by those who sit across the aisle.

The editorial follows:

JOE MARTIN IN IOWA

Speaker JOE MARTIN came to Iowa Monday. Of course, we should refer to him as the Honorable JOSEPH WILLIAM MARTIN, JR., Representative from the Fourteenth Massachusetts District, and Speaker of the National House of Representatives.

But Joe doesn't care for titles. He prefers to be known as Joe. That is what all of his friends call him, and most of the hundreds of thousands of residents of his district.

JOE MARTIN is a man of the people, as common and friendly as they make them. He gets acquainted with everybody and visits with more people in the course of his travels than any other man we ever met. He is always accessible, always ready to listen to the other fellow's troubles and do what he can to get them straightened out. That's one of the reasons he has been elected to Congress every election since 1924, polling the full Republican vote every time and often receiving half or more of the Democratic votes in the district.

But there are many other reasons why Joe has been a Congressman for 24 years, why he was elected minority leader in the days when Republicanism was at a low ebb, why he was chosen Speaker without opposition, and why he ranks above many leading statesmen in the country.

He knows more about the workings of the Federal Government than most Members of Congress. He is a superb organizer. Nobody ever called him a boss, but the Republican Members of Congress follow his leadership, not only willingly but enthusiastically. The Democrats respect and admire him. He doesn't have an enemy in Washington, or anywhere else.

JOE MARTIN is a man of the highest integrity. He is a Republican first, last, and all the time, but not a narrow partisan. What is best for the country determines his course.

* * * * *

Joe delivered a rousing speech to Republican committeemen and party workers in Des Moines Monday. It was the best speech we ever heard him make. He certainly rang the bell in Iowa.

As Speaker of the House, MARTIN is next in line of succession if anything should happen to the President.

Everywhere he goes, and Iowa is no exception, you hear rumors that he may be in line for the Presidency, regardless. If the cards should fall that way, the Nation would have a Chief Executive with only one ambition—to do his best for his country.

The Knutson Tax Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1948

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following article written by H. H. Bookbinder which furnishes interesting information on the tax bill which passed the House a few days ago. The article follows:

THAT INCOME-TAX FARCE AGAIN

Here we go again! The Republican chiefs of Congress are trying again to reduce taxes. Last year they failed twice to get their tax reduction approved by the President.

The GOP has announced that the first order of business in the 1948 session of Congress will be a new version of their income-tax proposal. Representative KNUTSON, Minnesota, Republican, who fathered last year's bills, has announced that his new bill is veto-proof, because it meets all the serious objections to the earlier bill and provides more relief to low-income families.

Almost all the publicity so far does make it seem like the new bill is a major improvement over the old ones. It seems to meet the major argument presented by President Truman for vetoing the old Knutson proposals, namely, that they "reduce taxes in the high-income brackets to a grossly disproportionate extent as compared to the reduction in the low-income brackets."

As a matter of fact, however, the new bill is subject to the same criticism as was directed against the old ones.

Statistics are funny things—if you are not careful. Let's take a look at some of the statistics that have been given lots of publicity in order to give the impression that the new Knutson proposal will benefit the poor at the expense of the rich. In the following table, present taxes and those resulting from the proposed reduction are given for various income levels. "Net income" means yearly income, after normal deductions, but without personal exemptions, for a family of four.

Net income	Present taxes	Proposed taxes	Percent reduction
$2,400	$76		100
$3,000	190	80	58
$5,000	589	386	35
$10,000	1,862	1,210	35
$20,000	5,890	3,656	38
$50,000	24,000	15,986	34
$100,000	62,301	44,224	29
$500,000	406,600	343,940	15
$1,000,000	838,850	732,966	13

Now, this looks pretty good. What are we yelling about? The family with a $3,000 income, or about $60 a week, has its taxes reduced by 58 percent. This percentage goes down and down, until the man with a million-dollar income saves only 13 percent in taxes. Isn't that fair?

WHAT'S WRONG?

Well, here's the gimmick. The important thing to you is not the percentage by which your taxes are reduced but the percentage by which your take-home pay is increased.

Now, let's take the table above, and do some arithmetic with it. Instead of yearly income, let's consider weekly income. Then let's see what the take-home pay is now, based on today's tax rates. Let's compare that with the take-home pay resulting from the proposed bill.

Net income (weekly)	Present take-home pay	Proposed take-home pay	Percent increase
$48	$46.48	$48.00	3
$60	56.20	58.40	4
$100	88.22	92.28	5
$200	163.00	177.00	9
$400	282.00	369.00	13
$1,000	518.00	680.00	31
$2,000	754.00	1,115.00	48
$10,000	1,868.00	3,121.00	67
$20,000	3,223.00	5,340.00	66

This table tells a different story, doesn't it? The average workingman would have his take-home pay increased by 3 or 4 percent, but the poor suffering banker or industrialist, earning $10,000 a week—a week, not a year—would have his take-home pay increased by 67 percent. The worker has about $1.50 a week more to spend, while the $10,000-a-week man has about $1,200 a week more to spend.

Bad as it is, you might think that this latest Knutson monstrosity is at least an improvement over last year's bills. The bill is better in that it does give somewhat more relief to the lower brackets—by raising personal exemptions from $500 to $600. But it is worse in that it helps the rich even more than before. Here is the proof:

Comparing the present GOP bill with the GOP bill of 1947, we find that the tax reduction is $50 greater for the $3,000-a-year man, $300 greater for the $10,000-a-year man, $5,000 greater for the $100,000-a-year man, and $20,000 greater for the $1,000,000-a-year man.

In other words, KNUTSON has "improved" his bill over last year's by giving the average worker $50 more tax relief and the millionaire $20,000 more tax relief. Not bad—if you're a millionaire.

CIO POSITION

The CIO has taken the stand that if there is to be any tax reduction the entire tax relief must be given only to the lower brackets. The simplest and most effective means is to increase exemptions. By doubling present exemptions, a family of four with an income of $80 per week would not pay any taxes at all. Such a change in the tax laws would reduce total tax revenues by no more than the Knutson proposal, and would provide needed relief for those families that have been hardest hit by the rapid rise in the cost of living.

H. H. BOOKBINDER.

Brooklyn Adopts Breukelen

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. MULTER. Mr. Speaker, Brooklyn, N. Y., has again shown the way. Some of its leading citizens of all races, creeds, and origins have organized under the name of "Brooklyn, New York, adopts Breukelen, Holland Project." Having discovered that its namesake in the Netherlands was in need, they decided to adopt it.

This is not a fund raising campaign. They are asking for things in kind. They have no paid staff. Every one is a volunteer, rendering services gratis.

Let me quote from a recent letter to me:

We need the help of everyone in Brooklyn. In cases where it is not practical to send goods, we're glad to receive a check. This is immediately used to buy at wholesale some item on our list. As we have no overhead every cent is spent for goods.

Can you think of a better way to foster foreign relations * * * * or a better piece of good publicity for Brooklyn? By the way, the people of Breukelen did not ask us for help. We asked them if they needed anything and this was done through the consul general in New York and the burgomaster in Breukelen. This is a one-time campaign only, and once we get them these goods they have a fine start to help themselves * * * which is what they really want to do.

Following is a circular giving more details about the project:

BROOKLYN ADOPTS BREUKELEN PROJECT

FACTS ABOUT BREUKELEN, THE NETHERLANDS

Breukelen has 5,100 inhabitants of whom approximately 3,400 are persons upwards of 18 years; and approximately 1,700 18 years and under.

Of these 3,000 are members of the Dutch Reformed Church; 600 of the Reformed Church; and 1,500 of the Roman Catholic Church. There are 4 churches in Breukelen. (1 Dutch Reformed; 2 Reformed; 1 Roman Catholic.)

Breukelen has a Boy Scouts and Sea Scouts organization; a rest home for the aged; two infant welfare centers and a Catholic welfare group.

BREUKELEN'S NEEDS

According to a letter received by Miss Marguerite A. Salomon from the burgomaster of Breukelen, the following is a list of the most urgently needed things * * * and to quote from the burgomaster's letter "In our opinion you can best help by sending materials. The women can make the clothes then themselves. In view of different cuts and especially different measures, this seems to us the best way."

Knitted underwear for children, men and women about 5,100 units; sizes: 2–6 years, 600; 7–12 years, 750; 13–18, 850; men's, 20 percent size 32; 20 percent size 34; 20 percent, size 36; 40 percent, size 38; women's 25 percent, size 36; 50 percent, size 38; 15 percent, size 40; 10 percent, size 42.

Sheets and pillow cases for maternity cases—approximately 300 of each.

Baby clothes for children (up to 2 years) about 250 pieces of each.

Outing flannel for babies; 3,000 diapers; 1,000 crib sheets; 3,000 safety pins.

Outing flannel for pyjamas (1 per family) approximately 10,000 yards.

Cotton material for women's clothes (1 per family) approximately 8,000 yards.

Cotton material for men's shirts (1 per family) approximately 5,000 yards.

Overalls (small, medium, large) about 200.

Work trousers for men (small, medium, large) about 200.

Knitting wool for sweaters and socks.

Men's suits—20 percent, size 38; 50 percent, size 40; 20 percent, size 42; 10 percent, size 44.

Bicycle tires and tubes, size 38x1½.

Notions: Cotton thread, darning cotton, rubber bands, pins, studs, buttons, snappers, arm-bands (for men's shirts), garters for men, haberdashery.

There are many items not mentioned by the burgomaster that would be most welcome.

To supplement the heavily starchy Dutch diet they would appreciate: meat spreads, peanut butter, cheese, jams, marmalade, luncheon meats, jellies; hard candies, sugar, jams, raisins, canned fruits; lard, cooking oils or shortenings; tea, coffee, cocoa, chocolate; canned and packaged foods of all varieties especially those which do not require prolonged preparation or addition of milk, sugar, or eggs; seasonings and flavorings, condensed milk, powdered milk and eggs.

Also girdles and corsets, sanitary napkins, rubbers; wash clothes, towels, soap, youth handicraft materials, youth sports equipment.

All shipments are handled free and duty free through the courtesy of the United Relief for Holland.

Mr. Speaker, the thought behind this project is an excellent one, and if it is adopted by other communities it will go a long way toward solving our world problems. I urge every Member of Congress to start a similar movement in his own community.

New York Teacher Offers School Finance Plan

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Christian Science Monitor, Boston, on Saturday, February 7, 1948:

NEW YORK TEACHER OFFERS SCHOOL FINANCE PLAN

(By John L. Blackman, Jr.)

Widespread interest in learning and teaching evoked by the reports of President Truman's Commission on Higher Education has drawn attention to an unusual plan for financing education put forth by a New York public-school teacher.

The plan for economic stability based upon the use of banking credits for education is presented by Mrs. Viola Lurch Cox, teacher in the Jamaica (N. Y.) Vocational High School, in a book, "Wealth Through Education," published by Stephen-Paul Publishers, New York. Believing that education is the true source of wealth not only for individuals but for nations, the author tells how she would increase the productive efficiency of individuals, and hence add to the wealth of nations, by making educational opportunities more widely available to all.

Mrs. Cox's plan, in essence a system designed to permit commercial banks to make personal loans to students under the guaranty of the Federal Government, had its origin in the long depression of the thirties.

In those years Mrs. Cox saw the education of many able students cut short by the necessity of supporting their families. She felt she must find a means of keeping the children in school.

CREDIT EXPLORED

Finally, with the cooperation of her husband, S. Ernest Cox, she began investigating the uses of credit in the history of many nations and became convinced that it not only facilitated material development, but had

encouraged in the borrowers more faith in themselves and a higher sense of responsibility and capacity.

She found that the means of obtaining credit have been extended greatly in the United States in recent years. The Federal Reserve System has facilitated the provision of reserves for the commercial banks. The Federal land banks and other agencies have increased the credit sources for farmers. The Home Loan Bank System has done the same for home owners. The Federal Housing Administration had inaugurated a new type of bank credit, insured by the Federal Government. But no comparable credit facilities have been made available for education, upon which the productive capacities of all workers depends.

It was in personal credit, then, that Mrs. Cox found what she believes to be the answer to her long inquiry. This answer she has now set forth in a volume entitled "Wealth Through Education." Dr. Willis A. Sutton, superintendent emeritus of public schools in Atlanta, Ga., and past president of the National Education Asscciation, has given his endorsement in an introduction to the book.

EDUCATIONAL LOANS

Mrs. Cox's plan, which she terms "Wealth for All," has attracted the attention of many educators and Members of Congress. It is carefully described in the book, together with a detailed estimate of its probable effects on the national income, national debt, effective tax rates, price index, and production index during the first 20 years after its establishment. Its principal features may be summarized as follows:

1. All young people, from the age of 10 to 24, would be made eligible for Government-insured educational loans to be obtained locally from commercial banks, under rules to be established by State loan boards. (Although primarily designed for use in the United States, Mrs. Cox believes the plan could, with slight modifications, be adapted to most other countries.)

2. The State loan boards would determine the amount of money to be loaned to each age group and establish rules for its proper use. The boards would be selected from business, labor, and professional groups by State and local boards of public education.

3. Mrs. Cox has suggested the following tentative amounts for the annual loans:

Age group	Annual loan	Sum due after 20 years
10 to 14	$400	$600
15 to 18	800	1,200
19 to 24	1,200	1,800

Thus a young couple which had availed itself of the average benefit of the educational loans and took the usual length of time to complete elementary school, high school, and college, would accumuate a joint debt of about $30,000, according to Mrs. Cox's estimate. But the author is sure the students would be stimulated by the new sense of responsibility resulting from the loans to complete their schooling in less than the usual time and so would need loans totaling considerably less than $30,000.

TWENTY YEARS AFTER

4. The students would be charged a rate of 2½ percent simple "interest" (virtually a service charge), but neither principal nor "interest" on any of the annual loans would fall due until 20 years afterward, when both would become payable on the first of these loans in 12 monthly installments. Thus the earliest that any loan would be due would be at age 30 for a loan obtained at age 10 (with parents' endorsement in this age group). The other loans would become due on successive years.

5. Of the 2½ percent payments, 1 percent would go to the banks to meet the expenses of servicing the loans, and 1½ percent would go to the Federal Government. Neither bank nor Government, of course, would receive any payments during the first 20 years of the plan. The 1½ percent received by the Government would be used for three purposes: (1) to insure the student borrowers against certain contingencies, namely, to cancel the loans of students who passed on or were permanently disabled before their loans fell due (2) to insure the banks against loss if a loan was defaulted by the borrower and his five fellow-student endorsers (this feature is adapted from the FHA system of insuring mortgage loans); (3) to pay $300 a year to parents for each child in the age group of three to nine who attends school 10 months a year, or who, up to the age of five, is given competent nursery school training.

This, then, is a brief outline of the system of "dynamic dollars" which Mrs. Cox estimates would increase the school attendance of the United States from about 25,000,000 to about 37,000,000 in its first year of operation. The amount of loans required to do this she places roughly at $18,000,000,000. This sum would be bank-created credits, that is, new money added to the Nation's effective demand for goods. An additional $18,000,000,000 would be lent each succeeding year. Thus in the 20 years before the earliest loans fell due, approximately $400,000,000,000 of student credits would be created, according to Mrs. Cox's calculations. After the twentieth year, however, some loans would be paid off as fast as others were granted, hence the total credits outstanding would tend to stabilize around $400,000,000,000.

PROBABLE EFFECTS

The immediate impact of an increase of 12,000,000 in the school population of the country (roughly a 50-percent change) is fairly obvious. The need for new school and college buildings, for additional teachers, and for millions of textbooks would cause a boom in education that would put the present veteran-stimulated boom (at the college level only) in the shadow.

The effects on the national economy of the vastly increased spending by students and their parents would be complex as well as staggering in scope. The possibility of further serious inflation of prices, if the $18,000,000,000-a-year plan were put into effect at this time, is not ignored by Mrs. Cox. If the sums were business loans, some inflationary consequences might follow, she believes. But she maintains that loans to students will have the effect of increasing their personal capacities and character, and so will result at once in increased efficiency of production on farms and in factories. This increased output of goods and services will absorb the larger supply of money, raising the standard of living of the entire population.

This point, it should be emphasized, is the main thesis of the book—that personal student loans will bring greater national wealth by increasing the actual output of goods and services of a given number of workers. In different language, the productivity of each individual will increase. The two aspects of this most likely to receive attention in Congress, if the plan is presented to that body, are: (1) By how much will this productivity increase? (2) How soon?

INFLATION A DANGER

It would seem reasonable to expect a lag of at least a few years after the granting of the first loans before the initial beneficiaries could complete their education and obtain positions in which they could make $18,000,000,000 more goods a year than they would have made without the loans. In the meantime, it seems to this writer, if such a lag appeared, the students' spending of their loans would have an inflationary effect on prices—not only in the printing and construction industries but in food and clothing. If put into effect during a serious depression, however, the plan would tend to increase employment rather than prices.

Wealth Through Education is more, however, than the presentation of a plan for making education available to all. It is a thorough and careful study of two topics of fundamental interest: (1) The relation between education and a community's spiritual and material achievements, and (2) the value of credit in history and at the present day in the development of great nations. It is pervaded with a strong faith in democratic processes and in the dignity and inherent capacity of each individual man and woman. Its objective is equality of opportunity for every child in every nation. It is already fulfilling an important mission in focusing attention on this vital problem.

Joseph Scott, Eminent Advocate of the Irish Free State, Makes Vigorous Appeal to Senate Foreign Relations Committee for Freedom of Northern Ireland in Considering the Marshall Plan

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. McDONOUGH. Mr. Speaker, Mr. Joseph Scott, eminent Los Angeles attorney and vigorous advocate of the Irish Free State from its inception, accompanied by a delegation of other prominent Irish-Americans, recently appealed to the Senate Foreign Relations Committee urging them to make certain that any of the funds provided by the United States to implement the Marshall plan would not be used by Great Britain to continue their oppression of the six counties in Northern Ireland that are not now part of the Irish Free State.

The following is the statement made by Mr. Joseph Scott:

The CHAIRMAN. The first witness this morning is Mr. Joseph Scott, of Los Angeles, Calif. We are very glad to see you, Mr. Scott. Will you proceed in your own way?

STATEMENT OF JOSEPH SCOTT, ATTORNEY, LOS ANGELES, CALIF.

Mr. SCOTT. Thank you very much.

First of all, I wish on behalf of the committee to extend our sincere appreciation for the privilege and the pleasure of presenting our views to this honorable body, and I will say very frankly that we come here as taxpayers looking to this committee to listen to our views and give them the consideration we feel confident you will accord them.

The delegation is from all sections of the country. I come from Los Angeles, Calif. There have been a lot of people coming from our city to present their views to the Senate and the House of Representatives, but there need be no question with regard to this committee of ours as to how we stand on the fundamental principles of the American way of life. We are uncompromisingly devoted to the principles of the founding fathers and we are all of Irish stock—not all of us born in Ireland. Some were born in the faith of St. Patrick, but some of the greatest patriots we have had in the Irish cause have been men of the Protestant faith.

Regarding the Irish Free State, so-called, composed of 26 counties in Ireland:

Its first President was an Irish non-Catholic, Dr. Douglas Hyde, a distinguished Gaelic scholar, and not previously identified with Irish politics.

Gentlemen of the committee, I hope I do not have to expatiate upon the anxiety we have as American taxpayers in regard to the fundamentals of the so-called Marshall plan and where the funds are going to go.

Our information is that it is proposed that a good portion of this money is to go to London, to Downing Street, and it will be siphoned out of that seat of the English Government over to Belfast, which is the stronghold of a little corner of northeast Ireland which was cut off arbitrarily by Lloyd George and men of his type from the rest of Ireland, where the principles of the American way of life are unknown or ignored, and where the ascendancy of the imperialistic powers of England are exercised to the *n*th degree.

We feel, coming from a race that suffered persecution through the centuries, not merely for religious principles but for fundamental political rights, that we should present to this committee our reasons for taking what may appear at first glance to be an arbitrary stand.

I came to this country myself after matriculating in London University. I was not born in Ireland, but my father and mother were married in the city of Wexford, a little corner of Ireland where John Barry, "the father of the American Navy," as we like to term him, was born.

When I left to come to this country, my little Irish mother threw her arms around me and told me to fear nothing that walked the earth or crawled under the earth, but to love God above all things and be true to the principles of Jefferson and Lincoln. It happened that she, as a little Irish girl, had had her boyhood friends come back from Gettysburg; and I learned, Mr. Chairman, from my Irish mother what Lincoln meant at Gettysburg—that right made might and that government of the people, by the people, and for the people, with the help of God, should not perish from the earth. So I did not need to go to any American college or to any library of American literature. I got it from the womb of my mother.

That is the faith that has been fought for through the years. Every battlefield of the Republic, from Washington to the last great war, is marked with it. I have lived in California for 55 years. I have seen the little pueblo of Los Angeles grow from 60,000 people to nearly 2,500,000, and in our county now there are about 4,000,000 people. Our race was out in California before me. I can recall still Admiral O'Callaghan, with his flagship, the *San Francisco*, going down to his glorious death in the blue waters of the South Pacific. I can still recall Chaplain O'Callaghan, the Jesuit padre, who was designated by the skipper of his ship as the bravest man he had ever seen.

We feel, Mr. Chairman and gentlemen of the committee, that the Irish have been an asset to this country. We feel that the right to be free as nurtured in the Irish heart has been a welcome, appreciated virtue in the American way of life. My little Irish mother told me that we got it from St. Patrick; that he was a slave in the hills of Antrim from the time he was 14 until he was 18 years of age, and in his blood, in his veins as a youth, he detested slavery in any form after his bitter experience.

He impregnated the Irish with that same principle, and through the ages they have fought for liberty—not for economic security, merely, to have a slave mind, but to be free.

So men and women of the Irish race had a convention in New York a couple of months ago. I have been attending these reunions and conventions for over 50 years, and I can state, Mr. Chairman, that it was the most representative gathering we have ever had to perpetuate the ideals of the motherland of so many of us and to instill more deeply a fervent devotion to the principles of the founding fathers of our country.

There were all types of political beliefs there. I think, as a member of the buck privates of the Republican Party, I was very much in the minority, but somehow or other they insisted that I accept the job as chairman of the convention. I have never aspired to public life. My only experience in that respect has been as president of the city board of education of Los Angeles for several years. I followed the fortunes of Mr. Taft when he managed to take Vermont and Utah in 1910; I stayed with Hiram Johnson in Chicago when he fought a losing fight in 1920 in his efforts to secure the Republican nomination as President. And an old doughboy like myself had the privilege of nominating for President one of the greatest men the country has ever produced, my earnest personal friend, Herbert Hoover. So I have been around a little.

Senator BARKLEY. You wouldn't by any chance be for Wallace this year?

Mr. SCOTT. No, sir; and nobody in this delegation is for Wallace. And that is another reason why I want to impress upon you gentlemen this:

The Irish have wanted to own the soil of their own homes, I want to emphasize, Mr. Chairman and gentlemen, that men like Wolfe Tone from Dublin was a Protestant. John Mitchel, in the days of '48, just 100 years ago, one of the rebels of Ireland, was likewise an outstanding Protestant. He managed to come to this country and threw in his fortunes with the Confederacy.

I want to say that I think it is Hilaire Belloc, a very outstanding English philosopher and writer, who said, "You have got to sustain the idea of private property, otherwise you must restore the institution of slavery," and therefore it has been one of the frantic, desperate hopes of the Irish to own their own homes. And therefore for that reason and on account of its atheistic philosophy we are utterly opposed to communism in all its shapes and forms. We do not mind telling you we think it is straight from "the hob of hell." It is diabolical in all its assets, if it has any.

Therefore, we Irish—thoroughbred Americans, if I do say it myself—are one of the best assets this Nation has got in its fight against communistic control; first, because the Irish believe in a living God. We make no pretense of any evasive attitude toward a belief in the living God. We welcome and see with reverence and appreciation and emotion the picture of George Washington on his knees at Valley Forge. They can understand what Jefferson meant when he said, "With a firm reliance upon divine providence, we pledge our lives, our fortunes, and our sacred honor," and Lincoln said, "This Nation under God shall have a new birth of freedom."

All the way through our history the Irish go along with our history because of our fervent belief in its religious principles. We have no truck with the agnostic, the pragmatist, the atheist, the infidel, and with those who scoff at religion.

So we feel, Mr. Chairman, when we come here, we come as men as humbly and fervently devoted to the principles of our Government as any of you splendid outstanding statesmen before me.

Now, why are we here? We have come as taxpayers. It may be a peculiar way to come, but we come as taxpayers. Some of us have made a little money. Our limited purse strings will be ripped wide open if the Marshall plan goes into full fruition. We feel we have a right to direct the attention of this committee that no funds whatever from the pocketbook of the American taxpayer shall be diverted or allowed or compromised to get to Belfast to maintain an imperialistic Tory ascendancy as reactionary as any there is in the whole world. It is the remnant of the Tory government, just as much hostile to the principles of our Government as when John Hancock—I want to remind the Senator from Massachusetts, the man who wrote his signature first upon that immortal document, who when he was writing said:

"There! I have written my name with spectacles, but I have written it so big that the King of England can read it without spectacles."

Our information—and we are speaking, we think, by proper authority, is that it is proposed that some of this money will be given as a grant to Belfast. We respectfully, urgently, and emphatically present to this committee that that would be a violation of the fundamental principles on which we exist as a nation and as a government. We think that if we are going to go anywhere at all, we must recognize and be, at least to some extent, consistent.

As we read the Good Book, we realize that Christ sat down and ate with prostitutes and publicans and had compassion on the sinner. "I came not to call the just but sinners to repentance." But there is one type of sinner he did not compromise with. The novelist Dickens has immortalized him in his English character of Mr. Pecksniff. Christ flayed such with scorn and drove him out of His temple, and that was the hypocrite, the two-faced man who professed to be superior to his fellows; the Pharisee, in other words. We resent the pretensions of Downing Street, London, or any other place who would have you do otherwise. We suggest to you gentlemen of the committee that any money from the Marshall plan going to Belfast would be wasted, a desecration of the purposes of the appeal now being made. Anyone who protests that it should go to Belfast and that it would do good there is either a liar, a knave, or an ignoramus.

We feel very strongly about it, gentlemen of the committee. We feel our people over there have suffered long enough. They had a dirty, abominable deal, if you will allow me to use a little Los Angeles language. Irishmen fought and died in the rebellion of 1916. Young fellows with their faces in the sun, full of celestial happiness for the glory of their cause, faced the firing squads of Lloyd George and went to their doom with as pure and undefiled souls as Nathan Hale had when they put the rope around his neck and he regretted he had only one life to give to his country. They were very brave kids; they were murdered and slaughtered.

Those young Irish people had the same idea, gentlemen of the committee, of life that you have: That to be free, to have liberty, was a God-given right that nobody should be deprived of, and these men died that way.

I have in my file here now an orderly, dispassionate statement made by a meeting held in Dublin recently by lawyers and men who believe in O'Connell, the great parliamentarian. O'Connell is dead now 100 years. Eighteen hundred and forty-eight was a terrible year for Ireland. My little Irish mother saw men and women and children dead upon the roadside from famine in those horrible days of 1848. They died of starvation, although there were enough foodstuffs exported from Ireland to feed the people. They died of starvation, and young men in 1848, ignoring O'Connell's idea of constitutional agitation, rose up and fought a hopeless rebellion—such as Meagher, Mitchel, and Gavan Duffy. Meagher became a great general under Lincoln in the Civil War. Some of you Democrats of the South may be interested to know that John Mitchel, to whom I have previously referred, threw in his fortunes with Robert E. Lee, and his grandson, John Purroy Mitchel, became mayor of New York. Gavan Duffy became Prime Minister of Australia—those three young men, released

from the yoke of English tyranny—see what they made of themselves.

Now, I am quoting here statements made quite recently at a public meeting on January 25, 1948, in Barry's Hotel, Dublin. Here are three extracts from a more conservative man than I am, because, as I speak, I am filled with emotion myself, because it is in my blood, and all these delegates here present behind me feel as I do. There are 30,000,000 people that can trace their line of descent and blood to the Irish. They fled to all the four corners of the world, but mostly here.

Here is a statement made by James McScorpan, King's counselor and Member of Parliament. This is what McScorpan said:

"Britain set up partition and could end it. The responsibility was thrown upon whatever government was formed in Eire to show that it was inexpedient for Britain to continue it. I have never advocated physical force, and I never will. But if it is not solved in the way I have suggested, then as sure as the sun will rise tomorrow another generation will arise and there will be more blood offered at the shrine of British imperialism. The only way to end it is to make it inexpedient for Britain to continue."

That is a terrible indictment to make of the so-called British Government that talks about freedom and liberty in a day that has seen Palestine ripped in two, that has seen India rise in its desolation and pain to produce a man like Gandhi—imprisoned time and time again. Your distinguished colleague—I knew his grandfather well—Senator LODGE, will recall, and every New England man will recall, the story of Emerson going to see Thoreau in prison and Emerson said to Thoreau "What are you doing in jail?" And Thoreau said to Emerson, "What are you doing out of jail?"

And so Gandhi was in jail time and time again, under the same power that put Belfast on the map as a government.

Now, look how Gandhi has been exalted in death. We find that Gandhi's philosophy, with all of his peculiarities of religion, were fundamentally the Sermon on the Mount:

"Blessed are they that hunger and thirst after justice, for they shall have their fill."

I have passed my eightieth milestone, gentlemen. I ought not be here. I think according to the Scriptual admonition threescore years and ten is the limit. But I am here. After threescore years and ten, a man is supposed to encumber the earth. I flew through the night to get here. Now let us return to this Dublin meeting of last month.

The next man who spoke said:

"While the Government in England, the Government in Whitehall shed crocodile tears over the welfare of minority groups in far-off India, the British Government carelessly ignores today the aspiration of 80 percent of the Irish people and insists on stifling the voice and ruthlessly suppressing the operations of the democratic processes in Ireland."

Another Senator from that same Parliament in Belfast, Senator J. G. Lennon, said:

"At the present time a friendly Ireland is essential to Britain. It was their duty to weld the Irish opinion throughout the world and in one voice to demand the ending of the partition."

The partition, gentlemen, was caused in this way: After Padraic Pearse and these other brave lads were shot to death, after the revolution was defeated, Eamon de Valera, the present Premier of Ireland, was in that rising and was made prisoner, and he was saved from execution because he happened to be an American, born in New York. Subsequently, in the effort of the English Government to secure a solution of the tragedy, Lloyd George, a wily, shrewd, clever, smart, nimble, agile mental giant, among that kind of people, told Griffith and Michael Collins, who at that time represented the Irish as an ultimatum:

"I have the steam up on the train leaving Euston station. You sign on the dotted line. If you don't, you take the consequences."

And with a gun to their heads, these desperate Irishmen signed on the dotted line. Thus this so-called partition became effective, cutting off the wholesome part of Ireland, this northeast corner dominated by racial animosity and religious bigotry.

Here is that corner of Ireland today, gerrymandered in disgraceful and contemptuous disregard for political rights of minorities, so that it would make an American city ward politician of today almost laugh in his sleeve at anything as coarse and ruthless as that if it was not for the tragedy of it.

They haven't a chance to be accorded a reasonable vote.

Now let us see what this group of 2,000 delegates meeting in New York wanted to do. They believed that we should put before this Senate committee on the Marshall plan this statement of our position, which with your permission we will file. That statement protests that we are opposed to having any American taxpayers' money diverted to maintain this imperialistic undemocratic form of government in northeast Ireland. We urgently request that you put it to them this way: "If you don't accept this program, you are not going to get any money at all from us."

My friend Will Rogers was a Democrat, like my friend Isidore Dockweiler. Out there I don't know how you fellows get along in your other sections, but we old timers get along very well in California. Isidore Dockweiler was a very old friend of mine. He is the godfather of my oldest boy, and I am the godfather of his boy, a lad who went over to Japan and to the South Seas and was captured and had a hell of a time for 3½ years. We people with different political views get along.

Will Rogers said to me:

"Joe, I don't know how it is, our kids can lick anything on top of the earth, under the water, on top of the water, in the air. But when our big boys sit down with those buzzards at the conference table we lose our shirts and they take us to the cleaners.

"I have sat in with groups on these very treaty conferences. I was in Paris with Wilson. I was at the Economic Conference in 1922 in London. I saw Harding and Charles Evans Hughes in action in the Naval Conference in Washington. Every time we sit down with those buzzards they outsmart us and outlick us and we go to the cleaners."

Now, Mr. Chairman, and gentlemen, I have been favored with a long life. I am grateful to God for the blood that is in my veins. I am the father of 7 living children and 17 grandchildren, and I tried to put into every one of those kids the philosophy of my little Irish mother, to love God above all things and to fear nothing that walks on earth, but to believe in the philosophy of Jefferson and Lincoln as fundamental to the American way of life.

Now, it seems to me, Mr. Chairman and gentlemen of the committee, that when you put this proposition up on the Marshall plan, you can put a program down to Downing Street, London, whereby it may be this, that, and the other, but no money whatever shall go to Belfast to sustain and perpetuate this horrible, graceless, and diabolical system of government. And I think, Mr. Chairman and gentlemen of the committee, it is not outrageous or inconsistent or abominable to suggest that if they don't accept that way, they get no money at all. That is the position of our committee, anyway.

I have seen changes in the life of this Nation. When I was a young man, Senator LODGE, if you will pardon me a minute, I went up in 1889 to Boston, and I saw in the advertising sheets of the papers there, in the Boston Globe and the Boston Transcript, "Wanted, a carpenter. No Irish need apply." "Wanted, a cook. No Irish need apply." "Wanted, a nursemaid. No Catholic need apply." That was in Boston in 1889. Now Boston today is 75 percent Irish and Catholic, but the Irish in 1889 in Boston didn't lie on their bellies and let people make a doormat of their backbones. The blood of free men was in their veins, and they stood up as free men and look what it has got for them.

Gentlemen of the committee, you have had a lot of people come from California. Some of them have very misty views of their obligations as American citizens and their beliefs as to the American form of government. But these people I bring to you today, gentlemen of the committee, are 100-percent-plus fervent devotees of the American way of life, firmly and confidently believing the way of salvation is through the philosophy that Washington on his knees and Lincoln and Jefferson all fervently adhered to. And when you have that kind of support, gentlemen of the committee, we think we are on the right track.

I don't want to be too peremptory in this matter. But as I have said, Mr. Chairman, I have a very firm belief that this committee will give us sympathetic attention and consideration. Some of us here have presented in typewritten form an extension of these remarks and an epitome rather more adequate than I have put it here as their views on this matter, and I think, if I may be allowed, Mr. Chairman, I would like an opportunity to extend my remarks, and ask that these other gentlemen may be called upon to have the same privilege.

Germany and the Marshall Plan

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. Monteith Gilpin, secretary, Society for the Prevention of World War III, which appeared in the Washington Post of February 17, 1948:

GERMANY AND THE MARSHALL PLAN

The Society for the Prevention of World War III, Inc., has indorsed the basic principles of the European recovery program. We believe those principles will be supported by all Americans who cherish freedom and peace. On the other hand, the society believes that while the principles are wholly admirable and correspond to the real interests of the American people, their correct implementation is of fundamental importance.

The present policy pursued in western Germany, however, will not contribute to the realization of our European recovery program aims because, in essence, it is an attempt to reestablish the German economy on an autarchy basis. We must also bear in mind that the food shortages and the economic situation in Germany today are largely the result of deliberate acts of sabotage on the part of the Germans themselves:

During 1947, 6,319,000 head of German cattle had disappeared and were presumably sold on the black market. Several months ago the press reported that the government of Wuertemberg-Baden had underestimated the grain crop by 62 percent. Ruhr coal production is about 50 percent below prewar levels, and as Walter Lippmann recently pointed out, about 20 percent of the coal produced in the Ruhr disappears. The same situation holds true regarding American shipments of

cotton to Germany; thousands of bales of cotton disappeared before reaching the German factories for processing. Likewise, the German workers, aided and encouraged by their leaders, are actively engaged in sabotaging the reparations program which is so essential for the economic rehabilitation of Germany's victims.

In allocating $1,005,000,000 to Germany (as part of the $6,800,000,000 requested), plus over $1,000,000,000 a year for food and commodities to be sent to Germany, the share of Germany amounts to more than 28 percent of the total to be appropriated for the next 15 months for Europe. This places a heavy obligation on the American taxpayer for the rebuilding of an enemy country, which through strikes and sabotage of its coal and food production is jeopardizing its own revival.

Since Germany's threat to world peace lies not in her own capacity to wage an independent war within the next quarter of a century but in her value as a partner in any future world conflict, it is important that her bargaining power as such a partner be kept to a minimum.

To make the rehabilitation of Europe a success, our society submitted to the Senate Foreign Relations Committee that the European recovery program be guided by the following principles:

(1) Our first consideration in the rehabilitation of Europe should be given to Germany's victims.

(2) American policy regarding European recovery should aim at reversing the economic and political trends of the past 25 years which have placed Germany in the key role of economic master of Europe.

(3) German heavy industries must be limited to peacetime needs as recommended in the final report of the United States Foreign Economic Administration.

(4) Democratic forces in western Europe must be helped in their quest for security from future German economic and military dominance because they are the only friends we have in Europe. The United States must help these countries develop their own industrial potential.

(5) Germany's coal production—the bloodstream of the European economy—should be maximized and sufficient coal delivered to her neighbors to enable them to meet the industrial level set at the Paris Conference.

(6) Prompt reparation deliveries should be made to the 18 claimant nations in the form of surplus capital goods—specifically the 9,000,000 tons of surplus steel capacity which exists in the western zones.

(7) All German cartels, trusts, and cartel-like devices must be forever eliminated.

(8) All German assets abroad must be unearthed, marshaled, and vested by the occupying powers for eventual allocation among Germany's victims.

(9) In helping to integrate the German economy with that of her neighbors, Germany should be given the opportunity to develop her own peaceful economy through the exploitation of her light industries and her agricultural resources and raw materials.

(10) The United States should cancel the $1,005,000,000 allocated for Germany as part of the $6,800,000,000. This would leave the military government, through $1,250,000,000 of appropriations for the next 15 months, in exclusive charge of aiding Germany to solve its food and industrial problems.

(11) In order to provide Europe with the means for maintaining a stable and prosperous economy which will eventually benefit the American economy and relieve the burden of our taxpayers, the resources of the Ruhr should be placed under international ownership and control.

C. MONTIETH GILPIN,
Secretary, Society for the Prevention of World War III.

NEW YORK.

Farley Blames World Ills on F. D. R.'s Rule

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald of February 18, 1948:

FARLEY BLAMES WORLD ILLS ON F. D. R.'S RULE—CALLS MANY TRACEABLE TO THIRD AND FOURTH TERMS

HAMILTON, N. Y., February 17.—James A. Farley, who helped put the late Franklin D. Roosevelt in the White House, said today that many of the world's ills could be traced to Roosevelt's third and fourth terms.

Farley spoke on the Human Side of Politics at the opening of Colgate University's 1948 series of lectures in human relations.

WEIGHT OF YEARS TOLD

"I sincerely believe that many of the ills which beset the world today may be traced to the third and fourth terms, which brought a great mind, but one worn by the weight of years and cares of state, to the all-important conferences at Tehran and Yalta," Farley said.

The former national chairman of the Democratic Party said that almost every world leader supported him in this belief. He said the Roosevelt at Tehran and Yalta was not the "vital resolute mind that gave a despairing Nation hope with the clarion call 'we have nothing to fear but fear itself.'"

"Instead," he said, "we had a worn Lear, dividing the world in a series of concessions embodied in secret agreements, which having arisen from the Pandora box of secret diplomacy, are plaguing the world's children with blood, death, and fears."

Farley said that reluctance to relinquish power, "particularly where the hand is feeble and the mind is tired," is fraught with danger to political parties and to the Nation. If younger men are not trained to take over leadership, he said, the party and Nation are weakened.

THIRD PARTY CONDEMNED

The former postmaster general lashed out at Henry A. Wallace's third party and said it was formed by one who "wouldn't play according to the rules." He said men and women should try to correct what they dislike in a political party from within the party.

"We have a third party today, formed by one who wouldn't play according to the rules in the Republican or the Democratic Parties," he declared. "I don't want a third party in this country. The two great political parties help our Nation by promoting unity. A third party can only promote minority rule and tend to leave the country the prey of demagogues and malcontents."

Abraham Lincoln and George Washington

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. ANGELL. Mr. Speaker, I include as part of these remarks brief articles by Carlos W. Huntington, a distinguished and public-spirited citizen in my congressional district, commemorative of the birthdays of Abraham Lincoln and George Washington:

ABRAHAM LINCOLN—1948

(Lincoln's Birthday, February 12)

Rail-splitter, clerk, postmaster, lawyer, member of the Illinois Legislature, Member of Congress, President, Abraham Lincoln was born in Kentucky, February 12, 1809, a staunch advocate of national unity and economy and efficiency in government.

What would he see in his America of today?

A national debt of unprecedented proportions, $256,000,000,000, almost $2,000 for every man, woman, and child, the highest tax rate in history; industry harassed by regimentation; bureaucracy and waste keynoting governmental operations; scare propaganda to aid in the imposing of a philosophy of scarcity, of governmental support from the cradle to the grave, of dependency on government for shelter, food, medicines, and security rather than individual effort and initiative; price support subsidies; governmental meddling in every phase of our lives; centralization of power in Washington and a breakdown of individual responsibility. He would also see a segment of our population espousing and abetting foreign ideologies that have as their goal a totalitarian government under the ultimate domination of Moscow; he would find do-gooders whose ambition is to give away our substance, both at home and abroad, they, of course, to be the mediums through whom the largesse is channeled, in order that they may reap the plaudits of the recipients, build up their power and control over the rest of the people and economy.

He would see Navajo Indians starving on their reservation while trainloads of food go to our former enemies across the water; he would see other Americans dependent upon charity for which "drives" are conducted, one after the other, to provide funds while our Government sends billions overseas; he would see our people shivering while coal and oil are exported to other lands; he would see hundreds of unnecessary Government bureaus staffed with hundreds of thousands of employees burdening the taxpayers; and he would find inefficiency and waste rampant in all branches of governmental activity.

On the brighter side, he would find an awakened national realization of the necessity of tax reduction, of greater efficiency in the Federal Government, of greater economies in operation and less restrictions upon free enterprise. He would find industry at an all-time high, despite governmental handicaps, increasing production, a determination to make the American system succeed, and an optimistic view of the future.

Yes; Lincoln would find that, despite all obstacles, America is still America, where government of the people, by the people, for the people shall not perish from the earth.

CARLOS W. HUNTINGTON.

GEORGE WASHINGTON—1948

(Washington's Birthday, February 22)

Surveyor, planter, soldier, Member Continental Congress, President, George Washington, Father of His Country, was born in Virginia, February 22, 1732, an ardent advocate of devotion to America and freedom from entangling alliances. What would he think of his country today, the state of the world, the outlook for the future?

He would see a nation of 140,000,000 recovering from two world wars and threatened with a third. He would see the results of appeasement of Hitler by Chamberlain—war; the appeasement of Stalin at Yalta and Tehran—nations overrun by communistic hordes—Americans saddled with $90 debt for every man, woman, and child for "lend-lost" grants to Russia alone; na-

tions prostrate and reviling the United States while begging for our dollars, food, and materials.

He would see Stalin, Molotov, Vishinski, and their ilk, barbarians dressed in the habiliments of civilization, hiding behind an iron curtain, their minions enslaving, purging, starving, and mistreating millions of Europeans, while attempting to spread their fiendish communistic doctrines throughout America and the lands they have not yet conquered. He would see the shambles of massacre and hate in, of all places, Jerusalem, ancient cradle of Christianity. He would see his Nation trying to help bring order out of chaos, trying to stabilize the world economy, trying to insure peace, and daily getting into the depths of the international maelstrom. We think he would reiterate his admonition of no entangling alliances, no commitments that would enslave our people. True, he would aid the suffering, but he would always bear in mind that a government's obligation is to its own citizens first, that the welfare of its people is paramount, and that out of our abundance, after our own needs are met, we will give freely to those requiring aid.

George Washington, there are still some of us who believe in your sound philosophy and doctrines on this your two hundred and sixteenth birthday.

CARLOS W. HUNTINGTON.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Joseph News-Press:

TIMELY OBSERVATIONS

There has been much in this newspaper about the Marshall plan. There has been much on this page and in this department for the Marshall plan. Yet there never was a great issue raised where there was not another side. This column today is devoted to a scrutiny of the Marshall plan. It will find a favorable reception in the Middle West, for all tests reveal that the Atlantic and the Pacific States are far more enthusiastic for the program outlined by Secretary of State George Marshall for the relief of Europe than is our own part of the country.

Frank Gannett, Rochester, N. Y., publisher of a string of good newspapers, brings forth the sound point that there are two phases of the European problem. One is the question of feeding the hungry and helping them produce more food. The other is to rebuild Europe with the hope of resisting the Soviet Russia power. Mr. Gannett favors saving the hungry, but not under European auspices. He would feed them through the American Red Cross, the Quakers, or some other great non-Government agency.

This eastern editor and publisher resents buying Europe away from Russia. He holds, and he has something, that rebuilding Europe involves so much international cooperation and so many safeguards against economic nonsense that the task is one for an international agency with hard-headed business sense. He favors the World Bank, whose capital has been subscribed by 46 nations, and which is authorized to lend up to $8,000,000,000.

It probably will not be questioned that if the United States does all the financing of rebuilding Europe we are going to have no tax reductions. We will have tax increases and we will have higher prices. There is a pretty large group of thinking men and women who are convinced that our own economic stability is in grave danger unless we think about this Old-World dilemma with practical common sense.

United States Senator JAMES P. KEM has prepared some startling data on what price America must pay for foreign aid. The junior Senator from Missouri questions whether America can afford to go all out as the President and the Secretary of State ask. Senator KEM has brought the matter home by showing what their foreign-aid plan has cost and will continue to cost the people of Missouri.

Senator KEM shows what foreign aid from July 1, 1945, to June 30, 1947, has cost every county and city of any size in Missouri. The figures will amaze you. St. Joseph's (Mo.) share of foreign aid that 2-year period amounted to $13,855,113. The foreign aid asked by the Marshall plan, says Senator KEM, would cost St. Joseph, Mo., $11,053,806. Then he shows the figure for Buchanan County. For the 2-year period ending last June 30 it was $17,214,261 and under the Marshall plan would be an additional $13,733,782, or a total for Buchanan County of $30,948,043.

And mark well this: The annual tax receipts from Buchanan County from all sources are estimated by Senator KEM at less than $2,000,000.

This Department thought the junior Senator from Missouri had gone off on a tangent. Mathematicel figures are confusing to many of us and we just could not swallow those startling figures. But they are correct. The junior Senator gets his figures from the Legislative Reference Service of the Library of Congress. The costs of foreign aid July 1, 1945, to June 30, 1947, are actual, nothing surmised, nothing estimated, nothing guessed. They comprise loans, property credits, advances, relief, rehabilitation grants, and other authorizations. The total for the United States this 2-year period is in excess of $24,000,000,000, that's billion, son, not million.

The rest is plain arithmetic. You will find it is $183 for every man, woman, and child in America on the basis of the last official census. It is $616 for every American family. Foreign aid has cost every American family $25 a month for each of the last 25 months.

We could give you the cost to other towns and other counties for the CONGRESSIONAL RECORD records that speech of Senator KEM, January 16, last. But to give you only a few (the cost for the 1945–47 period) show Savannah, $385,764; Tarkio, $386,862; Cameron, $661,545; Plattsburg, $350,445; Gallatin, $300,000; Union Star, $75,000; Albany, $367,830; King City, $201,840; Stanberry, $346,419; Trenton, $1,289,418; Mound City, $293,898; Chillicothe, $1,466,752; Princeton, $289,872; Maryville, $1,043,100; Platte City, $123,143; Weston, $205,525, and Grant City, $221,247. Something to think about, isn't it? No wonder we have that damned-soul look in our eye when we pass Income Tax Collector Lee Herter on the street these days.

The Palestine Problem

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast made by me on February 14, 1948:

Tonight I should like to discuss a subject that is close to the hearts of us all. We, the common people of the world, regardless of our race, nationality, or creed, earnestly desire that a lasting peace be established. Remember our rejoicing on VJ-day? I can easily recall how you and I expressed our great relief and joy on the streets of our city and gave thanks in the churches of our faith.

And to insure peace the anti-Axis Powers gathered at San Francisco and established an international organization known as the United Nations. With enthusiasm born of hope we faced the future and quietly said in our hearts "It shall be peace in our time."

Today, however, we view a strife-torn world—a world filled with petty prejudices, Godless greed and dwindling hope. In their drive for material gain, in their devotion to so-called scientific philosophies, the politicians of this day are turning their backs on the basic concept of our contemporary religions. They have lost sight of the fundamental truth that there is but one God and in his sight all men are equal. In my humble opinion the people of all lands must return to this fundamental truth if war is to be averted. A sincere devotion to the fatherhood of God and the brotherhood of man is the only sound foundation for a lasting peace. Before we can have peace among nations it must be established in the hearts of men.

Today, 2 years and 9 months after the war, more battles are being waged, more lives are being lost, than was the case in 1939, prior to Germany's invasion of Poland. With the exception of our Western Hemisphere, no area in the world is free of situations which can easily explode into World War III. Communist agression in China, turmoil in India, colonial revolt in southeast Asia, Communist-inspired rebellions in Italy and France, foreign intervention in Greece—the list is almost endless. But the most danger-laden of these, is the crisis in Palestine, where seven small Arab nations threaten the peace of the world. Failure to solve the Palestine crisis may well herald the beginning of another world conflict.

As you will recall Britain has been administering this territory under a League of Nations mandate given to her in 1922. This followed a decision of the victorious Allied Powers in World War I taken at San Remo in 1920. This decision stated that the mandatory should put into effect the terms of the Balfour Declaration made by the British on November 2, 1917. According to this declaration, the British Government agreed to facilitate the establishment in Palestine of a national home for the Jewish people. This agreement was also contained in a treaty between the Allied Powers and Turkey and finally in the Covenant of the League of Nations. Though not a member of the League of Nations the United States consented to this arrangement in the American-British-Palestine Mandate Convention of 1924. Britain has since administered this territory and was to have facilitated the establishment of a Jewish national home in accordance with provisions of the Balfour Declaration.

After World War II, however, Britain found herself in dire straits. She was caught in the greatest economic crisis of her history. She appealed, therefore, in 1947 to the United Nations General Assembly to recommend a solution which would enable Britain to withdraw completely from Palestine. The General Assembly of the United Nations was the twentieth committee to consider a solution for Palestine. After weeks of fact finding and free discussion the United Nations voted 33 to 13 in favor of partitioning Palestine into Arab and Jewish states with economic union under the United Nations.

Great Britain's Palestine mandate is to be ended not later than August 1, 1948, and the independent Jewish and Arab states are to come into existence not later than October 1, 1948. In the meantime two critically important events are to take place: First, a provisional council of state is to be designated and recognized for each of the Jewish and Arab states by the United Nations Palestine Commission; and, second, within the shortest possible time an armed militia composed of the residents of each state and sufficient in number to maintain internal order and to prevent frontier clashes is to be recognized by the United Nations Commission. Britain is required to vacate a port in Palestine by February 1, 1948, for the purpose of facilitating Jewish immigration.

The present situation finds the United Nations Commission just beginning its work; Arab guerrillas attacking the Jews to discredit partition, with widespread disorder and bloodshed in Palestine, and the Jews endeavoring to defend themselves; the British taking the position that all they need to do is see that none of their own troops get hurt before they can pull out; and the Arab states, member nations of the United Nations, almost openly supporting the guerrilla attacks on the Jews, persisting, to use their word, in defying the United Nations' decision and in the threat of an organized invasion of Palestine as soon as the British move out.

That is the present situation, plus one other very important factor—on December 5, 1947, there was announced by the United States a cessation of the licensing of arms shipments to the countries of the Middle East, including Palestine—in this way effectively cutting off the Haganah, the informal Jewish militia, from any arms, while leaving free the Arab guerrillas through the Arab countries, to obtain arms. The British confirm a report that they are continuing to sell and ship large quantities of arms, admittedly not less than $25,000,000, to Iraq, Egypt, and Transjordan.

The major argument made against the Palestine decision of the United Nations is that it is a threat to the peace. But is it not true that it will only result in extensive hostilities between Arabs and Jews, if the leading nations fail to show decisively that they will not tolerate it? Is it not true that widespread disorder and conflict in defiance of the United Nations is what will constitute a threat to the peace? Let us examine for a minute the Arab situation itself. It is the Mufti of Jerusalem, who is one of the most distinguished Nazi collaborators alive, and his guerrillas who are attacking the Jews in Palestine. Press reports show that many of the Palestine Arabs resent it, and they have enjoyed excellent relations with the Jews. And, indeed, they might, for Arab improvement in Palestine during the period of the greatest Jewish settlement, from 1930 on, has been enormous. The value of Arab land has gone up from $120 to $640 per acre. The Arab cattle population has increased by 60 percent. The Arab school population has risen from 20,000 to about 70,000, and the daily wages of Arab workmen in Palestine are generally five times what they are even in the more advanced Arab countries.

Arab nations who propose war on the United Nations muster armed forces of 120,000 men, 35,000 of whom are in Egypt, but have no adequate mechanized means with which to cross the Sinai Desert to Palestine. The most effective force, Transjordan's Army of 25,000, is British trained and under British command. If the Arab armies are to invade Palestine, it would be because, in the main, the British arm and lead them. Should that happen, it will be the most sardonic joke the world has ever seen.

Much can and must be done to bring higher standards of living, education, and health to Arab countries. They must be encouraged in democratic ideas. But the way to do this is not by exterminating the Jews for the Jews are the the principal source for improvement in the Middle East.

On February 10, 1948, I wrote Secretary of State George C. Marshall, asking what the United States is prepared to do to help in the implementation of the United Nations decision on Palestine. He replied on February 12 that the United States considered Palestine a United Nations problem and that the United States as a steadfast supporter of the United Nations would make her full contribution when called on to do so. And that is as it should be.

The Palestine crisis is not limited to trouble between Arabs and Jews. If the United Nations is ineffectual in enforcing its Palestine decision then it, like the League of Nations, is finished. This we cannot allow to happen. To make Palestine another Munich would be to make world war III inevitable. Seven small Arab nations must not be allowed to destroy the possibilities for peace. We must enforce the Palestine decision. We must support the United Nations all the way. This is our last chance to establish peace in our time.

Transylvania

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE WOMEN'S LEAGUE FOR AMERICANISM,
Cleveland, Ohio, February 9, 1948.

Hon. ROBERT F. RICH,
House Office Building,
Washington, D. C.

DEAR SIR: This is an appeal in the name of humanity to every loyal Member of Congress, in behalf of the tragic situation of a vanishing people.

FREEDOM AND LIBERTY IN THE TWELFTH CENTURY BY A HUNGARIAN KING VERSUS SLAVERY AND TORTURE IN THE TWENTIETH CENTURY BY AN AMERICAN PRESIDENT FOR THE SAXON PEOPLE OF TRANSYLVANIA, RUMANIA

The Saxon people entered Transylvania on the invitation of King Géza II more than 800 years ago. This Hungarian king, who was searching for a trustworthy people to inhabit and protect the land on the border of Hungary against enemy invaders, found the Germans from the Rhine and Moselle regions had the qualifications to meet his aims. He offered them the right to have laws and rules of their own making in the new homeland. Because of this freedom offered by King Géza; the golden charter; and the Saxon bill of rights, granted to them later, they were able to develop their art and culture rapidly. According to history the Saxon people have lived up to their duty and responsibilities from generation to generation. They have answered the calls to protect home and country to such an extent that they can rightfully claim the ground on which they live has been paid with their own blood. They have been able to master their difficulties successfully, even at times when their very existence was at stake. They have enjoyed the respect of friend and foe, because of their great sense of justice and their intelligence.

Never in their history have they been destitute like they are at this time, and only so because of the deeds committed at Tehran and Yalta by an American President. Mr. Roosevelt favored the enslavement and cruel treatment of the Saxon people because of their German origin. We do not believe that Stalin would have taken by force men and women for slave work in the far steppes of Russia without the consent given him by Mr. Roosevelt.

As Christian Americans the members of this organization believe in the golden rule, therefore we expect our Government officials to be a shining example to us in this respect. If they had lived up to their, and our, American principles in foreign policy since the end of hostilities, the Saxon people would no doubt have a heavy burden of reparations to carry but they would not be destitute. We then would have no cause to bring this grievous situation to the attention of our Congress.

We appeal for immediate consideration in this serious matter before it is too late. We believe that Congress has enough qualified men to study, investigate, and to find a solution for the Saxon problem. We have confidence that we have such great men in Congress who will not overlook little people because of their minority. Today whoever is left of the Saxon people must endure great hardships. Many of them are facing starvation as displaced persons in the camps of Austria and Germany. Others are still somewhere in Russia. The most unfortunate are those who are being sent back from Russia into Germany sick, without clothes, and forbidden to go back to their families in Transylvania. It is ruthless and it is outrageous that such undeserved misery should be imposed on a people who, although small in number, have given their share toward civilization and humanity.

In closing we would like to quote one of our greatest men, Abraham Lincoln, who said: "To keep silent when we should protest makes cowards of men."

May the fate and destiny of the Saxon people of Transylvania be guided toward righteousness and justice by an act of the Congress of the United States of America.

Very truly yours,
Mrs. ANNA WOLF,
President.
Miss RENATE DIETRICH,
Secretary.

Address of Congressman Joseph R. Bryson Delivered in Statuary Hall on Tuesday, February 17, 1948, Observing the Fiftieth Anniversary of the Passing of Frances Willard, Under the Auspices of the Woman's Christian Temperance Union of the District of Columbia

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

President Coates, officers, members of the Woman's Christian Temperance Union, and friends, on this, the fiftieth anniversary of the transition of Frances Willard, it is quite appropriate that we hold this observance here in Statuary Hall, this hallowed chamber of our Nation's Capitol, at the feet of the statue of one of history's most remarkable and influential women. As evidence of the unusual and outstanding character and serv-

ice of Frances Willard, her statue is the only one representing our women in this chamber. All around us are impressive figures of stalwart sons, brave soldiers, great statesmen, leaders in industry, education, business, and politics. In their midst stands this frail little woman of imperishable granite. Since the dawn of history, women have contributed more than their share to the advancement of Christian civilization. Someone has said that God could not be everywhere all the time, so he gave us our saintly mothers.

We have just observed the birthday of President Lincoln who, like other great leaders, attributed his finer qualities to his mother. Mr. Lincoln said, "Whatever I am, I owe to my mother."

Frances Elizabeth Caroline Willard was the daughter of teacher parents. Education, next to religion, played the most important part in their ideals of life. Circumstances made it necessary for the Willard family to leave their native State of New York and journey westward through Ohio, Illinois, and Wisconsin.

Early in life Miss Willard displayed talents of leadership and for many years taught in schools and colleges. Her record as an educator is outstanding but is overshadowed by her work in the cause of temperance.

Although considered by some as an impractical dreamer, Miss Willard fought hard for political enfranchisement of women. She was a pioneer in the contention for equal opportunities, equal pay, equal rights, equal responsibilities in the home, in the professions, in industry, and affairs of state for women. She insisted upon provisions for vocational guidance for girls, upon education for citizenship, upon physical education and sports. She advocated the 8-hour day, a minimum-wage law, and many other ideals which in her day were considered the ravings of an impractical dreamer.

When those of us who still fight for temperance and decency become discouraged, we are heartened to learn of the untiring efforts for a better world in which to live as sought by Miss Willard.

She believed that intoxicating beverages were God's worst enemy and the devil's best friend. As we contemplate the example of this good woman, we shamefully confess the fact that so many still clamor for booze even if there is no bread. The selfish, greedy attitude of those who transform food into strong drink has so recently been revealed by their opposition to any restrictions in the use of grain for the distillation of liquor.

By reason of her devotion and zeal in the cause of temperance, our subject advanced from a subordinate position to that of president of the World Woman's Christian Temperance Union.

This guiding genius of the national temperance cause early recognized the importance of the printed page. She wrote six books and edited the Union Signal. She believed in temperance education, and promoted this cause for schools, colleges, and churches. She agitated for legislation, and participated in securing constitutional prohibition amendments in various States.

Not only was Miss Willard interested in the cause of temperance and justice in our own country, but her theater of operation covered the entire world.

A half century has gone since this saintly woman was called to her reward. In spite of the present chaotic plight of this troubled world and in spite of the destructive wars through which we have passed, her marvelous influence is still with us.

This is not the only statue or memorial to Frances Willard. Throughout the world there are hospitals, educational institutions, and other agencies of mercy and culture bespeaking the fine qualities of this good woman. In Willard Hall, at Northwestern University, on a marble bust of Miss Willard are chiseled these lines from the pen of the poet Whittier:

"She knew the power of banded ill,
But felt that love was stronger still,
And organized for doing good
The world's united womanhood."

Soon after the passing of Miss Willard the great State of Illinois placed this marble statue of her likeness here. The Congress paused that day to mark the eventful occasion. Many impressive eulogies were delivered. Inscribed on the pedestal of this statue here are these words from the lips of Miss Willard:

"Ah! It is our women who have given the costliest hostages to fortune. Out into the battle of life they have sent their best beloved with fearful odds against them. Oh, by the dangers they have dared, by the hours of patient watching over beds where helpless children lay, by the incense of 10,000 prayers wafted from their gentle lips to heaven, I charge you give them power to protect along life's treacherous highway those whom they have loved."

Our Nation, our churches, our people do well to remember the life and service of so noble, so self-giving, so loving a soul.

She was a brave true soldier, a great commander, and finally and best of all a kind and gentle woman who loved her fellow beings with such an unstinted devotion that she has been christened the "mother of all mothers."

When called by that Master with whom she walked so closely all through life, she answered with tones of utmost content: "How beautiful it is to be with God."

May the memory of this good woman, who did so much for the cause of humanity, be forever preserved, perpetuated, and transmitted to the generations yet unborn.

How Firm Is Your Foundation?

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "How Firm Is Your Foundation?" delivered to the Mercer Club of Buffalo, February 10, 1948, and to the Masonic Club of Buffalo, January 14, 1948, by Richard Bishop Mather:

This occasion, which precedes the celebration of the birthdays of two of our greatest Presidents, George Washington and Abraham Lincoln, should inspire me to give one of the most dramatic and most eloquent orations of my career. I should thoroughly enjoy entertaining you and indulging myself in that fashion. But the present times seem to call instead for less impassioned speaking, for more sober thought, and still more intelligent action.

Rather than "orate" at you I should prefer to consider with you some fundamental issues which are of interest and deep personal concern to each one of us in this room, whether we believe them to be so or not, and whether we wish them to be so or not.

Had I begun my talk, not in this conventional manner, but by entering the room very quietly, tiptoeing across the floor, and then tapping each one of you gently on the shoulder saying to you, "Pardon me, but your foundation is slipping," you would have thought me either irrational or inordinately facetious. Yet there is nothing which I could do and nothing which I could say which would more accurately illustrate and more completely epitomize the message which I bring to you, than that.

We, in this country, have inherited a fabulously rich legacy of liberty, freedom, and opportunity. These rich privileges have come to us without effort on our part.

The liberty, freedom, and opportunity which we enjoy were firmly established for us by great men of past generations who conceived and brought this Nation of ours into being. It is well for us to recall the prevailing thoughts and words of their times.

George Washington is popularly referred to as the father of our country. He was the first President of the United States operating under our Constitution which fulfilled the promise of the Declaration of Independence, and which has preserved for us the heritage of liberty, freedom, and opportunity we enjoy.

The substance of the Constitution is given in the magnificently, precise, and clear preamble, which reads:

"We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Since the day of George Washington several changes, in the form of amendments, have been made in our Constitution. It is proper that these changes, expressing the will of the citizens, should have been made. In more recent years, however, the fashion seems to have been to circumvent the Constitution and to substitute bureaucratic processes for democratic government. To that extent, I say, our foundation has been slipping.

Abraham Lincoln, the Great Emancipator, referred to as the preserver of our Union, had the good fortune or misfortune, whichever way you view his situation, to have been President when our Nation was torn by the great civil conflict. You all know his undying message, delivered with eloquent simplicity, on a former battlefield in Gettysburg. He said:

"Fourscore and 7 years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether this Nation, or any nation, so conceived and so dedicated, can long endure."

We all know the sequel to that immortal address. We know that, to outward appearances if not inwardly in fact, the wounds of our Nation have been healed.

Since the time of Abraham Lincoln, there has occurred the greatest development ever recorded in all history. This development however, has not, in a manner of speaking, been "all across the board." The development has been predominantly materialistic.

The great scientist and author, Lecompte du Novy, in his book, "Human Destiny," which he completed just a short time before his death, said that the rate of material developments since 1880 has been so rapid as to leave us gaping, wondering what new marvels each tomorrow would bring forth.

In his book he developed the thought that the increase in materialistic knowledge and scientific skill may have outrun our human capacity to understand and appreciate its significance. Material inventions and developments may have outdistanced our ability to use them constructively and beneficially. He draws a distinction between intelligence and wisdom, saying that wisdom lags far behind.

As we all know, we now find ourselves confronted with the shocking fact that, for the first time in all civilization, man possesses power for its complete destruction, even obliteration.

Last Saturday evening, I heard the brilliant young president of Dartmouth College, Dr. John Dickey, speak very calmly and dispassionately on this subject to an assembled group of Dartmouth alumni. He said that having access to information, as he does, it is by no means a sure thing that we shall be able, in the time allowed, to find ways and means of preventing the use of atomic power, and other known destructive agencies, from wiping out our civilization. He reminded us that time is exceedingly short and that the solution, if one is to be found, must come through our democratic processes.

He went on to say that he personally does not take a dim view of the future. He said it is entirely probable that our civilization, as we know it, may be destroyed. But, he said, he does not believe that the earth itself would vanish. He said history is a record of the successive failures of one civilization after another. It may well be that our civilization is about to go into a total eclipse to be an object lesson for some future civilizations two, or three, or five thousand years hence, if indeed any record or trace shall remain.

To paraphrase the words of Abraham Lincoln, we seem now to be engaged not merely in a great civil war, testing whether this Nation or any other nation so conceived and so dedicated shall long endure, but engaged in a great, cold war, testing whether this civilization or any other civilization so conceived and so dedicated shall long endure.

The need of the times is not for impassioned speeches; it is for more sober thought and still more intelligent action.

In the face of such a portentous future, most of us appear to be blithely unconcerned. Our thoughts seem to center upon our own personal affairs and the gratification of our individual desires. In this respect, we act not unlike the sons of the wealthy olive growers of ancient Roman times, who were sufficiently well to do that they did not need to and had no inclination to exert themselves. Their father, recognizing their shortcomings, called them to his side as he lay on his deathbed. He told them that there was a great treasure buried in the grove. Scarcely had the old man expired before the boys were out in the grove, digging feverishly. Of course, they did not find that treasure, as such, but while they were digging they were also tilling the soil. That year, when the harvest matured, they were rewarded with an abundant yield. The truth of what their father had spoken then became apparent to them.

This country of ours is like a vast grove of freedom and opportunity. We seem to have been perfectly content to pick the fruits of these magnificent trees, giving little, if any, thought to the protection, cultivation, or perpetuation of them. We now find that this grove, our country, is seriously threatened. It is time that we took action. The magnitude of the job to be done requires the best efforts of every intelligent and capable citizen. It is a job greater than elected and appointed officials alone can do for us.

There are two aspects of the problem, one on an international level and the other on a local level. We should do as much as we can on both.

On the international level, we should endeavor to keep ourselves informed of the needs of the situations and of the best possible remedies that have been advanced, so that we may offer constructive suggestions as well as personal encouragement to our elected and appointed officials in whose hands the execution of the programs rests.

On the local level there is even more that we can do. Our country is a going concern. Equality of opportunity and freedom of action, under laws designed for the greatest good of the greatest number have made ours the greatest, richest, most powerful and most desirable Nation in the world.

Strong as our Nation is, it is being insidiously attacked from within. It is up to us to keep our Nation so vital and so strong as to be immune to any such attack. Groups such as this here in this room have the ability and the influence to accomplish this objective. A recent article in Collier's magazine entitled "Clubs Are Trumps," told of the phenomenal growth service clubs, such as yours, such as Kiwanis, Rotary, Lions, Exchange, Gyro, and others, have had in recent years. The author estimates there are now approximately 1,000,000 members of these clubs. He says that in the aggregate the membership is now so great and so influential that it could control the destiny of our country. The author points out, reassuringly, that these clubs are all organized to render beneficial and constructive service.

It is good to know that we have such force as this in our country. There is need of it.

The need is strikingly brought to our attention by the fact that pitted against these 1,000,000 members of service clubs, organized for good purposes, there are an estimated 5,000,000 members of Communist and Communist-front organizations who seek the destruction and downfall of our way of life. The Communists and their sympathizers are, if anything, organized more completely. And, instead of working toward their objective occasionally, they are unceasingly at it. They are intelligent, skillful, highly trained, and zealous. They are dangerous.

A year ago last September, when there were only about one-fifth as many, J. Edgar Hoover, Chief of the FBI, in an address which he delivered before the American Legion in San Francisco, said that he would not be concerned about the 100,000 Communists in this country were it not that for each one of them there are 10 more ready and willing to do the party's work. They place themselves in strategic positions where they influence or control the activities of tens, scores, hundreds, and even thousands of others.

In a country of some 140,000,000 people, even a group of 5,000,000 need not cause alarm, but the threat which they pose must be dealt with promptly. Our memory of what a small but powerfully organized minority accomplished in Italy, Germany, and is accomplishing in Russia is all too vivid and too much to the point.

To combat the efforts of Communists in our country, we need to consider how they operate. They have developed a technique of exploiting either real or imagined personal grievances and of offering to the aggrieved a chance to get even.

It is fantastic that anyone can come into this country with a "product" like communism, the worst product in the world, that has to be forced down the throats of oppressed people with the butt of a gun, and win any adherents to their cause. They cannot do it if we will all do our full part to keep this country of ours the land of freedom, equality, and opportunity which its firm foundation made it.

As individuals, we must do our part by action, by deed, and by word.

By action, I mean being the kind of citizen that exemplifies the best ideals of the American way of life.

By deed, I mean doing for others what you hope and expect will be done for you in this land of freedom, equality, and opportunity. Recognize the dignity of the individual. That is the root of democracy. Do not think of people impersonally as groups or classes or segments of society. Think of them and treat them as human beings.

In your dealings with your friends, your customers and especially your associates and employees, treat them as people. Do not think of workers in terms of so many manhours of labor or so many units of output. Think of them as individuals. Let them know something of your plans. Take them into your confidence. Make them feel that they are, in effect, partners in the enterprise. Let them see the part which they play and how they contribute to the success of the whole. Recognize the individual and make it possible for him to express himself. You will thus increase his self-respect, his spirit, and his enthusiasm. You will strengthen him to the point that he will not fall prey to the insidious approach of communistic agitators.

By word I mean speaking up for our democratic way of life, not running it down. It is an all too human trait to agree with people when they knock, complain, or revile. Should you hear loose, insidious, destructive talk, speak up. But, to speak up and to do so effectively, you will need more than the mere desire to do it. You will need both knowledge and skill. And so, I say to you, let us steep ourselves in the rich tradition of this country, learning exactly why it is that our country has succeeded and how it will continue to succeed on the basis of equality of opportunity and freedom of action.

As a suggestion, I offer this recommendation. Do what any businessman, any experienced sales manager would do, were he marketing or promoting a product. Analyze your product and the competition.

We shall label our product democracy and the competition communism.

Take two large sheets of paper, one for each, and then under each heading, list the good features of each system of government and the benefits which accrue to the individuals in consequence of them. Then, list the risks which individuals run and the losses which they sustain under each.

If you will do this, considering the problem from various standpoints including political, economical, cultural, social, you will find that you have in your possession all of the sales ammunition that you will ever need. Once in possession of it, set about developing the skill to use it most effectively.

Just 3 weeks ago, I was the speaker at a banquet in this same room. My attention was caught by a quotation printed on the souvenir program which read, "Wisdom is knowing what to do next, skill is knowing how to do it, virtue is doing it."

Let us do our utmost to acquire the wisdom, develop the skill, and display the virtue which our times require of us.

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I should like to enter figures prepared for me by the Legislative Reference Service of the Library of Congress showing the cost of our foreign-aid program to the 16 towns which compose the Third Congressional District of Connecticut. I do not make this entry to bolster arguments in favor of or against any European recovery program, but simply to provide

information to my constituents as to just what the program has cost and what their towns have contributed since the end of the past war:

Cost of foreign aid to the Third Congressional District of Connecticut

	Population	Foreign aid July 1, 1945, to June 30, 1947 (population×$183.028), based on $24,099,211,087	Foreign aid proposed by Marshall plan 1948–52 (population×$129.11) based on $17,000,000,000	Total foreign aid provided and proposed 1945–47, 1948–52 (column II and column III) based on $41,099,211,087	Property taxes collected in 12 months ended Mar. 31, 1945
New Haven County [1]	484,316	$88,643,389	$62,530,039	$151,173,428	$23,338,343
Towns:					
Bethany	706	129,218	91,152	220,370	37,754
Branford	8,060	1,475,206	1,040,627	2,515,833	318,878
Cheshire	4,352	796,538	561,887	1,358,425	145,795
East Haven	9,094	1,664,457	1,174,126	2,838,583	382,871
Guilford	3,544	648,651	457,566	1,106,217	133,224
Hamden	23,373	4,277,913	3,017,688	7,295,601	1,157,871
Madison	2,245	410,899	289,852	700,751	135,541
Meriden	39,494	7,228,508	5,099,070	12,327,578	1,662,666
Milford	16,459	3,008,797	2,122,459	5,131,236	850,941
New Haven	160,605	29,395,212	20,735,712	50,130,924	8,686,134
North Branford	1,438	263,194	185,660	448,854	49,070
North Haven	5,326	974,807	687,640	1,662,447	216,478
Orange	2,009	367,703	279,382	627,085	71,101
Wallingford	14,788	2,706,618	1,909,279	4,615,897	440,241
West Haven	30,021	5,494,684	3,876,011	9,370,695	1,183,242
Woodbridge	2,262	414,009	292,047	706,056	103,521
Total of towns	323,756	59,256,414	41,800,138	101,056,552	15,575,328

[1] The Third Congressional District does not include all of New Haven County.

Sources: Sixteenth Census of the United States, 1940, Population, vol. I, p. 182. "Information Relative to the Assessment and Collection of Taxes, 1945," State of Connecticut, Public Document No. 48, pp. 108–109.

NOTE.—1940 population figures for the continental United States are used because later figures are not available for every local unit. Population of the Nation (excluding armed forces overseas) has grown from 131,669,275 in 1940 to 143,382,000 (estimated) by July 1, 1947. If the latter figure is used, the per capita cost of foreign aid between July 1, 1945, and June 30, 1947, is $168.08 rather than $183.03.

It should also be noted that the foreign-aid figures cover a period of over 6 years while the county tax receipts cover only 1 year. The county tax receipts reflect the income of only one unit of government and not all local and State receipts and expenditures.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. MORRIS. Mr. Speaker, I am indeed happy to have the privilege and honor of inserting in the RECORD, one of the winning 5-minute talks of the recent "I speak for democracy" contest sponsored by the National Association of Broadcasters, the Radio Manufacturers, and the United States Junior Chamber of Commerce.

A resident of my congressional district and my home town, Miss Alice Wade Tyree, a high-school student of the Lawton (Okla.) High School, Lawton, Okla., was one of the four co-equal national winners. She is the charming daughter of Mr. and Mrs. John W. Tyree of address Tossaconnic, Lawton, Okla. Mr. Tyree is a prominent lawyer actively engaged in the private practice of law there in Lawton.

Competing against more than 20,000 contestants in more than 500 communities, 39 States and Alaska, Miss Tyree together with the other three national co-equal winners, won a $500 cash prize, a wrist watch, and a certificate of recognition signed by the United States Commissioner of Education, Dr. John W. Studebaker. We know that this honor did not come to you, Alice Wade, except as a result of hard work on your part, good training, a proper attitude toward life, and, of course, outstanding ability. I know that I speak for all the citizens of our great State of Oklahoma when I say that we are proud of you as I know are the good citizens everywhere in our country.

This contest for high-school students was planned to encourage young people to think about the democratic form of government and to express its philosophy well, in spoken words, being limited only as to time of 5 minutes. The contest was intended also to further the use of radio broadcasting for such expression.

Miss Tyree was entered in the contest by the Oklahoma Junior Chamber of Commerce with the cooperation of Lawton's radio station, KSWO.

I had the honor of attending the award luncheon here in Washington, D. C., and it was inspiring to me to witness the presentation of the awards by Attorney General Tom Clark. I am also glad to learn that the United States Office of Education is making transcriptions of Miss Tyree's talk and the other winning talks available to schools throughout the country and that the contest is scheduled to be also conducted next year.

Miss Tyree's talk follows:

I SPEAK FOR DEMOCRACY

One of the greatest things in a democracy is the importance of the individual. Only in a democratic environment does every man have the opportunity to develop to his greatest ability. This privilege has made it possible for any man to contribute his talent to America, thereby raising the standard of living for the whole people to a plane greater than has ever been known in the history of man. Even the poorer class of Americans have so much more, materially, in comparison with other countries, that we have been nicknamed "the rich Americans." While we know that all people in America are not millionaires, they are wealthy in opportunities and possibilities. The lowliest laborer is not cold and he is not hungry. And though he goes to work on foot, he has the same personal freedoms as the rich man who rides past him in a limousine. There is no class distinction to be broken down, no social or political caste system to hold him back. An American man is judged on his own ability.

Since its very inception, this country has been a nation of free enterprise, and no nation has ever, in the history of the world, attained its position scientifically, mechanically, or financially. On two different occasions, the United States of America has been called upon to save the world in battle, and thereafter, to save the world financially. This was possible because of the freedom of our inventive genius and our ability to produce commodities quickly and in large quantities. We are inspired to greater heights of productivity because of our individual freedom. No dictator decreed that we were to work certain hours, at certain times, and to have certain set goals. And because of this freedom of choice, because we Americans may work for ourselves and not for a stereotyped, mechanical, impersonal reason, we outstripped all previous records. A man working for personal gain will naturally work harder. This fact was proven when the first of the English colonies, which eventually became America, was established. In 1607, Virginia was settled, and though the pioneers worked diligently, the results were dismal. Capt. John Smith found the trouble. Those settlers were forced to work for a company, not themselves. When they were assured that the results of their work would belong to them, and not to a settling company, interest and hope revived them, and they shaped Virginia into a prosperous, proud settlement.

The human being is a sentimental animal. If he has an ideal to fight for, a principle to preserve, and a personal pride in the outcome of his struggle, then this principle is important and this ideal is real.

But an ideal is useful only as a guide by which to live. The democratic ideal is hollow until filled with democratic living. Democracy is just a word or a symbol until the individual realizes that only through his actions can it become a reality.

Johnny may stand up and sing God Bless America and feel very patriotic and privileged to be an American. But when he disregards common courtesy to one of his playmates or a little Negro boy, he is not being democratic.

Mr. Jones is proud of being able to cuss the Government without fear of imprisonment, which is all right, because this country encourages freedom of speech, since we are a country of individuals. But when he refuses cooperation by purposely forgetting about democratic ideals in order to make a shady business deal, he is abusing the privilege of a free citizen by being democratic only at his convenience.

Thus rights and privileges impose duties and responsibilities. With freedom, come restrictions and obligations. A chain is as strong as its weakest link. A nation is as strong as its weakest citizen. Our country needs to build a consciousness of morality in order that we may choose and act for the common good. We need statesmen, not politicians. In times of stress, our country has produced great leaders, because freedom was at stake. Freedom is not a gift. It is an inalienable right of man. In the very beginning, man was born free. Then came restrictions and laws, and freedom was limited to the strong. Gradually, as civilization has progressed, we have tried to regain freedom for everyone. In order to do this, we had to fight for it—and now we must live for it. We dare not wait until our freedom is threatened again. The job of keeping our peace is as worthy as that of winning it. We must not tolerate insipid politicians as substitutes for the proud, vigorous, leaders we need. We should demand men who

would work for the glory of democracy and its enlightenment in the world. But, we also need inspired followers—men and women whose desire for freedom and peace and democracy is so strong and so sincere that every other desire is subservient.

I speak for democracy—the only possible government of individual freedom.

Rent Control

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. ANGELL. Mr. Speaker, Sam O. Plunkett, a resident of my congressional district, is a member of the local rent advisory board of my area. Mr. Plunkett is one of our outstanding citizens and is exceptionally well versed in the problems with respect to rents, being secretary of the Oregon Apartment House Association. He was appointed as a member of the rent advisory board by the late Governor Snell, of Oregon.

I include as part of my remarks a portion of a statement recently made by him which appeared in the Oregon Apartment and Hotels Magazine for February 1948, which is worthy of consideration by all Members of the Congress while rent control legislation is under discussion. The statement follows:

BOARD GOVERNED BY RENT REGULATION

At rent board hearings all facts of the case are considered in the light of the rent board's authority under the law. Each member has an opportunity to express an opinion and to request from the rent office any information that may be pertinent to the individual application. Under the rent regulation a landlord is entitled to relief under hardship if he can show that his net income has substantially decreased under any one year of rent control compared to 2 years subsequent to 1939. The measure of adjustment would be the difference in the amount the landlord's net income had been reduced. Rent boards apparently do not have the right to bypass this provision which results in them being unable to correct an inequity. A recent case before the board involved a woman having shown a decrease in net income of $34.42 per year in a four-unit building. The total amount the rent office could increase the rent of each unit would be 72 cents per month. However, an increase of $1 per unit per month was granted the petitioner who filed an application for review with the rent board. Under the regulation the board could do nothing except refer it back to the petitioner to make application under another ground for adjustment. The rent in this case was $12 per month, so it is understandable that this lady was suffering an obvious hardship.

PREVAILING RENTS BAR TO INCREASE

In many instances in which appeals are made to the rent advisory board are cases in which the rent office denies a petition on grounds that the rents are not lower than the rents of similar accommodations on the maximum rent date. In these cases the rent office supports their position by submitting several comparable housing accommodations in which prevailing rents are shown to be the same or lower than the rents in question. Comparability of rents existing on the freeze date has been a bar to many rental owners in securing rent adjustments for the reason that most rents generally prevailing on March 1, 1942, were low. In fact, the freeze method of stabilizing rents was adopted under wartime conditions because of its immediate and simple application. It was never intended to become a perpetual yardstick for appraising rents.

FUTURE OF RENT BOARDS IN DOUBT

Under provisions of the Housing and Rent Act of 1947, the present regulation expires on February 29, 1948. This also terminates the status of local rent advisory boards unless the law is extended into the future.

As a member of the Portland board it was my hope that some immediate solution might be evolved that would relieve the present condition facing owners of rental housing. It is quite obvious to me that owners of rental housing have suffered immeasurably by having to conduct a business in which a rigid price level has been imposed on its income while at the same time it has been compelled to pay its operating expenses on a constantly increasing cost basis. The threat that rent controls will be unnecessarily prolonged to the point that increasing operating and replacement costs will be greater than net income should cause grave concern to rental-housing owners.

BOARD VOTES DOWN DECONTROL

Being the only member of the Portland Rent Advisory Board that voted for decontrol of the Portland area I made a statement in connection with my vote which I now repeat. "I intend to vote for decontrol on the principle that it is grossly unfair to single out one class of citizens to be held under price control while permitting all other segments of our business economy to be free from restrictions." In a recent speech before a congressional committee in which he asked for termination of rent control on February 29, 1948, when the present Rent Act expires, John E. Owen, president of the National Apartment Owners Association, stated: "The experience of the last several years has shown that rent control has not accomplished all the objectives that its proponents claim. Rent control has not prevented inflation nor retarded it. Simple proof of that statement is to point out that in the years we have had rent control we have also had our greatest inflation. Rent control has served only to conceal some of the effects of inflation by distorting some of the relative values of housing and other commodities. Holding down the rent of a family has made more of its money available to bid up prices of food, clothing, and other essential and nonessential commodites. Rent controls thus have removed some price pressures—only at the expense of others. Rent control has had the effect of increasing the incomes of some tenant families, but only at the expense of other families—those families which own the rental property—and those families seeking rental housing. It has not increased our national wealth one dime. In other words, the owners of rental property and the persons seeking housing have been required to subsidize not only the tenant in possession of living units, but other business enterprises patronized by these tenants."

CONGRESS DECLARES INTENTION

In conclusion, Congress itself declared its position on rent control in the Housing and Rent Act of 1947, when it stated: "Congress declares it is its purpose to terminate, at the earliest practicable date, all Federal restrictions on rents on housing accommodations. At the same time, Congress recognizes that an emergency exists and that for the prevention of inflation and for the achievement of a reasonable stability in the general level of rents during the transition period, it is necessary for a limited time, to impose certain restrictions on rents charged for rental housing accommodations in defense rental areas."

The limited time referred to expires on February 29, 1948, and Congress should not break faith with tenants who willingly signed leases in 1947 for the year 1948 under the assumption that Congress meant what it said, about terminating rent control. Neither should Congress extend the gross injustices against one class of citizens who happen to own rental property by making them the sole victims of bureaucratic control, by failing to permit the present law to expire on February 29.

Write a Letter to Relatives and Friends in Europe Week

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. ROSS. Mr. Speaker, I have introduced a resolution today requesting the President to designate the week ending March 28, 1948, as Write a Letter to Relatives and Friends in Europe Week.

Last month the Congress passed and the President signed the so-called Voice of America bill to enable the Government of the United States to promote a better understanding of the United States in other countries and to increase mutual understanding between the people of the United States and the people of other countries. As set forth in the act, one of the means of achieving these objectives is the dissemination abroad of information about the United States, its people, and its policies.

Mr. Speaker, the most powerful voice for telling the people of Europe the truth about the United States is the voice of the plain people of the United States.

One of the most effective means of checking the spread of antireligious, antidemocratic doctrines in Europe is through the voice or pen of those living in the United States, of those who know and believe in liberty and freedom and in our democratic principles and institutions, who have faith in a government based on Christian principles.

The people of the nations of Europe have experienced severe physical and mental suffering. War and its aftermath have left a large segment of the people of the continent confused in their thinking, uncertain about the kind of government they want, and who, because of misinformation, do not understand the United States and what we are doing to preserve peace in the world. These people need friendly encouragement. They need to have their faith in their fellowmen restored. If every American would write their European relatives and friends in their own words the truth about the United States, much of the confusion and misunderstanding would be dispelled.

These letters would be a most potent force in combating the false propaganda being directed against the United States. They would build a bond of friendship and understanding which no amount of manufactured propaganda could dissolve.

I urge the House to give this resolution most earnest consideration. It follows:

Whereas every effort should be made to promote mutual understanding between the people of the United States and the people of the countries of Europe, which understanding is one of the essential foundations of peace; and

Whereas steps should be taken to correct misunderstandings about the United States now prevalent in the countries of Europe; and

Whereas encouragement should be given to the dissemination in such European countries of true information about the United States by American individuals: Now, therefore, be it

Resolved, That the President of the United States be requested to designate the week ending March 28, 1948, as Write a Letter to Relatives and Friends in Europe Week, during which time private American individuals shall be urged and encouraged to write letters or messages to their relatives and friends in any of the countries of Europe, setting forth true information about the United States, its democratic principles and institutions, its prosperity, and its desire for mutual and honorable peace and understanding with all nations and peoples of the earth.

Lincoln Day Address of Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. MEYER. Mr. Speaker, last Thursday the Lincoln Day Club of the Third District of Kansas held its annual meeting at my home town of Independence. Despite inclement weather that assumed the proportions of a small blizzard, there were more than a thousand stalwart Republicans in attendance, coming from all over the district and from various parts in the State to pay tribute to the memory of the first Republican Party President. The meeting was climaxed by a banquet with Senator EDWARD MARTIN, of Pennsylvania, as the main speaker. The address of this gallant soldier and distinguished statesman was so constructive and inspiring it should receive the widest dissemination possible. To that end, under leave to extend my remarks in the RECORD, I include the address herewith and commend it to my colleagues and others as must reading. The address follows:

It is always a pleasure to come to the Sunflower State and to visit for a time with the fine, patriotic, progressive people of Kansas. It is a high honor to be invited to address this celebration of the birthday of the immortal Abraham Lincoln, first Republican President of the United States.

Here, in the heart of America, you proudly sustain the best traditions of Americanism. Patriotic inspiration springs from the romance of Kansas history. You have always believed in and practiced freedom.

Your magnificent achievements are a glorious chapter in American progress. It is the story of sturdy, hard working, courageous men and women who valued liberty of the individual above security. They transformed the rugged frontier of your pioneer days into a vast empire of agriculture and industry; education, culture, and religion.

Kansas is the great storehouse from which food pours out to supply the world's primary need for bread and meat. You also contribute to the welfare of the world from your vast deposits of oil, natural gas, zinc, lead, coal, and salt. These natural resources yield their riches only to men willing to work.

In the Spanish-American War, World War I, and World War II, military units from Kansas won undying fame and glory. My affection for Kansas goes back to when I was a mere lad, serving as buck private with the Tenth Pennsylvania Volunteers in the Philippines. Our outfit was brigaded with your Twentieth Regiment of Volunteers, commanded by that brilliant and inspiring leader, Col. Frederick Funston.

In military work and in politics I have learned to know and admire so many of your famous men. I have been associated for many years in National Guard affairs with Gen. Milton R. McLean, your efficient adjutant general. While Governor of Pennsylvania I came into frequent contact with your former Governor, Andrew Schoeppel, whose service to his State and Nation deserved the highest praise. I have greatly admired Frank Carlson, your present Governor, who made an outstanding record in Congress.

In the United States Senate it has been my privilege to serve with your two Senators—ARTHUR CAPPER and CLYDE REED—both of whom hold distinguished places in that body. They are representative of your many newspaper publishers, who are active in public life, including your able and courageous Congressman, HUB MEYER, of this district.

Some of the great Kansans, I am proud to point out, have their roots deep in my own Pennsylvania. I refer particularly to Alf Landon, who was born there, and many of whose close relatives have been lifelong Pennsylvanians; to your great Gen. Dwight Eisenhower, whose father was a Pennsylvanian; and to your distinguished adopted son, Harry Colmery, past national commander of the American Legion, who was born in the Keystone State and who still returns to visit us now and then.

These are just a few, enough to show that the ties which bind us are not flimsy and that there is a little bit of Pennsylvania in many of the truest Kansans.

With pardonable pride let me remind you that the peerless American whose birthday we honor tonight also had the blood of Pennsylvania ancestors in his veins.

Of Abraham Lincoln, more than any other figure in history, it may be truthfully said "He was a man of the people."

The contacts that influenced his life were with the farmer, the man in the street, in the cross-roads store, in the post office, and in the courthouse.

The details of Lincoln's life story are too well known to all good Americans to require retelling here. But his principles and sound common sense can guide us in grappling with the critical problems of today.

One of the paramount issues before the American people is the solvency of our Nation. Warning against excessive Government expenditures, Lincoln wrote:

"It is a system not only ruinous while it lasts, but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with a government." Those are Lincoln's words.

What this country needs today is more men in high public office who know the value of a dollar. We need more "No" men. We have too many "Yes" men, too many agreeable, complacent, charming people, willing to buy votes with your money.

These are the fellows with fine, florid programs. Sure; they have plenty to offer, plenty of benefits for everybody, plenty of good times for everybody, plenty of something for nothing for everybody. Of course, it is not their money they are spending. It is yours; it is everybody's.

I say we need men who can say "No" and oppose phony something-for-nothing programs.

If the wastrel demagogs are followed it must inevitably lead us down the road to destruction—to national bankruptcy and loss of individual freedom.

I'll give you a program. It may not be a popular program, but, in the years to come, it will pay dividends. It will guarantee that your pension and social-security programs will be sound and waiting for you; that your bank accounts will be safe; that you will continue to enjoy precious American freedoms and liberties.

This is my program. Say "No" to most of these flashy new spending proposals. Say "No" when men in high places offer to spend your money for you and assert they are giving you something for nothing.

Say "Yes" to proposals to cut the cost of government, to lower taxes, to reduce the national debt, and above all else, to keep our country solvent.

You will remember when the apostles of unlimited spending took over in March 1933, and the Nation had a public debt of twenty-two and one-half billion dollars. Today it is over two hundred and fifty-six billion.

At that time we had about 500,000 Federal employees. Today there are nearly 2,000,000 on the Federal pay roll.

Even in those early days it cost the taxpayers a little over $5,000,000,000 a year to run the Government. Today the President asks for a budget of forty billions, out of which about five and one-half billion represents interest on the national debt alone.

These figures are staggering but bear in mind that in addition, the Truman administration proposes to spend $17,000,000,000 of the taxpayers' money in Europe.

Now, we all recognize that there are good, sound reasons—humanitarian and economic—for us to go to the rescue of some European countries with a program properly and economically administered. But the great tragedy in the President's so-called State of the Union message was that he uttered not a single word on behalf of economy. He suggested no saving that would help provide the funds for this vast outpouring of American tax dollars.

The President has told us that it will require work, sweat, and sacrifices to achieve our aims in Europe. But he said nothing to indicate that the overgrown and arrogant bureaucracy in Washington will be called upon for any sweat or sacrifice.

Oh, no—they are so strongly entrenched behind the iron curtain of waste and extravagance that it will take high explosives to blast them out.

That points to the Republican program—beginning now—a great crusade to save America—to crush the spendthrift administration under an avalanche of Republican votes. You have a big job to do here in Kansas—and I know you will do your full share to return the United States to Lincoln's concept of constitutional government. Kansas will help elect a Republican Congress and a Republican President next November.

Let me tell you what a Democratic Senator reported just the other day. Senator HARRY F. BYRD, of Virginia, is a real American—an old-line Jeffersonian Democrat. He is chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures. Reporting to Congress for that committee, he said:

"Reduction of Federal personnel in the executive agencies during the first 6 months of the current fiscal year was negligible."

He continued, "Increase—not decrease—in Federal personnel is to be expected the remainder of the year."

There is something to think about. Here we are in peacetime—fighting to cut Government expenses, to reduce taxes, to keep down inflation and the Truman administration has gone back to boondoggling. It is building up the pay rolls in advance of the national elections—not for the public benefit—but to buy votes with the taxpayers' money—just as it always has done.

It has been estimated conservatively that it costs $5,000 a year to maintain a Federal employee on the average. I mean his salary and office expenses.

If we can eliminate only half a million of those pay-rollers, it would mean a saving to the taxpayers of upward of $2,500,000,000 a year.

But first we must break down the stubborn refusal of the administration to cooperate with Congress in effecting these economies so necessary to relieve the American taxpayer of the backbreaking load of taxation. It is sometimes difficult for people away from Washington to comprehend the things that we see there every day.

Roadblocks are placed in the way of every effort to reduce pay rolls and other Federal expenses. Every department, bureau, board, and commission operates a little lobby of its own to pressure the Congress and to stir up protests around the country. Items are padded and faked in budgets so that even after slashes have been made pay-rollers can be paid through phoney items. Money is actually concealed in budgets and then brought out to maintain the army of drones.

Every shabby trick is resorted to in order that they may maintain this huge bureaucracy which saps the Nation's lifeblood. Every day an army of press agents, on the taxpayers' pay roll, grinds out propaganda to keep the wasters in power. No scheme is too costly—no promise too fantastic for their political philosophy.

I can hear, like an ever-recurring echo over the years, that Harry Hopkins' slogan—"We will tax and tax, spend and spend, elect and elect."

Oh, Abraham Lincoln!

How we need you today!

The Great Emancipator told the world that "A nation cannot survive half slave and half free."

That is as true today as when he uttered it and it applies not just to one kind of bondage but to all kinds. Let me remind you that when a government says to its free people, "Don't do it for yourself anymore; let the ruler do it for you. Don't think for yourself; let the ruler think for you"—then, that government is perpetrating a form of bondage.

And, for a period of more than 15 years, I charge, this process has been going on in the United States. It has been slow. It has been insidious. The velvet glove has always been worn. But its expression has been those slashing, brutal, bare-knuckled, terrifying words of Harry Hopkins:

"We will tax and tax, spend and spend, elect and elect."

Thank God we have not gone too far. We are not yet half slave. And we will not be so long as we use the ballot box for our shield this November as we did in November 1946.

One of the great dangers to America is big government. In 1854 Lincoln wrote:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves, in their separate and individual capacities. In all that the people can individually do for themselves, government ought not to interfere."

In recent years there has been a great increase in the number of individuals and subdivisions of government, organized as pressure groups, asking and demanding help from the government.

Lincoln's early struggles and the hardships he endured give emphasis to the words attributed to your former Governor, Henry J. Allen:

"Had Abraham Lincoln been living today the Rotary Club would supply him with a set of books. The Lions Club with a good reading lamp. The Cosmopolitan Club with writing equipment. The Kiwanis Club with a wooden floor for the cabin. He would have the protection of the child labor law and Government old-age assistance. A kindly philanthropist would send him to college with a scholarship. Incidentally, a case worker would see that his father received a monthly check from the county. The OPA would reduce his rent by 50 percent. He would receive a subsidy for rail splitting; another for raising some crop he was going to raise anyway; and another for not raising a crop he had no intention of raising.

"Result: There would have been no Abraham Lincoln."

Once we strained our muscles for liberty. Today we seem willing to surrender a share of freedom for a handout from Washington.

Lincoln, in his wisdom and vision, saw the great need for more government in the town hall, in the city hall, in the court house, in the State capitols, and less in Washington. The courthouse must again be the beacon light of liberty as it has been in the past. The closer the government is to the people the more efficiently and the more economically it is administered. The Federal Government is the furthest away and the most expensive. Let us keep a greater share of our government at home.

No right thinking American can fail to be alarmed over the confused, contradictory, and bewildered leadership of the present administration.

Back in 1848, when he was in Congress and long before he dreamed of achieving the White House, Lincoln spoke caustically of the then President, James K. Polk. On the floor of the House he said:

"The President is in nowise satisfied with his own positions. * * * His mind, taxed beyond its power, is running hither and thither, like some tortured creature on a burning surface, finding no position on which it can settle down and be at ease. * * * He is a bewildered, confounded, and miserably perplexed man."

It is hard to believe that quotation is not just a few days old but goes back a whole century.

I say this at the risk of appearing unkind to your neighbor from Missouri who often perplexes the Congress by actions similar to those described by Lincoln. Perhaps you remember a few.

You will recall that the President of the United States told his press conference that a return to rationing and price control in peacetime would be the act of a police state. And 30 days later he sent a message to Congress recommending these very controls and ordered his Cabinet into action to influence Congress on behalf of this program.

Do you remember also a President of the United States who told Congress and the Nation he was dead set against any tax reduction at this time. And then went before Congress, in person, to recommend a $40 reduction for every person in the Nation, with a phony soak-the-corporation proviso attached.

And a President who went before Congress to demand that strikers be drafted into the Army, and a little later was denouncing the fair and equitable Taft-Hartley bill as a slave law.

And a President who wrote to former Gov. George H. Earle, of Pennsylvania, ridiculing what he called the Communist bugaboo. Those were the President's words. Then 2 or 3 weeks later he issued a public order to his administration to combat communistic menace which existed in the Government itself.

Yes; there is danger from communism in our country. But no subversive element will gain a foothold in America so long as our people stand firm and united in patriotism, good will, tolerance, and love of God.

There is, however, a minority group that is a menace even greater than the Communists. They are the minority that is seeking the easy way—those who show disrespect for the law—the chiselers, the racketeers, and the something-for-nothing crowd. We have some of them in labor, in business and industry, in politics, and even in the Government.

Their ranks include the pressure groups, many of them well meaning but misguided, who swarm about Washington and flood the mails with demand after demand for spending that favors their own selfish interests. They don't seem to realize that the benefits they seek will be only temporary in nature and that when bankruptcy comes upon us the most precious of all our blessings—freedom—will be gone.

America is a great and powerful Nation. We have been given this land as a sacred heritage. Generation after generation has kept the fires of freedom burning.

All of our great progress has been based upon the philosophy of the sacredness of the individual and the sovereignty of God. It has brought us freedom of action, independence of thought, and tolerance in worship. We, in this generation, must not falter, stumble, or fall. If the sacred torch of liberty falls from our hands, it will be because of what we do to ourselves. It will be due to blunders at home, because we continue to tolerate administrations that weaken our independence, our inner strength and even squander our solvency blindly.

Abraham Lincoln, a man of vision and passionate desire to keep this Union strong and firm, saw it that way. He declared to a New York audience:

"At what point then is the danger to be expected? I answer, if it ever reaches us, it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a Nation of freemen, we must live through all time or die by suicide."

We have taken some of the steps toward the danger that Lincoln pointed out in that warning. There is still time to change our course.

We are in a critical period today because we have depended too much upon the power of government and too little upon ourselves. There has been too much strife and confusion; too much selfishness and not enough cooperation; and the failure to observe the Golden Rule in our relations with one another. We have forgotten the thrift, courage, humility and love of God possessed by the founding fathers and so well exemplified by Lincoln. So many of our so-called intellectuals have forgotten God. They talk of a planned economy which has failed every place it has been tried during the last 2,000 years.

We have talked too much about our rights and too little about our obligations. There has been too much clamor for higher wages and greater profits. We have talked so very little about giving in exchange greater efficiency, increased production, better service, and higher quality.

The time has come where the individual citizen must know his duties and assume a greater share of the responsibilities of citizenship. From the family and the church we must relearn the ancient lessons of honesty, thrift, tolerance, work, and obligation. These must not be merely Sunday virtues. They must be 7-day-a-week virtues, practiced in our daily lives.

In the eternal truths that live forever, in the teachings of the Holy Bible, there is guidance to preserve America as a land of high ideals and opportunity so that the humblest child may achieve the highest position in government, in the professions, or in business. That was Lincoln's thought when he spoke to the men during a review of a regiment during the Civil War:

"I happen temporarily to occupy this big White House," the President said. "I am a living witness that any one of your children may look to come here, as my father's child has. It is in order that each of you may have, through this free Government which we have enjoyed, an open field and a fair chance * * * that the struggle should be maintained, that we may not lose our birthright."

A big job confronts us. We must retain America in all its greatness and glory through the idealism of the individual citizen. That means Americans must obey the law. The Golden Rule must be put into business. That will be an example to the world in right living.

We can do our job if we keep faith and carry out the ideals of Lincoln—"with malice toward none, with charity for all, with firmness in the right as God gives us to see the right"—and hold fast to government "of the people, by the people, for the people."

Tonight, the greatest tribute to Lincoln is a prayer from the 140,000,000 Americans that we may have an understanding of our mission in the world; that justice alone can bring peace to the world; that respect for authority and the rights of each other should be recognized. On the birthday of the Great Liberator our greatest need is a modern Lincoln, to lead us in our duty as Americans.

That will make us a strong and dynamic America. An America copied from the courage of Kansas so well expressed in your State motto, "To the Stars Through Difficulties."

Fuel-Oil Shortage

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. CLASON. Mr. Speaker, in the Washington Post of yesterday appeared the announcement that the Commerce Department halted the issuance of all export licenses for gasoline and fuel oil for 48 hours subsequent to 5 p. m. eastern standard time on Tuesday, February 17, 1948. It is understood that contacts have been made by the State Department with officials in several foreign countries with a view to a new cut in export quotas to be announced, probably on Friday. When the present embargo is lifted Friday morning, the east coast embargo will remain in force until March 31. Apparently the Commerce Department had considerable difficulty in determining whether or not to impose this absolute embargo of shipments from any port in the United States. First, the newspapers were advised that the embargo was on. Within a half hour they were notified that the suspension had been called off. A half hour later the Department officials announced the embargo was in force. I believe that this vacillating action on the part of the Commerce Department officials is typical of their handling of the fuel-oil shortage which has caused so much hardship and trouble for thousands of American citizens all over the country and particularly in New England.

The possibility of a shortage of fuel oil was known to Government officials last spring. Apparently, oil company officials persuaded them that the shortage would be of small account and of short duration. When they knew that they had guessed wrong, our Government officials failed to act promptly and decisively to end the shortage. Nine congressional committees have endeavored to bring order out of the departmental chaos and relief to the householders. It is through the efforts of these committees and of Members of Congress acting as individuals that pressure has been brought upon the various Government departments to release Federal oil to local municipalities, to prevent further conversion from coal-burning apparatus to oil-burning apparatus in Federal buildings, to provide additional Government-owned tankers for transportation, and to place embargoes on shipments of oil from the United States to foreign countries.

In its latter course, the Government has proceeded so slowly with partial embargoes, and finally a full embargo, that the relief which might have been granted to American citizens will come at a very late date in the winter; but it is better late than never. This relief is, however, due for the most part to Congress. Congressman HESELTON, of Massachusetts, has introduced a bill which would place a commission in charge of the oil industry. The problem is a difficult one but it must be solved. Government officials have stated that they have all the laws that they need to govern the oil industry in such a manner as to prevent shortages, yet they testify that we will be faced with fuel-oil shortages for the next four or five winters and with possible gasoline shortages in the summers. If they believe their own testimony, the cause of these future shortages will be the failure of the Government officials to make certain that the industry knows how much fuel oil and how much gasoline are needed to meet the requirements of the citizens of the United States and then to insist that the 21 major oil companies which now have a strangle hold on the oil industry and all other industries dependent upon it shall provide the American requirements for fuel oil and gasoline on time. There is a growing conviction among Members of Congress that this present fuel-oil shortage need not have occurred. It is unfortunate for the independent dealers in fuel oil and in fuel-oil-burning equipment that their industries and businesses are the only ones which the 21 major oil companies do not dominate at the present moment. It looks as if 21 companies control the future destinies of nearly 40,000 other corporations and individuals in the oil or allied businesses. If the 21 major companies do not recognize the rights of these independent dealers and if they do not further realize that the most important use of oil products—other than oil needed for national security—is fuel oil for the heating of American homes, then I trust that Congress will give full consideration to the Heselton bill with a view to establishing proper production and distribution of oil products in the United States.

I am pleased to include with my remarks the following editorial from the Springfield (Mass.) Daily News of February 12, 1948:

OIL EXPORT BAN WORTHLESS

An interesting commentary on the action of the United States Department of Commerce in banning oil exports from Atlantic coast ports until March 31 as a means of relieving the acute shortage of heating oil in the East, particularly in New England, is that the ban, to all intents and purposes, is virtually worthless and insignificant in its scope. Department officials frankly acknowledge that there is nothing to prevent exporters from shipping their oil overseas through Great Lakes, Gulf of Mexico, and Pacific coast ports.

If oil exports to foreign countries can produce a profit to make it worth while, there is every likelihood that the ban on Atlantic coast shipments will have little, if any, effect on the question of keeping our oil supplies at home for domestic consumption between now and the end of March, when oil is gravely needed for heating purposes in areas where supplies are extremely meager and rapidly diminishing.

It is quite obvious, then, that the ban in its present form is practically meaningless and entirely without merit.

If the Department of Commerce wants to put teeth in the prohibition of oil exports, it will have to clamp the lid down on all exports for a period of at least 30 days. In this way, and in this way only, will the petroleum interests be thwarted in their attempts to sell oil in the foreign market, presumably at far greater profit than is obtainable in the domestic market.

Now that Congressmen CLASON and HESELTON have been successful in their efforts to effect a partial halting of oil exports, they ought to extend their demands and insist that the Department of Commerce officials go all the way and prohibit exports of oil from every United States port, at least until after the severe winter weather has passed and needy communities have been kept properly supplied during the emergency.

Youth Training

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. BREHM. Mr. Speaker, as a charter member and past president of the Logan, Ohio, Kiwanis Club, I naturally watch with interest Kiwanis activities.

One of the primary objectives of Kiwanis International is to aid underprivileged children. Untold thousands of physically handicapped children have been restored to health and happiness through the efforts of Kiwanis members.

There has just now come to my attention a type of youth training which, in my humble opinion, is one of the most noble objectives any service club could adopt. This is also the first time to my knowledge that any service club has ever undertaken an educational program of this type. I refer to the action now being taken by the Kiwanis Club at Circleville, Ohio. This club has started an

anti-Communist drive among the school children of all grades in the city of Circleville. On last Friday they distributed 1,600 pamphlets entitled "It's Fun To Live in America" to school children of all ages. According to the chairman of the committee, Mr. Verne Hawkes, "Distributions will be placed on a monthly basis." There is a definite need right now to present a true picture to children and grown-ups alike comparing living conditions in Russia with those in the United States.

Mr. Speaker, I am proud that this Kiwanis Club is located in the congressional district which I have the honor to represent, and I want here and now to publicly congratulate the membership of the Circleville Club for adopting and promulgating this noble objective and to voice a hope that other clubs will follow their example. Hitler knew the value of enlisting the youth of Germany in his program. Every dictator nation follows the technique of instilling their false ideologies in the minds of their children. It is a known fact that subversive groups in America, through the formation of various youth movements with catch-phrase titles, are attempting to destroy American institutions by instilling false ideologies in the hearts and minds of American children. It is also a known fact that various instructors in the schools and colleges of America are disseminating propaganda directly opposite to the ideals which make America the envy as well as the hope of the world. If America is to be saved, it must be done through our youth, and I know of no better way to supplement the program of the churches and of the home than the one which the Circleville Kiwanis Club has undertaken. My best wishes are with them in their noble objective.

The Costs of Containment

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1948

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann from the Washington Post of February 12, 1948:

THE COSTS OF CONTAINMENT
(By Walter Lippmann)

President Truman's foreign policy is about to cost well over $20,000,000,000 a year in direct expenditures. The bill for foreign aid put in by the State Department is well over eight billions figured on a yearly basis, and there is besides the bill for many other activities in foreign relations. The bill for the armed forces is over ten billions, not counting the additional expenditures for the proposed strategic Air Force or anything more than a first small installment for universal military training.

The disturbing thing about these costs is not the burden they impose this year. It is that they support a foreign policy in which, as it is now conducted, this rate of expenditure will increase rather than diminish.

That is because we are operating a policy of global containment rather than one designed to induce and compel a settlement.

For a policy of holding the line all over the world requires more and more money, more and more armaments, merely to hold the line as the situation behind the line we are holding deteriorates.

During the past year it has been deteriorating in Germany, in Greece, in the whole Middle East, and in China. The deterioration is marked by the fact that as the Truman administration has increased its commitments its diplomatic influence on events has declined.

We have assumed the whole burden of the deficit of western Germany, but our control over the destiny of Germany is rapidly evaporating. We have assumed the whole burden in Greece, but the prospects of our being able to subdue the rebellion or to settle it are less favorable than when we rushed in a year ago.

The whole Middle East from Iran to Iraq to Palestine to Egypt is proving once more the old rule that when great powers intervene separately and competitively in a rich and backward region of the world the result is anarchy and violence. And in China we are about to increase our commitments at a time when our capacity to influence the course of events is approaching zero.

The common factor in all those places is that, thanks to the Truman doctrine, we are losing our freedom of action. Our clients are becoming our masters. The western Germans, the government party in Greece, the Iranian Government, the Zionists, the Arab League, and Gen. Chiang Kai-shek have been given such unqualified support so publicly that the Truman administration is constrained to follow them and cannot lead them. Once we declared that it was a vital interest of the United States to make western Germany solvent as a bulwark against communism, or to make Greece prosperous as a bulwark against communism, or the Middle East, or China, we deprived ourselves of diplomatic bargaining power.

We must support our clients, no matter what they do, because we have slammed and bolted the door behind us. They know that we cannot withdraw our support without eating our words, and suffering humiliation and a spectacular loss of prestige.

The policy of containment has thus become what it was bound to become—an ever-deeper entanglement in evermore insoluble difficulties. There is only one way out of it, and that is by concentrating our diplomatic effort upon a settlement at some critical point. That point may be Austria. It may be Greece. It could be the Middle East. But at some deliberately selected point the stalemate must be broken decisively by that combination of pressure and compromise which is the essence of diplomacy. The important thing is to break the stalemate somewhere, and thus to change the political currents of the world. An Austrian treaty, which resulted in the military evacuation of Austria, would do that. It might well mark the turn of the tide from another war to an eventual peace. Therefore, it would be worth a considerable price.

What has to be determined by diplomatic negotiation is whether the Russians mean to stay in Austria or to leave it—in other words, whether an Austrian peace treaty can be had for a price, whether Austria can be ransomed. If it can be, then the cost of the ransom will be small compared with the cost of not making peace, of maintaining the armies of occupation indefinitely, of never reaching the time when Austria is independent and no longer divided under alien rule.

The worst of the Truman foreign policy is that in order to justify the enormous and mounting costs, it has been necessary to argue ourselves into the assumption that nothing can be settled. From that it is a small step to the view that nothing ought to be settled since any settlement requires concessions and compromises—and thus to acquire the habit of not looking for, of not trying to think out, ways and means of breaking the stalemate.

This habit is easy to acquire and hard to throw off. Especially as is now the case in the State Department, the habit tends to become fixed because the few men at the top who would have to direct a policy of settlement are so busy with the complicated consequences of the policy of containment that they cannot pay serious attention to the remedy for it.

Address of Hon. Ellsworth B. Foote, of Connecticut

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. ELLSWORTH B. FOOTE, Member of Congress, Third District of Connecticut, before New London County Republican banquet, February 14, 1948, at New London, Conn.:

We meet this evening to pay tribute to the immortal Abraham Lincoln. From a purely political standpoint we do so because he was the first President from the Republican party and one of the noble men who brought our party into being and made it great. Long before we faced the crises of today he had become an American institution far removed from political divisions, however. He has become the symbol of all that is truly American. As Stanton said on that fateful night, "Now he belongs to the ages." True it is that he belongs not to one Nation, or one generation, but to all nations and all generations. But let us not forget in all pride that he belongs uniquely to the Republican Party. He shaped it in its early years. He believed in the party as the instrument of the public welfare. He brought to it his lifelong principles and those principles have been our beacon light. The historian H. G. Wells places him as one of the six greatest characters of all mankind.

Whenever our Republic has been threatened there has always arisen in our midst a man who seemed preordained to struggle with the task at hand. From out of the masses has come a champion of the people who has wrestled with the problem and won. When revolution came, it was Washington who stood forth to lead the people. When the new Government was formed it was Jefferson who acted as the guiding genius. When it came time for America to speak her mind for a hemisphere free from sea to sea, it was Monroe who proclaimed his doctrine. But no figure in history towers so above them all as does Abraham Lincoln.

He appeared on the scene in that historic moment when the very life of the country hung in the balance on the precarious scales of human destiny. He it was who understood better than anyone else that the Union must be preserved, and yet it could not be preserved half slave and half free. He came forth at the very moment when all the world watched the very death throes of the gigantic dream of an American Nation. He perceived the difference between right and wrong.

There was no middle course for him, but it took courage, foresight, and fortitude to shout the doctrine of "one nation indivisible," from the very housetops of a country then torn by domestic strife. He led the Nation into a war only when he knew it could not be avoided and he set his course with faith in God and the strength of his people. There were moments when he might have been swayed by the cunning compromisers. He might have been torn aside by the pleas of businessmen to whom war meant bankruptcy and ruin. He might have been deviated by the wails of mothers and fathers torn from their sons, by the agonizing thought of brother arrayed against brother, by the ghastly cascade of blood which flowed across the land, by the destruction of homes and cities, by the prisoners of war and the suspension of civil liberties, and the whole revolting picture of a nation torn from border to border. Yet, he did not swerve from his path. He did not for one moment lose sight of the goal. He saw ahead of him a nation reborn, bound together forever, one Government, one flag, one people. We would not be honoring his memory tonight if he had forsaken the struggle for union because of heavy expenditures and grim sacrifices of people that were required.

Life in the great city of Washington brings home to one the full realization of the sacrifices that have been made by men and women down through the years and the rich heritage that is ours. On every side one sees monuments testifying to the work which has been done toward building this Nation to the point where it has become the envy of all other nations of the world. One of the greatest testimonials is the Lincoln Memorial. This marble shrine in a setting of rich dark green below it, and the Washington Monument and the Capitol in line with it eastward, is a memorial to the nobility and idealism of Abraham Lincoln whose rugged figure, 19 feet high, is seated within. Seven years were required for its completion. In order to prevent the columns and walls from appearing wider at the top they are tilted slightly inward. Above the rows of the columns are printed the names of the 36 States of Lincoln's time. The present number is symbolized in 48 festoons around the attic parapet. It is estimated that 2,000,000 people annually look upon that seated figure in the memorial and read his second inaugural speech and the Gettysburg speech carved in the marble walls. When Lincoln stood in the chill November air of 1863 before the people at Gettysburg to do honor to the men who had fallen in the cause of this great Nation, he said: "The world will little note, nor long remember what we say here, but it can never forget what they did here." But the world did not and cannot forget what he said there. These words engraved in marble will be remembered as long as the earth endures.

Lincoln was a true liberal. Unlike some of the self-styled liberals of today, he was a true and classical one. He did not use meaningless expressions to identify his liberalism, but stated them simply so that all could understand. While he was poor financially and his heart bled for the poor people, he did not condemn the man who through his own industry may have acquired considerable of earthly goods. He did not condemn the rich, nor penalize them, nor attempt to set class against class. In a speech in New York City in 1846, he said: "Property is the fruit of labor—is a positive good in the world. That some should be rich shows that others may become rich and hence is just encouragement to industry and enterprise." Lincoln realized that capital and labor each had its own rights and duties and that only through a spirit of cooperation rather than antagonism could they and the country prosper and reach that high point of productivity so earnestly yearned for.

Lincoln was the greatest exponent of freedom that ever lived. He realized that a nation could not long endure half slave and half free. He realized also that a world could not long endure where any nation was half slave and half free. Surely as we face the problems of today, the words of Lincoln in his first speech at Springfield, Ill., in the campaign of 1858, are appropriate, when he said:

"Do we know where we are? Do we know whither we are going? Can we know what we must do until we get our true bearings and a sense of direction? If a nation cannot endure half slave and half free, can an integrated world in which time and space have been annihilated, endure half slave and half free, and what is the state of freedom in the world?"

These words, spoken 90 years ago, are truly applicable to the situation in this atomic age.

What is the state of freedom in the world today? It is a lamentable fact that notwithstanding two world wars were waged upon European battlefields for the cause of freedom that we are far from realizing the goal. Freedom is again being extinguished, all the way from behind the iron curtain—from Finland to the Aegean. On all hands are to be found the enemies of freedom and those who proclaim it. Two European statesmen, symbols of democracy and freedom, and who fought for it until it was necessary for life itself to leave their countries and seek refuge here, viz, former Premier of Hungary, Ferenc Nagy, and former Premier of Poland, Stanislaus Mickolyczyk, are today sounding the alarm to us as to what is going on in eastern Europe and the plan that is being made to engulf us here. It is a regrettable fact, as testified by former Premier Nagy before a congressional committee the other day, "that the worst possible sin in Hungary as well as in the other eastern European countries is sympathy toward the United States." He further states it almost appears as though every anti-Communist politician is persecuted, put on trial, compelled to run for his life, because he is sympathetic to America and eventually finds himself either in jail or the cemetery. He say that the Bulgarian Prime Minister stated that it would have been possible to save the life of Potkof if the United States had not intervened in his behalf.

What would the immortal Lincoln prescribe today? I think he would say that we should do all within our power, commensurate with our ability, to hold high the torch of freedom in the countries of the world. He would not stand, however, in my opinion for a repetition of UNRRA. He would make doubly sure also that the money sent to foreign countries did not fall into the hands and be used by the very forces of communism which it is sought to destroy. I believe he would advocate giving aid and assistance to those freedom-loving countries for their own advancement but would consider it also in the interest of our own national security. The massive force of communism grows bolder and bolder. Its plan for the complete domination of Europe is clear to all. To save freedom abroad and at home will cost money. In Lincoln's day it was a costly business to achieve freedom at home.

As Speaker of the House JOSEPH W. MARTIN, JR., in an address in Washington the other evening stated, "The world today is divided into two spheres—freedom and communism. Our free economic system is under attack from within and without. Moscow tells the world through its controlled press and radio that our American system has failed (notwithstanding that under it we have become the richest country in all the world and are financing the rest of it). The out-and-out Communists within our borders echo its propaganda. Their fellow travelers give them aid and comfort—using our own Constitution and our own institutions to protect them as they preach their poisonous doctrine. When we seek to curb their activities, they screech to high heaven their constitutional rights are being violated. They refuse to answer the question of whether or not they are Communists and invoke the first amendment to the Constitution—the very instrument they seek to destroy. Congress is their target because Congress is their major obstacle. It is the branch of our Government which has made and must continue to meet this challenge of America's well being. Congress has served unmistakable notice it will not tolerate traitors in our Government establishments and agencies any longer.

"The recent disclosure that Communists are employed right in our State Department, having possible access to documents and military secrets, is so distressing that it is nauseating. To think that those who owe allegiance to the only foreign country with whom war is possible are now in the employ of the department of our Government having jurisdiction over its foreign affairs. It is disclosure of conditions such as this that is the greatest deterrent to enthusiastic support of the so-called Marshall plan.

Lincoln has been described as both the saddest and most humorous of men. He was elected to Congress from the Seventh Congressional District of Illinois in 1846. His opponent was Peter Cartright, the famous Methodist circuit rider, and the campaign was waged not on national issues of the day by Cartright, but on personal, moral, and religious issues. Cartright and his supporters resorted to the "grapevine telegraph" in spreading reports of Lincoln's infidelity. The final rally of the campaign was held in Cartright's church, and it demonstrates humor which he displayed on so many proper occasions. Cartright had called Lincoln an infidel, an agnostic, and an unbeliever, and then turned to his audience and said, "All those who expect to go to heaven kindly stand up." All stood up except Mr. Lincoln. "Ha, ha," said Cartright, "see, I have proved my point. Now, where do you expect to go, Mr. Lincoln?" Whereupon Lincoln stood up and said, "I expect to go to Congress." And he did.

One need not to be an alarmist to say that this is a time of crisis for mankind. What better can we do as we honor the memory of Lincoln than in truth and in fact to fall upon the standard which he raised for his party and as its first President? Somehow we should like to call upon his wisdom and guidance. One could well say: "Lincoln thou should be living this hour." If Lincoln were in the White House today he would strive with every means in his power to smooth out and rub out the animosities and hatreds which now divide Americans—to convince labor and capital that their interests are the same—to reconcile or dampen down the racial, religious, and economic prejudices which have been so carefully fanned up and kept hot—to persuade every American once more of the eternal truth of Benjamin Franklin's historic remark that "We must all hang together or assuredly we shall all hang separately."

I can think of no more fitting manner of concluding my remarks than to reiterate the thought expressed by the Honorable EVERETT M. DIRKSEN, of Illinois, in his address at the National Republican Lincoln day dinner in Washington, D. C., on February 5, 1948, wherein he called attention to the fact that in 1832 a song was written, the last stanza of which reads as follows:

"My country, 'tis of thee,
Sweet land of liberty, of thee I sing.
Land where my fathers died,
Land of the pilgrims' pride,
From every mountainside let freedom ring."

And that it is not known to what degree this song of freedom may have come to the attention of Abraham Lincoln, but that Abraham Lincoln did something more than let freedom ring. He made it ring.

The state of freedom in the world is at a low ebb. Abraham Lincoln kept his rendezvous with freedom. Shall we keep ours?

Tomb of the Unknown Soldier

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include a portion of a letter recently received from Mrs. William L. Dickson, of 43 North Pearl Street, Meriden, Conn., who comments upon the lack of respect shown the Tomb of the Unknown Soldier at Arlington, Va.:

This summer my husband and I spent 3 months in England, Scotland, and France. While in London and Paris we visited the Tomb of the Unknown Soldier. In both places people stood quiet as if in prayer, as it should be. We did not think much about it till after being home a month, we visited our own in Washington. We were ashamed to see good-sized children running and laughing about. Speaking of it later, I have had people tell me that they have seen grown-ups try to make the guard laugh and get in his way as he marches back and forth.

Can't you ask the boys that are on duty there what they think? Perhaps we need guards to teach our people how to act in such a sacred place.

Palestine Test

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sumner Welles which appeared in the Washington Post on Tuesday, February 17, 1948:

PALESTINE TEST
(By Sumner Welles)
PRICE OF PROCRASTINATION

It is hard to arouse a democracy to impending danger when the clouds on the horizon still seem no larger than a man's hand. Even Winston Churchill could not awaken the British people to the menace in the rise of nazism. The peril to us in Japan's aggression against China and in Mussolini's invasion of Ethiopia went largely unperceived. But even if the tragic lessons of the recent past are to be so easily forgotten, the clouds now looming are no longer on the horizon. They are hanging over us.

This Government has repeatedly announced that the United Nations is the foundation of American foreign policy. Yet because of the failure of the United States to adopt a consistent and courageous policy on Palestine, the United Nations is today faced with the gravest dilemma in its history.

Save for Britain in the days of Baldwin it would be difficult to find a more sorry instance of a major power refusing to face facts.

The decision to partition Palestine was taken after full investigation and debate. It was in strict accordance with the provisions of the United Nations Charter. The United States was in great part responsible. This country played a leading role throughout the events that led up to that decision.

The American Government failed, however, to insist that the United Nations must be enabled to enforce its decision, and to protect life and property in Palestine until the independence of the two new states had been finally established.

For lack of any United Nations police force, the members of the Palestine Commission have now been told by the British that they will be assassinated if they set foot in Palestine. Major hostilities between Jews and Arabs are imminent. The United Nations cannot carry out its decision. Because the United States has during the past two months renounced every semblance of leadership, the smaller countries are increasingly reluctant to assume any responsibility.

The Palestine Commission has at length been compelled to ask the Security Council to determine that there is a "threat to the peace" and to take action under the charter. And Washington still remains silent.

It is notorious that there is a sharp cleavage of opinion within the Government. The Army and Navy, supported by some officials of the State Department and of other departments, insist that the United States must take no action to back up its words. They allege that our growing controversy with Russia makes it unwise for us further to antagonize the Arab states or jeopardize this country's access to Near Eastern oil.

Such arguments are wholly unconvincing. The British Government cannot prolong its mandate in Palestine. Once British forces withdraw, war will result unless the United Nations can send an international constabulary to Palestine. If hostilities break out, the Soviet Union will undoubtedly insist that its vital interests require it to send its own forces to maintain order in its neighborhood.

Should our service departments prevail upon the Administration to refuse to exercise any leadership within the United Nations to maintain peace in Palestine, they will pave the way for what they fear most, namely, the extension of Soviet control over the Near East.

The arguments on oil are just as unrealistic. If a new war breaks out, the Near Eastern oil resources would certainly not be available to western Europe nor to the United States. Should peace be preserved, since the Arab governments depend upon the royalties from their oil concessions, they are hardly likely to oppose their exploitation.

But we are face to face with a far more fundamental issue.

Japan defied the League of Nations in 1932 and was permitted by the great powers to do so with impunity. The Italian aggression against Ethiopia, the civil war in Spain, and the rape by Hitler of Austria and of Czechoslovakia were the inevitable result.

The Arab states have now defied the United Nations.

The partition of Palestine is the one major question upon which the policies of the United States and of the Soviet Union have coincided. Yet this Government has so far failed to initiate any measures within the United Nations to guard against the Arab aggression which is under way, or even to protest the flagrant violation of their charter commitments by the Arab states.

If the United Nations is in fact the foundation of American policy, the United States must support the United Nations, not only when that is convenient and easy, but quite as much so when such support implies effort, sacrifice, and risk.

The League of Nations collapsed because the major powers then members of the League supported the League only when it suited their own ends. They failed to support the League when it seemed that their selfish interests might be prejudiced.

We are seeing exactly the same trend. The Palestine question is a test case. Should the United States persist in its present blind inaction, it will be preparing the way for the failure of the new international organization, and if the United Nations fails, the one hope humanity today possesses for the rule of law rather than the rule of force, for the freedom and progress of mankind, and for the establishment of a peaceful world order will vanish with it.

American Diplomats Criticized for Views on Prewar Dictators

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by William L. Shirer that appeared in the New York Herald Tribune of Sunday, February 15, 1948. Mr. Shirer, as we all know, is without doubt one of the most learned journalists in America and one of the best informed men on Germany and European countries. Mr. Shirer has spent many years in Germany and in practically all of the countries of Europe. I was glad to read his comments on Arthur Bliss Lane, former Ambassador to Poland. Lane saw the misery, hunger, disease, and destruction among the Polish people and did absolutely nothing to help them. In my opinion Mr. Lane's attitude was heartless and inhuman. He exerted every effort to deny loans and credits to the Polish people. He even went out of his way to deny them a meager amount of relief supplies of food and medicines that were voted by Congress for the Polish people. He tries to cover up his inhumanity by saying that he did not like the Polish Government. After Hitler and the Nazis finished murdering and slaughtering some 7,000,000 people in Poland, Mr. Lane by his actions, would have permitted many millions more to die of starvation and for lack of medicines. Anyone who is sympathetic to the Polish people cannot regard Mr. Lane with respect.

Mr. Shirer's article follows:

AMERICAN DIPLOMATS CRITICIZED FOR VIEWS ON PREWAR DICTATORS—SHIRER, DISCUSSING LANE'S BOOK ABOUT POLAND, ASKS WHY ONLY RED BRUTALITY EVOKES IRE; SAYS ENVOYS ACCEPTED THE RIGHTISTS

(By William L. Shirer)

I have read Arthur Bliss Lane's somewhat hysterial but highly provocative and informative book, I Saw Poland Betrayed, with the greatest of interest, but I cannot help thinking that his case against the suppression of democracy in Poland by the Bolsheviks would have been much more effective had he shown more concern about democracy in eastern Europe in the years when he represented his country there and when the Communist ruffians had not yet taken over.

It is a criterion which one could apply to most of our American diplomats.

I have no illusions about Russia's hold over eastern Europe—a hold which is based, as Mr. Lane shows in regard to Poland, on fraud, terror, and force. But what sometimes baffles me about our State Department diplomats is that they seem to recog-

nize tyranny only when its color is red. Why were their eyes closed and their hearts hardened to the tyrannies of almost all the little eastern European states they were accredited to during the years when those lands were completely uncontaminated by communism?

For a number of years between the wars eastern Europe was my beat, and though the people, including the intellectuals and artists were charming, and in most instances courageous, their governments, for the most part, were monstrous. These governments, which were dictatorships, did not permit democracy to function. They suppressed the human freedoms.

IS IT WORSE THAN BEFORE?

It may be, as PM's disillusioned former correspondent, Hal Lehrman, argues in his fascinating book, Russia's Europe, that there are degrees of tyranny and that the current Russian-Communist kind is several degrees worse than what it supplanted.

But the old variety was bad enough, and some of its excesses, its terror, its sadistic practices of torture used to rob me of my sleep when I learned of them in my tour of duty as an American reporter.

However—in those days—these excesses bored the readers back home, and, so far as I remember, they used to bore most of our American diplomats on the scene, who later would recoil at similar practices of the Red barbarians.

Perhaps it is my naïveté, but it is hard for me to distinguish between tyranny and terror, whether red or black. In those years between the wars I remember that our American diplomats took the suppression of democracy and human decency in eastern Europe in their stride. Their proudest boast—as anyone who has called at an American legation or embassy in east Europe will recall—was that they had gone "huntin'" with Dictator So-and-So and what a really good fellow he was when you got to know him.

And I cannot recall that a single American ambassador or minister resigned in a huff and came home to write an angry book about the suppression of democracy in the country to which he had been accredited.

Could it be that suppression of liberty and democracy is all right with an American diplomat so long as the Communists do not do the suppressing? Long assignments in Poland, Hungary, Yugoslavia, and other countries now under the Soviet yoke have made me ponder the question.

EXAMPLE OF BALTIC STATES

I kept pondering it during the perusal of Ambassador Lane's book. He was, for instance, our Minister to Estonia, Latvia, and Lithuania during 1936 and 1937. How did he find democracy faring on the Baltic?

The facts were plain. In 1934 the Estonian Parliament had been dissolved, martial law proclaimed, and an authoritarian regime set up with Paets as dictator. It is true that after Mr. Lane left things got worse in Estonia. Indeed, by 1938 the local dictator presented the country with a corporative Fascist constitution and the country lived under martial law with suspension of civil rights.

Did we care much about that in America? Or did it depress our diplomatic mission to the Baltic States? Or did the State Department send ringing notes to demand that democracy be restored immediately?

Estonia, of course, was only one of the three Baltic States. There was, for instance, Latvia. Mr. Lane was also accredited to it. By the time he arrived, in 1936, Prime Minister Ulmanis had succeeded in suspending parliament and setting up an authoritarian dictatorship on what he called a "corporative"—that is, Fascist—basis. The country lived largely under martial law.

LITHUANIA THE SAME

Lithuania, the third Baltic State, had seen the dissolution of all opposition parties in 1935 and authority taken over by Smetona. And so on.

Mr. Lane next moved to our legation in Belgrade. Though he arrived there in 1937—that is, 3 years after the assassination of King Alexander had brought an end to a royal iron dictatorship—it can scarcely be said that democracy and a respect for liberty and human rights prevailed in Yugoslavia. The elections were rigged, and until near the very end Stoyadinovitch was pretty much of a dictator under the regency of Prince Paul, who had surrounded himself with White Russians who were not only pro-German but pro-Nazi. I cannot recall that our legation or the State Department lectured the undemocratic pro-Nazi Belgrade regime during this time.

In his book Mr. Lane recalls the unbridled enthusiasm he witnessed in Warsaw when the Polish Republic was born in 1919. He did not see diplomatic service in Poland again until he returned as Ambassador in 1945. But in his sketch of the background of his assignment he has not a word to say of what happened to democracy in Poland between the time he left and the time of the treacherous Nazi onslaught in September 1939.

I happened to spend a fair amount of time in Poland during that period, and I have been thinking what a significant book some retired American Ambassador could have written then with a title: "I Saw Democracy Betrayed in Poland." He could have told how Pilsudski, for whom Mr. Lane has some kind words, destroyed democracy in Poland, and how, after Pilsudski's death, the little band of stupid pro-Nazi colonels outlawed all parties but their own, and even annulled the democratic constitution of 1921 by illegal and fraudulent means.

None of this background excuses what the Russians have done to gain their ends in eastern Europe. But it does seem to me that our diplomats, like Lane, when they come to write their books, owe it to their American public to provide a little perspective. And their angry words about Russian-Communist tyranny would ring truer, I submit, had they been just a trifle angry at the reactionary tyranny which preceded it in eastern Europe.

Palestine: British Appeasement Did Not Secure Arab Loyalty

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the CONGRESSIONAL RECORD two recent articles on Palestine. The first is If America Scuttles Partition from the February 14 issue of the Nation, in which the editor, Freda Kirchwey, vigorously reviews developments in the Holy Land and rejects any possibility of appeasement of the feudal Arab tyrannies. The second is by Henry Wallace from the February 16 issue of the New Republic, and is included, not because of Mr. Wallace's role as a third party Presidential candidate, but because of his familiar and lifelong standing as a great humanitarian and an excellent reporter. They follow:

[From the Nation of February 14, 1948]

IF AMERICA SCUTTLES PARTITION

(By Freda Kirchwey)

While the United Nations Palestine Commission wrestles with its monstrous assignment, word spreads in Washington and Lake Success that the United States is looking for a way out of its commitment to partition. The opposition of certain State Department officials and of Secretary of Defense Forrestal was exposed in these pages 2 weeks ago by Lillie Shultz. Since then, Forrestal has said plainly that the protection of our oil reserves in the Middle East would require strong measures—including "some arrangement" which might bring upon the Government the charge of imperialism. And sources close to the State Department insist that strategic considerations have at last forced Secretary Marshall to abandon his support of partition.

If this is true, it leaves the President both isolated and vulnerable. From honest conviction as well as political interest, Mr. Truman favors the UN plan for Palestine. More than that, he recognizes the obligation our Government assumed when it voted for partition in the General Assembly. But it will take immense courage to resist the kind of pressure that can be brought to bear if his chief policy-makers decide partition would jeopardize American security in the eastern Mediterranean. Has Mr. Truman that kind of courage?

Without active American help, the Palestine Commission stands no chance on earth of winning the backing it requires in the Security Council. Only American insistence could overcome the obstacles set up by the British—their refusal to allow the creation of local militias in Palestine as recommended by the Assembly; their refusal to provide a port and hinterland from which the commission could operate; their unwillingness to receive the commission itself until just before they lay down the mandate, thus preventing the United Nations from making any adequate preparations for taking over the interim administration of the country. Above all, the British have permitted the Arab rebellion to develop to a point which guarantees in advance the failure of partition, unless the Security Council takes drastic measures to restore order.

To meet the problems facing it in Palestine, the Security Council, will have to develop a capacity for positive action of which it has never yet shown any signs. It will have to deal with acts and threats of aggression on the part of several member states of the United Nations, one of which—Syria—is represented on the Security Council. It will have to deal with Britain's failure to maintain peace and security, its explicit refusal to carry out recommendations of the Assembly—and Britain is a permanent Council member, possessed of the veto. It confronts the necessity of putting down rebellion. Obviously, none of these obligations will be met unless the United States puts the full weight of its authority behind the commission and the decision of the United Nations. If it fails to do so, Britain and the Arabs may wreck partition, but American prestige will go down in the general collapse.

This has not yet happened; perhaps it will not happen. But if it does, we should recognize what it means in terms of American foreign policy. For the growing resistance to partition in the minds of our policy-makers is part of something much bigger. Put in a sentence, it indicates that the Truman doctrine is in process of being extended to embrace the whole Middle East and perhaps other areas as well; that the strategy

of employing as allies or tools whatever groups happen to be in power, provided only they are opposed to Russia and hostile to communism, will be applied to the Arab countries as it is now being applied to Greece and Turkey.

Just as the British tried to buy Arab support, or at least neutrality, by abandoning their commitments in Palestine when they saw war with Hitler in the offing, so they and we—if the opponents of partition have their way—are preparing similarly to buy Arab support in anticipation of war with Russia. The states of the Arab League, angered by the UN decision and fully aware of western doubts about implementing it, have put on a full-dress demonstration of their unending will to defeat the plan, if it costs the last poor Arab's life. The Jews persist in believing that, given arms, they can defend both partition and themselves; they have also asked for a United Nations police force to help maintain order and protect the commission. But some of our leaders in Washington are more impressed by Arab threats than by Jewish powers of resistance—or America's commitments in the UN. Several officials have expressed the belief that arming Haganah would only incur Arab vengeance, while an international force might in the end bring Soviet troops—along with ours—into the Levant. Better to "eat crow" on partition, they say, and make deals with the Arab rulers to protect the bases and pipe lines and oil reserves we shall need in that war with Russia. So the Arabs call the tune to which Americans will march in defense of our democratic Western civilization.

It takes temerity to differ with experts; but one gains courage from the fact that only a few months ago many of these same men had figured it out differently. They saw the strategic problem then in terms of a defense based in Africa—arguing that, in case of war with Russia, the Middle East could not be held unless armies were already massed there to prevent an invasion.

One gains courage, too, from recalling that British appeasement after 1939 did not secure Arab loyalty, but, on the contrary, was utilized by local leaders to prepare the Levant as an avenue of Nazi advance; and that the Mufti, now directing the rebellion in Palestine, was similarly engaged in Iraq at the most critical moment of the war. But if the loyalty of the Arabs cannot be bought, even with Jewish blood, the good will of the Jews can be thrown away. No official in London or Washington can hope that Jewish friendship will survive the scuttling of partition or that Palestine's Jews will quietly submit to Arab domination or existence in a "Vatican state" at Tel Aviv. Rather than accept the blasting of all their hopes, the Jews will fight, and this time they will not be held back by any concern for future good relations with Arabs or British—or Americans. They will fight as the Jews fought in the Warsaw ghetto. And every Jew will be an Irgunist, for the premises on which moderation still precariously rests will have been blasted away.

Will pipe lines and refineries be safer in these circumstances than under the plan laid down by the United Nations? Will a bloody struggle with the Jews of Palestine help secure the Middle East as a bulwark against Russian expansion? Will it create that solidarity in the West so essential to the successful "containment" of Russia? Would the United Nations itself survive the surrender of partition by America?

These are some of the questions the President should put to his chief advisers before he allows his Government to go back on its word. For once he accepts the logic of imperialism, the course will be set for war and the final defeat of democracy.

[From the New Republic of February 16, 1948]

HENRY WALLACE'S COLUMN

PALESTINE: CIVILIZATION ON TRIAL

We have the power to stop violent deaths in the Holy Land.

Day after day, as I read the stories of bloodshed in Palestine, my mind goes back to my visit there three short months ago. I saw the magnificent efforts of the Jewish settlers to build thriving communities which would set a pattern for the entire Middle East. I saw evidence on the village level that the Jew and the Arab get along very well, provided hatred and discord are not incited from outside. I saw the potentialities of this ancient land as they were dramatically presented by the Jewish people in their everyday work. I was confident that the Nation of Judea would, with the help of funds from the World Bank, join with King Abdullah of neighboring Trans-Jordan in developing the Jordan River for the lasting benefit of both Arab and Jew.

On November 29, when the General Assembly of the United Nations decided that the only practical and equitable way to put an end to the Palestine strife was through partition into Jewish and Arab states, those of us who have confidence in the practicability of international organization were inspired with hope.

Since November 29, the British Government, without American opposition, has done all in its power to obsrtuct the implementation of the partition plan.

It has waged undeclared war on the Jews, confiscating their weapons while they were under Arab attack. It has permitted Arab troops commanded by the ex-Mufti of Jerusalem from his exile in Egypt, to lay siege to the old city of Jerusalem, to erect road blocks on Palestine highways, to snipe at Jewish food-supply convoys.

The British Government bluntly told the UN that it will not permit the UN Commission to enter Palestine until May 1, 2 weeks before the scheduled termination of the British mandate and the surrender of civil authority. It told the UN it will not legalize present Jewish defense forces or permit the formation of a Jewish militia, despite a recommendation of the UN Commission that such a militia be organized.

When I read Bevin's speech about his Arab friends—the feudal lords of the Middle East—coupled with the day's stories of new bloodshed, I thought of the persecuted people I had seen building a new life in Palestine, and I shuddered to think that this man should ever speak, as he has so often done, in the name of western civilization.

Britain and the Arab states are waging civil war against the United Nations. They will succeed unless the United States speaks out forcefuly and at once to give the UN courage.

When it was a question of bringing the Iranian problem before the UN, the United States didn't hesitate to act at once. When it was a question of furnishing arms to Greece and Turkey, the United States did not hesitate to act unilaterally. Of course, when it was a question of supporting the legitimate government in Spain with arms in 1936, the United States had refused to act. Is history to record that the United States acts in most instances to support feudalistic and vested interests?

Almost 2 years ago, on Army Day 1946, President Truman declared that, "No country, great or small, has legitimate interests in the Near and Middle East which cannot be reconciled with the interests of other nations through the United Nations. The United Nations has a right to insist that the sovereignty and integrity of the countries of the Near and Middle East must not be threatened by coercion or penetration."

Yet Truman ignored the UN in the case of aid to Turkey and is ignoring it today. American actions and inaction make us as responsible as the British for continued bloodshed in the Holy Land.

We are undercutting the whole peacemaking power of the UN.

The United States, having cast the decisive vote for partition, must put its strength behind that decision. We must let the British know at once that they will receive no more money from the United States until they carry out the UN decision with regard to Palestine. We must insist that the British stop furnishing arms to the Arabs anywhere in the Middle East. I would like to see UN action to stop all shipments of arms to any nation anywhere in the world, but I condemn a system that prevents shipments to Jews and encourages shipments to Arabs.

The Arabs and the oil resources of their lands must not be pawns in a cold or hot Anglo-American war against Russia. The move to sabotage the UN decision for a Jewish state, to keep the Moslem peoples submissive, and to placate the kings and emirs and effendi is an outrage.

I have listened to and read a lot of propaganda, much of it no doubt British-inspired, to the effect that the Jews in Palestine are Communists or that recent immigration has been largely communistic. I am convinced that this is another utterly false "Red menace" manufactured with the hope of justifying murder.

The Jews of Palestine are not Communists. The economy of Palestine is more genuinely a mixed economy than can be found in any country in the world. There is plenty of room for the free enterprise of the businessman and the individual farmer. Many of the recent immigrants have come from eastern Europe because they did not want to live in Communist lands, and they find a different spirit in the kibbutzim than in the Russian kolkhozes. The attempt to use the Red paintbrush to smear the Palestine picture is nothing short of criminal.

The strife in Palestine is a reflection of a foreign policy—our foreign policy—which is negative and defensive. The elements for peace exist in Palestine as they do throughout the world. There are people, masses of good people, Jews and Arabs, with common needs, destined to be neighbors, who can be helped to build new, useful and abundant lives if we will think positively and act forthrightly, without delay.

In addition to using its influence to stop the British government's sabotage of the UN decision, the United States must call on the Security Council to order the establishment of a Jewish defense militia, responsible to the UN commission for maintaining order in the Jewish state until an international constabulary can be provided. We must demand security council action to halt the shipment of arms to the Arab league states which are waging war against the United Nations. We must request the Security Council to urge immediate compliance by the British government with the General Assembly's recommendation to evacuate a port in Palestine for the reception of Jewish immigrants.

We have the power to stop violent deaths in the Holy Land. We must use it.

Labor and Management Relations

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. MILLER of California. Mr. Speaker, decades hence students of labor

relations digging into the CONGRESSIONAL RECORDS of 1947 for subject material on which to write the labor history of our time will find many yellowed pages filled with charges and counter-charges as to what had transpired during the immediate past that resulted in the passage of legislation adverse to the cause of labor. They will find many unsupported statements but little factual material.

In order to supply some of that lacking factual material, I ask unanimous consent to include in these remarks an editorial published in the Richmond (Calif.) Independent on Saturday, January 17, 1948, that is entitled "Good Going."

This editorial is based on the results of a survey conducted by the Contra Costa County Development Association and released that week. The survey was among the leading industrial plants of Contra Costa County and covered a 7-year period from 1940 through 1947 as to the number of man-days of labor lost due to strikes.

The results of this survey are interesting and have earned their place in the history of Contra Costa County. Now Contra Costa County is one of the most rapidly growing counties in California and is predominantly industrial. It was in Richmond, Calif., the largest city in Contra Costa County, that records for shipbuilding during World War II were set. Here were located the largest shipyards of that master of production, Henry J. Kaiser.

Contra Costa County is a pleasant place to live. Its people are friendly, intelligent, tolerant, and understanding; and perhaps this is the secret of the fine labor relations that exist in this county.

Here labor and management have demonstrated that they can get along together and that they are interdependent.

I am, indeed, proud to represent a district in California of which Contra Costa County with its close to 300,000 people is a part.

I am proud of this record and I think the Contra Costa County Development Association supported by the county and the industrialists of the community is to be congratulated for making known the results of a factual survey that discloses that during the period 1940 through 1947 there were 10,167 days of work lost due to strikes out of a total of 42,538,893 man-days of work. This means about 1 day out of 425 was lost due to work stoppages arising out of labor-management disputes.

The editorial reads:

GOOD GOING

This week the Contra Costa County Development Association released results of a survey conducted among the leading industrial plants of the county and found that during a 7-year period only 10,167 man-days of work were lost due to strikes.

This is nothing short of miraculous in view of the fact that there were 42,538,893 man-days worked during the same period, 1940 through 1947.

The figures emphasize what has long been a contention of labor and management leaders in the county, that Contra Costa County labor-management relations are the best in the Nation.

Contra Costa County is predominately industrial. Its lifeblood is closely interwoven into huge oil refineries, the world's largest sugar refinery, powder plants, pottery plants, and other types of heavy industry. Normally, it would be considered the ideal breeding ground for industrial dispute.

The fact that there is such a low ratio of man-days lost because of strikes is a tribute to labor and management. They know how to get along. They see the other fellow's point of view and adjust their thinking and actions along those lines.

It is also a near miracle when one considers the fact that on the whole, labor and skilled crafts in the county are better paid, or as well paid, as employees in other sections of the State. In several categories the working man in Contra Costa County earns more on an hourly basis than in any other section of the State.

All of this contributes to well being for the worker, a full day's output for the employer, and a higher than usual standard of living.

Contra Costa County, second leading industrial county in the State and topped only by Los Angeles in the value of its products, might easily have been the scene of spirited, protracted, and costly labor disputes. But it was not, and down through the years the record shows that peaceful relations between employer and employee have been the rule rather than the exception.

There have been some disputes and there have been some work stoppages. But they have been quickly settled as the result of the sane thinking and action of the leaders involved.

Labor and management in Contra Costa County have demonstrated that they can get along, and that both sides can profit.

Many other areas in the State and the Nation would do well to emulate the Contra Costa County method of doing things.

Abraham Lincoln—1948

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. REED of New York. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I am inserting an article, Abraham Lincoln—1948, written by Carlos W. Huntington, which appeared in the Portland Homebildor under date of February 14, 1948:

ABRAHAM LINCOLN—1948

Rail-splitter, clerk, postmaster, lawyer, member of the Illinois Legislature, Member of Congress, President, Abraham Lincoln was born in Kentucky, February 12, 1809, a staunch advocate of economy and efficiency in government and national unity.

What would he see in his America of today?

A national debt of unprecedented proportions, $256,000,000,000, almost $2,000 for every man, woman, and child, the highest tax rate in history; industry harassed by regimentation; bureaucracy and waste keynoting governmental operations; scare propaganda to aid in the imposing of a philosophy of scarcity, of governmental support from the cradle to the grave, of dependency on Government for shelter, food, medicines, and security rather than individual effort and initiative; price-support subsidies, governmental meddling in every phase of our lives, centralization of power in Washington and a breakdown of individual responsibility. He would also see a segment of our population espousing and abetting foreign ideologies that have as their goal a totalitarian government under the ultimate domination of Moscow; he would find do-gooders whose ambition is to give away our substance, both at home and abroad, they, of course, to be the mediums through whom the largesse is channeled, in order that they may reap the plaudits of the recipients, build up their power and control over the rest of our people and economy.

He would see Navajo Indians starving on their reservation while trainloads of food go to our former enemies across the water, he would see other Americans dependent upon charity for which "drives" are conducted, one after the other, to provide funds, while our Government sends billions overseas. He would see our people shivering while coal and oil are exported to other lands. He would see hundreds of unnecessary Government bureaus staffed with hundreds of thousands of employees burdening the taxpayers and he would find inefficiency and waste rampant in all branches of governmental activity.

On the brighter side he would find an awakened national realization of the necessity of tax reduction, a greater efficiency in the Federal Government, greater economies in operation and less restrictions upon free enterprise. He would find industry at an all-time high, despite governmental handicaps, increasing production, a determination to make the American system succeed and an optimistic view of the future.

Yes, Lincoln would find that, despite all obstacles, America is still America, where government of the people, by the people, for the people shall not perish from the earth.

CARLOS W. HUNTINGTON.

Republican Speakers Eulogize Abraham Lincoln on His One Hundred and Thirty-ninth Birthday Anniversary; They Applaud National Rededication to Principles of Freedom and Equal Opportunity Advocated and Practiced by the Great Emancipator

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. HALLECK. Mr. Speaker, pursuant to authorization of the House of Representatives, I am presenting herewith for the readers of the CONGRESSIONAL RECORD the text of an inspiring radio broadcast commemorating the one hundred and thirty-ninth birthday anniversary of Abraham Lincoln.

The addresses, citing everlasting accomplishments, precepts, and admonitions of the immortal Lincoln for application to problems currently confronting our Nation, were presented under auspices of the Republican National Committee over facilities of the American Broadcasting Co., February 12, 1948, Hon. Carroll Reece, chairman of the Republican National Committee, speaking from Indianapolis, Ind., presided.

Hon. Joseph W. Martin, Jr., of Massachusetts, Speaker of the House of Representatives, spoke from New York; Hon. Kenneth S. Wherry, United States Senator from Nebraska, spoke from Huntington, W. Va.; Hon. Dwight H. Green, Governor of Illinois, spoke from the executive mansion at Springfield, Ill.; and

Clare Booth Luce, former Republican Member of the Congress from Connecticut, participated in the broadcast from San Bernardino, Calif.

All cited Lincoln's way—the way of national unity in support of liberty and justice and equal rights and opportunities for all races, creeds, and colors—as the eternal American way and conqueror of alien ideologies that would make our Government master instead of servant of the people.

To these views, I am sure all patriotic Americans wholeheartedly subscribe. I thank the House of Representatives for this opportunity to have this Lincoln Day broadcast made a part of the permanent record of the Eightieth Congress.

Full text of the broadcast, beginning with the radio announcer's opening remarks, follows:

ANNOUNCER. Tonight the American Broadcasting Co. presents in the public interest a special tribute to Lincoln. The program is arranged and presented by the Republican National Committee. The next 30 minutes ABC microphone will take you to Springfield, Ill.; New York City; Huntington, W. Va.; San Bernardino, Calif.; and Indianapolis, Ind.

The chairman of the program will be Carroll Reece, chairman of the Republican National Committee, who will introduce four other speakers in this Lincoln anniversary celebration. And now we take you to Carroll Reece in Indianapolis.

Chairman REECE. This is a year of decision for the American people. This year the people will decide whether to go forward as a free and powerful Nation, guided by the principles of Abraham Lincoln, or whether we will continue along the perilous course of the past 15 years. The Republican National Committee tonight is happy to be able to present to you some of the outstanding members of our party, persons who have rendered great service both to the party and to the Nation, both in public and in private life.

Eighty-eight years ago, in a time of crisis, this Republic turned to Abraham Lincoln and the Republican Party for guidance and protection. The result was the preservation of the representative Republic bequeathed to us by the founders of this Nation, and during the years which have passed since those dark days, so long as we have followed the precepts and the principles of Lincoln, we have grown in wealth and power. When we have turned from those precepts, as, unfortunately, we have on a few occasions, we have become involved in difficulties and controversies, both foreign and domestic.

There is little need to point out that we are involved in such difficulties today—after nearly 16 years under an administration which has sought to subvert or destroy the things for which Lincoln fought and for which he died.

It is said that history repeats itself and the situation in which we find ourselves today convinces me that such is the case, because basically the problem which we must solve today is the same one which confronted Lincoln—the problem of maintaining freedom and independence and integrity in a world in which powerful forces are arrayed on behalf of tyranny and disunion. The stage is larger today, the actors are different, but the basic principles involved are the same.

Lincoln had his roots in the great Middle West. Born in Kentucky he moved to Indiana in his youth, but most of his life before he was called to Washington, was spent in the great State of Illinois. I am speaking to you tonight from the capital of one of the States in which Lincoln lived, and now for a continuation of our program we take you to Springfield, Ill., to hear a great Republican and a great Governor of that State, the Honorable Dwight H. Green.

Governor GREEN. Thank you, Carroll Reece.

Four score and seven years ago yesterday, February 11, 1861, Abraham Lincoln left Springfield on a special train which carried him to Washington—to the Presidency, to death by assassination, and to eternal fame. From its platform he bade a tearful and prayerful farewell to his Springfield neighbors.

Springfield still feels the living force of Abraham Lincoln. I speak to you from the 90-year-old Executive Mansion. When it was new Lincoln was a frequent visitor here. Through the miracle of the radio, and the wise arrangements of the national committee, I am able to join with my fellow Republicans in their homes throughout America in this celebration of his birthday.

All Americans are united today in homage to the simple man from Illinois who made liberty more real for countless millions of men and women of every color, creed, and condition in life. Yet properly and inevitably he remains the patron saint of the party which gave him to the Nation and which he, in turn, made a dominant factor in America from 1860 to this day.

Properly in this campaign year when we believe that the preservation of the fundamental freedoms of America again depends on Republican victory, we scan the Lincoln record for counsel and inspiration to apply to our present task. The lesson I find in that record is this. The Republicans won in 1860 because they had a candidate who understood the American people and who stood uncompromisingly for what he believed to be just and right; and because the party conducted that campaign as a great moral crusade. I believe that that is the only formula which will achieve Republican victory in 1948.

In short, what our country and our party need today is Republicans who will work and live by the philosophy and the faith of Abraham Lincoln. Indeed, the whole world needs that faith and that philosophy.

This morning I participated in ceremonies as another special train left Springfield. It is the Lincoln friendship train, sponsored by church organizations throughout America. After joining other sections from other States, the train will deliver at the seaboard a cargo of food to be sent to starving men and women in Europe.

How wonderful it would be if that train could carry also faith and hope to the starving souls of the world. The train cannot do that, but the American Nation can send them. We can do that by scrapping the Morgenthau plan of vengeance and hate and replacing it with a Lincoln plan of justice and mercy for conquered Germany. We can repudiate the shameful compromises by which Presidents Roosevelt and Truman consented at Yalta and Potsdam to programs of mass slavery, mass exile, and mass oppression.

Our own experience should teach us that peace and prosperity must be founded on liberty, justice, and tolerance. Without liberty there is no peace but the submission enforced by the oppressors; no prosperity except for the exploiters of the oppressed. I am convinced that unless America is prepared to oppose a world half-slave and half-free, to stand for a Lincoln plan of justice and mercy, and to support it with firmness in the right, all the billions we may spend under the Marshall plan will be wasted. Similarly, the perplexing domestic problems which confront us will be solved not by new experiments in regimentation and socialism, but by a return to Lincoln's zeal for hard work and production, his faith in our system of free enterprise, his conviction that capital and labor in mutual respect can achieve a fuller and richer life for all.

Let us here rededicate ourselves to the goal for which Lincoln lived and died—a strong and free America.

Now to Indianapolis and Chairman Reece.

Chairman REECE. The next speaker on our program is one of the outstanding women of America. She has distinguished herself in the fields of literature, the theater, and public service. We go now to San Bernardino, Calif., to hear the former Congresswoman from Connecticut, the Honorable Clare Boothe Luce.

CLARE BOOTHE LUCE. It is over 80 years ago that Abraham Lincoln was slain. He was slain by a bigot who hated him because he had used his great mind and will "To give this Nation, under God, a new birth of freedom." So ever since we have rightly called him a martyr to liberty.

Liberty, do we have any clear idea what we mean by liberty? Don't we mean this: That a man has liberty when he is free to choose according to his own lights—between what seems good to him and what seems evil?

The idea that man is born with the right to choose freely is something called "the doctrine of natural rights." This doctrine is set forth in the Constitution and Declaration of Independence. It holds that each and every one of us—regardless of color, creed, or birth—holds these natural rights inalienable. And, as Abraham Lincoln knew so well, they are inalienable for one reason only: because they are the endowment of the Creator.

So God has endowed a man, at birth, with a free will, which can never be taken from him. But he can be stopped from exercising his free will in making choices. His free choices can be interfered with, or prohibited by other men. Bureaucrats and demagogues can cut them down by using legal stealth. They can pass laws which little by little will whittle away at his liberties. In the end he may not be able to call his house or business or savings or even his wages his own. His opportunities may be reduced to the point where he can't earn a living and must either starve or become a creature of a political boss or party. He may be handed over to be the victim of a powerful economic pressure group. If he is also a member of a weak minority, he will then become a slave in everything but name. He will have lost, as we say, all his civil liberties.

The American people enjoy a larger measure of civil liberties than any other people in the world. They do so, because they still have a representative form of government. They have voted themselves into these liberties.

But by no means do all our people enjoy all the civil liberties to which they are entitled—not only as children of God—but as ordinary United States of America citizens. I am speaking of the Negroes and the other racial minority groups.

The reason for this again is that we are a representative form of government. And our Government isn't perfect because we, the people, are the Government, and we aren't perfect by a long shot. So there are imperfect—that is to say, prejudiced and selfish people in our Government. Most of them got put there by selfish or indifferent voters, who urge their representatives to increase their own freedom of choice while denying it to minorities. The problem of government is simple to state, even if it isn't easy to solve: It is to increase the area of freedom of choice for the greatest number of people, while safeguarding all the liberties of the past that have proved fruitful and useful to our Nation.

Now it is just a plain ordinary everyday common-knowledge fact that the southern Democrats in our Congress do not want to increase the area of freedom for our Negroes and minority groups. There are a lot of things wrong with the Republican Party—just as there are a lot more things wrong

with the Democrat Party. And you, exercising your freedom of choice, can do your own toting up of the score, come the next election.

But this is a matter of record: All the great initial advances made in our civil rights were made by Republicans. They freed the slaves. They passed the thirteenth amendment which prohibited slavery here forever. They put through the fourteenth amendment. That one protects us against having our life or property taken from us without due process of law. They brought about the fifteenth amendment. That keeps any citizen from being denied his right to vote by reason of his race, color, or previous condition of servitude. If you don't believe what a joke the Democrats in our House and Senate try to make of these amendments every chance they get—you should have sat, as I did, for 4 years in Congress. The tragedy was, they succeeded. And why not? They were in power.

They have been in power for 16 years.

Just now Mr. Truman is making quite a to-do about civil liberties. He named a committee to give us a report on civil rights. Here's something from that report:

"The most striking mass interference (it said) since slavery with the right of physical freedom was the evacuation of persons of Japanese descent from the west coast during the past war. The evacuation of 110,000 men, women, and children—two-thirds of whom were United States citizens—was made without a trial or hearing of any sort at a time when the courts were functioning."

"The most striking interference since slavery with physical freedom." Yes, that is what Mr. Truman is saying now about what Mr. Roosevelt did. But the funny part of the thing is that Mr. Truman was in the United States Senate at the time Mr. Roosevelt did it.

He was a big, important, Democratic Senator. And the sad thing is nobody heard Mr. Truman saying anything then against this interference with freedom.

No, human liberty isn't the thing the Democrat Party cares most about like Abraham Lincoln did. But maybe you do. Maybe you'd like to see the poll-tax abolished, and an antilynching bill passed. Maybe you'd like to see minorities in this country get a little better break? Well then, I expect you'll have to go for the party of Abraham Lincoln.

Now to Indianapolis, and Chairman Reece.

Chairman REECE. The period immediately following the War Between the States was one marked by the tremendous development of the territory which now includes the Western States. As a result of that development, made possible largely by the achievements of Lincoln, many new States were admitted to the Union, and among the first of those was the State of Nebraska. Nebraska has supplied many notable leaders of the Republican Party and of the Nation. One whom I am going to present tonight is now the acting majority leader of the United States Senate. Like most good Republicans, he too has been making a Lincoln Day speech tonight and he is in Huntington, W. Va. I now present the Honorable KENNETH S. WHERRY, United States Senator from Nebraska.

Senator WHERRY. Thank you, Carroll Reece.

My fellow Americans, throughout the land Abraham Lincoln has been honored today, in thousands of homes, in schoolrooms, and patriotic programs. Tonight at hundreds of meetings he has been paid the highest tributes. May I, as a Member of Congress, the Congress in which Abraham Lincoln once served, submit this thought to you?

As in Lincoln's time, so now, we need a united America. And America needs a leader in the White House who will stand four-square on the principles championed and accomplished by the immortal Lincoln. He was unmoved by the storms of controversy which raged about him because his soul was rooted in the finest traditions of liberty and faith in his fellow men, a faith in God, and an abiding confidence that only right is might.

For 15 years the strategy of New Deal administrations has been to divide and control, to pit one minority group against another, to incite conflict between capital and labor, and to reduce our country to a nation of contending classes. But Lincoln gave his full measure of devotion to save the Union, to bind its wounds, and to unite all people.

So the issue is, Shall there be a fifth term of New Dealism in the White House?

That is what President Truman and his radical advisers are conspiring to achieve. The master planners who are advising him have taken possession of the Democratic Party. They have nothing in common with the Jeffersonian Democrats or those of us who believe in the principles of Abraham Lincoln.

The American people will not stand for a fifth term of New Dealism. Next November they will elect a Republican President who will cooperate with a Republican Congress to unite our people. Then our country will move forward to complete the job so well advanced by the present Republican Congress.

In his time Lincoln emancipated the slaves. In our time the Republican Congress emancipated the workers. Lincoln advocated and believed in American free enterprise. President Truman has lost faith in our competitive system. He constantly appeals to the Congress for power and more power to control and regulate the lives of our people. The solid fact is President Truman has been wrong on the economic situation from the day hostilities in the war ended up to this very moment. He anticipated and geared his actions for 10,000,000 unemployed. He was wrong by 10,000,000. Last October the President said price control and rationing were police state methods. Two weeks later he asked Congress to give him power to establish a more colossal OPA than we had during the war.

He fanned the flames of inflation by almost daily predictions that prices were going higher and higher and higher.

The President has insisted that huge exports of grain and meats have had little or no effect upon our domestic prices. But Secretary of Agriculture Anderson testified that exports have had a terrific effect. Who was right and who was wrong?

Even as commodity prices began breaking last week the President was insisting again to newsmen at the White House that the Congress must vote him police state power to impose price controls. The same confusion and drift prevails in the administration's foreign policy. Twenty billion dollars has been spent in Europe since hostilities ended. Fundamental problems remain unsolved, the answers to which may have far-reaching consequences, because of the President's mistakes and delays. We are still searching for a lasting peace.

The administration tried to impose the Morgenthau plan upon Germany. It failed. And it was the Republican Party that forced abandonment of that stupid and costly policy. The people sense the Ship of State has lost its rudder and the captain does not know what course he follows.

As Abraham Lincoln spoke of another President:

"The President is in no wise satisfied with his own position. First he takes up one, and in attempting to argue us into it he argues himself out of it, then seizes another and goes through the same process, and then, confused at being able to think of nothing new, he snatches up the old again, which he has sometime before cast off. * * *

"He is a bewildered, confounded, and miserably perplexed man."

This kind of leadership the American people will no longer tolerate. The signs are unmistakably clear. There is an insistent yearning call for a leadership that will stand unflinchingly for the eternal truths lived by the great Lincoln.

Let us, all of us, all Americans, rededicate ourselves tonight to his precepts and principles, so that our beloved country, with God's help, again may enjoy the blessings of freedom and opportunity.

And now back to Carroll Reece, our national chairman, in Indianapolis.

Chairman REECE. When Lincoln was struggling to maintain the Union, one of the areas from which he drew most effective and loyal support was New England. Our next speaker on the program is a product of that area. He is a man who holds today the second highest official position in our Federal Government.

Tonight, he has been a speaker at the great Lincoln Day dinner in New York City. He will speak to you from there. I now present the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, Speaker of the House of Representatives.

Speaker MARTIN. Tonight, the fate of civilization hangs in the balance. Everywhere in the world men, women, and little children, terrorized by the flames of war which have swept their homes away and which have left them miserable, hungry, confused and fearful turn their eyes to the United States and cry "Help us lest we perish." In that bygone day of Lincoln in our own Nation, the fate of the Union hung in the balance. Dark clouds of trouble hovered low over our own fair land. Today throughout the whole world including our own country, dark clouds of danger and threats of disaster hang low and everyone is afraid.

We in our generation must save civilization, even as Lincoln, in his generation, saved the Union. Little did the men and women of his day know the Union he preserved would become the hub upon which the fate of the whole world would turn. But so it has become. The people of the North, the South, the East, the West, patriotic Americans all, stand shoulder to shoulder in the struggle to make sure civilization shall have a new birth of freedom, and that free government and human progress onward and upward shall not perish from the earth.

In that struggle, we must go forward with Lincoln's unfaltering faith in God, and his deep trust in the people.

We must keep our own Government of the people safe, sound, strong, and solvent. This must be done for the sake of all those who love liberty everywhere in the world. Their great strength and hope lie in America. Their inspiration, too, is in Lincoln's wonderful example of faith, determination, and fortitude.

If our own Nation loses its free way under our American system, if liberty withers in Lincoln's America, the beacon of hope for all the rest of the world will become dim and flicker out; the torch by which the footsteps of mankind are being lighted onward and upward will lose its flame and men will become lost in the darkness of despotism and ignorance.

As we see freedom faltering in so many lands, we must give the world the great example of making liberty a practical chart of life in these United States. It would be unthinkable that the lives which have been offered up by men in their last great sacrifice upon the alter of their country should have been given in vain. It is unthinkable that the privations which our forebears have endured should come to naught. We in this Nation shall not meanly lose our liberties and allow the great handiwork of the founding fathers to fall in failure. We shall be true to Lincoln's faith in us. We shall be true to our faith in Omnipotent Providence. We shall be true to our faith and confidence

in ourselves. We shall not permit political greed for power or wanton extravagance in government, reckless waste, or conniving schemes to defeat our great aim to maintain our own liberty under our American way, and to help lead the other peoples of the planet back to sanity and peace.

As a Nation we say to the world, in Lincoln's words:

"With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive to finish the work we are in. * * *"

God bless Lincoln; God bless America.

I now return you to Indianapolis, and Chairman Reece.

Chairman REECE. On our program tonight four great Republicans, and four great Americans have addressed you from widely separated cities in the United States. They have sought to bring you the message of the Republican Party; the message, which I hope will assist you in making the right decision in this year of destiny. We believe that the destiny of this great Nation, and indeed the destiny of the world itself, depends upon adherence to the principles which have made this Nation great and which will make it even greater unless they are disregarded.

This is more than a Presidential election year. It is the year in which the American people have what may well be their last chance to make a free decision as to the future of our Nation. All of us, Republicans, Democrats, and those of no political affiliation, are in the same boat. If we go on the rocks, we will all sink together.

The Republican Party enters the Presidential campaign this year animated by a determination to save our way of life and our form of government, and a conviction that this can be accomplished only by the election of a Republican President who will be guided by the principles of Abraham Lincoln—the principles which saved this Nation once before and will save it again.

We appeal to all Americans to join us in this great endeavor. Let us not forget the admonition of Lincoln here in Indianapolis on February 11, 1861, while he was on his way to Washington to assume the Presidency. He said:

"I appeal to you to constantly bear in mind that not with politicians, not with Presidents, not with office seekers, but with you is the question: Shall the Union, and shall the liberties of this country be preserved to the latest generation?"

ANNOUNCER. During the past 30 minutes you have heard five leaders of the Republican Party in tribute to Abraham Lincoln. The chairman of the program was the Honorable Carroll Reece, chairman of the Republican National Committee, who spoke from Indianapolis. The Honorable Dwight H. Green, Governor of Illinois, was heard from Springfield, Ill. The Honorable JOSEPH W. MARTIN, Jr., Speaker of the House of Representatives, spoke from New York City. Senator KENNETH S. WHERRY, acting majority leader of the United States Senate, was heard from Huntington, W. Va., and former Congresswoman Clare Boothe Luce was heard from San Bernardino, Calif. This program was presented in the public interest. This is the American Broadcasting Co.

Ohio Veteran Laws

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. VORYS. Mr. Speaker, many Ohio veterans are not fully aware of their legal rights to various benefits, privileges, preferences, and exemptions, as extended to them, under certain circumstances, by the laws of the great State of Ohio. I am, therefore, pleased to present, for their information, an outline of such laws, as compiled by my good friend, Albert L. Daniels, department adjutant of the Disabled American Veterans, 111 Wyandotte Building, Columbus 15, Ohio, who will be happy to furnish more specific information on any such State law.

Mr. Daniels, incidentally, has been a member of the Ohio Legislature for 12 years, the last 8 of which have been spent in the State senate, and, at the present time is chairman of the senate committee on finance. He is an outstanding leader of the legislature, particularly on veteran questions.

Mr. Albert Croy is department commander. He is publisher and editor of two newspapers in Van Wert County, the Ohio City Progress at Ohio City and the Radar at Convoy. As a World War I veteran myself, I have been interested in the DAV for years, even though I was not wounded or disabled, because of their fine service in behalf of comrades who were less fortunate than I. The DAV is definitely in good hands in Ohio with an excellent history of constructive accomplishments on behalf of war disabled veterans and their dependents during the past 15 years.

This résumé of Ohio laws, affecting veterans, their dependents, and organizations, is as follows:

BONUS

A bonus is being paid to every honorably discharged veteran of World War II who served on active duty in the armed forces between December 7, 1941, and September 2, 1945, both dates inclusive, and who, at the time of commencing such service, had been a resident of the State for at least 1 year and who served at least 90 days or who is still in such service. Amount—$10 for each month of domestic service and $15 for each month of foreign service with a maximum of $400. Survivors of eligible persons also have entitlement.

BURIAL ALLOWANCE AND ALLIED BENEFITS

A maximum county allowance of $100 is provided for the burial of indigent veterans, their mothers, wives, or widows. Burial may not be in a potter's field. Privilege is granted for removal and reinterment of bodies in soldiers' plot.

Counties, townships, and municipalities may purchase and maintain burial plots for burial of deceased veterans.

Cemetery associations have been granted certain powers.

The county recorder is the custodian of records concerning the location of veterans' graves and upon request from a veterans' organization 30 days prior to Memorial Day, shall furnish such organization with a list of all veterans buried within the county.

It is the duty of the adjutant general to preserve a record of place of burial of veterans.

Cemeteries may not prohibit the erection of a headstone provided by the United States or by the State of Ohio for veterans' graves.

The county is required to furnish, on petition, markers for veterans' graves for the purpose of designating such graves for memorial purposes.

The county shall apply to the United States for a suitable headstone for the grave of a deceased veteran and have same set in place.

CIVIL RELIEF AND ALLIED BENEFITS

Acknowledgment is made of legal instruments and the administration of oaths.

Disability of minority is waived for a veteran or spouse to contract under the GI bill of rights.

Protection is granted to persons in the armed forces in case of civil actions arising during period of military service.

CIVIL RIGHTS AND DUTIES

Absentee registration and voting is provided.

Provisions for voting by inmates of soldiers' homes have been made.

CLAIMS—ASSISTANCE IN OBTAINING BENEFITS—SAFEKEEPING OF PAPERS

Representatives of recognized veterans' organizations are appointed as commissioners with power and authority to administer oaths and take acknowledgments in connection with instruments to be used in prosecuting claims before the Veterans' Administration.

The State commissioner of soldiers' claims administers oaths without charge.

Free copies of public records are provided for wards of the United States Veterans' Administration under the Uniform Guardianship Act.

County recorders issue, without charge, a certified copy or certified photostatic copy of discharge papers.

The Veterans' Administration or other United States Government agency may obtain from the director of health, without expense to the State, transcripts of, or information from, birth, stillbirth, and death certificates without payment of any fee.

It is the duty of the State commissioner of soldiers' claims to assist veterans, their heirs, or representatives with their claims against the United States.

The soldiers' relief commission in each county is empowered to employ a county veterans' service officer to advise and assist veterans, their wives, widows, children, parents, and dependents.

EDUCATIONAL BENEFITS—QUALIFICATIONS FOR THE PROFESSIONS AND TRADES

Training in the armed forces is accepted as active practice required of applicants for registration as professional engineer.

Tuition benefits are extended to veterans.

EMPLOYMENT PREFERENCES, PRIVILEGES, ETC.

At least 7 of the 11 members of the board of trustees of town, municipal, or county memorials to veterans shall be veterans. Preference shall be given to veterans in employment on the construction and maintenance of such memorial buildings.

Members of the school retirement system in the armed forces are considered as on an indefinite leave of absence if they return within 2 years after discharge, with all rights preserved.

Members of the soldiers' relief commission and service officers appointed by the commission in each county must be veterans.

Period of service with the armed forces is not counted in determining eligibility for appointment to position in the police or fire departments recreated within 3 years after its abolition.

Preference is given to veterans in employment as caretakers of county or township memorial buildings.

Preference is given to veterans under civil service in State and local units as to examination and appointment.

Preference is given to veterans, their wives, widows, and children in employment by the soldiers' relief commission, as investigators.

Benefit rights are preserved under the Employment Insurance Act.

Retirement rights of public employees, teachers, and school employees in military service are preserved.

Full credit is extended to police and firemen's relief and pension funds for time spent in the armed forces of those honorably dis-

charged on or before September 30, 1948, and who shall have made application for reinstatement in their department within 90 days after discharge.

Classified State employees may be reinstated after termination of military service in World War II with preservation of civil-service rating.

Representatives of congressionally chartered veterans' organizations recognized by the Veterans' Administration may be appointed as State veterans' commissioners.

Retirement is provided under the State employees' retirement system (also public school or teachers' retirement system) where the cause of disability was the result of military service.

Unemployment compensation provisions are extended for those entering the armed forces.

GUARDIANSHIP

The superintendent of the Ohio Soldiers' and Sailors' Home is the guardian of the estate of all minors admitted to the home.

A uniform veterans' guardianship act has been enacted with modifications, providing for the appointment of a guardian of an incompetent veteran or the minor child of a veteran, to receive certain benefits on behalf of such ward.

HOMES

Veterans, their wives, widows, and mothers may be admitted to the Madison Home.

Veterans may be admitted to the Ohio Soldiers' and Sailors' Home.

Orphans of veterans may be admitted to the Ohio Soldiers' and Sailors' Orphans' Home at Xenia.

HOSPITAL BENEFITS

An incompetent veteran may be committed to a Federal hospital under the Uniform Guardianship Act.

Counties, etc., are authorized to purchase land in cooperation with the United States public-works projects for building veterans' hospitals.

MARRIAGE

All marriages of soldiers performed in the State from the beginning of World War I up until February 28, 1919, under marriage licenses issued by their commanding officers or other military authority, have been declared valid and binding. Such marriages shall be recorded by the probate judge on payment of a fee of 50 cents.

For good cause a probate judge may waive the 5- to 30-day waiting period before issuing a marriage license.

Regardless of the requirement that marriage license be obtained in the county where the female resides, the probate judge of any county must issue the license to any soldier or sailor stationed in his county and to the prospective bride of any such soldier or sailor.

MEDALS, CERTIFICATES, ETC.

Badges of honor have been provided for veterans who had service on the Mexican border, Spanish-American War, and World War I.

Provision has been made for a special State roll of honor to accord recognition to officers and enlisted men who received awards for gallantry.

MEETING PLACES, MEMORIALS, ETC.

A memorial forest has been established in Hanover Township, Ashland County, in commemoration of those citizens who lost their lives in World War II. The Ohio Federation of Women's Clubs is erecting a memorial shrine building.

Suitable markers have been erected on all State and Federal highways at points crossed by Morgan's raiders in 1863.

The Greene Ville Treaty Memorial Park has been established at Greenville as a State memorial under the State Archaeological and Historical Society. A $20,000 canvas painting of the event hangs in the rotunda of the State capitol in Columbus.

The taxing authority of any township, municipality, or county may declare additional taxes necessary for the building of memorials to commemorate the services of all members and veterans of the armed forces.

To honor three of Ohio's famous fighting divisions, State Route No. 3 has been designated Thirty-seventh Division Memorial Highway; State Route No. 42 has been designated Forty-second "Rainbow" Division Memorial Highway; United States Highway No. 21 has been designated Eighty-third Division Memorial Highway.

PATRIOTIC HOLIDAYS

Annual appropriations made by county, city, or town for Memorial Day observance are expended through veterans' organizations.

County commissioners provide Memorial Day markers for veterans' graves upon petition of any Memorial Day association or veterans' organization and pay the expense of placing such markers.

RECORDS, RELICS, ETC.

The 700 extra copies of the Official Ohio Roster of the Soldiers of the American Revolution have been transferred to the Ohio Society of the Daughters of the American Revolution.

A war history commission has been established with biennial appropriations.

RELIEF AND REHABILITATION

Banks, building and loan associations, and domestic life-insurance companies may make loans to qualified veterans under the GI bill of rights.

A postwar program commission has been established to study restoration of World War II veterans to private industry.

The county soldiers' relief commission extends relief to needy veterans, their wives, widows, children, and parents.

The board of trustees of town, municipal, or county memorials coordinate and assemble within a county one-stop information or service centers where all governmental agencies for the benefit of veterans operate. The centers are located in the memorials.

Where the proceeds of admissions are used for the benefit of needy veterans, such admissions are exempt from taxation.

TAX EXEMPTIONS, EXEMPTION FROM LICENSE FEES, RENEWALS, ETC.

No tax may be collected on admissions where the proceeds inure exclusively to benefit persons in the military or naval force, National Guard organizations, Reserve officers' associations or organizations, posts or organizations of war veterans, or auxiliary units or societies, provided no part of the net earnings go to a private stockholder or individual.

Residents of State institutions and military homes may fish without a license.

Persons in active military service are exempt from motor-vehicle license requirements during furlough and from examination after discharge.

A special license is issued for operation of a motor vehicle not to exceed 12 times a year for parade and exhibition purposes, with an annual fee of $2. Such licenses are issued only to the American Legion, VFW, and Forty and Eight.

Veterans are required to pay a nominal fee only for peddler's license.

A disabled or an unemployed veteran may do business as a vendor, as defined in the retail sales tax act, in more than one county under a single license.

Embalmer's or funeral director's license is renewed without cost during period of military or naval service.

Any trade or professional license is renewed without penalty or examination after discharge from the armed forces.

Monuments, monumental buildings, and funds set apart for building of monuments to veterans are exempt from property tax.

Real estate held or occupied by veterans' memorial associations, monumental building associations, etc., is exempt from property tax.

Time is extended for filing tax returns, reports, or information required by law to be furnished to the department of taxation of the State or to any county auditor of any county for members of the armed forces during World War II until 6 months after a discharge.

Funds raised and set apart for the purpose of building monuments to veterans of the State and monuments and memorial buildings are exempt from taxation.

The requirement that a club shall have been in existence for a period of 3 years in order to qualify for a D-4 liquor permit does not apply to units of organizations chartered by the Congress of the United States or a subsidiary unit of a national fraternal organization, provided, however, that the parent organization has been in existence for 3 years or more at the time of making application.

VETERANS' ORGANIZATIONS

State appropriations are made biennially to the following veterans' organizations: Grand Army of the Republic, United Spanish War Veterans, American Legion, Eighty-third Division of AEF Veterans' Association, Veterans of Foreign Wars, Ohio Rainbow Division, Thirty-seventh Division AEF Veterans' Association, Disabled American Veterans, American Legion Buckeye Boys' State, Army and Navy Union. The funds appropriated are used to render various types of service to veterans and their dependents.

Provision has been made for policies of group life insurance covering members of veterans' organizations.

The unauthorized wearing or use of insignia, badges, etc., of certain veterans' organizations is punishable by a fine not to exceed $20 or imprisonment for not more than 30 days, or both.

County commissioners may permit use of county buildings by any society or association of soldiers, sailors, marines, and pioneers.

Certain counties may erect memorial structures with room suitable for a meeting place for the Grand Army of the Republic, Woman's Relief Corps, Sons of Union Veterans, or any other organization for the benefit of Civil War veterans or their descendants.

Certain veterans' organizations have rights with respect to the use of county memorial buildings.

Suitable rooms, including heat, light, and janitor service are provided in State armories for the following veterans' organizations unless a State, county, or municipal memorial has been provided: The Grand Army of the Republic, Woman's Relief Corps, Sons of Veterans, Sons of Veterans' Auxiliary, Daughters of Union Veterans, United Spanish War Veterans, United Spanish War Veterans' Auxiliary, Veterans of Foreign Wars, Union Veteran Legion, Army and Navy Union, American Legion, Disabled American Veterans.

The boards of trustees of town, municipal, or county memorials may provide, with or without cost, suitable county headquarters for nationally organized veterans' organizations chartered by Congress.

Township memorial buildings are to be open and free to and for the use of veterans and allied organizations as meeting places.

Counties, cities, and towns may make annual appropriations to veterans' organizations for Memorial Day observance.

Members of the Soldiers' Relief Commission and service officers and other employees appointed by the commission in each county must be veterans.

Members of veterans' organizations are exempt from prohibition as to wearing of uniforms.

Most of the above-mentioned laws have been enacted by the Ohio Legislature during the last 27 years through the sponsorship and cooperation of the DAV and other veterans' organizations.

The people of the State of Ohio give evidence of their confidence in the service work of these veterans' organizations by making biennial appropriations to the DAV, as well as to the American Legion, VFW, USWV, etc.

Most of the 108 DAV chapters in the State, whose membership dues average about $5 annually, maintain volunteer or part-time service and employment officers.

In addition to such State-wide service, the DAV maintains 12 full-time national service officers, under the direction of Bernard Southard, at the Veterans' Administration regional office in Cincinnati, and four others, under the direction of John N. Nemeth, located at the Veterans' Administration regional office in Cleveland.

These DAV experts extend all types of assistance to veterans and their dependents, tion, presentation, and prosecution of their justifiable claims for various types of govmore particularly in the technical preparaernmental benefits to which they may be lawfully and factually eligible.

The DAV is primarily a one-purpose organization—to see to it that all war disabled veterans and their dependents receive their just entitlement to rights and benefits provided under many complicated laws, Federal and State.

To provide gainful employment for all such disabled veterans, the DAV has developed a Nation-wide man-job-matching method program.

During its more than 27 years of service activities, the Disabled American Veterans has sponsored and supported much liberalizing legislation, nationally and in each State.

Formed in 1920 and chartered by Congress in 1932, the DAV is composed solely of men and women who were wounded or disabled as a result of their service to the United States in time of war. My good friend, Gov. Thomas J. Herbert, is a life member of this organization.

National headquarters of the DAV is at 1423 East McMillan Street, Cincinnati 6, Ohio, under the direction of Vivian D. Corbly, national adjutant, together with Capt. Cicero F. Hogan, as assistant national adjutant.

Having specialized in the protection and promotion of the justifiable needs and welfare of America's disabled defenders, the DAV feels that it has been thereby rendering a great service to these veterans and to our country.

Address of Hon. Joseph W. Martin, Jr., Before the National Republican Club's Lincoln Day Dinner in New York

EXTENSION OF REMARKS

OF

HON. W. KINGSLAND MACY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. MACY. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I have the privilege and honor of including, preceded by my brief introductory remarks, the very excellent and forceful address of the Honorable JOSEPH W. MARTIN, JR., at the sixty-second annual Lincoln Day dinner of the National Republican Club in the grand ballroom of the Hotel Waldorf-Astoria in New York City last Thursday evening, February 12, 1948:

INTRODUCTORY REMARKS BY HON. W. KINGSLAND MACY, PRESIDENT OF THE NATIONAL REPUBLICAN CLUB

President Hoover and other unusually distinguished guests, members of the National Republican Club and their friends, and I have to thank our chairman of the evening for an all too generous introduction, the inspiration that comes from this gathering should in some measure compensate all those who have contributed to make it the magnificent occasion that it so obviously is.

To Dr. Wolfe for his erudite address, to Senator FERGUSON for his brilliant governmental discussion, our grateful thanks.

I bring, also, greetings to one and all from Governor Dewey, whose unprecedented administration has done so much for the people of our State of New York, which has consequently inured to the benefit of our Republican Party.

The Speaker of the House, the most powerful representative body in the world today, is by virtue of his office a dominating figure in our Government, made even more so by recently enacted legislation affecting Presidential succession. Yet, the present encumbent, by his forthright demeanor, his complete understanding of governmental processes, and his all-pervading kindly attitude and approachableness has so endeared himself to Representatives on both sides of the aisle that the influence of his personality goes far and beyond. No colleague of mine or his would be other than extremely proud to present, as I now do, JOE MARTIN.

ADDRESS OF SPEAKER MARTIN

Tonight as we are gathered here to honor the memory of one of the world's immortals, the martyred Abraham Lincoln, we in this hour of world confusion can feel something of the anxieties which weighed upon him. He was President when the fate of the Union was in the balance. We today must strive to have Lincoln's faith in providence and in the destiny of our country. We are again at the point of a fateful decision. Civilization must be saved. Our generation must save it.

We have just passed through a second world war to preserve liberty and perpetuate civilization everywhere. As the distinguished Michigan Senator, HOMER FERGUSON, has pointed out, we are now confronted with a desperate struggle to maintain liberty at home. We dare not assume freedom in our own Nation is assured. Eternal vigilance today, as always, is required.

Congress must maintain our free constitutional Government, free economy, and free society.

The administration whose party has been in power for 16 years is now demanding the greatest peacetime appropriations in our history; it demands a return to governmental controls, rationing, and price ceilings. What we need is more of the Spirit of '76, and less of the spirit of 76,000 bureaucratic regulations. To get that spirit we must have a Republican President and a Republican Congress. And that is what we will have next January.

Our freedom has been seriously whittled away in the last 15 years. The citizens' liberties have ceased to be secure. We are reaping the fruits of those reckless days of the New Deal. Bureaucrats still have the old scheme of operation which can be stated in two lines:

You make it; we take it;
You lend it; we spend it.

From the White House down, there is bitter resistance to efforts of the Congress to cut Government spending.

The $39,700,000,000 proposed expenditures for fiscal 1949 is more than four times the amount spent just before the war, in 1940. It is eight times the amount expended in 1933, when a New Deal President was first elected on a campaign promise to cut Government costs by 25 percent. Now they have the gall to tell us a $40,000,000,000 budget can't be cut a thin dime. But it is going to be cut, and this Republican Congress is going to do it.

Nobody in the administration seems to realize we cannot forever go on wildly spending more and more of the people's money laying an increasing burden of taxation upon them, and still keep the United States safe, sound, solvent, strong, and free.

Only a strong United States can possibly combat the threat of world communism.

The best we can do to achieve that is to help the other nations to help themselves. The Communists are at work to stop effective aid to Europe. They want to produce the confusion and chaos which will enable them to take over the governments, enslave the people, and rule. They conspire to destroy our American system.

We spilled rivers of blood and gave torrents of goods, machines, and services to fight for freedom abroad. We Republicans mean to keep freedom at home; we are making that fight now. We know we can count on the people's support.

Our domestic economy shall not be tilted off balance by excessive taxes nor forced into ruin by inflation. Our Nation can be kept strong, sound, solvent, and free. It cannot be done by giving the administration new powers of rationing, regulation, and coercion over the lives of our citizens. No man ever set himself free by putting on handcuffs. We became a great nation by following the highway of freedom. We are going to remain a great nation by staying on that highway.

The veterans of the wars and all the other young people want their chance to get ahead. They deserve that chance. They are going to get it.

We are confronted in this country by three fundamental conditions; any one of them could prove our ruin. None of them need prove our ruin if we will exercise common sense and good judgment.

I want to discuss those conditions.

The administration has squirmed and wiggled in every possible way to evade responsibility for inflation. The fact remains the seeds of high prices and inflation were planted by New Deal deficit spending. The currency was inflated by billions of dollars. Bank portfolios were inflated by more billions of Treasury paper. Still more billions were sold, after the war began, to the people in bonds. War activities were inflationary. The greater part of everything produced was destroyed in war. Wages and salaries remained at home. A great backlog of demand and purchasing power piled up. When those two forces operated in the markets, prices went up.

Then came this world-wide demand for aid to other peoples. Drafts on our production for that program constitute a further inflationary force. Goods, machines, and services are again going overseas, and the wages and salaries stay at home. The answer to high prices is production and more production—on the farm, in the field, in the factory, and in the mill. We must get that additional production, with lower prices and improved quality, without reducing wages or increasing working hours. Then, every man, woman, and child in the United States will actually realize an increase in real income. That production can come only through patriotic cooperation between labor, agriculture, management—every citizen who loves America and liberty.

To obtain that production we must consider taxes.

Taxation, Federal, State, and local, takes 31 cents out of every citizen's dollar. Of that

amount, about 11 cents goes in direct income tax to the Government. The rest is collected in prices. The Government compels the retailer to become its tax collector, and grab 20 cents of every dollar the American housewife takes to the store, for governmental bureaucrats to spend. We passed a tax bill twice in the first session of the Eightieth Congress. Twice Mr. Truman said the people were not entitled to a reduction of taxes. Therefore, he vetoed our tax proposals.

We passed a tax-reduction bill in the House last week. This bill gives more than 71 percent of the tax relief to the people with incomes of less than $5,000; it frees 6,000,000 people from paying any tax; it gives special relief to the neediest of our people, the aged and the blind. It helps the American taxpayer to meet the high prices. It provides incentive for men and capital to work together for needed expansion and more jobs for the people. There is nothing wrong with a fair profit in business.

We Republicans believe lower taxes will spur production and bring lower prices for the people. We are going to see that the people get them. Our opponents claim tax reduction would be inflationary, because, they say, it would leave the people with too much money in their pockets. All you folks out there who think you have too much money please stand up.

Nobody can now say Government operation under compulsion is any good. Look at Russia. Communism is a threat to us as well as to the rest of the world. A lot of people who, for 15 years or more, played around with the Communists and the pinkos were given places of high power and influence in the Government. There is absolutely no question but what the New Deal administration knew full well the intentions of the Kremlin.

We Republicans warned of this menace of communism for 10 or 12 years. We told the Nation the Communists were sneaking into high Government places. Now it is going to take a Republican administration to clean out these fifth columnists, and traitors from the governmental structure. Those who insisted for years in keeping them there will never do the job.

Another problem is the proposal to spend billions of dollars for foreign aid.

The only proper yardstick by which to measure foreign-aid cost to our people in sweat and toil is its proportion to our total production. That is the only way we can get an intelligent concept of what we are undertaking to do. Of course, we intend to help Europe. But the people are entitled to know exactly what they are being asked to undertake; how much it will cost them; and how the whole program shall be administered.

This is going to put a great strain upon our own people. It cannot be tried a second time, if it fails the first. I propose the rule which shall guide the administration of European aid shall be: Economy, efficiency, commonsense, and cooperation. We are confronted by unusual expenses. We must face that.

We know we must maintain a national defense—especially in the air—fully adequate for any emergency. We cannot and will not neglect this national defense. The Congress has been accused of rendering our defense in the air an empty shell. The fact is the Eightieth Congress in its first session actually permitted the air services to spend, in fiscal 1948, $76,000,000 more than the President asked. I ask you—when did generosity ever starve anybody to death?

The total reduction in the expenditures in the armed forces was only 1.3 percent or $120,000,000. Now if a reduction of $120,000,000 destroyed our national defense, and made a hollow shell of our air services, in Heaven's name, what did the services do with the $9,400,000,000 they were granted?

That is a question the people are entitled to have answered, and should insist on having answered. I could cite many other instances wherein distortions of fact and rank misstatements have caused unjust criticism of the Congress. Caught between these crushing inflationary prices, the crushing burden of taxation, and the crushing loads of foreign aid, we need an administration which realizes the vital necessity of economy and efficiency in Government.

The New Deal has had 16 years in which to prove it knows how to achieve efficiency and economy. For 16 straight years it has failed. The Republican Congress achieved the first balanced budget in all that time. We have started to pay off the national debt. We have reached a point where we can no longer temporize with political trickery or subterfuge; nor can we tolerate waste and inefficiency anywhere in government. We must overcome inflation by increased production and lower prices.

We must lower taxes. We must do everything possible to make sure our heavy expenditures in foreign aid will succeed. The only way this Nation can get such assurance is to turn out the incompetents in Government. This will be done with the election of a Republican President and Republican Congress.

In this last great haven of liberty, we must as a united people, pull together to win the world back to peace; to put a stop to ruthless aggression; to make sure we can perpetuate religious and political liberty. It is a great challenge to the American people. They will not fail. Pray God we may bring Lincoln's courage and Lincoln's faith to the task.

We Have Failed Indonesia

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1948

Mr. KLEIN. Mr. Speaker, in the rich and storied lands of the Far East, off the mainland of Asia, the march of democracy is strong and heart warming. Exploitive colonialism is falling away into the limbo of forgotten crimes against humanity.

The United States has withdrawn from the Philippines and the new Philippine Republic has become a functioning reality.

Not too far away, as distances are measured in the vast sweeps of the Pacific, the new Indonesian Republic has emerged from the clouds of civil war, Japanese aggression, and lingering Dutch imperialism.

The analogy with American history is obvious and unmistakable. Just as our own American Revolution against British exploitation was preceded by meetings, discussions, and fervent planning, so in Indonesia the vast masses of people worked their slow way toward fitness for independence and self-rule through the processes of education and economic improvement.

The Indonesian Republic now is in the same stage of development as was our own beloved country in the decade which followed the Revolutionary War.

We are bound to the national aspirations of exploited people by an unseverable bond of sympathy and association. We have hailed the final reluctant step of the Imperial Dutch Government in recognizing the existence of the Indonesian Republic, and in disclaiming imperial designs on the islands.

In that connection I am inserting in the RECORD an editorial from Labor, a weekly newspaper published here in Washington, and an article entitled "We Have Failed Indonesia," from the February 18 issue of the Christian Century. This article was written by Garland Evans Hopkins, who is an associate secretary of the Board of Missions of the Methodist Church, and who is well qualified for his authoritative position by his own first-hand investigations in Indonesia, and by his particular responsibility for liaison with government and business leaders.

The record of courage of the Indonesians in resisting Japanese aggression, and of willing and active and dangerous cooperation with allied forces of liberation, has been written with blood in the history of World War II in the Pacific theater.

Yet the United States is preparing to expel some natives of Indonesia from this country in accordance with our outmoded immigration and naturalization laws. Most of the victims of this legalistic and unfeeling move are residents of my congressional district. They are, or can be, good American citizens. Many of them are married to American citizens. Others fought in our army against tyranny.

Through the intervention of the Indonesia League of America, Inc., an organization devoted to the promotion of better understanding between our country and Indonesia, bills are being introduced in both Houses of Congress to enable these gallant allied people from the East to remain in the United States and to acquire citizenship through amendment of our archaic laws.

I hope, Mr. Speaker, that all of us here will support these measures and will cooperate to the end that we may reach passage in this session; and I hope that the Commissioner of Immigration and Naturalization will use his widest discretion through benevolent deferment of any legal proceedings against these people.

The matter referred to follows:

[From the Christian Century]

WE HAVE FAILED INDONESIA

(By Garland Evans Hopkins)

Several months ago in these columns I asked, "Will we fail Indonesia?" The answer can now be given. It is clear that we have failed Indonesia. Recall the sequence of events. It was on August 1, 1947, that the world thrilled to the forthright action of the Security Council in calling on the Netherlands and the Indonesian Republic to put an end to hostilities and settle their dispute by arbitration or other peaceful means. Cease-fire orders from both governments followed on August 4, but each party immediately charged the other with violations.

On August 14 the Indonesian statesman, Soetan Sjahrir, requested the Security Council to supervise the cease-fire order, to ask that the Netherlands troops be withdrawn to former positions and to provide an arbitration commission. He pledged that his government would abide by the decision of

the commission. The Netherlands delegate answered that the Council had no jurisdiction in the matter. He proposed mediation by an impartial third party functioning without relation to the Council. He also proposed that the career consuls in Batavia should jointly report the situation.

COLONIAL POWERS SUPPORTED

In all the discussion which followed these proposals, Herschel Johnson, the United States representative on the Security Council, stood solidly behind the colonial powers. His original attitude of contempt toward Indonesia gave way to one of restrained courtesy, perhaps because of the numerous demands in support of the colonies made upon the State Department by leading Protestants. But it is doubtful that there was any fundamental change in his viewpoint. If more American churchmen had become vocal the situation might have been saved.

However, not all American churchmen were against colonialism. One leader wrote: "The economic life of Holland itself is at stake. * * * Americans should never forget this. Holland's continued existence depends upon the resources of the Indies." This kind of statement was grist for the mills of our Europe-minded State Department and UN delegation. Throughout the discussions Russia and Poland, from whatever motive, were saying the things a dynamically democratic United States should have said. There was a sharp rise in the numbers and prestige of the Communist Party in Indonesia.

On August 25 the Security Council passed a resolution which, among other things, requested the "governments members of the council who have career consular representatives in Batavia to instruct them to prepare jointly * * * reports on the situation." It tendered its good offices, expressing readiness, if requested, "to assist the settlement through a committee of the council consisting of three members of the council, each party selecting one, and the third to be designated by the two so selected." In other words the council, largely at the insistence of the United States, refused to undertake arbitration and accepted the procedure of "good offices," a device which had already twice failed.

The career consuls' report offered more hope of getting at the truth than previous devices had done, particularly in view of the fact that the strongly pro-Dutch American consul general, Walter Foote, had been relieved of his duties in Batavia. But then the United States Government clearly showed its hand: it requested Foote to remain and serve with the career consuls in making the survey. The resulting report presented two directly opposed positions as admissible interpretations. It was tendentious and of little value.

On October 1 Frank Porter Graham, president of the University of North Carolina, and a recognized liberal, was appointed as this country's representative on the Good Offices Committee (GOC). The move was welcomed by friends of Indonesia, though the battery of advisers provided by the State Department raised a question as to how far Graham would be free to exercise his own judgment. Reports from Indonesia soon showed that his chief task was to mediate between his fellow committeemen, R. C. Kirby, of Australia, and Paul Van Zeeland, of Belgium, whose differences to date have prevented the presentation of a report to the Security Council and may result in two or even three reports being submitted.

It will undoubtedly be years before the full story of the negotiations can be made public, but it is hardly hazardous to guess that Graham has been torn between his personal convictions and demands from the State Department to hew to its policy of subordinating all other considerations to the rehabilitation of Europe. Particularly unfortunate is it that the one man in the State Department who might have raised his voice in support of a more farsighted policy as regards Indonesia—Kenneth Landon, the former Presbyterian missionary who is Acting Chief of the Southeast Asia Division—has frequently been absent from his desk on sick leave. The fact that former Consul General Foote has been kept in Washington as consultant and adviser on Indonesia since his return is highly significant.

UNITED STATES TO BLAME

It is now evident that the GOC has failed. This is doubly tragic. Not only does it blast Indonesian hopes but it adds another to the failures of the United Nations at a time when that organization badly needs a success to its credit. Responsibility for the failure will properly be laid at our door, for if Graham had sided with Kirby, the Renville truce and subsequent statements signed on January 17 would not have been imposed upon the Indonesians. By attempting to steer a middle course between the principles of colonialism and those of democracy, the United States has laid itself open to blame for a document more ambiguous than the Linggadjati agreement. The Indonesians have been forced to yield on practically every point. Their one gain is provision for a plebiscite, but since the Dutch control the territory in which this is to be held, there is serious doubt as to the possibility of a genuine expression of sentiment. The Dutch, on the other hand, have received almost every concession they demanded, even maintenance of the Van Mook line.

Despite the manifest injustice of this situation, Prime Minister Sjarifoeddin was backed by President Soekarno when he stated, immediately after signing the truce: "The Republic is naturally disappointed that the truce finally agreed upon departs so far from what we hoped for * * * but the Republic has accepted the truce and will carry it out to the best of our ability." What else could the leaders of Indonesia do but sign in the face of their commitment to support GOC?

But the people (who are sometimes said to be powerless in the hands of their leaders) were not willing to accept the Renville agreements. The Cabinet members representing the Masjoemi Party—largest and most intensely nationalistic of Indonesian parties—resigned. The stop-gap Cabinet of the Batak Christian Sjarifoeddin fell and Mohammed Hatta, long-time leaders of the extremists, was asked to form a new cabinet.

This is an unfortunate move, so far as the west is concerned. Indonesian liberals like Sjahrir and Sjarifoeddin have long held before their people the hope of western cooperation in attaining freedom and economic stability. The loss of prestige resulting from the failure of every previous effort, and now of the GOC, relegates these men to the background. It is entirely possible that the Indonesian Government will become antiwestern and transfer its hope of support to the Moslem nations. If this happens, it will be a serious blow to both the cause of democracy in the east and to the hope for peace in Indonesia. Responsibility for such a démarche would have to be placed squarely and almost equally upon the Netherlands and the United States.

COLONIAL WAR MADE IN AMERICA?

Until the end of 1945 Indonesians looked to the United States of America as the one power which stood for freedom and emancipation of colonial peoples. They have suffered slow disillusionment as proof piled upon proof that the Department of State was committed to buttressing Dutch power. The Indonesians felt that the Dutch would never have dared to launch their war in the colonies unless the United States had given them the green light. This conviction was strengthened by the fact that while the Hollanders' aggression was at its height the United States continued to lend them money.

Indonesians have been bombed by planes made in America, shot and shelled by tanks, artillery and rifles made in America, and burned by flame-throwers made in America. The death and devastation which have come upon the land were made possible by American money and American arms in the hands of the Dutch. To say that the United States had no concern or moral responsibility for the situation brought about by the use of these weapons is an argument which few Americans, let alone Indonesians, would be willing to accept.

MORE OF THE SAME POLICY

Now, following the truce, the United States has repeated its offer—first made in July 1947 on the very eve of the Dutch war—of $100,000,000 for the rehabilitation of Indonesia. This seems a friendly gesture. In light of the provisions of the truce, however, several questions arise. Who is to spend the money, the Dutch or the Indonesians? What say will the Indonesians have in accepting or refusing the loan, in the terms under which it will be accepted and in its expenditure? Will it be spent for the ultimate good of the Indonesian people? If the money is handed over to the Dutch or to a Dutch-sponsored colonial government, it will simply mean that the United States has made an additional loan to the Dutch with Indonesia as collateral. In the hands of the Dutch such a sum could become a more effective weapon against the Republic than all the arms we have supplied.

It is all too obvious that we have failed Indonesia. But it does not follow that we must continue to make the same mistake. The Dutch Government and the United States Department of State should face the realities. Independence for Indonesia is certain to come. It may be delayed; it cannot be defeated. An aroused public opinion in the United States should demand a complete reversal of our present policy toward Indonesia.

[From Labor]

THIS IS NOT A PLEASING PICTURE

IS THIS THE KIND OF DEMOCRACY OUR BOYS FOUGHT AND BLED TO ESTABLISH?

Aboard one of Uncle Sam's transports, anchored off Batavia, Java, a commission, representing the United Nations, has succeeded in inducing the representatives of the government of the Netherlands and of the Indonesian Republic to sign a truce. The Indonesians are promised a measure of liberty, but—and this is the most disturbing feature of the document—the Dutch retain control of all the natural resources of the territory affected.

Probably it is the best solution the United Nations commissioners can work out at this time, but it calls attention to some ugly facts. Why should the Netherlands, a little country in northern Europe, control the fabulous wealth of thickly populated islands thousands of miles from the Dutch homeland? Of course, the answer is that Dutch and British capitalists insist on retaining the source of their tremendous profits.

The Japs chased the Dutch out of Indonesia. Some of the natives welcomed the invaders because they hated their old masters.

Yankee soldiers and sailors drove out the Japs and the natives felt that at last a real deliverance had come. They were to be free to conduct their own government and to determine their own way of life.

However, the Dutch came back, armed with American and British weapons, and proceeded to slaughter the natives. The situation became so nasty that the United Nations had to intervene, and now we have the results of that intervention.

All through Asia the story will spread and hundreds of millions of yellow men will be convinced that the white man talks a democracy and liberty for all human beings, but mercilessly exploits those who can't stand up against his modern weapons. We ask again:

"Is this the kind of democracy our boys fought and bled to establish?"

Universal Military Training

EXTENSION OF REMARKS
OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Kokomo, Ind., on February 12, 1948:

You know that Mr. Truman has demanded that Congress authorize a permanent program of compulsory military training for all American young men who, after 6 months of Army training, would join in a steadily growing pool of reserves. The Armed Services Committee of the House, in compliance with the President's demand, reported such a bill on July 26, just a few days before Congress adjourned last summer. The measure went to the Committee on Rules, where it has since rested.

The Rules Committee, of which I am a member, schedules all legislation in the House. In conjunction with the Steering Committee, it actually determines the legislative program.

Everyone who wants a universal military training program, therefore, has been directing urgent appeals to my committee to schedule this measure for House action. As one of the 12 members of the committee, I have been subjected to constant and intense pressure on this issue. In fact, the proponents have conducted a campaign to induce me to help force the bill out of the committee. Let me quote a portion of a letter sent to the posts in our district by the State commander of the American Legion as a part of this campaign:

"This is a personal appeal for some quick and definite action on your part. The national program * * * is in jeopardy because Congressman FOREST HARNESS is voting to hold in committee our UMT bill. We need a letter from yourself and every other member you can get to write at the earliest possible moment, urging Mr. HARNESS to vote to bring this bill out of committee. Our national representative * * * advises that a big majority of the House favors passage of this important defense bill, but they have been unable to get a chance to vote because it is held in a committee of which HARNESS is a member. The national commander has asked me to get our members of the Fifth District busy, and I have assured him that you would comply in a big way."

Not for a moment would I question the motives of my comrades in the Legion. Every man among them has proved his devotion to America, and I know each speaks from the heart in this issue. I do, however, doubt that my friends have examined the over-all problem of national security as they might.

Naturally, that sort of activity is causing a rather complete misunderstanding of the program and of my position. The fact that I have so far declined to commit myself one way or the other on this immediate proposal has been interpreted to mean that I am against the principle of universal and equal responsibility to serve our country in time of need; that I am opposed to adequate national defense; and even that I am playing politics with national security.

Fortunately, I believe my record in the matter of national security needs little defense, even before the most strident critics. The hard lessons I learned as a combat infantryman in the First World War have not been, and will not be, forgotten. I have always wanted to keep American defenses so strong that no aggressor, or combination of aggressors, would risk an attack upon us.

I have belonged to the American Legion and the Veterans of Foreign Wars from their inception, shortly after I laid aside my uniform in 1919. I have gone up and down our State, and I have repeatedly taken the stump elsewhere in the cause of preparedness. I think my ideas are, and have been, much the same as those of any sane man who has ever heard a shot fired, or a bomb dropped in anger: Avoid war if at all possible. But if war is inescapable be prepared to destroy the enemy quickly, and at the smallest possible cost in lives and treasure. It is also a part of my creed that American might is the strongest possible argument to deter an aggressor who will listen to no other.

Well, then, what about this immediate issue? Does our national security rest upon a foundation of compulsory peacetime military training, or doesn't it? Frankly, I confess that I do not surely know, even though I believe I have studied this question at least as carefully as most of those who insist, with Mr. Truman, that we must rush into a program of training all American youth. I see considerable merit in both views of the question. Enough merit, in fact, to convince me that we ought to examine and debate the issue much more thoroughly. Let me point out what I consider to be compelling reasons why we should not act hastily or hysterically.

Have we actually proved that universal military training is essential to our national security? Do we have convincing evidence that the benefits will be worth the actual cost of $3,000,000,000 per year? If so, are we sure that we will not place undue dependence upon a pool of half-trained reserves, at the expense of the several more important elements of national defense? Do we realize what a complete departure such a program will be from a national philosophy which has always rejected the concept of compulsory service to the state except in periods of dire emergency? Do we fully understand how staggering is the over-all cost of the security program, of which this would become a part? Are we sure that the economy can carry the burden indefinitely? Or, if an over-all budget, including this training program, is too heavy to carry safely, are we honestly willing and ready to cut other security functions just as far as necessary to provide for this program?

These are a few of the key questions which can still be asked open-mindedly and objectively; and which certainly ought to be answered just as honestly and thoughtfully as possible before we reach any final decision.

I frankly do not have the answers and I am convinced that the proponents of the program cannot answer them with positive assurance. The report of the President's Advisory Commission on Universal Training, headed by Dr. Carl T. Compton, frankly admits many doubts as to the wisdom of effectiveness of such a program. Let me give you just a few thought-provoking quotations as evidence that this distinguished group of men, after consultation with 200 military, diplomatic, industrial, and educational specialists, studiously avoid any dogmatic conclusions on the subject.

The Commission says, "We do not advocate universal military training as a panacea which of itself will give us security. We do no give it priority over any of the other elements we have set forth of an integrated national defense program." Now let us see how they define the other elements: "Our first requirement is a mobile striking force, relying heavily on air power, to stop the enemy's attack and hit back at him with all possible force. This force would have to consist of highly trained professional soldiers and fliers * * * We believe that a potential enemy's reluctance to start a war, and his handicap in prosecuting it successfully if started, will be in direct proportion to the power and readiness of our mobile striking force."

The Commission continues by pointing out that our second line of defense is comprised of Regular Army, Navy, Air Force and marines. In a word, our established, regular armed services—not a reservoir of partially trained men. Behind these first- and second-line elements, the Commission calls for a broad, continuous, and intensive program of scientific research and development; and a program of industrial mobilization and stock piling of critical materials which will keep the country fully prepared to meet any emergency.

The Commission says of this over-all program, in which universal military training appears only as a component of relatively minor importance: "All of them are necessary if we are to feel secure in this world. We cannot underscore this too strongly."

And the Commission could not possibly have emphasized more sharply a fatal error which might accompany universal military training than it did in these words:

"We realize that there may be danger if our country puts universal military training into effect, that it will therefore be lulled into a feeling of false security. There may be a tendency for this reason, coupled with a natural desire for economy and lower taxes, to seek to offset the expense of the universal military-training program by a curtailment of one or more of the other military elements of national security. * * * If the introduction of universal military training should have such indirect effect of weakening, rather than strengthening, the other elements of our national security, then our Commission is of the firm opinion that the adoption of universal military training would be a mistake and would diminish, rather than increase, our national security."

For my own part, I believe we have so far given all too little thought to date to the over-all cost of national security according to the plan of which universal military training is a part. Please understand that I have no thought of pinching pennies when it comes to national defense. Whatever it costs us to maintain our freedom as a Nation, the price will still be a comparative bargain. Nevertheless, we ought to know for sure that we can go on indefinitely carrying this load without damaging or destroying our free economy.

First of all, we must go on supporting our front-line forces. The budget for the armed services for the coming fiscal year is $12,000,000,000, in round numbers. Regardless of their views on universal military training, most thoughtful persons agree this is a wise and necessary investment.

But on top of that, we are expected to provide for a training program to cost upward of $3,000,000,000 per year; and to contribute well over $4,000,000,000 annually under the Marshall plan to the recovery of Europe.

Those items add up roughly to $20,000,000,000 per year which we in America are asked to advance for national security. That is just about 10 percent of our total national income. And even this program cannot be considered adequate. The armed services budget is by no means sufficient to provide the sort of research and development, the industrial mobilization, or the stock piling which the Compton commission recommends. And still another Presidential advisory group, the Air Policy Commission, says that present provisions for our Air Force are entirely inadequate; and that ever-increasing investments in air power will be necessary in the immediate future.

Listen again to the wise counsel of the Compton commission:

"In making our plans for national defense we must take realistic account of the financial ability of the country to support the measures that are considered necessary. We

must have protection without such prohibitive cost that it will bankrupt the Nation * * *. Universal military training should not be undertaken at all unless the citizens of this country understand that it has value only as a part of a program that will demand the expenditure of a much larger portion of our national income than we have ever allocated for national defense in peacetime. * * * It is perfectly apparent that the over-all cost of an adequate program is staggering."

When the President's own advisers speak in such strong terms, certainly every thoughtful person must pause and seriously ponder the grave implications.

And as we consider the staggering cost of adequate defense, let us remember that we are expected to carry other costs of government which are equally burdensome. If we adopt the Federal budget proposed for the coming fiscal year, the over-all load on the taxpayers will be $40,000,000,000 or roughly $1 in every five of our entire national income.

Obviously, this sort of spending must stop somewhere—and soon—if we do not intend deliberately to swamp and destroy our free economy. After all, there is a definite limit to the load that even this amazingly strong and productive economy of ours can carry. Many of our foremost economic, financial, and industrial leaders testify that we have already reached the limit of safety, if, indeed, we have not passed it.

But if we weaken or destroy our economic machine, we weaken and destroy the very foundation of national security. Since science has introduced us to total war we need no expert witnesses to convince us that our armed defenses can never be stronger than the economy which supports them. But it is most significant that the Compton Commission places at the very top of its list of essentials to security a strong national economy. Says the Commission report:

"A strong, united Nation is our number one security requirement. It is the bedrock on which all our military preparations depend. In particular, we must be concerned with * * * a healthy economy reflected in full production, full employment, industrial peace, and the avoidance of recurring economic crises or inflation."

Can we hope to keep our economy healthy and growing under such burdens as we are even now imposing upon it, to say nothing of the increased burdens we may be forced to impose to maintain defenses which will assure our national survival?

If the load is too heavy, how and at what points may we expect to reduce it? Will the American people, already chafing under a crushing tax burden, forego the tax cuts they have been promised and which they have a right to expect? We must not, of course, invite disaster by skimping on national defense, so we must seek savings in other portions of the budget. But are our people honestly willing and ready to cut every other function of Government to the bone? Will they support Congress in trimming away every nonessential or overly costly service? Will they even give up a portion of the many services they have come to think of as essential?

Every one of these is a question of the gravest and most imperative importance, and it is worse than idle, it is dangerous to attempt to reach any conclusions about UMT or any other phase of our national security problem until we have the most reliable answers that careful thought and study can provide.

I have quoted generously from the report of the President's Advisory Committee not alone because its authors are distinguished and respected men, but also because it seems particularly significant to me that these men who are perhaps most often quoted in favor of UMT actually render only a conditional endorsement, and very frankly express their own doubts at many points. There are, of course, other equally prominent authorities whose opinions ought to give the most ardent supporters of UMT food for further thought. Among these sources is the President's Air Policy Commission, which I mentioned a minute ago. To persons interested in objective study of our problems of national security I suggest a reading of both these reports.

I hope this brief review explains why I and other members of the Rules Committee have so far refused to be stampeded or coerced on this issue. But I want to emphasize the fact that I, as one lone member of 12, can hardly be expected to direct the committee's final action. After all, I do not own and boss the committee. And I assure you that I, as an individual member, or even the whole committee, can exercise only relatively small influence in the decision Congress makes on this issue.

The opinion was stated in the letter I quoted at the outset, that a majority of the House is eager to vote favorably for the current bill, but is deprived of the opportunity because my committee is blocking the measure.

But whenever a majority desires to take action on any bill, it can discharge the committee and bring the measure to the floor after seven legislative days. All it ever takes to get action is to secure the names of a simple majority—218—on a discharge petition.

Such a petition has been filed on the UMT bill, and has been available to the House membership at the Speaker's desk for some time. Does a majority of the House membership desire the immediate passage of this measure, as the quoted letter indicates? I took the trouble to check just before I left the Capitol yesterday, and I found that up to that time just 13 Members, out of a total of 435, had signed it.

So much for the status of this measure in the House. But that is still only half the story. No matter how the House may act, the Senate must also approve the measure if it is to become law.

Although that body has been entirely free to act, it has done nothing at all to dispose of the issue. Its Armed Services Committee has conducted no hearings; and I can see no evidence that the Senate expects to dispose of the issue any time in the early future.

Despite any reports to the contrary, therefore, a large majority in both Houses obviously share my own and my committee's view, that hasty action on this issue would be unwise. You can take it for granted that the Members of Congress are just as deeply concerned about American security as anyone, but our concern is not leading us to decide this issue until we know more surely the wise and safe course to follow.

Republican Ticket Only Avenue of Escape From New Dealism

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. JENISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to call the attention of the Congress to an outstanding address made by my distinguished predecessor, the Honorable Jessie Sumner, of Illinois, before the Kansas Republican Women's convention in Topeka, Kans., on January 28, 1948. Miss Sumner's keen insight into the problems of our Government and her rare talent for clarity in thought and presentation are well known to those colleagues who served with her through 8 years in Congress. Her address at Topeka proves once again her courageous devotion to the cause she represented so ably while a Member of this House. It deserves the serious consideration of every Member of the present Congress.

ADDRESS OF HON. JESSIE SUMNER, OF ILLINOIS

The Republican ticket, November 1948, is your only avenue of escape from New Dealism, the form of totalitarianism that masquerades as Americanism.

To be sure, there are some philandering Republican leaders who, having themselves become New Deal camp followers, seem to want the rest of us to join the New Deal harem, too, and who even go so far as to try to tell you that nobody is giving our country away.

But that only goes to show that the primrose path of New Dealism is filled with irresistible temptations, such as:

Washington dinner parties serving lend-lease soup to nuts. Free trips to Europe and all around the world for statesmen who will see only what the New Deal wants them to see. Mixing with lords, dukes, kings, and commissars—with their hands out for handouts or—to put it more politely—who have the common touch. Campaign assistance at the expense of American taxpayers. Being lauded instead of lashed by the New Deal press and the rest of the New Deal disk jockeys. Being photographed for the history books at world peace conferences, pompously picking Uncle Sam's pockets, and diplomatically creating more rendezvous with destiny for America to fight. It isn't surprising, is it, that so many politicians are human enough to cut themselves in on the New Deal racket and thereby qualify as world humanitarians, too?

The New Deal has spared no effort—and no Government money—in its sedulous drive to annihilate all opposition. The President's annual budget is a disguised campaign fund, filled with appropriations calculated to buy the votes of minorities at the expense of the majority. They laughed when the present New Deal President "sat down at the piano." But now you know that every time he plays it costs you billions of dollars. Every note he hits is a bank note.

It is through such legalized vote buying that the New Deal has built up a Nation-wide political machine—which consists of so many self-styled nonpartisan organizations that any club, league, union, or trade association you join is likely to be a New Deal-front organization. It includes teachers and even preachers. Today, like the benighted citizens of Hitler's Reich, you can hardly look or listen without having New Deal half-truths and untruths preached at you as if it were the gospel. Their falsehoods echo and reecho throughout the land until they actually believe them themselves.

The New Deal should have been thrown out way back in 1938. It was already obvious then that this Nation was being led blindfolded into dictatorship, serious currency debasement, and another quixotic war to save the world, from which, as we told them at the time, nothing would come except corpses and communism and more wars to fight. In the sacred name of the United States, New Deal Government officials have delivered unto death and communistic slavery whole countries full of innocent men, women, and little children. They keep ranting and spending for "conservation purposes." But their spending for other purposes has already exhausted many of the vital natural resources

in which this country, as they admitted themselves, was rich at the time they came in. They have become so addicted to war that they don't even give you time enough between wars to raise up a new crop of young men to manhood. If left in control of the United States Government, these Don Quixotes will surely proceed to accomplish the complete degeneration, if not the destruction, of this generation of Americans.

It is sickening to hear over and over again the hypnotizing propaganda that the United States, though still the most powerful Nation in the world, can no longer stand nor prosper alone. What an excuse for paying blackmail to every gold-digging government on earth.

This Nation is the mighty Nation that was born of a high determination never to pay tribute to any foreign government. During the first century of this Republic, while the American people still had the protection of the Constitution and the eternal principles of good government instituted by our first President, George Washington—while we still had Presidents who were neither egotists nor weaklings—nobody dared to attack us but the British and they were soundly defeated. And nobody would dare to attack us now if we had a President who was man enough to follow the Constitution and the eternal principles of national self-preservation laid down by our first President—who was a loyal American President.

Within 8 years after the Revolutionary War, the most exhausting war in American history, freedom had already paid off. Adams and Jefferson, envoys to beggar-ridden Europe, were able to boast that you could not find a single beggar nor involuntary pauper in the whole United States—the land where today most every American is begging for steel and other American products because European beggars are systematically pilfering the American people, with the treacherous connivance of our own Government officials.

The dynamic citizens of the United States, before the Constitution was kicked out from under them, demonstrated continually and irrefutably for over a century, that freedom produces a steadily rising standard of living. As long as they are free to produce what they want and keep what they produce and earn, Americans will produce whatever is wanted at cheaper and cheaper prices. They will work, save, and invest, thereby creating a plentitude of rising opportunities for their fellow citizens to do the same. The formula never fails.

Thomas Jefferson, coauthor of the Constitution, said that the principal problem solved by the Constitution was that of enabling the American people to live free of the oppression common to every government in Europe, where, he said, people were robbed of the fruits of their toil by government politicians, whom he called wolves and thieves because they robbed the people through direct and indirect taxes. And also through the insidious age-old racket of making the people feel prosperous while robbing them of what they have through creating additional money for the rulers to spend after they have spent all that they dare to demand of the people in taxes. And these are the principal rackets by which the New Deal wolves and thieves are grinding the American people down into slavery.

If you can only succeed in selecting a Republican Congress and a Republican President—I mean real Republicans and not mere gigolos for the New Deal—you can be sure that they will curb those rackets. A real Republican victory in 1948 means up from slavery.

It is harrowing to hear the falsetto voice of the wolf in grandmother's nightgown saying that your Government must give what you have to the rest of the world in order that the rest of the world will have as much as you have so that you will have more. What do they think we are? Simpletons? Playing Lady Bountiful with your money has gone to their heads. Like Hitler, the paintslinger, they are infatuated with themselves in their new role of world humanitarians, world leaders, and world conquerers. Heil, the New Deal world order!

Why, the omnipotent Lord Himself did not try to take in any more territory. He gave a chosen few religion and left the rest of the world to work out its own salvation, from the example. Our Christian American forefathers, adhering to the Constitution, refused to give anything whatsoever to any foreign government except a successful example of self-government. But that shining example was enough to inspire the oppressed and impoverished peoples of Europe to seize sufficient freedom for themselves to prosper more than they had ever prospered before. All that the world needs from the United States today is the only thing that it is not getting—the example of good American government.

Today this Nation is being disgraced. Treason is the fashion. Our National Capital crawls with Benedict Arnolds whose hearts beat with adulterous love for foreign governments. Little world statesmen—busily trying to support the whole wide world at your expense, who would not know enough to support themselves if you dumped them off the Government pay roll. The cowardliest crew that ever manned the ship of state—spending everything you possess out of fear that they might lose an election. Paying to foreign governments more blackmail, more blackmail, more blackmail, more blackmail—until everybody in the world thinks that we, the fearless American people, are yellow too. At the rate at which they are throwing it overboard, this generation of Americans will live to see the day when the magnificent American heritage of natural resources is gone with the wind.

Through unscrupulous unrepaid gift-loans the British and other foreign shakedown artists have been calmly living off the American people ever since World War I. This ridiculous American munificence to the so-called mother country is enough to make us look as if we had a nation Oedipus complex. Though it is only because the politicians who rule us have an inferiority complex derived from being inferior.

Gift-loans have served to keep the world groaning under the anachronistic parasitical British Empire system which our ancestors left in disgust. The fact is that the British Empire system is almost as much of a spreader of communism as Russia, since exploited colonials become convinced that even communism could not be worse than what they have.

But now our Government is paying annually increasing billions to the British to keep in power British socialism—the British reproduction of communism. The fruitless British socialistic government is a hopeless dictatorship. In fact, every single foreign government that your Government is now subsidizing is a hopeless dictatorship. They all use Nazi-like price controls and communistic preventions of private enterprise.

All of the dictatorships that your Government is now subsidizing are so hopelessly misgoverned that they could not possibly keep out of the red, much less keep out the Reds. What else but hopeless dictatorships would you expect the New Deal to promote abroad, far from your watchful eyes? You certainly could not expect the New Deal to promote the traditional American brand of freedom abroad. Because the New Deal has always done its best to destroy American freedom here at home.

You know from experience that gift-loans plunge the United States into depression and war.

Depression? Yes; two depressions. As patriotic American financial analysts warned in advance, gift-loans to England and other alien governments immediately following World War I caused the inflation resulting in the 1921 crash. As the same experts warned in advance, gift-loans and currency manipulation by the Federal Reserve Bank to facilitate a loan to the Bank of England sparked the inflation and precipitated the 1929 crash. And now the same old reliable experts cry warnings that continued gift-loans can only strip this country and land us in a hungry economic paralysis which will be worse than a crash.

War? Why certainly. In 1934 subsidies to both England and Russia, by means of the New Deal gold-buying program, revived the Russian Communist Government then dying on the vine and seething with counterrevolution. The revival of Russian communism furnished the excuse for the building up of Hitler who was called the "bulwark against communism." The resulting war to save from Hitler the nations which themselves had actively built up Hitler—England, France and Russia—furnished the excuse for the building up of Russian communism. And now repeated and increasing donations to Europe are used to rebuild Europe, including Germany, as a "bulwark against communism." Yes, gift-loans are the price we pay for depression and war.

Since VJ-day the New Deal Machiavellis have already squandered on foreign governments over $22,000,000,000 worth of what would otherwise belong to you. They told you at the time that it would save you from "world chaos and confusion." Remember? But common sense and plenty of Republicans protested that they would only use the money to buy the world chaos and communism which they now have the colossal effrontery to propose spending another $20,000,000,000 to rescue you from. You can see with your own eyes that they are only spending you into world bankruptcy and World War III.

Step by step they dragged you into World War II by first throwing American arms and ships into war through their Lend-Lease Act. And how surprised and grieved they acted when the Pearl Harbor attack—which they knew was going to happen and invited—caught us with our defenses in Europe. Step by step, exactly as they dragged you into World War II, they are now dragging you into World War III, by first throwing American arms and ships into war through bills which are exactly like the Lend-Lease Act.

They call those bills European recovery bills, but they might better be called Russian recovery bills, since the Russians will recover whatever we've sent to Europe if and when Russia decides to take over the rest of Europe—as New Dealers themselves have admitted that Russia can easily do any time that she wants to—and within 24 hours.

And how surprised and grieved they will act when the attack discloses that America is no better prepared than at Pearl Harbor. As General Arnold reports, "The cold truth is that at present we are almost as badly off, in a military sense, as before Pearl Harbor." All you have been getting out of the vast military expenditures meekly voted by Congress since VJ-day is a political army—evidently intended to fool you, since it does not fool any potential enemy. What America needs, so say the real experts, is scientific research, industrial-mobilization planning, and quantities of constantly improved planes. What the New Deal is putting over instead is a broomstick conscription army and a military dictatorship.

They tell you that their lend-lease bills which they now call European recovery bills are plans to keep war away from our shores.

But that's exactly what they told you about the Lend-lease Act which brought war to our shores. You already know from tragic experience that New Dealers are not above deceiving you again and again and again. To reelect the present administration would be to deserve the want and war you would surely get.

The spectacle of President Truman, General Marshall and other New Dealers posing as leaders of a crusade to save the world from communism is almost as comic as if Stalin, Molotov, and other Communists were to pose as leaders of a crusade to save the world from communism. New Dealism and communism are like Siamese twins. The New Deal has always helped the Russian Communist Government stay in power and augment its power. The Communist fifth column in the United States has always helped the New Deal administration stay in power and augment its power.

The New Deal has always almost invariably followed the Communist Party line. The Communist Party has always almost invariably followed the New Deal party line. The New Deal has always done everything it could to discredit and destroy the Congressional Un-American Activities Committee which, under the New Deal, was the only agency of government trying to save the United States Government from overthrow by Communists. Under the New Deal, Communists have always littered the Government pay roll.

Evidently New Dealers themselves can't tell a Communist from a New Dealer. A few months ago the New Deal President even asked Congress for several million dollars with which to hire people to locate the Communists on the Government pay roll, presumably because there was nobody on the pay roll who could tell the Communists from the New Dealers. But, as usual, the money appears to have been largely wasted. The last I heard, when in Washington in December, there were still "Commies" roosting on the Government pay roll—even in the State Department—which thinks up and administers the plans to save the world from communism. Perhaps the theory is that it takes a Commie to catch a Commie.

They hope, with their noisy crusade to save the world from communism, to make you, the voters, forget that it was they, themselves, who gave the world to communism. It was the late New Deal President Roosevelt, who, at Tehran and Yalta, airily delivered unto Stalin the parts of Europe which enable Russia to dominate Europe and the parts of Asia that enable Russia to dominate Asia. It was the present New Deal President, Truman, who, while communing with Stalin at Potsdam, finished the job of giving Stalin all of the world that Stalin asked. It was the bemedaled godfather of the Marshall plan, General Marshall, himself, who, as American Ambassador to China, immediately after the war, tried to induce the Chinese Government to commit suicide by letting Communists share in the government of China.

Long before the murderous western front invasion of Europe, it was already obvious that the invasion would be a waste of American lives because the New Deal had already given Russia control of Europe and the difference between Stalin and Hitler was not worth the life of a single American boy. But those of us who said so—and I, for one, even filed a bill in Congress to postpone the invasion until Stalin should cough up the countries he had swallowed—were only wasting our breath. There is no use to expect real humanitarianism from phony Kelly-Nash, Tammany, Pendergast and other New Deal humanitarians. New Dealers were still trying to make you believe that Russia was a "freedom loving," "peace loving," "democracy" long after enslaved people from one end of the world to the other had found out from experience that the chief difference between communism, nazism, fascism, socialism and new dealism is only professional jealousy.

The same New Dealers who are now posing as anti-Communists kept on building up Russia and promoting communism in your name and with your money, long after they had begun to pretend that the reason they were shoveling your property into Europe was to save Europe from communism. In 1946, at the same time that the administration was pressuring through Congress the British gift-loan bill, with the excuse that it was necessary to save the British from communism, it was also putting through Congress a bill to donate another $250,000,000 to UNRRA—though knowing in advance that the UNRRA donation would surely be used to enslave anti-Communists and build up Communist armies exactly as previous grants to UNRRA had been used. They were even letting Russia coin unlimited amounts of American money, using United States Treasury plates. They called it "occupation" money, but it was freely exchangeable for good old American dollars.

And only last year, while, with one hand, the administration was hurling American arms and officers into the Greek war against communism, with the other hand it was still sending Russia lend-lease war materials and furnishing Russia export licenses with which to haul away shiploads of American oil and what have you—though today Americans are shivering in their homes for lack of fuel oil, and midwestern farmers are curtailing their production of next year's food crop for lack of oil with which to operate their bulldozers and tractors.

And only last month, while the New Deal was pushing through Congress the interim-aid bill, with the excuse that it was vital to save Europe from communism, it was giving the Russian puppet government of Poland $60,000,000 worth of locomotives and railroad equipment badly needed here at home and helpful to Russia in case of war. In short, they have not stopped subsidizing Russia. After all, this is the same New Deal administration which appointed as head of the Government agency manufacturing atom bombs a bureaucrat who had been officially advocating giving Russia our American atom-bomb secrets.

It is for a higher power to judge whether death-dealing New Dealers shall be thawed out in the hereafter. It is for you to vote the straight Republican ticket, the only way to avoid sharing their guilt.

The way to rescue Europe from Russia is to take Russia and the Russian puppet governments off our American supply lines. But you will never get either Russia or Communists off the American supply lines until you first dump the New Deal off the American supply lines.

In 1933 the New Deal jitterbugs came in talking that the Constitution was a one-horse shay. They hitched their jitter-buggy to a comet—the late New Deal President, now gone, but not forgotten—nor forgiven. Who cared that the New Deal was copying the hit programs which nazism was copying from communism? The industry controls, the labor regimentation, the propaganda methods, even the purges. To say nothing of the demagogic schemes for taking honest men's property away from them—though, unlike the Nazis, the New Dealers were smart enough not to pretend that they confiscated private property for religious reasons. Few noticed when OPA came—after the people escaped from NRA—that OPA, from which you managed to escape only because President Truman muffed his cards, was the exact duplicate of the key Nazi program for the subjugation of industry.

By throwing you a bone now and then—a project or a subsidy or a special privilege—so as to make you think that they were cutting you in on their racket, they have won every election—except the last one. The Republican Party is now crowded with refugees from this unconstitutional, un-American corruption and oppression.

The lion's share of the New Deal loot goes to—you've guessed it—the New Deal's old sparring partners—the economic royalists. I mean the big war profiteers who have held the Democratic Party by the nape of the neck ever since World War I, and more than once have given a Republican Party National Convention the bum's rush.

These New Deal Midases are always out with their tin cups whenever Government throws important money around, whether at home or abroad; but preferably abroad where you, the voters, can't see the size of their take.

For example, you should have been at the hearings when one of the New Deal's less retiring kept businessmen was going it for the New Deal's so-called veteran's housing bill in 1946. How he lauded OPA. Though incontrovertible evidence in the hearings showed that the reason that houses were not being built was because OPA had prevented the production of every single kind of material used in building houses.

All he wanted, he said, was to help the poor veterans by building prefabricated houses in mass production in his brand new industrial empire built from a shoe string during the war with your money. Why not? The bill was a Christmas tree, loaded with legalized graft for New Deal pets—materials priorities, guaranteed sales, subsidies, free factories, tax exemptions—in short, all the same legalized rackets by which some of the largest corporations during the recent war, multiplied their prewar assets several hundred percent—as shown by the records of the Securities and Exchange Commission.

The suicidal New Deal foreign policy is made to order for the economic royalists—whom the New Deal has made rich with your tax money. Without it, the stiff competition from typical American businessmen might cut them down to size. But the New Deal foreign policy will lift them to the financial stratosphere to which they aspire.

Goods produced in their free plants here can be sold to foreigners and paid for with your money through gift-loans. Goods produced with slave labor in their free factories abroad will be shipped back to compete in the coveted American market on equal terms with goods produced by taxpaying Americans paying high wages. Moreover, your fine boys will be rotting around the world, policing their interests, which they chummily refer to as "American interests." And if their old pal, Stalin, persists in his stubborn and unanticipated refusal to play ball with them in Russia and the rich areas which the New Deal gave to Russia, presumably in order to induce him to play ball with them—you will surely see another Pearl Harbor somewhere.

The little lambs bleating passionately for the New Deal foreign policy and world government are simply asking to be fleeced. Thanks to the New Deal propaganda barrage which blankets this Nation, few seem to realize that world government is already your ruler, much of it already set up, some of it already operating—though it has not yet dared show its fangs.

Step by step, just as they dragged you into World War II, just as they are now dragging you into World War III, just as they always drag you into everything at which you would balk if you knew ahead of time where you were being dragged—in 1945 and 1946—before the Republicans were elected to control Congress—this Nation was surrendered to a group of world bureaucracies of which UNO is the part that squeaks. Together,

those bureaucracies will have complete power to loot and oppress the American people.

The Bretton Woods banking bureaucracies, patriotic experts testified before Congress, have power enough to create out of thin air unlimited billions of American dollars to be given to foreign governments in exchange for their worthless I O U's. It means unlimited gift-loans for which your Government has already issued a blank check.

The UNO bureaucracy—except for the veto, which, under the New Deal, is no veto—will own the United States Army. The world trade bureaucracy—not yet set up, but for which our President has already signed up with the British—will have power to impose permanent rationing and permanent OPA. It will also have power to impose the death sentence on any business in which you are now engaged in order that some foreign country can produce what you are producing for the American market instead.

In Parliament, the Duke of Bedford called it "the most impudent attempt in history to set up a financial and economic dictatorship." Said he, "We are proposing to hand over the control of our economic life in a very large measure to a gang of Wall Street financiers who are responsible to no one and are above every government."

You have already felt the heel of bureaucratic, autocratic, plutocratic New Deal tyranny. But what you have so far endured is as nothing to the want and war you are sure to suffer when the world bureaucrats, appointed by foreign dictators who are used to killing and enslaving people, go into action, grinding you beneath their world juggernaut, destroying you with your own American weapons and armies if you dare to revolt.

Once this new world dictatorship is well under way, how would you propose to stop it? Through your union? That is a laugh. If and when you grow weary of working for a dictatorship which gives the fruits of your toil to parasites, the New Deal will again pass a slave labor conscription bill, like the one which President Roosevelt maneuvered through the lower House of Congress and the one which President Truman flim-flammed the lower House into passing—giving the Government power to force any American citizen to work anywhere at any wage or no wage. The first time it went through General Marshall testified in favor of it. And the CIO union did not lift a finger to oppose it.

Little they care, these New Deal world humanitarians, whether you die in war or starve in peace—so long as they get their mink coats, their faces in the papers, their free factories, their free trips abroad, their medals from kings and their weekends with lords. November 1948 may be your last chance to escape from the barbaric tyranny that New Dealism has already enthroned in a world supergovernment to rule over you and your government. Later may be too late.

We, the American people, are not yellow. We are not morons. All that makes us seem so is the corrupt exhibitionists in control of our Government who have betrayed us and are still betraying us. All that keeps the United States from being invincible and invulnerable is the lack of loyal, virile Americans in Government office who would obey the tried and true American principles of national self-preservation which would make us invincible and invulnerable.

If the American people are worthy of their ancestors—and I think they are—we will all jump into this election campaign and work as we have never worked before for the straight Republican ticket. And we will not stop weeding until every politician in the whole wide world knows that we mean business and intend to have good traditional American government of the American people, by the American people, for the American people, once more and forevermore.

Lincoln Day Address

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by United States Senator RAYMOND E. BALDWIN, of Connecticut, to a Lincoln Day banquet at Springfield, Mo., February 9, 1948. This was an affair sponsored jointly by the Sixth and Seventh Missouri Congressional Districts, represented by Hon. DEWEY SHORT and myself. Over 2,000 people were in attendance. The address of Senator BALDWIN was warmly received by the vast crowd present and by his radio audience. It is a splendid, thought-provoking statement of the great issues confronting the Congress and the country at this difficult time.

I sincerely appreciate your kind and generous invitation to join you here in commemorating the birthday of our first Republican President.

In Washington, we are so deeply involved in our daily legislative work that it is a great relief to come out here and exchange viewpoints with you.

Speaking of Congress on such a political occasion brings to mind the story of Lincoln's 1846 campaign. He was opposed by Peter Cartwright, a fiery circuit rider who was said to be able to freeze hell over with three sermons. During one of his meetings Lincoln strolled in. Cartwright reached the point where he was demanding of his congregation whether they were going to heaven or hell. When the standing count was called Lincoln remained seated. When Cartwright demanded where he was going, Lincoln replied, "To Congress." With a little congressional experience I feel sure he would have aligned himself with one of the standing groups.

Your State of Missouri, with its great cities, its industries, its farms, and its villages, has always seemed to me to be a kind of crossroads of America. It is here, if anywhere, that we can find the typical American. And it is from these Americans that the strength of our country comes. In the last year, I have had the opportunity of knowing and working with your very capable and respected Senators, JIM KEM and FORREST DONNELL, and also with several of your Congressmen. I might say that Missouri Republicans have chosen well their delegates to the Congress. I particularly want to thank Congressman BENNETT and your committee for their kind and generous hospitality which made me feel welcome here before I arrived.

Tonight I don't want to deliver a lecture on legislation before the Congress. I would like, rather, to talk with you about Abraham Lincoln and about our party—its problems, its hopes, and its future, and about this country of ours which has come to be the most powerful and wealthy nation in the world. We have reached position not because we sought power or wealth, and not by virtue of military conquest or political aggression. The reason we have come to that position is best explained by the fact that we meet here tonight to pay homage to the most loved of all Americans. An American who represents the beliefs and ideals and hopes we all have. What were those hopes, beliefs, and ideals? Humility, love of freedom, self-respect, hard work, equal opportunity, tolerance, and Godliness.

These are the beliefs and the virtues that put this Nation in a higher position than that ever gained by all the military conquerors in history. These are the beliefs and virtues that made us great and will make us greater. If we ever lose our humility, our love of freedom, our tolerance, or if we ever forget our God, we shall surely lose all that we cherish and all that we hope to pass on as a heritage to our children.

The world has become a small neighborhood of nations. We now have the electric light, the wide use of the telephone, the automobile, the radio, the airplane, and finally the atomic bomb. Distance has disappeared. The furthest part of the globe is today only a few hours from Springfield. Huge industries have grown up. Our population has doubled and redoubled.

All of that change around us has not changed the souls and the hearts of men. The basic rights and wrongs, and the hopes and prayers of our people are no different today in an atomic age than they were in a frontier age.

Our forefathers came to this Nation because they sought security and peace and the right to live as free men. Abraham Lincoln is the most revered of all Americans because he succeeded in preserving and furthering those ideals. Peace and security and the rights of free men are still today the answer to all our prayers.

It is harder to find peace in our world of today. It is harder to build security. It is harder to keep men free, but that only means that we must redouble our efforts as threats against our moral precepts crowd in upon us.

The Democratic Party (author of the strange experiments which have culminated today in conditions with which it is apparently unable to cope) has evolved some strange thinking.

The Democrats choose to call the Taft-Hartley bill a "slave labor" bill. Yet, polls indicate that the majority of labor itself approves the principal provisions of the bill. Statistics indicate that the strike record, since it has been in effect, is the best in years.

The Democratic Party criticizes the Republican tax-relief program on the ground that it "soaks the poor," completely ignoring the fact that it gives nearly three times as much relief to people of low incomes as it gives to people of high incomes; that it frees millions of people having low incomes from the tax rolls entirely; and establishes a proportionately higher tax on high incomes.

The Democratic Party chooses to object to the Republican Party's demand for a sound, realistic attitude in our foreign policy, completely ignoring the fact that it was years of appeasement and years of wasted money that led us to the present difficult situation.

Not more than a few weeks ago a prominent apologist for this strange system said, right here in Springfield, that labor was not to blame for inflation; that the farmer was not to blame for inflation, and that business was not to blame for inflation. That would seem to cover about all the categories from which votes can be solicited. He then went on to say that the release of price controls was the cause. Now, we don't need controls unless we have something that needs controlling. Whatever needed controlling was certainly something brought about during the period when we Republicans, unfortunately, had little to say in matter of public policy. Beyond that, when these price controls (on which the Democratic Party depends so much) were removed, there was a Democratic Congress in Washington and it was the Democratic President who removed the controls by Executive order nearly 8 months before the law was due to expire.

These devious Democrats now try to hide these sins by complaining that this Congress has not, in 1 year's time, developed what they call a workable program to create peace and prosperity and all good things, to replace their 15 years of chaos, confusion and emergencies. What have the Democratic Congresses and the Democratic Presidents of the last 15 years been doing about these workable programs for which they now plead so piously?

If it were not for our deep love of our country, we could be tempted to suggest that the Democratic Party work its own way out of the difficulties it has caused.

All of this reminds me of the sailor who went on an all-night spree; came in the next morning tired, broke, and discouraged, and then blamed a friend for allowing him to go out.

There are those among us who have pessimistically concluded that America has reached its pinnacle of success—that war is inevitable, and that it is for us nervously to enjoy our prosperity while we prepare for the inevitable conflict.

Through all of Abraham Lincoln's life, he met periods of despair and periods of disappointment, but we can well remember that in Abraham Lincoln there was always hope—and there is hope in America today.

We have not yet begun to develop the vast resources that God gave our people. We have not yet begun to enjoy the comforts that we can create. We have not yet begun to enjoy the best that we can build.

Peace, progress, and prosperity do not just happen. They are the result of sacrifice and work. It was the sacrifice and work of our forefathers that gave us the heritage we enjoy today. Abraham Lincoln did not go from the lowest place in life to the highest by idly accepting all that he found around him and concluding that no improvement could be made. Every great step of progress in this Nation has been the result of foresight, sacrifice, work, and progressive thinking. We can have peace in this world as surely as Americans 100 years ago could preserve our Union. But we cannot have peace if we turn away from the challenge that is before us.

In all that has been written about Abraham Lincoln, I cannot recall there being recorded any act or campaign he undertook to belittle, deny, or wreck the plans of others without full consideration, but I can recall a great deal of the positive programs he held up as hope for our people. Lincoln was a builder. Let our party, if it forsakes all else, remember that we, too, are builders.

Our purpose as a political party is to provide more progressive, more hopeful plans for the future. It is not the province of any party out of power to obstruct and reject every proposal of the party in power. We are not intended to serve as the anchor to hold our ship of state at rest until the wind blows in our favor. We are, rather, the keel of that ship of state which, while it does not turn at the captain's whim as does the rudder, can still help insure us against an erratic and risky course. A dragging anchor can be cut loose and dropped to the depths of oblivion so the ship can sail on. It would seem useless to say that our country has not progressed and advanced since last we were in control at the helm, but we have done so erratically by fits and starts. There has come about in these years some threats to our beliefs in a free republican system of government. A deeply divided party, made powerful by unprecedented budgets and glittering promises, has succeeded in steering us off the course that made this Nation the wealthiest and strongest and the freest of any in all world history.

Speaking of Government, Lincoln said: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, Government ought not to interefere." (That is a principle which we can well afford to examine.)

"I like the system which lets a man quit when he wants to and wish it might prevail everywhere. One of the reasons why I am opposed to slavery is just here. What is the true condition of the laborer? I take it that it is best for all to leave each man free, to acquire property as far as he can. Some will get wealthy. I don't believe in law to prevent a man from getting rich. It would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else."

There have been two basic fallacies in the thinking of the administration of the past 15 years. The first is that capital and labor alike can work less and less and earn more and more. Wealth is usable goods, and can only be obtained through the production of usable goods. There is more wealth in one acre of Missouri farm land than in all the gold buried at Fort Knox. We can reach any degree of prosperity and any standard of living so long as the producer of wealth is encouraged to produce more by the buyer's willingness and ability to buy more. Labor, the farmer, and business, must come to realize that a bigger production means more income for the owner and the worker, and thus more purchasing power to buy the increased production of the workers.

The second weak premise upon which our plans of the last 15 years have been based is that of deficit spending. By irresponsibly charging off to the future the cost of expensive schemes, we can unquestionably offer the people added services and added securities—or at least furnish employment for many engaged in planning those goals. But like the charge account in the local grocery store, some day it must be paid. Emergency after emergency has led to the spending of vast sums for popular purposes and has led to the vast wastage of public moneys. In this a curious thinking has evolved. The late President said on many occasions that he favored a balanced budget and reduced public expenditures. The present administration likewise has put itself on the record foursquare for economy.

Lincoln had these same problems. He once said:

"For several years past the revenues of the Government have been unequal to its expenditures, and consequently loan after loan, sometimes direct and sometimes indirect in form, has been resorted to. The system of loans is but temporary in its nature, and must soon explode. It is a system not only ruinous while it lasts, but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with a government."

The President in his recent message on the State of the Union offered the people the same kind of a bargain that Lincoln said the Yankee peddler offered when he put up for sale "a pair of pantaloons large enough for any man and small enough for any boy." We cannot oppose the fine principles exhibited in that address. We cannot put ourselves in the position of being opposed to morality, the Golden Rule, or in favor of sin, but we can wonder first what the cost of all this will be to the American people, and second, whether or not the administration can accomplish it. Our quarrel is not with the purpose but rather with methods which so rarely bring results.

For example, since ascendency to power 15 years ago, the Democratic party has consistently and regularly warned that there was, in this country, a serious housing shortage—and we do have a serious shortage. Today, after 15 years, we have 34 Government agencies concerned with the question of housing and the President tells us that the shortage is more severe than ever.

Fifteen years ago the administration consciously went about the job of creating inflation by cheapening the dollar, spending huge sums of Government money, increasing taxes, favoring any and all increases in wages and salaries, practicing inefficiency in the Government, and now—in 1948—the Administration seems surprised that we do have inflation. The President claims credit for the high wages and high purchasing power that inflation brought and yet is loathe to claim the high prices that come as part of the same inflation.

This strange Democratic Party has come to have in it some oddly contrasting figures. Today, in voting for that party on a national ticket, one can well wonder whether he is voting for the ultra-conservatism of the Democratic deep south or the radicalism of the far left wing. He can wonder whether he is voting for the kind of attitude toward labor that vetoes the Taft-Hartley bill, or the kind of attitude toward labor that threatened to draft railroad workers into the Army. He can well wonder whether he is voting for sympathy with Communist Russia, or for sympathy with a reactionary Greek King. He can well wonder whether he is voting for controls and rationing or whether he is voting for the party that refers to such action as being the methods of a police state. He can well wonder whether he is voting for an Administration that opposes any tax reduction consistently, or whether he is voting for an Administration that opposes tax reduction only in nonelection years. He can well wonder whether he is voting for a party that violently opposes the anti-poll-tax and antilynching legislation, or whether he is voting for a party that calls such practices viciously un-American. He can well wonder whether he is voting for a party that looks for Communists under every bed or whether he is voting for a party that hides them under every bed. He can well wonder whether he is voting for a party that believes that speculators in the grain market are "gamblers in human misery," or whether he is voting for a party that has in it officials who busy themselves in such activities. He can well wonder whether he is voting for a party that advocates the "four freedoms" in all parts of the world or whether he is voting for the party that sat idly by while those freedoms are "snuffed" out. He can wonder whether his party is, this year, in favor of plowing crops under or burning them or demanding the farmer produce more.

It is all very well to say that $5,000,000,000 or $10,000,000,000 or $20,000,000,000 can be arbitrarily cut from that budget, but we are up against two difficulties: the opposition of the administration, and a budget which fills a book—I am sure as large as the Kansas City directory. More than that we cannot reduce commitments which our Government has already assumed. In this connection the President in his recent message to Congress tried to illustrate the economy of his administration by claiming that the budget had been reduced from a wartime level of $63,000,000,000 to $38,000,000,000, and that the number of Federal employees had been reduced from a wartime level of three and three-quarter million to two million. That is an obviously misleading and unwarranted claim. No one could, with any justification, compare the cost of—or the employees needed for—the conduct of Government in wartime with that of peacetime. The President did not choose to compare the number of employees in the last peacetime year or the budget of the last peacetime year—which budget incidentally was only about one-quarter of the present one.

In seeking to reduce the ever-increasing budgets, we do not have an entirely free

hand. The present budget, estimated now at $39,700,000,000, includes $11,000,000,000 for defense, $7,000,000,000 for international commitments, $6,000,000,000 for veterans, $5,300,000,000 for interest on the debt, $2,000,000,000 for social security, and $2,000,000,000 for tax refunds. Of this a total of $22,500,000,000 is already committed. In addition, another $11,000,000,000 concerned with national defense can probably not be greatly reduced with safety. That leaves us only about $6,000,000,000 with which to deal. It is obvious that we cannot make a $20,000,000,000 cut in that.

I make those observations not because we, in the Congress, have any less interest in reducing these expenditures, for we must and we will reduce the budget and taxes. I illustrate these difficulties to point out the position in which we find ourselves. We feel somewhat as Lincoln must have felt when a friend told him it would do him good to get down to Washington. Lincoln answered, "I only wish I could have got there to lock the door before the horse was stolen. But when I get to the spot I can find his tracks."

We must, each of us, as a member of a great party, play a confident role in urging allegiance to our cause. We know what our problems are. In seeking solutions the authorship is of far lesser importance than the result. Let us apply that thinking to a careful review of ways and means of keeping the peace, defeating high prices, maintaining industrial peace, building houses, improving the Nation's health and education, broadening the protection of social security, protecting civil rights, reclaiming arable land for farming, increasing industrial production, increasing agricultural production by a realistic guaranty of a fair return, lowering taxes and Government cost, protecting ourselves against dangerous ideologies. These purposes must be more than idle words. We can accomplish these things effectively within the scope of our now threatened system of free and independent enterprise. To do that we must either propose specific programs of our own or espouse promising programs of others. We cannot continue to say "we're for it, but not that way" unless we have a better way. The test of our value to our American future is not the degree of success we might have in denying progress but the degree of success we have in making progress. We have the choice of becoming a bitter, critical minority or becoming confident progressive builders of our own great future.

I cannot emphasize too strongly the need for us to become the party of youth. We need to do more than ask youth to join our columns. We, as workers in our party, need to demonstrate the sound and working principles of our American beliefs. We need to demonstrate that we, not only understand the problems of our youth, but are willing and anxious that energetic youth help lead the direction of our party.

We need to demonstrate that we are capable of—and constantly are—putting the interests of our Nation above party consideration. We need to demonstrate that we can, and we will, provide for the needs of our people and listen to their hopes and demands instead of creating agencies to stumble over one another in the development of ineffectual theories.

We are again a growing party, not looking back hopelessly on failures of the past, nor looking back smugly on victories of other days. With Lincoln, we can, "hope to stand firm enough not to go backward and not go forward fast enough to wreck the country's cause." If we are to justify a victory in 1948, we must frankly review the reasons for our failure. We made errors, the principle of which was that we did not keep pace with our people—but what our platform was in 1932 or at any other time in our history, is of little consequence today. The Pied Piper of promises has led the parade long enough. Let us not sit disconsolately by while the parade wanders aimlessly through a labyrinth of back alleys. Let us join the parade—and lead it again back to the broad avenue our forefathers built.

The political philosophies of our people and our party are, as Lincoln said, "sweet and short like the old maid's dance." The true American is a man who believes in political freedom for himself and for all people. A man who believes that he shall have the right to live as he chooses so long as he does not interfere with the rights of his neighbor; a man who believes he can, like Lincoln, rise from poverty to the highest office of our land; a man who believes the world changes and that he can change with it; a man who is not held down by either the dead hand of defeat or the dead dogmas of the past; a man who believes in youth and progress—constructive, positive programs; a man who believes in America, and believes in the God that made America great.

Address of Hon. Joseph W. Martin, Jr., Speaker of the House of Representatives, Before the Missouri Association of Republicans at the Jefferson Hotel, St. Louis, on Saturday Evening, February 7, 1948

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. PLOESER. Mr. Speaker, on February 7, Missouri had the honor and pleasure of a return visit from our esteemed Speaker, JOSEPH W. MARTIN, JR., of Massachusetts. We have had the pleasure of having Mr. MARTIN in Missouri with us on several occasions. We Missouri Republicans take him to our heart as an adopted son.

On the occasion of the Lincoln Day celebration at the Jefferson Hotel in St. Louis, our Speaker delivered an outstanding address which was broadcast from coast-to-coast over NBC network.

It is my great pleasure to express thanks in behalf of Missouri Republicans and to extend the remarks of our most distinguished Member—the Speaker—into the RECORD:

Mr. Toastmaster, members of the Missouri Association of Republicans, fellow citizens, when I come to Missouri my mind reverts to other visits. I recall coming here in 1938 when you had only a single Republican Congressman, good old DEWEY SHORT, and a handful of members of the legislature.

Today you have two Republican United States Senators, nine Members of the House, and you have control of your legislature. You have made great progress for sound, sane government in these few years, and I am sure that next November you will complete the task by reelecting your Congressman, electing a Republican Governor, and casting your electoral votes for a Republican President.

We are gathered here to honor the memory of an immortal American who had a sublime faith in God, and a profound confidence in the American people. He carried this Nation through a crisis which might well have destroyed the Union and made of America a divided country. Happily the Union survived and went on to a high destiny in the world. Lincoln died a martyr to his country's welfare and his devotion to the public weal. His birth date is saddened this February by the death of a great apostle of peace in India to whom death came in the same way as to Lincoln.

One of the outstanding characteristics of Abraham Lincoln was his reluctance to use power. He had a high respect for the Congress, in which he had served before he became President.

I ask you, What kind of thinking do we have today when an administration says Government price controls and rationing are tools of a police state and then advocates just such police-state methods 2 weeks later? Either they don't know what they are talking about or else they are not talking about what they know. Obviously, such an administration is not the kind to be in charge of our Government in these critical times.

What kind of thinking is it when in one breath the administration asks business to spend $50,000,000,000 for expanded production, and in the next breath, suggests increased taxes upon business. These taxes proposed by the administration would, of course, actually be a sales tax. Otherwise business would be prevented from securing the necessary funds for expansion.

Lincoln was an apostle of candid government. He believed the people were entitled to know what their administrators were doing in their name. He was convinced the people should always be told to what they were being committed by their public officials. "Why should there not be a patient confidence in the ultimate justice of the people?" he asked. "Is there any better or equal hope in the world?"

The trouble with America in the last few years has been we have had a rash of manufactured emergencies, and a chronic case of counterfeit crises in peacetime for the sole purpose of the administration demanding from the Congress more and more power. That is why Congress now views with suspicion any cry of "Wolf."

One trouble with America today is we have too many people who were never elected to public office running the Government. The people are sick of them. The administration still has a bad case of "spendicitis." It has been stubbornly unwilling to cut the cost of Government, and reduce the stupendous pay rolls. But the Republican Congress is going to do a little surgery on that trouble; we are going to cut it out. The administration today is demanding more powers, not for war, mind you, but for peace. It is demanding more and more money, higher and higher budgets. Even a nation as resourceful as America cannot indefinitely support such budgets.

This 16-year Government of trial and error—mostly error—must be discarded; it must be replaced by time-tested principles, principles which are wholly American and which have always worked successfully before in critical periods of our history.

The New Deal has sought to array class against class. It has made the businessman and business generally the focal point of its insidious attack on our American system of free enterprise. In devious ways it has promoted a so-called socialistic plan to redistribute the wealth forgetting completely that socialism redistributes poverty, not wealth.

This administration would restore bureaucratic control over our economy in its lust for more power over the people. By shackling the economy the administration says it hopes to check inflationary forces. It is never wise to do evil hoping good may come of it.

America is at a turning point. We are fighting a battle to maintain our American system of constitutional government, free

economy, and free society. We stand against demands for Government controls which would be sure to grow and spread to the point of state socialism. In other parts of the world, we are fighting communism, so-called, which is slave government.

America is the spiritual leader of the forces of Godliness and liberty. We are the financiers of what must be the greatest co-operative movement for freedom ever tried in history. The fate of civilization depends upon the success of that movement.

For more than 14 years the Republicans have been warning the Nation against the creeping plague of Communists infiltrating into positions of power in the Government. They were protected as they sought to gain control of labor unions; and even as they stirred up strife and strikes during the war.

The New Dealers derided our warnings. They scoffed at our fears. They went merrily on placating the Communists, and praising their so-called liberalism. Now even the State Department has had to reveal the treacherous acts against civilization committed by communism while high American officials were praising the Kremlin. Those who thought it was politically smart and philosophically fashionable to go along with pink policies, now want to sing very low. But it has not been so long ago when the New Dealers, the semi-Socialists, the Socialists, the pinkos, and the outright Communists were all playing around together. Anybody who questioned either their wisdom or their integrity, their intentions or their actions, was a prince of privilege, or a ruthless reactionary.

Now, fellow citizens, whom do you want to clean these Communists out of places of power? Whom do you want to clean up the intricate network of bureaus of this Government? Whom do you want to ferret out, and throw out, these people who delight to spend and spend, and tax and tax, and waste and waste? Do you want those who a short time ago were in bed with the Communists, and the pinkos and the statists? Or do you want the Republicans who saw this danger from the very start; who have fought these saboteurs all the way down the years; who never conciliated them, or appeased them, or made traffic with them? That will be an easy one for the American people to answer come next November.

The truth about despotism is out. Dress it up in any kind of propaganda you will, it still enslaves the people, and creates a special privilege class of those who control the Government.

The facts are now so clear, nobody dares to argue that communism has any advantages over our American system, or any attraction for free people. It will be stopped at our shores by those who have never trafficked with it; who never associated with it; who never appeased it; but who, down the years, have fought it for the deadly menace to liberty it has always been. That is one strong reason why I am certain the people next November will elect a Republican President and a Republican Congress.

The sly front of governmental waste is confusion, and secrecy in administration.

The Republican-controlled Eightieth Congress achieved a balanced budget for the first time in 16 years. We have commenced to pay off the gigantic national debt. We passed a tax-relief bill twice in the first session. We gave the greatest relief to those in the lower-income brackets. We sought to relieve the elderly people, and those living on small fixed incomes of all taxes, so they might have a few of the comforts of life. The administration was determined the people should have no relief from crushing taxes. Mr. Truman vetoed the taxpayers. That is why you didn't get the tax reduction last year. We have just passed another tax-reduction bill in the House which grants relief similar to the first two bills which were vetoed. This bill gives 71.1 percent of the tax relief to the people with incomes of less than $5,000; it frees 6,000,000 people from paying any tax; it gives special relief to the neediest of our people, the aged and the blind. It helps the American taxpayer to meet the high prices. It provides incentive for men and capital to work together for needed expansion and more jobs for the people. Twenty cents of every dollar the housewife pays in prices goes to the tax collector, and doesn't buy a nickel's worth of food or service. Eleven cents more goes to the Government as income tax.

Now, fellow citizens, there is something else we have to do when we reduce taxes. We must cut governmental waste and spending. The only way to cut governmental waste and spending is to cut down the governmental bureaus which waste and spend. That is another strong reason why I am certain the people will elect a Republican President and a Republican Congress next November.

The bureaucrats have a long-established policy. It may be expressed in two lines:

You make it; we take it.
You lend it; we spend it.

A joint commission is now at work on the Government reduction problem. The joint commission will report next year to the Congress. We then, with a Republican President and a Republican Congress, will finish the job of cutting the Government back to peacetime size.

We must return to the State and local levels the functions which belong there, and return to private endeavor the functions which belong there.

Big Government always means big budgets. Big budgets always mean big taxes. High taxes are oppressive on the people and discouraging to business expansion and production.

Swollen government is always oppressive. The bigger and more concentrated government becomes, the further it gets away from the people and the more remote the bureaucratic mazes are from the taxpayer.

The only way to prevent that is to keep government well and safely in the hands of the people themselves.

What we need in government is more of the Spirit of '76 and less of the spirit of 76,000 administrative regulations.

The President says he intends to spend in fiscal 1949, $39,600,000,000. We may well be startled when we realize this amounts to $1,020 for every family of four in the United States. Ten years ago the Federal Government expenditures were $276.60 per family of four. Talk about inflation robbing the people.

The administration boldly says this budget cannot be cut. Well, I will tell you it must be cut and we are going to cut it. With cooperation from the executive department, it could be reduced very substantially. But even without that cooperation, we will do this necessary job for America. The people cannot be kept forever in a strait-jacket simply because the bureaucrats insist upon continuing their wartime spending ways.

We are assuming a new cost burden on a colossal scale.

It is proposed we spend billions of dollars in the European relief program. The administration is fighting to have its own people handle these billions. The Congress is looking very carefully into the sums which are to be spent, and into the methods to be employed in the spending. The burden of cost is too vast for this money to be wasted or misspent.

In considering the tough plight of our European neighbors we must not permit our natural sympathies to blot out realities. In attempting to lift our friends up we must be certain beyond doubt that failure will not plunge us to their level of poverty and despair. We must ever bear in mind that to prevent Communist world domination we must remain strong economically and militarily.

I have a rule which I now propose. I believe it should govern the administration of the European venture. It can be stated in four words: economy, efficiency, common sense, and cooperation. Lacking any one of these elements the whole venture could be an appalling waste of the American taxpayer's money.

Only a safe, sound, solvent, free America can help the rest of the world regain peace, progress, and happiness.

While we are helping Europe, we are reaping the bitter fruits of administration mistakes over the past 16 years. The American people are bedevilled by high prices. The citizens by now know pretty well the causes of high prices. They now know inflation was born in the deficit spending of other New Deal years. They know the war activities were inflationary. The goods and services went overseas, or to the bottom of the seas, while the unspent wages and the salaries stayed home. The people now know the drain on our production to aid the world operates as an inflationary force, because, again, as in war, the goods go overseas and the wages and salaries stay at home. The people remember that price control didn't stop inflation. Price control merely drove goods into the black market. The Kremlin has had absolute control over prices in Russia, but they had inflation just the same. Despotism and deficit spending are the twin promoters of inflation.

The administration would like to have us believe inflation, like Topsy, just growed. Scatter-brained economic theorists have been pumping it up ever since they descended upon Washington like 7-year locusts in 1933. Unlike 7-year locusts, unfortunately, they've stayed for 16 years. A powerful insecticide compounded of the American voters' wrath, and the people's desire for a return of good government, will be applied next November and put a stop to this plague.

The foggy-mindedness which this administration indulges in is demonstrated in their talk about high prices. What has been perfectly plain all along is just now being discovered by them. Someone has pointed out that the dollar has depreciated just as the share in a company depreciates when the capital of that company has been watered. The administration tries to blame the producers—the Republicans—everybody—for high prices. It is the New Deal Administration itself which has created the inflation. Producers are straining to provide goods. The remarkable thing is not that prices are high, because Government inflation made them that way. It is that our free American enterprise has so rapidly and effectively moved to counteract this inflation by enermous increases in production.

There is just one answer to inflation in America; that is sound, common sense production of farm and factory products under free economic conditions which will not generate unemployment. The essence of prosperity is jobs at wages high enough to buy the products of farm and factory.

The administration has already demonstrated that its only answer for the condition America finds itself in is more power, more controls, and more spending, and eventually more scarcity. The attack on inflation and waste will have to be made under a Republican President cooperating with a Republican Congress. The New Deal has had 16 years in which to demonstrate its capacity for sound, economical government. It has failed miserably. It took a Republican Congress to achieve the first balanced budget in 16 years.

Government is vastly more costly than it ever was before. We know our national defense is going to be very much more expensive than ever before in the history of this Nation. We know we must have a super air defense fully adequate to meet any emer-

gency of the future. We are all intent on keeping our country strong. The Republicans are creating a special committee to study our air defense. If the cost of government is not to overwhelm the people—efficiency and economy in government must be made effective as never before.

Ours is a battle bigger than party. It is a fight to save Americanism. Millions of honest, patriotic Democrats and independents are ready to unite with us—give them a cordial welcome.

We have poured out rivers of precious blood, and inconceivable amounts of goods and services through two world wars. We don't intend to lose the liberties at home we fought for abroad. We are not going to let America go down in confusion and chaos. We shall keep Lincoln's America and our America sound, solvent, strong, and free. We shall lead the great world movement for godliness and liberty. Faith and freedom must be our watchwords. Honesty, efficiency, cooperation, and a people united to save civilization can save civilization and will save civilization.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

FEDERAL SECURITY AGENCY,
UNITED STATES OFFICE OF EDUCATION,
Washington, D. C., February 9, 1948.
Mr. J. V. DOWTIN,
Principal, Kenton High School,
Kenton, Tenn.

DEAR MR. DOWTIN: The 10 reasons for Federal aid to education which you recently submitted to the United States Office of Education have come to my attention.

Your statements in justification of Federal aid are pithy and to the point, and it is my belief that they are worthy of publication in the CONGRESSIONAL RECORD. It is suggested that you send them to your Congressman with the request that he have them inserted.

Your thoughtfulness in sharing with us your views on this important subject is appreciated.

Sincerely yours,
RALL I. GRIGSBY,
Special Assistant to the Commissioner.

KENTON HIGH SCHOOL,
Kenton, Tenn., February 12, 1948.

TEN REASONS FOR FEDERAL AID TO EDUCATION

1. Ours is a shifting population, a person educated in one State may live the rest of his life in another.

2. Each State has representatives and helps elect the president.

3. Fun is made of people of poorer States and they are told how to manage their affairs. Education would make them less amusing and more able to handle their affairs.

4. In the War Between the States the South was overrun, became in debt, and had her property destroyed. Then she was robbed. The thieves and robbers were protected by the United States Army. Nor have all the discriminations against the South been abolished.

5. The businessmen of the richer States gain in their business transactions with the businessmen of the poorer States. The former set the prices—buying price and selling price (the old colonial system).

6. Recently it was decided that all citizens of a State should have equal opportunities for education. Why not for the Nation?

7. Educated whites and educated blacks would go a long way in solving the race problem. When has there been a conflict in which all parties were educated?

8. Illiterates and others lost to the army because of poor education were a loss to the entire Nation—also the allies.

9. Criminals in the poorer States commit Federal offenses. Lack of education is a cause of crime.

10. By subsidies, tariffs, grants, special privileges, etc., big business has received Federal aid. In many ways labor has received Federal aid. Even the farmer has received some Federal aid—though not enough. Why shouldn't education, America's most important business, receive Federal aid? Teachers are dependent on others for their livelihood.

J. V. DOWTIN.

Proposal for Issuance of Commemorative Stamp To Honor Nation's Volunteer Firemen

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. BOGGS of Delaware. Mr. Speaker, I have just introduced into this House a joint resolution which I earnestly believe merits the interest and support of all the Members. This resolution provides for the early issuance of a commemorative stamp of the denomination of 3 cents as an expression of the Nation's gratitude to the thousands of volunteer firemen throughout America and to the thousands of women who comprise the auxiliaries of these volunteer fire companies.

Seldom has the value of the work of these volunteer firemen and the members of their respective auxiliaries been more apparent than in this present severe winter. At great risk of their own safety, and indeed their very lives, these unpaid fire fighters in rural and suburban areas throughout our country give evidence each day of their courage and devotion to duty. Day and night, by their willingness to accept great personal discomfort, they protect the lives and property of residents of our towns, villages, and rural areas.

In Delaware I have had the privilege of being closely associated with scores of these volunteer firemen who faithfully carry on their individual businesses and productive enterprises but are, nevertheless, always available when the safety of human lives and of real and personal property is endangered. Furthermore, I personally had an opportunity recently to witness, and to be grateful for, the speed and the efficiency by which these unpaid but highly trained firemen perform their tasks.

I have learned that it was exactly 300 years ago—in 1648—that the first fire ordinance was adopted in what later became the United States of America. It was as a result of that ordinance that a body of volunteers patrolled the streets of New York City each night to watch for the outbreak of any fires; and 30 years later the first organized volunteer fire company, as we think of it today, was established in Boston. It is now estimated that there are at least 14,000 volunteer fire departments in the United States. The number of members of these companies and of their women's auxiliaries has not been ascertained, but it must certainly consist of hundreds of thousands.

Although volunteer firemen have served America for 300 years, no commemorative stamp has ever been issued in their honor. I now propose, Mr. Speaker, that such an honor be extended to them by our Nation.

Mr. Speaker, I also want to point out, as anyone who has ever lived in a rural American community knows, that the value of volunteer fire companies and their auxiliaries extends far beyond their invaluable services in fighting actual fires. They have done—and they continue to do—much in promoting fire prevention. In the villages and towns of America the fire house is an integral part of community life and civic and social activities. It may truly be said that within the volunteer fire companies throughout the Nation may be found the firm roots and the very foundation of our form of government. In those town and village fire houses we have, indeed, a fulcrum of democracy.

Mr. Speaker, there is still another important point I wish to make. Only a few days ago Secretary for National Defense Forrestal announced that plans are being drafted to organize civilian-defense units throughout the United States which would be fully trained to act in the event of any national emergency, especially such an emergency and critical situation as would be caused by an atomic-bomb attack. I say, Mr. Speaker, that the Secretary for National Defense already has available to him, as a nucleus for such a civilian defense corps, the volunteer firemen of America.

George Washington: 1948

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks I am inserting in the RECORD an article entitled "George Washington: 1948," written by Carlos W. Huntington, which appeared in the Portland Homebildor under date of February 14, 1948:

GEORGE WASHINGTON: 1948

Surveyor, planter, soldier, Member Continental Congress, President, George Washington, "Father of His Country," was born in Virginia, February 22, 1732, an ardent advocate of devotion to America and freedom

from entangling alliances. What would he think of his country today, the state of the world, the outlook for the future?

He would see a Nation of 140,000,000 recovering from two world wars and threatened with a third. He would see the results of appeasement of Hitler by Chamberlain—war; the appeasement of Stalin at Yalta and Teheran—nations overrun by communistic hordes—Americans saddled with $90 debt for every man, woman, and child for "lend-lost" grants to Russia alone, nations prostrate and reviling the United States while begging for our dollars, food, and materials.

He would see Stalin, Molotov, Vishinski, and their ilk, barbarians dressed in the habiliments of civilization, hiding behind an iron curtain, their minions enslaving, purging, starving, and mistreating millions of Europeans, while attempting to spread their fiendish communistic doctrines throughout America and the lands they have not yet conquered. He would see the shambles of massacre and hate it, of all places, Jerusalem, ancient cradle of Christianity. He would see his Nation trying to help bring order out of chaos, trying to stabilize the world economy, trying to insure peace, and daily getting into the depths of the international maelstrom. We think he would reiterate his admonition of no entangling alliances, no commitments that would enslave our people. True, he would aid the suffering but, he would always bear in mind that a government's obligation is to its own citizens first, that the welfare of its people is paramount and that, out of our abundance, after our own needs are met, we will give freely to those requiring aid.

George Washington, there are still some of us who believe in your sound philosophy and doctrines, on this your two hundred and sixteenth birthday.

CARLOS W. HUNTINGTON.

New York State Republican Clubs Support European Recovery Program

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. JAVITS. Mr. Speaker, the mounting support for the European recovery program among thoughtful citizens deeply concerned with the public welfare is very gratifying to those who have been wrestling with the enormous problems of world peace and stability. A significant contribution is the following resolution adopted by the Association of New York Young Republican clubs at the January meeting of their board of governors:

ASSOCIATION OF NEW YORK STATE
YOUNG REPUBLICAN CLUBS, INC.,
New York, N. Y., February 11, 1948.

Hon. JACOB K. JAVITS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN JAVITS: The attached resolution, with regard to the Marshall plan, was adopted by the Association of New York State Young Republican Clubs, Inc., at a meeting in January.

Very truly yours,
CHARLES S. HAMILTON, Jr.

At a meeting in January of the board of governors and the executive committee of the Association of New York State Young Republican Clubs, Inc., the following resolution was adopted with regard to the Marshall plan:

"Whereas, World War II has so disrupted the economy of various European States, and so distorted international trade, that minimum requirements of food, fuel, fertilizer, and production tools can be obtained only through substantial, long-range loans and contributions from all unscarred countries having relative export surpluses; and

"Whereas permanent world peace cannot be achieved without the restoration of those European national economies which have been dislocated by World War II; and

"Whereas the economic position and self-interest of the United States require that it lead the way in the selection and administration of the necessary reconstruction program, seeking full participation of other nations able to help; and

"Whereas a realistic study of their own needs and stated anticipated performance has clearly outlined the goals of the 16 nations participating in the Paris Conference; and

"Whereas studies of the American economy indicate our ability to supply the necessary aid, now, therefore, be it

"*Resolved*, That the Board of Governors and Executive Council of the Association of New York State Young Republican Clubs, Inc., recommends the adoption by Congress of a European recovery program embodying the following principles:

"1. The shipment of foods, fuel, and fertilizer as an outright gift.

"2. The shipment of capital goods, the value of which should be liquidated over a long term by the import of materials in short supply in the United States and other contributing states.

"3. Insofar as practicable, the aid should be extended in kind rather than dollar credits.

"4. A complete program to achieve European recovery, based upon the production and standard of living goals set by the 16 participating nations, should be authorized as a whole.

"5. The sole condition to the extension and continuation of aid should be active protection by receiving nations of freedom of worship, assembly, speech, press, and elections.

"6. A nonpartisan European recovery agency should be set up and administered by American business leaders and technicians appointed by the President and approved by the Senate. Provision should be made for representation of other contributing nations. A semiannual progress report should be submitted to Congress, which report should include the agency's views as to possible modification of the program."

Lincoln and the People Everywhere

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. HAYS. Mr. Speaker, the Robert Todd Lincoln collection of Lincoln papers was opened to the public on July 26, 1947, in the Library of Congress. At the ceremony to mark the public opening of this collection one of the principal addresses was delivered by Dr. Roy P. Basler, a former professor at the University of Arkansas. Dr. Basler is now editor of the Writings of Abraham Lincoln, sponsored by the Abraham Lincoln Association of Springfield, Ill. His notable work for the association in producing a new and more satisfactory edition of Mr. Lincoln's writings is recognized by students of Lincoln literature as a significant contribution.

Under leave to extend my remarks, I include the following closing paragraph of Dr. Basler's eloquent address at the Library of Congress ceremony:

In Lincoln's life and thought America has found a compelling symbol and statement of democracy. Lincoln instructs the very soul of mankind in the meaning of human dignity, in the efficacy of human striving for justice and right, and, above all, in the spirit of patient, ironic humor with which all absolutes must be tempered—whether of failure or success, falsehood or truth, wrong or right—if men of various talents, creeds, and colors are to seek equality under one law. By precept and by example, Lincoln continues to teach mankind the way of democracy in this so-called atomic age, even as he was himself taught, both boy and man, by the precepts and examples of Washington and Jefferson.

America has accepted Lincoln as a symbol of the best which man has thus far achieved through democracy. More than this, America has accepted with Lincoln an ideal which may yet be more nearly attained—the timeless and universal democracy of the Declaration of Independence, rather than the temporary and often expedient democracy of the timely, or sometimes untimely, laws of our land. What Jefferson conceived, Lincoln consecrated with renewed meaning. Those who know the minutiae of Lincoln's life and works recognize the abiding truth in this popular acceptance of Lincoln as America's finest symbol of democracy. It was Lincoln's own admission that he had "never had a feeling politically that did not spring from the sentiments embodied in the Declaration of Independence." In an impromptu speech delivered to a German club in Cincinnati, while he was en route to Washington in 1861, Lincoln stated unequivocally: "I hold that while man exists, it is his duty to improve not only his own condition, but to assist in ameliorating mankind." If America knows and follows Lincoln we cannot fail in this, or any future era, to assist in the work of ameliorating the lot of all men everywhere.

I believe that America will continue to follow Lincoln's belief that the wealth and power which have accrued to the Nation in our quest for freedom and equality is not an end in itself, but is a byproduct, to be utilized as a means of furthering the quest. Our wealth and power cannot justify our democracy before the nations of the world, now or ever. But our democracy can justify our wealth and power, by utilizing it in the quest for a better world for all men everywhere. We shall have failed of the historic destiny which Lincoln saw for us unless we recognize with him, that "the struggle of today is not altogether for today—it is for a vast future also." How truly Lincoln answered one great question:

"What constitutes the bulwark of our own liberty and independence? It is not our frowning battlements, our bristling seacoasts, the guns of our war steamers, or the strength of our gallant and disciplined Army. These are not our reliance against a resumption of tyranny in our fair land. All of them may be turned against our liberties, without making us stronger or weaker for the struggle. Our reliance is in the love of liberty which God has planted in our bosoms. Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men, in all lands, everywhere."

This, ladies and gentlemen, is Abraham Lincoln's belief, and I believe, fundamentally,

America's belief. So long as Lincoln's life and works are studied, it will be difficult for Americans to hold any contrary belief. To the purpose of perpetuating the study of Lincoln, the Robert Todd Lincoln collection is dedicated. May we hope that the day will never dawn when Abraham Lincoln and the principle for which and by which he lived have lost their force in the hearts of "all men, in all lands, everywhere."

American Ideals Taught in Athens College, Athens, Greece

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. TEAGUE. Mr. Speaker, while in Greece with the Foreign Affairs Subcommittee last October, I was impressed to find several people in each village who could speak very good English. After talking with these people for a while they would always proudly explain that they had attended an American college in Greece such as Athens College.

These colleges in Greece, which are about the junior college level here in the United States, are supported by donations from Americans. It is my opinion that the education we are able to furnish these young Greek students by teaching them the ideals of American democracy is one of the most important things we can do for them.

I was very much impressed with the accomplishments of Dr. Homer W. Davis who is founder and president of Athens College. Dr. Davis is formerly of Coram, Long Island, N. Y., and he and his staff of American and Greek instructors are training several hundred students each year the American way of life.

Our American Mission for Aid to Greece is assisting in the rehabilitation of Greece but it has not taken over any responsibility of providing funds for these American colleges. It is important that friends of these schools continue to support them financially.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a recent letter received from the president of Athens College, Dr. Homer W. Davis, together with a letter from the Chief of the American Mission for Aid to Greece, Mr. Dwight P. Griswold:

ATHENS COLLEGE,
Athens, Greece, February 7, 1948.

The Honorable OLIN TEAGUE,
House of Representatives,
Washington, D. C.

DEAR MR. TEAGUE: Recalling your visit to the college and your suggestion that I should keep in touch with you, I am writing to claim your interest in America's contribution to education in Greece.

All of us, of course, watch with great interest the work of the American Mission for Aid to Greece and give it our full moral support. The privilege of educating and in fact the fate of all American institutions in Greece obviously depend on the success of American efforts here, for the alternative is the iron curtain.

In the meantime, while the struggle is going on, we feel that Athens College, like other American institutions in Greece, is a powerful support to the official American effort and that the disappearance or serious curtailment of the work of these institutions, because of lack of funds, would be interpreted by the anxious public as lack of interest on the part of the American public and in fact weakening of America's determination. Any sign of weakening would be fatal.

Those of us who have struggled since liberation to rebuild American institutions in Greece thought that the announcement of the Truman doctrine would be accepted by the American public as recognition that greater help for Greece was needed and that, therefore, our task would be less discouraging. Unfortunately, the result has been just the contrary and we have faced the danger of closing the doors of the college because so many of our former contributors have taken the attitude that Government help made voluntary contributions unnecessary. We have tried to counteract this unfortunate impression and the attached copy of a letter from Governor Griswold has proved effective in many quarters.

Our trustees in the United States are appealing to the American public and particularly to Americans of Greek blood, whose obligations and interest in the matter are closest.

Mr. Theocharis Stavrides, former assistant principal of the college, who was at my side for 15 years in building up this institution, is in the United States this year and is spending much of his time going about and addressing groups in behalf of our trustees. It would be a tremendous support of our cause if you would be willing to give him letters of introduction to influential or wealthy Phil-Hellenes in your States, particularly Greek-Americans. Your endorsement of the work of the college and your expressed interest in the efforts for its survival would mean a great deal to us and I believe it is not an exaggeration to say a real contribution to the success of American efforts in Greece.

I hope that Mr. Stavrides will find it possible to call on you. If not, he will write you. His address is Mr. Theocharis Stavrides, care of Near East College Association, 46 Cedar Street, room 1209, New York 5, N. Y.

I apologize for troubling you but I know that I can count on your interest in the work to which we are devoting ourselves here with all our strength and energy. We feel that we are on the front line here and it is a great satisfaction to know that we have the support of friends in Washington, who have been here and have seen for themselves what is at stake.

With the kindest regards, I am,
Very truly yours,
HOMER W. DAVIS,
President.

THE AMERICAN MISSION
FOR AID TO GREECE,
Athens, November 22, 1947.

Dr. HOMER W. DAVIS,
President, Athens College,
Psychico.

MY DEAR DR. DAVIS: It has recently been brought to my attention that contributions from the United States to certain institutions here, particularly Athens College, have fallen off since the arrival of the American mission. I am told that this is due to the feeling in the United States that the American Aid Mission has taken over all responsibility here, including even the American educational institutions which have operated for so long and so efficiently in this part of the world. As you know, this is not the case and, for the present at least, our program is confined to the economic and security problems of Greece itself.

It is extremely unfortunate that these contributions are on a decline, and I am sure that if the facts are properly presented to the American public, they will respond. I, myself, have first-hand knowledge of the good work you are doing here. I have met and dealt with graduates of Athens College in many walks of Greek life in the short time I have been here. Your institution is performing a lasting service and is contributing not only to the welfare of Greece, but also to the prestige of the United States.

I wish you every success in this important work. With kindest regards, I am,
Sincerely yours,
DWIGHT P. GRISWOLD,
Chief.

The Postman Deserves a Raise in Pay

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. MILLER of California. Mr. Speaker, the editorial that appeared in the Oakland Post-Enquirer of Friday, January 16, 1948, is pertinent to the times. Recently there have been a few flurries in the commodity market that some have been quick to hail as a break in the high level of food prices. This is wishful thinking. There has been no real reduction in prices.

Postal and other Federal employees are entitled to a raise in pay. This editorial pleads their case in a logical manner. I urge you to read it carefully.

Continued high prices have sapped the surplus earnings of Government employees. They have no cushion of savings left to tide them over in case of sickness or periods of distress. There is no chance for them to build a reserve—it takes all they make to buy the necessities of life.

There are very few pennies left in the pocketbooks of the faithful wives of our postal and public employees after a very few trips to the grocery store.

Let Government express its interest in its employees by adjusting their salaries upward to meet high-living costs—we must not be guilty of forcing down the living standards of faithful public servants.

THE POSTMAN DESERVES A RAISE IN PAY

During the present sequence of rising prices and salary adjustments, the plight of the Nation's post-office employees continues to be largely unknown to the public, and consistently ignored by Congress.

The National Federation of Post Office Clerks is a union affiliated with the American Federation of Labor.

Apart from this identity, however, the post-office employees' union operates under limitations which prevent it from forms of bargaining and pressure invoked by other organized workers to better themselves economically.

Thus, they are prohibited from appealing to the Labor Relations Board and other facilities to compose salary grievances.

They must wait for Congress to consider their needs, and be bound by the decisions of Congress.

In spite of these handicaps, the post-office employees loyally and patiently go about their vitally essential work.

Their only recourse is to enlist public opinion, and hope that it will impress upon the Congress the now drastic need of better salaries.

In turn, Congress, not confronted with vigorous demands by highly organized and active pressure groups, finds it all too easy to ignore or delay the need and justice of the clerks' petitions.

This is not only unfair, but unintelligent.

Efficient and swift service of the mail is an unrelaxing and constant national necessity. It requires well-trained, loyal, and experienced men.

It merits a much higher rate of pay, and certainly does not deserve the small, few, and infrequent raises of the past.

The postman is a valuable and valued servant of the public.

He, too, has bills to meet, a home to support, children to educate and the maintenance of adequate savings.

This he cannot do on his present pay.

While other workers have kept their accounts even with rising prices, the postman has had to tighten his belt. While other workers went on strike, the postman went his rounds, with unexampled dependability.

Obviously, Congress must get busy and correct this injustice.

And quite as obviously, the public must also get busy and remind Congress that proper and prompt action on this matter is a matter that can no longer wait.

Excelsior, Minn., Editorial

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks, I include an editorial entitled "How Lincoln Attacked a Problem," which appeared in the Minnetonka Record on Lincoln's Birthday, February 12, 1948. This newspaper, published by the "waters of the Minnetonka," is well known for its many thought-provoking editorials and able coverage of the news. I especially recommend the following editorial for the keen comparison it makes to our present-day situation:

HOW LINCOLN ATTACKED A PROBLEM

When we find our Nation involved in insoluble difficulties we are inclined to seek help from the experience of brave souls who faced like conditions and left records of their methods of action. We of America—literally our Congress and our President—have been floundering helplessly in an effort to attain peace years after the last enemy yielded up his weapon and surrendered. Years of confusion, frustration, energy-sapping uncertainty have been wasted, and peace seems more distant than it seemed on VJ-day. Can we—can our congressional leaders, our President—be helped by noting how a statesman of the past acted in a somewhat similar situation?

This is Lincoln's birthday. No harm can come—and possibly good may result—from considering how he attacked a problem that threatened the Nation. This was the problem of human slavery. It was in June of the year 1858. Slavery, roughly an institution of the Democratic Party, though many individuals in that party abhorred it, was extending into territory formerly considered free. There was a conspiracy, apparent but not yet demonstrable, on the highest political level, that aimed to make slavery permissible in every State. Heretofore, Lincoln kept repeating, slavery had been looked upon as an evil existing when the Constitution was adopted; it was to be restricted; "in the course of ultimate extinction."

Now the institution, under the urge of southern hotheads and northern Democrats like Judge Douglas, of Lincoln's own State, was entering Kansas. The time had come, lonely, pondering Lincoln, lawyer and homely philosopher, decided to face the issue, attack the forward-sweeping scourge, call a halt.

The opportunity came at the close of the Republican State convention, held in Springfield on June 16, 1858. The convention had nominated Lincoln as Republican candidate for United States Senator. He was not present but came when sent for. He was asked to make a speech. He astonished the convention, we may suppose, by taking a manuscript from his pocket, or possibly from his hat, and beginning carefully to read his message. He had never done this before; his speeches had been delivered from his well-stored memory; this was to be something extraordinary, in which there must be no word added, deleted, or altered. He began, as he often did, with an axiom-like statement with which all hearers could agree:

"If we could first know where we are and whither we are tending, we could better judge what to do and how to do it."

We may imagine the delegates from town and country accepting this obvious truth and perhaps wonder at the grave manner in which it was set forth. Then came a sentence that may have caused eyebrows to be lifted:

"We are now far into the fifth year since a policy was initiated with the avowed object and confident promise of putting an end to slavery agitation."

We may believe the tall home town lawyer shifted a leaf or adjusted his glasses, affording a moment for this statement, which also was obvious, to be accepted. His next sentences contained graver matters:

"Under the operation of that policy, that agitation has not ceased, but has constantly augmented. In my opinion, it will not cease until a crisis shall have been reached and passed."

We can almost see town and prairie delegates' shoulders jerk as they glance at one another. What is coming now? What is Lincoln getting at? Such queries may have leaped in hearers' minds. The great wide shoulders may have sagged; the vast sad eyes may have blinked, as he continued:

"'A house divided against itself cannot stand.' I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing or all the other."

With what pain these grave conclusions must have pierced the hearts of the assembled prairie pioneers, men who had assumed their section of the country would be forever free from the degrading curse of slavery. But the speaker was not mincing his words. He had spent months pondering, studying, making notes, forming sentences. Sad, unwelcome, discouraging his speech was indeed, but human progress, eternal truth, national dignity demanded that it be spoken:

"Either the opponents of slavery will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinction; or its advocates will push it forward till it shall become alike lawful in all the States, old as well as new, North as well as South."

The tall lawyer continued. For an hour he went on, heaping up evidence of the secret agreement between Stephen A. Douglas, former President Franklin Pierce, Roger Taney, Chief Justice of the Supreme Court, and President James Buchanan. He came to the application of his evidence:

"Put this and that together and we have another niche, which we may ere long see filled with another Supreme Court decision, declaring that the Constitution does not permit a State to exclude slavery from its limits."

It was a Nation-shaking speech. Honest, clear-seeing Lincoln faced the unpleasant problem squarely, acted boldly, bravely. The people supported him. In time—it took a few years and a cruel war—the problem was settled for all history. Slavery was uprooted. Lincoln's nation became all free.

Good might be produced if every Senator and Representative, as well as our Chief Executive, should on Lincoln's birthday, reread this historic speech and weigh its wisdom and courage.

The Electoral College

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. GOSSETT. Mr. Speaker, once the people of America recognize the political shackles which bind them through the electoral college, they will demand its abolition. I was pleased to note a most intelligent discussion of this issue in an editorial appearing in the Lynn County News on February 13, 1948. The Lynn County News is a progressive paper published by Mr. E. I. Hill at Tahoka, Tex. I wish to place his editorial in the RECORD:

GOSSETT HAS THE REMEDY

That civil-rights message that President Truman delivered to Congress recently stirred up a lot of criticism in the South. In fact, nearly all southern Representatives and Senators have expressed opposition, either publicly or privately.

Some of them are mightily wrought up. Others have kept their tempers. Most of the Texas delegation have been moderate in their criticisms. They have kept their tempers, we are persuaded, because they have scented little danger of the proposals being pressed to a vote. Secretly if not openly, they feel that the President was only playing a bit of politics. He was fishing for the Negro vote in the next election.

Of course, if he should be reelected, both he and the northern Democrats generally would doubtless make some sort of effort to have these proposals enacted into law, but it is not believed that he and other party leaders would press the fight to the extent of alienating the entire South from the Democratic Party. It is to be hoped that those who hold to this view will prove to be right.

The whole matter, however, has focused attention on some serious defects in our electoral system—defects for which Representative ED GOSSETT, of Wichita Falls, has been proposing a remedy for the past year or more.

Under our system of electing a President, certain minority groups have power in elections out of all proportion to their number, the power to swing the entire electoral vote of a State to the candidate of their choice, for, under our Constitution, if a candidate for the presidency gets a majority of even one of the popular votes cast in a State he thereby gets all of the electoral votes from that State.

Take New York, for instance. It has 45 electoral votes. Suppose that Truman gets

2,500,000 popular votes and his Republican opponent gets 2,499,900 popular votes in that State, Truman has carried the State by a popularity majority of only 100 votes but in the electoral college, which elects the President, he gets all 45 of New York's electoral votes. A change of 51 votes from the Democratic to the Republican candidate in the popular election would have swung the entire electoral vote away from Truman and to his Republican opponent. Therefore it is seen how a small block of voters in a doubtful State may be able to swing the entire electoral vote of that State to one candidate or the other as the block may choose. A thousand Negroes in New York might swing the entire electoral vote at the next election either to Truman or to the Republican candidate. Since there are many thousand Negro voters in New York, it behooves any candidate to win them to his side.

Now GOSSETT's proposal is that the electoral votes of a State be divided in the same proportion as is the popular vote. In that case, Truman, who gets 2,500,000 popular votes in New York, and his Republican opponent who gets virtually the same number, should likewise be given virtually the same number of electoral votes, practically 22½ each.

Texas has 23 electoral votes. If the Democratic candidate should get four-fifths of the vote and the Republican candidate one-fifth, then the 23 electoral votes would be divided up in the same proportion.

Under this system, one man's vote in Texas would count for just as much in a Presidential election as one man's vote in New York or any other State. Under the present system 1,000 Negro votes in New York may have more weight than a million white people's votes in Texas.

Under the present system, the man who carries New York, Pennsylvania, Michigan, Ohio, and Illinois by even a dozen majority in each State, gets all of the electoral votes of those five big States and is almost sure to be elected, even though his opponent might have a million majority in Texas, and might have a popular majority of millions in the United States.

We believe that the Texas delegation in Congress should get solidly behind the GOSSETT bill and press its passage. We believe that the people of a majority of the States would approve it.

And the power of the minority blocks would be reduced to their numerical size.

Lithuania's Lost Legacy

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. SHAFER. Mr. Speaker, three decades ago, on February 16, 1918, the people of Lithuania, a little country in northern Europe, proclaimed their declaration of independence. We, as a Nation, recognized them as a free and sovereign nation, dedicated, as we are, to the proposition that all men are created equal.

That Lithuanian Declaration of Independence had been earned through long decades of travail by a stalwart people. More than 120 years had elapsed between the time they lost their freedom and the time they regained it from foreign foes.

In 1940, the Lithuanians lost their freedom again, to a tyranny far more deadly than any known in the long roll call of history. They were swallowed up by the mighty Soviet Union, perhaps as part of a deal between Joseph Stalin and Adolf Hitler.

Now, through the acquiescence of Americans who glibly promised the people of the world the "four freedoms," Lithuanians in their native land have no freedom. American Lithuanians are still working to win their native country's freedom, but the fight sometimes seems hopeless.

Several days belatedly, but better late than never, I want to salute the efforts of those who are still trying to bring freedom to the people of Lithuania. The thirtieth anniversary of the Lithuanian Declaration of Independence passed last Monday, February 16, but the spirit of freedom in Lithuanians around the world will not pass. It wil live on, and, with the help of freemen everywhere, it will someday triumph.

Palestine

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. GOSSETT. Mr. Speaker, the appropriate committees of Congress should immediately go into the Palestine situation. Too many blunders have already been made in this matter. Time is running out, and we may soon be face to face with World War III. An intelligent discussion of the issues involved appeared in an editorial in the Washington Evening Star of yesterday. For the information of the Congress and the entire country, I wish to insert that editorial in the RECORD:

SHOW-DOWN IN PALESTINE

The report of the United Nations Palestine Commission—a report which states bluntly that nothing but armed force can carry out the partition of the Holy Land—should end wishful thinking on this subject. For it is all too clear that the time for a show-down in Palestine is close at hand.

It was the end of November when the General Assembly, with this Government exerting pressure on member nations, adopted its resolution recommending the division of Palestine into Jewish and Arab states. At that time, although the Arabs had stated their intention to resist partition with force, it is improbable that many people foresaw the condition which confronts us today. It was said, and widely believed, that the Arabs were bluffing, that in the last analysis they would not oppose the moral force of the General Assembly's appeal. It was also said, and many believed it, that in event of armed resistance by the Arabs the Palestine Jews, through Haganah, their militia organization, would be capable of dealing with it.

Time demonstrated the fallacy of these assumptions. Then agitation developed for the modification by this Government of its arms embargo so that weapons could be shipped to the Jews to bolster their fight against the Arabs. The contention was that the Arabs could get arms and the Jews could not. Therefore, it was said, why not make arms available to the Jews, thereby balancing the forces in Palestine? This was another dubious assumption, one that has been thoroughly blasted by the report of the Palestine Commission. A balancing of power, instead of affording us an easy escape route, would almost certainly lead to fighting on a scale which would compel intervention.

The effect of these considerations, of course, is not to supply an answer to the problem. But a review of past errors should serve to underscore the danger of impulsive action and the overriding importance of taking further steps only after the most careful deliberation.

It is clear now that the United States committed itself to partition without any plan or program for its implementation. To act in that fashion is always dangerous. It will be doubly so if we now commit ourselves to the principle of the use of armed force against the Arabs without the fullest consideration of all the factors involved and the probable consequences of such a course.

Most of these considerations should be obvious. Some of those which lend support to the appeal for forcible implementation of the General Assembly's recommendation follow:

1. The right of the Jews to a national home in Palestine. This, of course, is a controversial point, but to those who believe in it, it is reason enough for action.

2. The prestige of the United Nations is at stake. The argument here is that if the Arabs are permitted to nullify with force a recommendation supported by two-thirds of the General Assembly, the already shaky foundations of the UN will be most seriously undermined. It cannot be denied that there is substance to this argument.

3. The opposition of the Arabs raises an intolerable situation which will go from bad to worse if nothing is done. Therefore, we should act promptly and decisively, through the UN, to compel acceptance of partition.

On the other side of the ledger one finds considerations such as these:

1. The sending of a United Nations force to Palestine—assuming that the Security Council would order that—probably would mean war with the Arab world. The military committee of the Arab League has said that if the United Nations sends troops to Palestine they will be opposed by force. We should assume that they mean this, and we should decide whether we are prepared to see such an undertaking through to a successful conclusion.

2. The Mediterranean and the Near and Middle East are of vital strategic importance to the United States and the rest of the western world. In event of war with Russia in the foreseeable future we would have to have bases in that part of the world. Hence, to what extent would our national interests be jeopardized by incurring the full hostility of the Arabs?

3. The oil in the Arab world is important to us, and even more so to Europe. It has become fashionable to jeer at any one who mentions oil in this connection. But the oil is an important consideration nevertheless. The Zionist leaders say that the Arab need of dollars is so great that, come what may, they would still sell their oil. But this is merely another assumption, and we should carefully consider its validity.

4. What are the motives and intentions of Soviet Russia in this situation? Russian policy for centuries has aimed at penetration of the Mediterranean and Persian Gulf areas. If a United Nations force should be sent to Palestine would it include Russian troops? On the other hand, if nothing is done and disorders continue, can Russia be expected to keep hands off this coveted area almost on her borders? Obviously, from the standpoint of our own national security, these are matters which should concern us deeply.

At the present time there is no evidence of a disposition on the part of our Government to discuss these questions publicly.

The President says we are supporting the United Nations, but he will not go beyond that, and his subordinates in the administration, among whom there is the sharpest difference of opinion, are unwilling to talk for publication. But our decision is not one which should be made in hush-hush fashion. There is little time left, for the British will surrender their League of Nations' mandate in May. What are we going to do then?

If we make a wrong decision the results can be calamitous for us. That being so, it is imperative that this matter be brought into the open where it can be publicly explored and discussed with a view to ascertaining where our real interests, and those of the rest of the world, lie. Too much is at stake to permit domestic political considerations, international pressures or anything else to block the fullest public consideration of the showdown which is impending in Palestine.

National Security Week

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. SHAFER. Mr. Speaker, this week, February 12 through 22, is National Security Week in the United States. It is sponsored, as we all realize, by the Reserve Officers Association of the United States to promote sound public thinking on a matter of continuing public interest—security for our Nation against enemies at home and abroad, present or potential.

As every intelligent American knows, America relies upon its civilians for both manpower and leadership in time of crisis. This has been true in every war and it will be true if war comes again, although everyone of us naturally wants no war unless we have to have one.

In World War II, members of the Reserve Officers Association of the United States furnished more than 90 percent of the leadership of our armed forces at home and abroad. Now, in peacetime, this organization is furnishing leadership in warning our people of the perils of unpreparedness and in trying to enlighten everyone as to possible courses of action we must take to be economically and militarily strong at all times.

I know that I speak for every Member of Congress when I salute the Reserve Officers Association of the United States today and bid this organization of stalwart citizens godspeed in their efforts to enlighten and to inform the people and to encourage sound thinking every day in the year on such a vital public matter as national defense.

This Congress has evidenced its continuing interest in the needs of national defense, as everyone concedes. We have appropriated huge sums for the armed forces and we will stress even more in the future the need for a highly trained, mobile, powerful air force, second to none in scientific development and striking power. We will be true to the aims of the Reserve Officers Association and we hope that every American will cooperate, not only this week but every week in the year.

Georgia, an Adventure in Freedom

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. RUSSELL. Mr. President, on Saturday, February 14, this year, at the Library of Congress in Washington, there were held commemorative services on the two hundred and fifteenth anniversary of the founding of the Georgia Colony. On that occasion my distinguished colleague the senior Senator from Georgia [Mr. GEORGE] delivered a very scholarly address entitled "Georgia, an Adventure in Freedom." I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

No attempt will be made to catalog achievements in agriculture, horticulture, manufacturing, trade, and commerce in which Georgia excels or has made noteworthy progress by common consent of all loyal Georgians at least. Rather, this happy occasion affords opportunity to interpret the State, albeit in an inadequate manner.

On the 1st day of February 1733 an English gentleman in the prime of life led a band of hopeful adventurers to Yamacraw Bluff, on the Savannah River. There he was greeted by a dignified Indian of about 90 winters. The white leader was James Edward Oglethorpe—a soldier of the King, a member of Parliament, a humanitarian, and the founder of Georgia. The red man was Tomochichi, chief of the Yamacraws, who later accompanied his soldier friend to England and sat for his portrait by the celebrated painter, William Verelst.

On the following day the pioneers of Georgia began a still-vital tradition by showing that they were not less religious than the Pilgrim Fathers. They assembled to render thanks to God for their safe journey and to ask His blessing upon their new venture for freedom.

Under the personal supervision of their leader, the colonists soon laid out a town of regular streets and squares—as it appears in Peter Gordon's famous engraving of 1734, showing the new buildings on a site cleared from the woods, with Oglethorpe's stately tent pitched in the foreground, overlooking the river. The picture may be seen in the Library of Congress Exhibit of the Week.

The imagination of the engraver symbolizes the character of Georgia's founding and much of its history. It had long existed in the orderly vision of Oglethorpe. It was the creation of a statesman, the first in a long succession of Georgians whose motto was the one he adopted for his colony: "Non nobis, sed aliis"—not for ourselves, but for others. The soldier's feelings were touched by the misery of poor debtors languishing in their cells, and the sufferings of persecuted minorities in Europe, especially the pious Lutherans of Salzburg, who marched through the lands of their exile singing hymns.

"Through the night of doubt and sorrow, onward goes the pilgrim band,
Singing songs of expectation, marching to the promised land."

He resolved to establish the promised land, where they might begin life anew and protect the King's dominions against the Spaniards. No doubt he had read the Description of the Golden Islands, which appeared in 1720, and Sir Robert Montgomery's rather impractical plans for the Margravate of Azilia, to be organized in "the most delightful country of the universe"—namely, Georgia. King George II liked Oglethorpe's idea, and on June 9, 1732, granted to him and other eminent gentlemen a charter for the region between the Savannah and Altamaha Rivers and "westward to the South Seas." That generous phrase gave Georgia her claim to the vast region from which were carved the States of Alabama and Mississippi. In 1763 the third royal George extended the bounds to Florida.

The Spaniards of St. Augustine doubtless did not appreciate that sweeping gesture of princely generosity and reflected bitterly that their predecessors had been making Georgia history for more than a century and a half before General Oglethorpe was born, in 1697. They must have reflected, too, that the new province remained safely in his soldierly grasp, when they had fought with him in 1742, at the Battle of Bloody Marsh, on one of the Golden Islands.

That battle occurred almost exactly two centuries after Hernando de Soto traversed the future territory of Georgia to the Savannah River, on his way to his solemn burial in the Mississippi River he discovered. His exploit fixed Spain's claim upon the spacious region from the Keys to Chesapeake Bay and from the Sea Islands to the Father of Waters, which became known to her soldiers and missionaries as La Florida. The determination of the bearded dons to maintain possession was shockingly illustrated in the massacre of the French colonists of the 1560's by the ruthless Governor of Florida, Pedro Menendez de Aviles. In 1566 he planted on St. Catherines Island the first of a chain of forts in Georgia which from that time was known to the Spanish chroniclers as Guale.

For over a century soldiers and monks maintained the forts and the missions, and Georgia was a frontier of Spain's far-flung empire. In 1606 Bishop Altamirano, of Cuba, traveled in state through Guale, confirming more than 1,000 converted Indians. Other Spanish explorers—Tristan de Luna, Pardo, and Boyano—entered Georgia by the back door in search of the mines of the Appalachians. Those mines for generations contributed to the coffers of the Emperor of the Indies, and eventually inspired the establishment of the famous branch mint of the United States at Dahlonega.

The missions survived repeated Indian rebellions and buccaneer raids, and fierce storms which pounded the outer beaches of the Golden Islands and shook the bearded oaks. But they retreated before British imperial aggression and the persistent Indian trader, who drew away the Indian converts and encouraged freebooters to loot the riches of Guale. After the founding of South Carolina in 1670, the chanting and the recitations of the Indian pupils gradually ceased. The solid mission buildings became silent ruins under the hoary trees.

Then the red man confronted a force far more hostile to his way of life than the solidiers and friars of Old Spain. That was the swarming of the north European hive, the myriad householders coming with wives and children to establish homes, plantations, gardens, churches and schools. The mounds scattered over Georgia told the red man that the land belonged to him, but treaties with the white man warned him that his heritage was slipping from his hands. The contest was long, and Georgia had passed the centennial mark before the last page was written and the Cherokee Nation sadly and reluctantly began the long trek to the far West.

With them passed a great tradition, for the Georgia Indians were not degenerate loafers hanging about the tavern hearth for stray drops of liquid comfort. They are proud, intelligent countenances that gaze from the portraits painted by famous artists, when the Indian dressed in his best for great

occasions. There are Tomochichi the Yamacraw, friend of Oglethorpe, who buried him with honors at Savannah; Sequoyah, inventor of the Cherokee alphabet; and the Creek chief, William McIntosh, who sacrificed his life to the rage of his own people, to keep peace with Georgia. These were no mere barbarians. They cultivated farms, supported their own churches and schools under the guidance of missionaries, wrote letters to the Indian agents, and published their newspaper, the Cherokee Phenix, of New Echota, Ga. They gave the State the most vivid Indian history any Southern State can claim.

Into their lands swarmed the pioneers of Georgia—a cosmopolitan lot, gathered out of many kindreds, tongues, and religions: English Episcopaleans, Scottish Presbyterians, Catholic Piedmontese from Italy, German Lutherans, Moravians, Carolina Quakers, New England Puritans, French Huguenots, Jews, Welsh, and Swiss. The present-day Georgians are not the unmixed "Anglo-Saxons" absurdly claimed by the racial purists, but a blend of Wright, McIntosh, and Treutlen, Baldwin and Hall, Lanier and Ravenel, Sheftall, Mordecai, and Gwinnett. The mingling of these stocks undoubtedly accounts for the amazing intellectual brilliance of the State, as seen in a constellation of statesmen, orators, evangelists, and writers, hardly rivaled by any other Southern State.

Their idealism was a heritage from the original trustees, who pictured their dear Georgia as an empire abounding in silk, wines, oil, and indigo, and covered with rich vineyards, mulberry groves, gardens, and plantations cultivated by freemen, without the shadows of slavery. But philanthropy yielded to economic realities, and the Negro came to stay. He might arrive in the foul hold of a New England "slaver" from Goree, but soon he learned the master's language and religion, and to Georgia he brought the permanent gifts of his music, dancing, handicrafts, folklore, and soft fantasy.

Before 1776 Georgia had become a typical southern plantation colony, with a royal governor and an elected assembly after the trustees surrendered their rights of government in 1754. It had the usual established Episcopal Church, large estates tilled mostly by slaves, and also many small farmers, whose descendants became the majority of an intelligent, industrious, and religious people.

The advance of modern education and industry has not impaired the people's loyalty to the religion of the pioneers. There is a direct inheritance of spiritual aspiration, of longing after holiness, from the enthusiasm of the Wesley brothers, John and Charles, to the mysticism of Sidney Lanier's The Marshes of Glynn:

"As the marsh hen secretly builds on the watery sod,
Behold I will build me a nest on the greatness of God:
I will fly in the greatness of God as the marsh hen flies
In the freedom that fills all the space 'twixt the marsh and the skies:
By so many roots as the marsh grass send in the sod
I will heartily lay me ahold on the greatness of God."

This is a poet's interpretation of the personal religion instilled in the people by the Methodist circuit riders since Hope Hull, and by the evangelism of George Whitefield, and Jesse Mercer, and Daniel Marshall. The first southern hymn book, published in Charleston in 1737, was composed by John Wesley during his visit to Georgia.

Because of this tenacious tradition, Georgians today are a religious folk, with more than half of the people gathered into church membership. They are predominantly evangelical, whether they love the pure and precise English of the Book of Common Prayer, or the speaking in tongues at the Pentecostal meeting, or the trumpets of jubilee in some rustic praise house of the Sea Island Negro. It has been said that Christianity in America will be saved in the South; and when that happens, doubtless Georgians will be among the apostles. Yet they are not generally bigoted.

The Revolution of 1776 swept away religious privilege, along with imperial control—but only after an intense struggle. The founder and his friends had been good servants of their King, and imparted a loyalist tinge to the colony. But as imperialism attempted to tighten its grip after 1763, the traditional loyalty was opposed by a small but determined band of Sons of Liberty, organized in 1765.

Inspired by the influence of the able royal governor, James Wright, the loyalist party contrived to delay Georgia's representation in the Continental Congress—to the vast disgust of patriots. The contest became in part a desolating civil war, and perhaps none of the Thirteen States suffered more than Georgia. Through all the confusion and the barbarous devastations of partisans, Georgia emerged into statehood under her first constitution of 1777, and the leadership of such statesmen and soldiers as Lyman Hall, Lachlan McIntosh, and his rival, Button Gwinnett, John Milledge, John A. Treutlen, Samuel Elbert, William Few, and Abraham Baldwin. The last two sealed her union with her sister States, by signing the Federal Constitution, which the State ratifying convention unanimously accepted.

Georgians had scarcely adjusted themselves to the new order, when the plantation of their hero, Gen. Nathanael Greene, became the source of an invention—Eli Whitney's famous cotton gin—which introduced the golden age of the plantation economy. It strengthened the traditional prestige of the ownership of land, which had been the foundation of Georgia as a military frontier, and remained the hallmark of social position, the entree to political leadership, preferment, and statecraft. The men who made statesmanship a real craft, and who represented Georgia in the court and camp, in Congress and the Cabinet, were generally the masters of estates. Their wives were the mistresses of stately homes and gardens, which are still admired as models of gracious living.

Behind the planter aristocracy, but not behind in ability, were the masses of yeoman farmers whose many sons worked in the fields, and in 1861 dropped their tools to defend the cause of State rights and add to our wartime humor as they chaffed each other by the campfires. Then came the Negro, with his cabin and truck patch, and his frequent pride in the estate where he served. Sometimes, especially if he were ambitious and sensitive, he ran away and contributed to the embarrassment of statesmen who strove to keep the Union from breaking along the Ohio River. The ineffable "cracker" of the rough humorists was the freak of a fundamentally sound if not completely just society—he was not typical.

The plantation of romantic tradition, the white columns, the formal gardens and the family coach, did not completely represent the old order. The yellowed pages of our old census records, in the National Archives, reveal other phases of the story—the persistence of the nonslaveholding farmer and the local artisan. That varied economy was knit together and to other States by railroads, of which Georgia had more mileage in 1830 than any other Southern State. It made the Empire State the larder and arsenal of the Confederacy. And Federal strategists finally perceived that the only quick way to end the war was to invade Georgia, cut the Confederacy in half, and deprive the segments of much of their sustenance.

That rough surgery did not merely shatter an economic system, it also interrupted the evolution of a promising intellectual culture. The Federal Armies did not find in Georgia an utterly rustic people, steeped in mental torpor. The State was preeminent in the South as a stronghold of those typically American institutions, the free church, the church college, the academy, and the classical university supported by the State. Although the outlines of a democratic system of schools had barely emerged by 1860, Georgia was dotted with little private academies and colleges, which were featured in the illustrated guidebooks of the State, by the skill of the artist.

The old engravings of Georgia scenes—the rapids of the Chattahoochee, lonesome Rock Mountain, and Toccoa Falls—suggest the spirit of her early literature, which prolonged the romantic impulse of the first explorers, whose narratives inspired the DeBry engravings depicting the vivid and strange customs of the natives of Guale. The romantic spirit of the early nineteenth century suffused the poems of Georgia's first cluster of poets—Richard Henry Wilde, Paul Hamilton Hayne, and the "lost poet," Thomas Holley Chivers. The earthy realism of Augustus B. Longstreet, Richard Malcolm Johnston, and William Tappan Thompson kept Georgians from taking themselves too seriously, and foretold the growth of "realistic" fiction after the War Between the States.

In the old South, the term "literature" embraced political essays and oratory, and even the carefully styled letters of eminent men. The Georgian who listened intently to the rolling periods of Robert Toombs and Howell Cobb, or meditated on the closely reasoned constitutional arguments of "Little Alec" Stephens and Ben Hill, considered himself as a witness and even as a participant in the creation of literature. The literary atmosphere of old Georgia suggests that of the classical ancients, whose architectural masterpieces inspired the builders of her mansions, whose speeches thrilled the young collegians debating the questions of the day behind the white columns of Demosthenian Hall at the University of Georgia, in appropriately named Athens.

There came the long-dreaded but yet half-wished-for day when the fiery orators and the philosophers of State rights could see no resolution of the irrepressible conflict, save in secession and a resort to arms in defense of their conviction that Baldwin and Few had set their hands to the charter of a confederacy. The parting of the ways came hard. In 1850 the Georgia moderates prevailed, and greatly helped to keep the Southern States in the Union for another decade. Even in the fateful election of 1860, Georgians gave 43,000 votes to the Constitutional Union candidate for President (John Bell, of Tennessee), as against 51,000 for Breckinridge, the so-caled secessionist candidate.

Once the die was cast, however, the people rallied to the defense of their State. To many the war was, and in spite of General Sherman, remained a high adventure, a romantic and heroic experience. It must have been so to contribute to American literature such gems as Father Abram J. Hyan's The Conquered Banner, and Francis O. Ticknor's Little Giffen and Virginians of the Valley.

A people who sang in the face of ever-grimmer privations could endure the worst inflictions of the so-called reconstruction, which to most Georgians—white and colored—later came to seem more like a subversion of civilization. Their courage is symbolized in the brave letters written by Paul Hamilton Hayne from his cottage at Copse Hill, or by stricken Lanier, playing his beloved flute in the grim fastness of a Federal prison, and then returning to Georgia on foot. In a few years he was writing to Oliver Wendell Holmes, discoursing upon his theory of poetry as if nothing had happened, and in

1876 he was chosen to write the ode celebrating the centennial of the national independence. Bill Arp, one of Georgia's peculiar breed of earthy humorists, helped the Nation to forget the bitterness of what he so aptly described as the "uncivil war."

In that spirit the people began to reconstruct their life from the desolation, welcoming the northern capital which began a transformation of Georgia into a modern industrial as well as agricultural commonwealth. A new generation turned away from the embittered die-hards to look for inspiration to Henry W. Grady and other prophets of the new South, and to Tom Watson, author and "agrarian rebel," mouthpiece of uncounted small independent farmers.

The Negro, released from tutelage to the Freedman's Bureau and the carpetbagger, learned from Booker T. Washington and his followers that the promise of his future lay in first achieving economic independence. While he began slowly but steadily to acquire land and tools, he laid also the foundations of cultural independence, in his own schools and newspapers, and in the growth of a literature of slave narratives, reminiscences, poetry, novels, short stories, and social studies. The older folklore persists in studies of his music and customs, and the immortal one and only Uncle Remus.

The prophets of the new South insisted upon nothing more strongly than refounding the educational system on a democratic basis. The result of their labors in the present threefold system of private, denominational, and public schools, placed education within the reach of all classes, and culminated in the old State university at Athens. In the hard, uphill years a young woman of aristocratic lineage had a vision as she beheld the religious and mental destitution of the mountain children near her girlhood home at Rome. In a log-cabin Sunday school she began a venture of faith which eventually produced the world-famous Berry schools.

The diversity of modern Georgia prevails in the various character of the students in her schools. At Rabun Cap the farm family of the northern hills learns improved agriculture and home economics. The future minister or social worker adjusts the old religious culture to a new economic order, at one of the numerous denominational colleges and seminaries. The young engineer at Georgia Tech and the Negro youth in a laboratory at Atlanta University are types of the new industrialism. At Athens, walking past the classic Demosthenian Hall goes the successor of earlier seekers after wisdom and culture, who aspired to the editor's chair, to a literary career, or perhaps to a seat in Congress or the Cabinet. Their Georgia is far from the illiterate sodden South, pictured in radical political oratory in the era of the Bloody Shirt.

From 1871, when the State was readmitted to the Union—if we must use that dubious phrase—until the turn of the twentieth century, Georgia slowly recovered from the shocks of war and reconstruction. The modern era of Georgia history began in the decade of the 1890's. A surge of national feeling in 1898 found a ready response in the State and helped to wipe out the memories of 1865. Other harbingers of better times were the rise of a fresh literary movement and the memorable exposition at Atlanta in 1895.

The contemporary vogue of the historical novel carried to an unusual success one written by a Georgia-born woman, Augusta Evans Wilson, in a home thoroughly representative of the old regime—St. Elmo at Columbus. The book, which derived its name from the place, marked the new disposition to view the ante bellum days in a mood of romantic reminiscence rather than of bitterness over a lost cause.

At the exposition, Booker T. Washington made his fame as one of the foremost leaders of his people and challenged Georgia, as well as the South in general, to a new and more hopeful and practical view of interracial relations. The exposition in itself was a proclamation of the coming time of a balanced economy of improved agriculture and modern industrialism. It marked also the emergence of Atlanta as the capital and typical city of the new order—about which opinions still differed rather violently.

The vast changes then becoming obvious were destined to proceed with steadily increasing momentum in the First World War, when the State became a center of military training and war industry—as it had been on a more modest scale in the War Between the States. The Second World War simply repeated the same sudden burgeoning in a vastly larger measure. But in the latest emergency, Georgia had far more to start with than ever before, as in the meantime local enterprise and outside capital had collaborated to develop the highway system, port facilities, and electric-power resources, and had started or expanded many types of industry—such as metals, textiles, mining, quarrying, lumbering, and shipbuilding. The latter recalls that the timbers of the famous American warship *Constitution* "Old Ironsides" are said to have been cut in the liveoak groves of the Georgia Sea Islands.

The onset of industrialism speeded up the drift from country to city, brought to the State its first wave of labor organization and labor unrest, and stimulated a slow but continuous advance of urban psychology, the promotional spirit, and cosmopolitan taste. If Savannah symbolized the old order of slow and gracious living in its classic houses, iron grilles, and walled gardens, Atlanta stood for the new tempo, as seen in its towering office buildings, and its railroad yards and factories. This capital city is now considered by many Georgians to be as representative of their State as the columned mansions of Athens, Decatur, and Roswell.

The mechanical and scientific culture it represents has confronted Georgia with a whole new set of social problems, as small-town and country people (including many Negro farmers) have forsaken the old ways of life for crowded living conditions in cities. The strains have been eased partly by an enormous migration of Georgians (especially the Negroes) to other States, and more particularly to Northern industrial centers. And the interracial tension has noticeably declined, due not only to migration, but also to the earnest efforts of both sides to promote understanding, aided by the influences of progressive churches and of organizations founded for the express purpose of reducing the frequency of clashes.

With this shifting pattern of life has come a mood of self-appraisal. That is not entirely new to Georgians. Mr. Longstreet and several other early Georgia authors were disposed not to set their people uncritically upon a pedestal. Steeped in classical learning, they were perfectly familiar with the Greek motto, "Know thyself." Against bitter opposition, prophets of the new South began the revaluation of old ideals, largely through the newspaper and the traditional mode of oratory.

That task has been taken up, more recently, by the younger generation of literary people. Their reaction from nineteenth-century romanticism and gentility has carried them to the opposite extreme of a morbid realism. Tobacco Road and Anger in July, which might be considered as representative of this whole train of thought, are but the obverse side of the vogue of Walter Scott, a favorite author of the ante-bellum South. The realistic fiction writers have turned Georgia and the whole of Dixie inside out, like an old coat, to find the frayed patches in the lining, and stood southern society on its head to see whether it really has clay eaters and clay feet. They have probed the sordid aspects of Cracker life, revelled in dissecting the new and raw mill town, and delineated the wrongs of the Georgia "nigger." They have cast off the romantic standard and tried to shock the conscience into a social compassion akin to Oglethorpe's for the turbid ebb and flow of human misery which in part inspired the founding of Georgia.

Their passion shows the effect of a sudden and rather violent impact of modernism upon a conservative society. Contemporary Georgia is not asleep.

More recently, there has been a marked reversion to the practical ideals of the older tradition, as seen in Margaret Mitchell's Gone With the Wind. Here is a new and salty type of romance, based upon documentary study of history, rather than mere sentiment. Refusing entirely to reject his past, the intelligent Georgian views it with a calmly realistic candor without morbidity. He would retain, if possible, the cult of honor heroism, and unselfishness expressed in the State's first motto "Non nobis, sed aliis" not for ourselves, but for others.

Address by Hon. John L. McClellan, of Arkansas, Before the Mississippi Valley Association at St. Louis, Mo.

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. OVERTON. Mr. President, at the annual dinner of the Mississippi Valley Association held at St. Louis, Mo., on January 26, 1948, the senior Senator from Arkansas [Mr. MCCLELLAN] delivered a very able and informative address. I ask unanimous consent that the address be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the association, ladies, and gentlemen, in view of the lateness of the hour, I think if I were smart, and I know if I were campaigning to get the votes of this audience, I should take a short cut to your friendship by being very brief, but I shall undertake to make some hurried remarks touching upon matters I think of common concern to all of us.

An occasion like this gives to us who are Members of Congress the privilege of keeping in contact with organizations of our most progressive and patriotic citizens who are vitally interested in national programs that have as their objectives the continued progress and prosperity of our people. Many of the programs in which your group is interested are not only necessary to continued growth and progress, but they are, in fact, indispensable to the economic life and the survival of our Nation.

The general objectives of the Mississippi Valley Association have my enthusiastic support. For this reason I am anxious to cooperate with you and with other organizations that are concerned, to the end that our great natural resources may be well conserved and developed. I derive genuine pleasure and reassurance from meetings and contacts like this with you. I am honored indeed to have the privilege, and I have greatly enjoyed being with you today.

Much of the world today is in a tragic disorder that borders on chaos and calamity of almost inconceivable proportions.

The strange vicissitudes that are moving with such force and rapidity across international scenes are having a terrific impact on human relations and goverments throughout the world. They are strongly influencing our policies and actions in foreign relations and also with respect to our domestic economy. Prudence dictates that as a matter of intelligent self-interest and for the safeguard of our liberties and their perpetuation we must, for the present at least, be prepared to the limit of our potential strength and capacity for any eventuality or crisis that may arise.

We are going to be asked to make a tremendous investment in foreign nations, in foreign people—to help rehabilitate the European nations where the grim specter of want, hunger, despair, and chaos threatens peace—at this session of Congress.

In connection with this it is my most fervent hope that the Marshall plan—the European recovery program—is so established that it will promote lasting peace—but let me say this to you: With all the stupendous problems we in America face—a tremendous national debt, the highest tax rates in history, the drain the war made on our resources, and the inflation which threatens our continued prosperity—in the light of these tremendous problems—I say that it is time we try to know what we are doing when we authorize these investments beyond our shores.

Among other things, it is my judgment that as we face this challenge—that as we take these steps to secure a just and lasting peace—that we must make plain to Russia and to every other nation whose ideology conflicts with ours that this is an investment in freedom—and that we intend to protect every dollar of it once the investment is made.

Until a genuine and just peace has been attained America, remembering the past, cannot be indifferent and slothful at the present nor unconcerned and neglectful of the future.

Every intelligent and informed American citizen knows, as Hitler and Mussolini would concede and verify if living, that the strength of America made possible two great world military victories during the past three decades, in which the two ideologies of aggressive totalitarianism and peace-loving democracy clashed for world supremacy. If a third conflict comes, the strength of our Nation, or her lack of strength, will surely determine the outcome of it. That there does exist a real threat and danger of another such unthinkable catastrophe cannot be denied. To avoid such a tragic and maybe fatal eventuality is the hope and highest aspiration of all mankind.

We are striving by international cooperation and by working through the United Nations and all other means available to us to establish a just and enduring peace. It must be just or it will not last. If all efforts should fail, and another clash of arms between totalitarian aggressors and the freedom-loving people of democracies should come, we must be prepared for it.

The question, then, arises how best can we work for peace with the expectancy that our efforts will be rewarded. What must we do to keep America so strong that no power will dare to attack, or if an attack is made, we can resist with such force as to destroy any ruthless aggressor? "Keep America strong" is a phrase of common warning and admonition today. But how?

There are multiple phases and factors involved in national strength both in peace and in time of war. Many of these are associated with the programs and policies that we may pursue.

It was the economic, industrial, physical, moral, and spiritual strength of America that provided the balance of power in two world wars and made the difference between victory and defeat. It is the continued economic, industrial, physical, moral, and spiritual strength of America upon which we and the remainder of the democracies of the world must depend to win the peace or to defeat totalitarian aggressors, when and if they attempt world conquest. We cannot permit our strength and vitality to become impaired nor can we permit it to remain static. It must be constantly increased.

Except for American might and power, armies of aggression would be marching today all over Europe, Asia, and Africa with designs for an ultimate invasion of the Western Hemisphere. That might and power serves at present as a barrier to the march of world banditry. If that barrier should be removed or broken, if we fail or neglect to progressively increase our might and power and keep it supreme, the peace will be lost, and the freedom of mankind will again be placed in fatal jeopardy.

When we speak of keeping America strong, too many of us think in restrictive terms. We have in mind the size of our Army, our Navy, and our Air Forces. True, they are important, indispensable factors. But they, by no means, represent all the elements that go to make up strength and power either as an effective means to peace or to victory in the event of war. France had her Maginot line and the largest standing army in the world, but when the test came she collapsed because she lacked many other essentials.

American might and power emanate from, and are reposed in, two principal sources: They are the natural, physical resources with which our land is endowed and the vision and intellect of our people. These two factors can hardly be segregated or isolated one from the other.

Our natural resources, although abundant, are not unlimited. Their quantity and extent can and have been fairly well determined, whereas the vision and resourcefulness of our people have not known, and need not know, any bounds or limitations.

If we measure up in vision and intellect to our opportunities and possibilities, we can make our natural resources sufficient and adequate to provide us with unexcelled material wealth and power for centuries to come. On the other hand, by slothfulness, indifference, and neglect we can fail to conserve or to develop for the maximum use and benefit to our welfare the natural resources that are our heritage. If we commit or permit such failure our strength can deteriorate in the course of time to the extent that we will be neither an international force for peace nor a potent instrumentality for victory in the event of war.

The four basic natural resources from which we draw and develop strength and power are our soil, our timber, our minerals, and our water—our lakes and streams. These actually provide the physical sustenance of human existence and are basic elements in our social structure, health, economy, and prosperity.

Minerals, by their very nature, are exhaustible. Man cannot replace them. Our soil and timber are depletable and can be wasted away. We have learned, however, by proper use and practices they can be conserved and the depletion that occurs from use and consumption can, in most instances be substantially restored. Our fourth great resource, water, is inexhaustible. It is constantly restored and replenished by nature.

With respect to our minerals, it is incumbent upon us to use all practical means for their conservation, to continue exploration for new discoveries of deposits wherever they can be found. Those that are scarce and of a strategic nature should be acquired from abroad and stock-piled to meet future needs that may arise.

Timber should be conserved, and new methods applied in the adaptation and use of wood products so as to avoid waste. By proper husbandry, by reforestation, and by forestry protection, we can largely reproduce our forests and greatly increase their growth and quantity.

Our soil is not so easily restored. Greater emphasis must be placed upon its conservation. The more extensively our lands are developed and agricultural production increased, the greater the drain upon our soil and the more it is depleted. Fortunately, adequate countermeasures are available to us to prevent erosion and waste and to revitalize the strength and fertility of our soil.

Cognizant of this situation, and accepting its responsibility during the past quarter of a century, our Government has inaugurated and conducted programs at Federal expense that encourage and help private enterprise in this Nation to conserve our mineral supply. We have made provision for mineral depletion—tax allowances to promote exploration for the discovery of new deposits. We have acquired considerable forestry reserves and placed them under proper usage and management. We have given Federal assistance to States and to private enterprise in programs for the protection and restoration of our timber resources throughout the Nation.

An extensive soil-conservation service has been established. Large areas of lands are now wisely and effectively protected from erosion. More and larger areas must continuously be brought under control and into this program. With an impoverished soil, there can be neither progress nor prosperity.

We have made rapid strides in the right direction with respect to conservation and wise development and usage of these great natural resources. There is still, however, much distance to go. With respect to these programs, there must be no let-up or relaxation. Instead, if we are to constantly increase national strength they need to be augmented and expanded.

Unlike the other three great natural resources, there are associated with our abundant waters—our streams—elements and forces of both good and evil. If man's ingenuity is not applied to make them more adaptable to the service of human needs, the evil elements and forces too often recurringly predominate, with resulting tremendous injury and loss. But with the application of human ingenuity, the elements of evil can be removed—at least, controlled and converted into service of immeasurable benefit to mankind.

Truly, our water resources have fascinating possibilities. Their potentialities intrigue the imagination and challenge and inspire us to explore and drive toward the frontiers of opportunity they present. Left uncontrolled, their destructive forces greatly depreciate their beneficial value. Excessive floods sweep with violent destruction throughout the valleys in which they flow. Devastating floods occur not at regular but at repeated intervals. In the past, they have done material damage beyond evaluation in dollars and cents and caused loss of life and untold human misery and suffering. The loss occasioned by floods during the period of our national existence would be far more than adequate—doubly so—to pay the cost that will be involved in making the improvements required on all of our major streams, to prevent recurrences of major floods and provide the improvements necessary to develop their potentialities to the highest degree, and thus give to our people and our Nation their maximum service and benefit.

The Divine Creator did not make the whole world a Garden of Eden. When He decreed that man should earn his bread by the sweat of his brow, he meant just that. And that applies to nations, to nationalities, and to peoples, as well as to individuals. He did not create a perfect physical world. Had He done so, there would be no work for man to do. But He has endowed our land with abundance and given to us the opportunity to build a nation of free men so strong and powerful that the evil force of totalitarianism cannot prevail against us.

Included in our rich heritage are our great, fertile valleys where these devastating floods occur. If they are ever developed to their maximum use and productivity, barring unprecedented providential hindrance, they have the capacity of banishing famine from the face of the earth. But our fertile valleys can never be fully developed agriculturally or industrially, until the menace and danger of destructive floods are removed. This can be done; it should be done, it must be done, if we are to preserve and develop our productive power and make and keep our Nation so strong that it will be invincible.

We have large areas in the Nation where for long seasons of the year there is a scarcity of water. On the upper regions of our great valleys, these areas exist. But there is no conflict with our interest in the lower valleys and those of the upper regions. They have too little water; we have too much. The problem can be resolved by adequate storage and conservation in the upper regions and by control and regulation in the lower regions. By the former, we will insure in the arid areas an adequate supply of water at all times for human and industrial needs. By the latter, we will provide the necessary protection of both human lives and property, prevent destruction, and convert the forces of this excess into constructive channels.

All these programs, and particularly our water resources and flood-control development, met with stubborn opposition in Congress. When first inaugurated the charge was frequently made that projects of this character fell within the category of political favoritism and "pork barrel" legislation. This charge has long since been repudiated, and Federal responsibility for their construction is now firmly established. It has been so successfully demonstrated that benefits from water resources development so greatly exceed the costs that they are now regarded as sound and prudent capital investments—investments from which the whole Nation profits in increased productive capacity that yields a higher per capita income and larger national revenue. The wealth, progress, prosperity, and standard of living of all our people are greatly enhanced as our river programs are advanced, and more and more of these projects are constructed and completed.

Last July 16, in a special message to Congress, the President of the United States recommended a 10-year program for the completion of all projects necessary for the protection of the Mississippi River Basin. I heartily approve, and I hope the Congress will have the wisdom and courage to make the necessary appropriation and see that the job is done. Yes; we will encounter opposition, but I believe we can overcome it. It will be earnestly contended that due to the tremendous national debt, the present current cost of Government, and the large sums to be expended for foreign aid, that this program should be deferred. But I maintain that delay in doing this job of consummating this great national improvement would be detrimental and inexcusable. This program is so important and essential to our growth and national strength and to the common welfare nothing should be permitted to interfere or hinder its progress to completion.

I agree with what President Truman said in his special message to Congress that:

"The major opportunity of our generation to increase the wealth of the Nation lies in the development of our great river systems."

That is a vigorous, forceful, truthful statement. The statesmanship it embraces and expresses is a challenge we must meet if we are to preserve and pass on to others a heritage equal to or greater than that we have so happily enjoyed.

If we expect to keep America strong and invincible, we must not fail in this trust. This generation in keeping with the spirit and finest traditions of the past will keep the wheels of progress rolling on toward the fulfillment of every challenging opportunity to make America stronger, to keep her invincible. For we know that only the productive can be strong, only the strong can be free.

Lincoln Day Address by Hon. Edward J. Thye, of Minnesota

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Lincoln Day address delivered by the able junior Senator from Minnesota [Mr. THYE] at Boise, Idaho, on February 14, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is something so invigorating about the western spirit that when the invitation came to me to speak here in Boise, tonight, I eagerly welcomed the opportunity. I think it is no disloyalty to my own beloved State of Minnesota to say to you that I feel perfectly at home in the West. I feel especially at home here in Idaho where you have entrusted your State government to an able Republican leader, Governor Robins, and I appreciate the opportunity to visit the home environment of my friend and colleague, Senator HENRY DWORSHAK.

During the past year, I have become well acquainted with Senator DWORSHAK, who sits only a few seats from me in the Senate, and I have found him a most conscientious and earnest legislator. He is a student of the Federal budget and complicated finances of the Government, an earnest advocate of the economy that is so badly needed in Washington, and an able and respected champion of individual enterprise which we believe is the essential characteristic of America.

We are assembled here this evening as members of a political party that came into being under the leadership of Abraham Lincoln. That courageous and inspired leadership, which made possible the preservation and continuation of the United States, deserves the tributes of all our people. Lincoln is the symbol of freedom, of the lawful rights of the individual citizen under a constitutional government, and of the strength and initiative of a united people. That spirit of freedom has made America great. That spirit of initiative has built our industrial enterprises. That spirit of unity has attracted men and women from all the countries of the world to live together as neighbors and fellow citizens—builders of a strong, progressive, and hopeful nation that stands preeminent in the modern world.

From its very beginnings under Lincoln, the Republican Party has been a party of progress and development. You people of Idaho, in the heart of the West, have compelling reasons today to recognize that fact in the historic decisions which Republican Congresses have made in the development of this region.

In keeping with the important role of agriculture in building a strong nation, President Lincoln approved in 1862 three of the most important legislative steps ever taken by the Government in behalf of the farmer. They were the act creating the Department of Agriculture, the Homestead Act of 1862, and the Land-Grant College Act which granted to the States vast quantities of the public domain for educational purposes.

The Homestead Act of 1862, which flung open the door of opportunity to any citizen who would become a farmer, marked a new era in pioneering and homesteading which attracted the courageous youth and the sturdy immigrants. The land of the West was made accessible to settlers free of any purchase price in 160-acre homesteads, provided it was occupied for a minimum of 5 years. This act was responsible for the sweep of settlement westward to the Pacific. In the course of time, 275,000,000 acres were transferred to settlers under the basic provisions of the Homestead Act.

I

It was again a Republican Congress under a Republican President, Teddy Roosevelt, which passed the Reclamation Act of 1902 under which the Government of the United States undertook to champion the cause of irrigation by providing that irrigation works, beyond the easy reach of the ordinary cooperative methods, might be constructed with Federal funds. The investment was to be repaid gradually by the farmers.

As a result of this and supplementary acts, 54 projects have now been built, yielding water to more than 4,000,000 acres of land, and serving nearly 100,000 families. Under the direction of the Bureau of Reclamation and the cooperation of the people, an empire, uniting the two seacoasts of America, has been built. Some of the works have been described as wonders of the world, such as the pioneers did not dare to dream about.

I need not remind you people of Idaho what reclamation has meant to this region. Your effectively coordinated irrigation projects stretching from Jackson Lake on the headwaters of the Snake River, through American Falls Reservoir and Minidoka Dam, to Arrow Rock on the Boise River, have brought a million acres under cultivation. They have become the biggest single factor in Idaho's contribution to the agricultural wealth of the Nation, and have resulted in the production of huge crops at a time when the Nation was calling for the utmost in food production. Together with electric power benefits they have brought new resources into use.

I recently saw a chart prepared by the Bureau of Reclamation covering a 40-year period in six counties in south-central Idaho. That irrigation expansion alone creating your famous Magic Valley, had developed more than $130,000,000 in property values, an annual pay roll of $63,000,000, 1,600 business enterprises, and jobs for 26,000 persons. Without irrigation that section of the Snake River Valley would have remained as unproductive as the surrounding desert.

The Eightieth Congress has recognized the vital importance of the reclamation program by the extensive appropriations that were made for the present fiscal year, amounting to $142,000,000. Still more generous provision is anticipated for the immediate future to keep construction proceeding at a rate that will yield vast new irrigation and power benefits.

II

In Lincoln's day the slogan of the hour was the familiar cry, "Go West, young man, and grow up with the country." And many did that as the Nation spread itself across the continent. But that frontier, with its adventure and its hardships, with its opportunity and its growth, is no longer ours to exploit. The new frontiers of our day are rather to be found in such developments of our potential resources as the reclamation program. They will be found in the research laboratory. They are waiting to be explored in establishing better relations and understanding between labor and management. They lie before us in the obligation we have assumed in international affairs.

Ours is a great responsibility which requires not only a high sense of obligation as citizens but a fresh and eager leadership that

has the vision, the courage, and the progressive spirit to chart the way forward.

1. We need a new leadership in the National Government in Washington as a first step to make possible a beginning toward that objective.

2. We are struggling against the threats of inflation and the difficulties which high prices for food and commodities impose upon the average family and especially upon the average wage earner. Yet the administration in Washington refuses to admit that these conditions are in part due to the pursuit of negative policies by the Government. It offers no solution except more rationing, more controls, more government.

3. We must have full production to relieve the shortages and to provide for the many things the American people need. Yet the administration in Washington declares that "at least $50,000,000,000 should be invested by industry to improve and expand our productive facilities over the next few years," but the President vetoes all efforts to reduce excessive taxes and proposes discouraging burdens upon venture capital.

4. We have a Republican majority in Congress which has attempted to cut down the cost of government by reducing personnel and trying to stop waste. Yet the administration in Washington which has a partisan control of every executive department and the innumerable administrative agencies can and does neutralize constructive legislation and in one breath says these cuts are "phony" and in the next claims it cannot give proper service because Congress has reduced its funds.

5. We have been concerned over the effect of the uncontrolled export of certain scarce commodities such as freight cars, oil, and pipe, to mention three that are in critical demand, and the President has had power since July 1940 to say whether or not a commodity shall be exported, how much, to what countries it shall go, and how much to each country. Yet we have an administration in Washington that not only has been negligent in the proper use of that power but has sought to shift the blame for its failure to Congress by demanding legislation to strengthen export controls when it has had ample authority all the time.

This negative atmosphere, resulting from the all too clear attempt of the Truman administration to carry water on all shoulders, makes difficult the development of constructive and badly needed new policies that will lead this great country through the difficult transition years of the immediate postwar period into a happier and better period. We simply cannot find the way to that new era if we adopt the cynical philosophy too often present in our thinking during the years of the New Deal which places an undue faith in bureaucratic government and shrugs off the spirit of initiative and enterprise on the part of our citizens.

For the first time in 15 years a Republican majority was in control of one arm of the Government last year—the Congress. In spite of the negative atmosphere in which it was necessary to work, with threats of vetoes from the White House and no assurance that Republican-sponsored policies and legislation would be effectively administered by executive agencies of the Government under complete control of the opposing party, and in spite of an accumulation of vexing problems that are the aftermath of war and of four New Deal terms, it was possible to establish a record of constructive legislation that merits confidence.

1. Thanks largely to Republican insistence, there has been a balanced budget for the first time in 15 years.

2. An actual decrease of over $3,000,000,000 in appropriations, as compared to budget estimates submitted by the Executive, was made. At the same time generous provision was made for reclamation projects, flood control, and river improvements, and the highest peacetime budget for national defense was provided.

3. A Labor-Management Relations Act to reestablish a balanced situation in industrial relations was passed despite the President's veto.

4. Following upon the legislative reorganization, which went into operation last year, steps were taken for a commission survey of the need for reorganization of the executive branch.

5. Numerous war-power and emergency enactments were repealed, and Congress has stood firm against a continuous demand for restoration of Government regimentation. Scores of constructive measures have been passed dealing with pressing domestic problems.

6. Full and generous cooperation has been extended the administration by the Republican majority in Congress in the bipartisan foreign policy, under the leadership of Senator VANDENBERG.

The contributions of the Republican Congress, described in broad terms, point the way to our most vital objectives: First, adherence to the belief that a strong, solvent, and free America is the basis of our greatest contribution to world order. Second, recognition of the leadership the Government must take in the resourceful utilization and use of our potential natural resources. Third, cultivation of an atmosphere of fair dealing and understanding in the relationship of our economic groups without which the free-enterprise system cannot be made to work. Fourth, acceptance of our responsibility and obligation to provide the stabilizing force in the world as war-torn and devastated nations seek to find their way to a stable and peaceful condition.

America's international obligations and responsibilities today are compelling. While we did not accept the full leadership in the world affairs which had been ours immediately following World War I, we must not make the same mistake now in the immediate years after World War II. A world leadership has been thrust upon us by the ability to produce which made it possible for us to supply not only our war needs, but also much of the requirements of our allies, and by the demonstration of skill and leadership and sacrifice which we gave to the struggle for the liberties and rights of man. We must not lose the lasting peace for which our gallant youth fought and died.

Our immediate obligation is to take an active part in the rehabilitation of the war-torn western European countries as they seek to reestablish sound governments based on human rights and freedom. This cannot be brought about easily. It will cost us appropriations to assist in this rehabilitation. The Marshall plan as it is now known could as well be said to be the Vandenberg plan. It was the able, distinguished Republican Senator, ARTHUR E. VANDENBERG, who said even before the war ended in 1945: "We will propose to help create the postwar world on a basis which will stop aggressors for keeps and, so far as humanly possible, substitute justice for force among freemen. We propose to do it primarily for our own sakes." Senator VANDENBERG's brilliant speech in the Senate in January 1945 really commenced the thinking on the European question which has culminated in the Marshall plan.

You and I may at times feel that this is a responsibility and burden that we should not enter upon; yet you and I in our own experience or memory know what a terrific impact on the economy of a community or State results from a devastating flood, a hailstorm, or a tornado. While I served as Governor of my own State, there were communities in my State that suffered shocking losses from storms or floods, and the State assisted them in their rehabilitation by direct appropriations. Neighboring communities also felt it their duty to help.

I think we must look upon our assistance in the rehabilitation of European countries in the same way. The devastation caused by war was more far-reaching than any calamity that we have experienced here. We should be a very grateful people that we have been spared twice in world conflict. We did not have our beautiful cities devastated as were those of England, some of France, the Netherlands, and all the others. Even the problem of the rehabilitation of Germany, which we might say is none of our affair, requires that their civilized life be reestablished and their industry made to serve the German people as they seek to lift themselves to a complete recovery.

Unless we lend a hand in a neighborly manner to bring hope and encouragement to Europe and to draw forth the hidden money of the businessman and the industrialist, we cannot expect other than chaos for those countries. Such a situation will permit the Communist philosophy to completely dominate by force those who now would like to reestablish governments for the people. If all of these countries are pulled back of the so-called iron curtain of Russia and the development of the resources in those countries becomes a part of Russia's economy, to be developed under the Soviet concept of world rule, I would say, and I say it most reverently: God help the people of this earth in this atomic age.

These years of crisis ahead lay down a challenge to the party of Lincoln for clear thinking and courage as our Nation assumes its destined place in a world that is struggling to rebuild and restore what years of war have laid waste.

They will require unity on the part of the American people, an adventurous and pioneering purpose, and a vital leadership that will kindle a rebirth of the American spirit.

Lincoln Day Address by Hon. Ralph E. Flanders, of Vermont

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Party of Lincoln in This Year of Grace," delivered by the Senator from Vermont [Mr. FLANDERS] at Detroit, in the Fifteenth Congressional District on February 10, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PARTY OF LINCOLN IN THIS YEAR OF GRACE

Mr. Chairman, ladies, and gentlemen, it is an honor I greatly appreciate that I am asked to talk with you this evening. There is no group of Republicans in the country whom I would rather meet with at this time than the group I find before me, composed as you are of the convinced, unterrified, and dauntless Republicans who have for many years maintained the faith in a district which has, I am told, always voted Democratic in national elections.

I have the faith to believe that your long years of hope and action will this year be crowned with success, so that we may add yet one more of our party to the swelling majority in the House of Representatives. You are already magnificently represented

in the Senate. To have two men like HOMER FERGUSON and ARTHUR VANDENBERG accredited to this State is an honor which any State may well envy. In particular am I personally proud to follow the leadership of your senior Senator in his wise and patriotic counsel as to foreign affairs. In this, as in much else, he stands head and shoulders above us all.

We want to attain our victory this fall in a solid sort of way, which will foreshadow years of success for our party in this spot instead of some temporary flash of success. To do that we must put a depth and solidity into the Republican program which will embody the enduring contribution which it can make to the welfare of the citizens of this district, this city, this State, and the Nation. It is my purpose to discuss some of those values with you this evening.

I know of no spot where the enduring values of our Nation are put in more tangible, visible form than in our National Capital. There we may behold the noblest vista ever planned and executed by the hand of man. At one end of that vista stands the Capitol itself—planned and built by our fathers on no mean and niggardly scale. There was in them a sense of the magnificent destiny of our Nation. There was in them a sense of its vast territorial extent. They envisioned the incredible riches of its rocks and soil and of the industry and ingenuity of the millions then living in this country—destined to increase and multiply by birth and immigration. With this faith and vision in their hearts, our fathers planned that great building with a grandeur and yet with a dignity which has never been surpassed among the similar works of man.

Westward from that structure, for more than a mile, extends an open vista. It is marred on its flanks by the exigencies of war in the shape of temporary buildings which, it is to be hoped, a world organized for peace will soon warrant us in removing, yet, as seen from the Capitol, the eye is not attracted to these temporary structures. Instead it reaches far down the open space and rests on that simple soaring symbol of our Nation's founder—the Washington Monument. What a stroke of genius is the design of this simple obelisk: Plain and solid in its structure, lofty in its height, with its summit pointing still farther upward than the reach of the structure itself, it is the physical embodiment of the character and attributes of the father of our country, whose memory it perpetuates in physical form, even as our history, our Constitution, and our very unity as a nation perpetuates his memory in a spiritual form.

That monument is a mighty structure. Seen in the varied aspects of early morning, bright noon, rosy sunset, and pale moonlight, it has an infinite variety of appeal. There have been times when, driving to my office in the morning, I have seen its base invisible in low-lying mist while its summit rose above those mists in the bright light of the morning sun. Such a sight is thrilling, indeed. It has a significance it is difficult to put into words.

But the monument is not the end of the vista. In the far distance, away beyond the monument, there is visible from the west front of the Capitol, a gleaming marble structure—the Lincoln Memorial. I suppose there is no spot in this Nation which has attracted, since it was built, more thousands of our citizens to pause, to wonder, and to submit themselves to an impelling flood of admiration and inspiration. That this unschooled and unpolished western pioneer should be enshrined here in classic marble is not incongruous. The stature of the man has grown with the years. His character and his achievement become greater as we recede from him and set his brief years of service in the time of the Nation's supreme need in the framework of human history. Truly, as Stanton said at Lincoln's deathbed, "He belongs with the ages."

Let us tonight in a humble and reverent way bring our minds and our emotions back to the life of that great man. Let us test our actions by the principles which ruled him. Let us see what we may gain of light and leading from his life to apply to the difficult and dangerous times in which we find ourselves today.

If the party of Lincoln is to be his political and spiritual successor, it will first of all have to concern itself with human beings. It was fundamental in our great leader's thinking and feeling that man had worth as a man without reference to his station and birth, to the material circumstances to which he was born, those which he acquired by his personal activity or those which fortune may have chanced to shower upon him. In this belief and with this guide to action Lincoln embodied in himself the great truth which the founder of our Christian religion brought to the world and which is the enduring substance of that religion wherever it is sincerely apprehended and taught. Our concern likewise is with human beings and not with things or with abstractions.

Let me digress at this point for a moment to tell of the personal experience of some of us who were engaged in hearings throughout the country last fall on the subject of the high and increasing cost of living. In one sense of the word, we discovered little which could not have been discovered by expert statisticians who analyze the information which governmental and private research organizations pour forth in an unceasing flood.

But instead of trusting to these dry and lifeless columns of figures, we went instead to the people themselves. My own panel covered the country east of the Alleghenies all the way from New Hampshire to Florida. I, likewise, visited hearings on the Pacific coast at Los Angeles and San Francisco. That western group had the same experiences that met us in the East and the significant experience was this: That masses of figures, for the most part dealing with averages, conceal human problems which are most easily revealed by going directly to people. To be specific, average wages may be better with relation to some average cost of living now than was the case in 1939, even though conditions have deteriorated somewhat from the peak of real wages in 1946. It became clear, however, that we could not indulge in complacency in spite of this generally favorable situation. Within those average incomes and average costs of living were to be found many millions of people who had been left behind in the war and postwar advances in incomes, and whose conditions were materially worse than they had been at any time, even worse for many of them than they had been during the depths of the depression.

Who were these people who had been left behind in spite of so great and general statistical advances? Among them, of course, were all of those who were trying to live in their older years on the savings of a lifetime. All who had been depending on pensions and retirement annuities were severely cramped. There are millions of wage earners, organized and unorganized, who have been left behind as the incomes of their more fortunate and aggressive fellow workmen had been increased. All of those who were connected with religious and charitable institutions were in serious straits. The incomes of those institutions have not gone up with the increases in the cost of living. Almost all employees of Federal, State, and local governments have lagged behind. As for myself, when I considered the serious difficulties in which school teachers, preachers, particularly young preachers, found themselves, I was astonished that radicalism had not gained a stronger hold on this influential group of our fellow citizens than appears to have been the case.

Let me suggest to my fellow members of the Republican Party that there is a party necessity, simply because there is a human necessity, to recognize the difficulties in which these great groups, numbering in the aggregate many millions, find themselves. It is this group of white-collar workers and low-income wage earners which can and will swing elections. For our party, the safest political strategy is to recognize the problems of these people, not only politically but with the heart and with the head.

Let us take another look at the great Abraham Lincoln. He had a profound confidence in popular government. This found its springs of belief and action in his acceptance of the Christian doctrine of the value of the individual human soul. It led him to the firm, instinctive belief that no man had the right to rule the beliefs and actions of another as a superior compelling the obedience of an inferior. It led him to look upon slavery with loathing. It led him to hold aloft that ideal of government which was expressed in the world's greatest example of noble and sincere eloquence—the Gettysburg Address: "That we here highly resolve that these dead shall not have died in vain. That this Nation under God shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth."

It was reported in the papers a year or two ago that the Gettysburg Address had been translated into Russian and publicly disseminated to the Russian people through the Russian press. There was, however, a subtle change in the three propositions connecting the government and the people in that final sentence. As I remember, it read something like this: "That government of the people, through the people, for the people, shall not perish from the earth."

That the people themselves are the instruments of their destiny was Lincoln's doctrine. It is the Republican doctrine. The people do not, except for short periods and under close control, depute to governments that authority and responsibility which rests directly in them. We do not in this country have unanimous elections. We will not in this country grant to any elected or appointed official unrestricted and unregulated powers, except as may be necessary for limited times under stress of total war or other severe national emergency.

With this retention of power in the people goes a depth of responsibility which is rejected by totalitarian governments, whether Fascist or Communist. We, the people, are the sovereign power. We also have the final responsibility. We cannot blame others. We ourselves are the authors of our destiny, whether the fate be fortunate and noble or unfortunate and tinged with shame.

There is another aspect of Lincoln's character and policy which has, I believe, never been sufficiently analyzed or appreciated. I refer to the fact that his speeches are all closely based on reason in spite of the fact that they dealt with highly emotional problems. The problem of human slavery is one which aroused the fieriest emotions which we can easily imagine, whether in the mind of its proponents or its opponents. The depth of those passions can be realized if we consider that they were of such an intensity that they were fast leading to the breaking up of the Union and the destruction of our country as an organized government based on the sacrifices and the principles of the founding fathers. In particular we have to remember the extreme emationalism of the opponents of slavery which led, in its ultimate expression, to the endeavor of John Brown to foment and arm an insurrection of the Negro people against their southern owners.

No one felt the depth of moral degradation in slavery more deeply than did Lincoln. Yet that tremendously strong feeling at no

time misled his mind in its consideration of the effective policy to be developed and applied in the face of the disintegration of the Union which was resulting from it. He put his finger on the preservation of the Union as the central problem of the American people. Slavery could be controlled. It could not be eliminated in the course of time unless the Union were preserved. As he said on one notable occasion, "If I could save the Union without freeing any slave, I would do it; and if I could save it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that." And these words came from a man who hated slavery with the full intensity of all his moral nature.

The existence of the Union was threatened by slavery. It was this central problem to which the Republican Party addressed itself. That purpose was directed by a highly intelligent, intellectual analysis of the problem. It did not satisfy the abolitionists who, with an unintelligent but emotional approach to the problem, were bitterly opposed to the platform of the Republican Party. It likewise, of course, failed to satisfy those who were intent on the expansion of slavery into the new Territories of the West still under Federal domain, but which were in time to come to be self-governing States in their own right. In the fact of a moral problem charged with emotion, as no subsequent issue has ever been, it was wise, prudent analysis which controlled the policies of Abraham Lincoln and the great party which he led.

One may read the letters and addresses of our great leader (as I have done in recent months) and be astonished at the absence of appeals to a lower level than those of the citizen's conscience, the citizen's reason. The intellectual content of these letters and addresses is astonishingly high. I think it must be said that that intellectual content is higher than is customary in the political speeches of our own time. He had supreme confidence in the ability of the American people to follow a reasonable and effective course rather than an emotional and destructive one in dealing with the great issues which confronted them. His belief in popular government was one which he put to the test. In putting that belief to the test, the people did not fail him.

Let us revive our faith in the intelligence and practical wisdom of the American people. Let us avoid emotional appeals which lead to unwise action, whatever transitory and shallow support for party candidates and policies may be gained thereby. Should we succumb to the temptation which these deceptively attractive means to a current political victory lead, we will find, I am sure, that they will result in the progressive weakening and ultimate end to the useful and necessary part which we play in the direction of the course of our great country.

Let me make at this time, and particularly in this place, a practical application of this necessity for the appeal to the intelligence as well as the appeal to emotion.

A major problem which faces us today is that of maintaining and steadily increasing the standard of living of the American people, whether their life and work is found on the farm, in the factory, in the business office, in the store, on our railways, or wherever the lifework of the citizen has located his activities. In the endeavor to maintain and, if possible, to increase this provision of goods and services for the individual's enjoyment, we have perhaps been led to depend too strongly on increase in money income whether through wages or salaries or business profits. There is an obvious fallacy involved in the endeavor to improve our condition by such action alone. We do not eat money. We do not wear money. No piece of hard or paper currency, however large, will shelter us from the weather. Only the miser, and there are few of them indeed, can get joy or satisfaction out of the mere possession of these titles to real wealth. Yet all of us whether as businessmen, farmers, or wage earners, seem driven at times by the idea that by multiplying the volume of our money income we can as a people increase our standard of living.

The Nation is committed to the 40-hour week. We have what is to all intents and purposes full employment. That means that we have reached certain limitations as to the volume of goods and services which can be divided among us.

It is true that there are inequities in distribution. It is true that some business profits are too high to be justified on purely immediate social grounds. Observing this, the temptation is strong to attempt redistribution of those profits by wage advances beyond the limits of the present high rates enjoyed by many groups of workers. Our whole effort at the present moment seems to be directed toward the redistribution of a production of goods and services limited by our standard work week, our productive capacity, and by the high total volume of men and women available to operate those means of production and distribution.

Our concentration on trying to get advantages for ourselves or our particular group by the single route of competitive raises in income is leading to two very serious conditions. We must be intelligent enough, in the Lincoln tradition, to recognize and meet these conditions with effective action.

The first of these dangers touches the groups which are being left behind in this race for higher money incomes. Advantages gained by those most successful result, in a high percentage of the cases, in the necessity for increased cost in the goods and services produced and distributed. This in return results in a higher cost of living which those who are left behind are unable to meet. The advantages therefore gained by the fortunate group are at the expense of the submerged group. Let me say at once that this is true whether the advantages in money income sought by the more fortunate is in the form of wages, of salaries, or of unjustified profits.

Aside from these present injustices the endeavor to realize on limited production by increased income is an actual barrier to the increase in productivity, on which alone a continuance of our progress toward increased American living standards can be based.

I do not see that men work under any more severe physical and nervous strain than they did when I was a boy, and received as a machinist apprentice 4 cents an hour for a 60-hour week. I doubt if the worker in the steel mill today, with all the elaborate electrically-driven handling and manipulating equipment, uses or requires the same muscular energy than was the case 50 years ago. The farmer today, with his large use of mechanical equipment, is saved much of the drudgery of the farm work which I saw and experienced as a youth. Yet in spite of this, the output per man-hour, wherever the worker may be located, has increased tremendously during my lifetime. This tremendous increase in output has gone into an improvement in the goods and services available to the ordinary man and has marvelously raised the standard of living in this country. This has been done by the steady progress of research and invention applied to better business management, but particularly to improved processes, machinery and product. It is this which has given us our higher standard of living while we have shortened the work-week from 60 hours in my boyhood to the 40 hours of the present time.

Now we are by no means at the end of the possible improvement in products, equipment, and management. Those familiar with the possibilities ahead of us see no diminution in the rate of improvement possible. For the future, as in the past, our main dependence lies in raising the standard of living by these time-tested means.

Such improvement requires heavy investment. It requires expensive research. It requires months of design, development, and construction. It requires machinery far more intricate and expensive than anything dreamed of by an older generation. But the possibilities of improvement which those older generations grasped, applied, and enjoyed, still remain with us.

That brings us back to this question of profits. Profits for peacetime are unprecedentedly high. Yet we should remark in passing that if we should tax away all business profits, it would pay only one-half the annual expenses of our Federal Government alone, not to mention the high cost of our State and local governments.

It is, however, on these profits that we must depend for the coming heavy expenditures by which alone we may expect to make substantial contributions to a further increase in the standard of living of our people. Our national policies must be such as to encourage the flow of profits into these channels of improvement on which so much depends. This is not a secondary or incidental interest of the wage earner or the farmer. It is a pressing and primary interest, to which the best intelligence and the strong determination of our people must be directed. It is typical of the technical problems which must be faced by our legislators and administrators.

It is from the standpoint of the material well-being of our people that the most important of these problems must be faced. If problems of this sort are wisely solved, it will lead to a general improvement in material well-being which will affect every member of society—not merely some special group which has succeeded at the expense of others in obtaining for itself a larger share of a limited volume of current production. In offering solutions for this great social problem of the Nation by constructive means, our party will be following the intellectual tradition established by Lincoln, its great leader, rather than going down the political byways of lower appeals to lower emotions.

I would like at this point to say a few words with regard to liberalism and conservatism. I refer to that liberalism which the conservative calls radicalism, and that conservation which the liberal calls reaction.

I conceive that the proper use of the term "liberal" is to apply it to objectives rather than to means. I conceive that a proper objective is a continuing increase in the production of things we wish to consume and enjoy and equitable distribution of those goods to those able and willing to work, such distribution being measured in proper degree by the contribution toward the production of such wealth which each makes. There should be added to this a wise provision for the unfortunate and for those who have retired by reason of age from the full activity of productive life. There should finally be established as an objective not equality of ownership or equality of income, but equality of opportunity in this land of opportunities. These I consider to be liberal objectives.

I would further suggest that we abandon the words "radical," "liberal," "conservative," and "reactionary" when it comes to picking out means for reaching these objectives. There should be but two judgments supplied to the means. Are the proposed actions or policies honest? Will the proposed actions or policies, in fact, assist in reaching the liberal objectives?

This is important both politically and practically. The shallow political view attaches the tags, liberal and conservative, to the means for reaching desired results. For instance, if a given proposal seems on the face of it to be immediately favorable to railroads or public utilities, it may be classed in common parlance as being a conservative measure. If it seems on the face of it to be unfavorable to those institutions, it is too often classed as a liberal measure. As an opposite

example, everything which seems to be on the face of it immediately favorable to organized labor is classed as liberal. That which appears on the face of it to be unfavorable is classed as conservative or, more usually, as reactionary.

It is of exceeding importance that we cease to tie these tags onto methods, laws, and policies. If we are thoroughly convinced in our hearts of the desirability of our liberal objectives, such as those just described, let us with all the energy, ability, intelligence, and experience that we can bring to bear on the problem, examine these proposals for action on the basis of whether they are honest and whether they will actually assist us in reaching our objective. In no other way can we advance the real long-range interests of our country and of its citizens.

A careful reading of Lincoln's published words leaves me with the conviction that this was the principle by which he guided his political life and I feel no less convinced that it is on these principles that Lincoln's party should make its appeal to the voters today.

We are perhaps only slowly realizing the depth of moral strength and the innate knowledge of the moral laws of the universe which Abraham Lincoln possessed. This moral genius, for it was nothing less than genius of a very high order, found its highest expression in his second inaugural address. May I repeat to you the concluding paragraphs of that immortal document.

"The Almighty has His own purposes. 'Woe unto the world because of offenses! for it must needs be that offenses come; but woe to that many by whom the offense cometh.' If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through his appointed time, he now wills to remove, and that he gives to both North and South this terrible war, as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him? Fondly do we hope—fervently do we pray—that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondman's 250 years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said 3,000 years ago, so still it must be said, 'the judgments of the Lord are true and righteous altogether.'

"With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

We, too, in the positions in which we find ourselves, must guide our lives by the principles which Lincoln saw so clearly and expressed so effectively. As citizens of this great Nation, destined to national and international responsibilities whose extent Lincoln in his day could only have dimly conceived, we are faced with moral responsibilities which we cannot escape. Those responsibilities devolve on us in all our capacities, whether as teachers of the young, producers of the Nation's wealth, organizers of that production and distribution, legislators and administrators, writers, preachers, or prophets. We ourselves make our country what it will be. If we work for wrong objectives or if we work for good objectives by bad means, we cannot escape bringing upon ourselves and others the inevitable evils of the choices which we have made. If, on the contrary, we set before ourselves high objectives, objectives higher than those in the particuluar group or even the party to which we belong, and if we pursue those objectives with all the intelligence, energy, and experience which we possess, we can play our part in our day in achieving that high destiny which our great leader in his day made possible by the strength of his will, the depth of his moral insight, and the intelligence of his action.

Treatment of Indians—Veto of Gideon Peon Bill

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Gideon Peon in the Background of a Presidential Veto," by John H. Holst, of Lake Whales, Fla., together with a related and brief comment on the same subject by Mr. Robert Yellowtail, former Superintendent of the Crow Agency of Montana, and one of the leading Indian spokesmen of this country at this time.

Mr. Holst was for many years a resident of Montana, was formerly a professor at the Montana State College at Bozeman, and was considered an educator of high standing. For 15 years he was associated with the education department of the Bureau of Indian Affairs, until his retirement a few years ago. He is a man of high standing and integrity, and while with the Indian Service had the opportunity to visit every Indian reservation in the United States. Consequently, he is familiar with the workings of the Bureau of Indian Affairs.

The Public Printer advises me that Mr. Holst's article is estimated to make two and one-fourth pages of the RECORD, at a cost of $159.55.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GIDEON PEON IN THE BACKGROUND OF A PRESIDENTIAL VETO

(By John H. Holst)

A hundred years ago most of the Indians had been settled on reservations for their own protection and for that of the white pioneers. This was accomplished by treaties, the terms of which were proposed and imposed by Federal treaty commissions which gave the Government agencies complete control over the Indian groups and over their lands which were held in trust for the common use of the particular tribe.

Ninety-nine years ago the Indian Bureau was set up in the newly created Department of the Interior and was charged with the administration of Indian Affairs under the authorizations of Congress. The Indians were to be educated in thrift and industry and prepared to take their places as citizens.

But the reservation system did not operate to produce citizens because the Government, through its Indian Bureau, denied to the Indians the incentives that lead to the growth and development of individuals and groups under normal conditions. The Indians had only the rights of occupancy and use on the land and no assurance that they would be able to hold the improvements they might make or be able to pass them on to their heirs. It was not strange that they had no incentive to build today what they might lose tomorrow. Under the system of Government rationing, initiative, thrift, and industry were disregarded. Farmers, mechanics, and teachers provided by the Indian Bureau told the Indians what to do and when and how to do it, thus taking away all the challenge. Yet it is surprising that so many individual Indians inspired by the white system of economy about them struck out for themselves and attained a high degree of competency.

By 1870 the Indian Bureau had become notoriously corrupt and the Indians on the reservations had fallen into idleness, mischief, and mendicancy. They had no incentive to work since they could collect debts owed them by the Government in foods and materials which their work would otherwise buy. Thousands of them lived in bedraggled tepee villages about the field agencies to be ready for ration days. The others were continually gathering or waiting for rations. The central Indian office and the field agency staffs were mainly concerned with ration estimates, ration purchases, distributions of ration supplies to warehouses, and final distributions to Indians.

The General Allotment Act was intended as a solution to the intolerable reservation system. Under the plan for Indian home building and training in citizenship the Indians of a reservation were to be allowed to select lands for homesteads, usually 160 acres for an adult and 80 acres for each child under 21 years of age. In this way every Indian of any age or degree of blood was to be provided with basic land of his own selection to be held in trust for him for 25 years.

After the Indian residents and all having land rights on the reservation had made their individual selections of land the surplus was opened to sale and settlement for the benefit of the allottees. In that way Indians and non-Indians were interspersed in what became known as checkerboard areas. Whatever the method of disposal of surplus lands, the returns were placed in the particular tribal trust fund subject to the disposal of the Indian Bureau under congressional authorization.

The Indians lived among their white neighbors as noncontributing intruders because the Indian Bureau controlled their land and their trust funds and used the trust in both cases to control the Indians. The initiative was always with the Indian Bureau which assumed to know what the Indian needed and what would be best for him. But the Indian wanted the freedom of citizenship. Thousands of the more virile went out into the world on their own account. Many of them have said to the Bureau, "Here is my property through which you would control me. Lease it for me for whatever you will and I will someway manage to get what more I need for living." Trust-held lands are but picket pins for pauperized Indians.

The 25-year trust imposed upon Indian allottees and their subjection to the pauperizing indignities of the Indian Bureau were so destructive of Indian life that Congress enacted a law in 1906 giving the Secretary of the Interior the right to terminate the Federal trust on lands belonging to Indians whom he considered competent to manage their own affairs. He seldom exercised this authority.

Congress attempted to speed up the liquidation of Indian reservations through its acts of May 25, 1918, and June 30, 1919, which provided for the making of final rolls for the segregation and distribution of trust funds and property but too much was left to the discretion of the Secretary of the Interior whose Indian Bureau was ever dilatory but blamed its remissness on the failure of Congress to provide sufficient funds and particularized authorities. Many reservations were completely allotted but trust

funds were not distributed. The Indian Bureau continued to hold the tribal funds and trust title to the allotted lands and so to control the Indians and sabotage the whole plan.

Under the trust allotment system Indian estates are not subject to division among heirs since the Government cannot make final settlement without liquidating its trusts and State laws cannot operate as against such trusts. The result is an inheritance tangle of ever-growing complexity. The Indian Bureau uses this as a justification, first, for increased appropriations for its administration and, second, under the Wheeler-Howard Act, for its so-called consolidation of Indian lands through which it forces the return of individual allotments to tribal status and common use under its control.

In 1934 came the Wheeler-Howard Act—only less famous than infamous—to turn back the clock of Indian progress a hundred years or more. It froze all Indian lands in perpetual trust, even the alloted lands. It delivered the Indians, body and soul, into the ruthless hands of the Secretary of the Interior and his irresponsible Indian Bureau, to become the guinea pigs for the New Deal social and economic planners. Under its terms the Indians exist for the support of the Bureau. The Indian allottees, 250,000 or more, are in desperate straits. They can neither sell their lands nor pledge them for equipment or operating funds. They cannot pay taxes in cooperation with their white neighbors for the welfare of their communities.

II

On January 27, 1947, Senator ZALES ECTON, of Montana, introduced the following bill in the United States Senate, a bill that was destined to have far more significance than was originally intended:

"Be it enacted, etc., That the Secretary of the Interior is authorized and directed to issue to Gideon Peon, Flathead allottee No. 33, of Butte, Mont., a patent in fee to the following-described lands situated in Lake County, State of Montana: The north half of the southwest quarter of section 33, township 19 north, range 19 west, Montana principal meridian, containing 80 acres."

Who is Gideon Peon? He is a citizen of the United States and a legal voter in Montana. He is 45 years of age, married, and lives with his family in Butte, Mont., where he has been a loyal and capable employee of the Federal Government in the Post Office Department for many years. He was born, allotted, and educated on the Flathead Reservation though he is less than one-half Indian blood. His allotment was to have been held in trust for him for 25 years as provided under the General Allotment Act of 1887, or until it should be patented to him during or after that time, when the Secretary of the Interior should consider him competent to manage his own affairs.

Was Gideon Peon competent to manage his own affairs? He had made his own way and managed his own affairs with credit since he was 15 years of age. Why, then, had he not been given his patent? Why had not 200,000 other mixed bloods and Indians been given their patents since they were and are as capable as the average white. Simply because the Indian Bureau fears the loss of its wards and the income they bring to it. It fears the loss of one, even, lest that start an Indian procession into full citizenship.

Did the 80-acre allotment actually belong to Gideon Peon? It certainly did, and under the strongest possible Federal guaranty, though it had been held in trust far beyond the 25-year period. And it did not belong to the United States any more than does the land held in trust by the Federal Government for 250,000 other so-called Indians.

Why was it necessary for Congress to authorize a patent for Gideon to his own land? Because for more than 40 years the Secretary of the Interior has refused to perform his duties under the law in relieving the land of competent Indians from restrictive trust.

Since Gideon Peon is representative of the scores of Indians who are asking Congress to authorize and require the Secretary of the Interior to perform his duties and grant to such as are evidently as competent as the ordinary citizen, the patents in fee which the Government has long promised them, and since he is also fairly representative of the scores of thousands of Indians of mixed blood who have been duped by the Indian Bureau into accepting its schemes instead of the promised patents in fee to their lands, attention is directed to the case of Gideon Peon against the Indian Bureau backed by the Secretary of the Interior supported by the President of the United States.

III

It is not often that so simple a piece of legislation as S. 403, only nine lines in length, has such a range of governmental implications and so much background involving social and economic principles. The bill was referred to the Senate Committee on Public Lands which, according to established custom, sent a copy of it to the Secretary of the Interior for his examination. It is in this way that we pay tribute to our multitude of bureaus. We concede that they must have an opportunity to protect their prestige even at the expense of citizens and the legitimate agencies of the Government.

In this case the Committee on Public Lands, in effect, called to Krug: "We see one of your branded steers wandering near your line fence which may have a gap in it." A word to the bureauwise was sufficient. Krug hit the saddle in person. Later as a score or two of like calls came, he gave instructions to his Danites to care for the immediate situation through adverse reports patterned after his, and through which he could direct a drift fence of conditional vetoes to turn back the steers that were escaping.

On April 17, 1947, the Secretary of the Interior reported adversely on the bill to give Gideon Peon the long promised patent to his land. Krug himself wrote the report. He neglected all facts pertinent to the case and confined himself to the well standardized stock of convenient arguments kept by the Indian Bureau to be used in adverse reports on all bills to give Indian allottees patents to their lands and to set them free from the Bureau. A critical analysis of Krug's report on the Peon bill is here attempted in the belief that it will serve sufficiently in the case of every report from that department on similar bills so long as it continues to fake the application of the seven stock arguments of the Indian Bureau to the ".

In a show of originality, Mr. Krug says, "It is felt that the best interests of Mr. Peon would be served by retaining his land in trust status." He appears to have the feeling that Mr. Peon is getting along well enough under Indian Bureau supervision. The Indian Bureau is getting him $250 a year rent for his land and his white neighbors pay his taxes and furnish him with all the civic benefits that they possess. But that is not enough for the greedy Peon. He left the Flathead years ago because he was not willing to live among friends and neighbors who were paying for his social, educational, and civic welfare. He felt himself a pauper so long as he could not do his part.

Mr. Krug next says, "This is contrary to the best interests of the Indians of the Flathead Reservation who need to retain in Indian ownership and use as much as possible of the land on the reservation." This is a statement born of complete ignorance of the situation and a desire to serve his Indian Bureau. The fact is that the allotted lands on the Flathead are no part of the reservation; and no Indians live on the unallotted lands of the defunct reservation. It is under the complete control of the Indian Bureau.

Again Mr. Krug says, "Since Mr. Peon's land is in an area occupied by both Indians and non-Indians, the sale thereof to a non-Indian would further complicate and interfere with the consolidation of Indian holdings in that area." He continually talks of the sale of Indian land to confuse the issue. Mr. Peon was not asking permission to sell his land; he was asking for the long-promised patent to it. When Mr. Krug speaks of the "consolidation of Indian holdings" he refers to that communistic scheme under the authority of the Wheeler-Howard Act by which the Indian Bureau may induce or force the allotted Indians to turn their lands back into tribal status under Bureau control for the common use of the group. Only in the Sioux country is that plan meeting with any success. The Flatheads will have none of it though the Indian Bureau should torture them for a hundred years.

"If it becomes absolutely necessary for Mr. Peon to dispose of his land," says Mr. Krug, "it should be sold under departmental supervision to the tribe or to another individual Indian." He might have added, "at half price, the title passing to the Government for the manipulation of the Indian Bureau," but Mr. Peon is asking for patent to his land, not to sell it.

In a clarion voice of warning, Mr. Krug reiterates the oft-repeated lie of the Indian Bureau to say that "past efforts to bring about the wholesale removal of the protective restrictions against alienation and taxation of Indian lands have had disastrous results." Certainly no "wholesale removal of restrictions" was contemplated in the Peon case or in the other individual cases though such a thing would have been fully justified. Aside from Indian Bureau assertion, there is no evidence that the removal of restrictions on Indian allottees has had any baleful effects in the past. In fact, thousands of known cases attest the opposite. Does the Secretary know that after the expenditure of hundreds of millions of dollars on Indian education he now regards fewer Indians as competent than were so regarded by the Secretary of the Interior 40 years ago?

Mr. Krug, evidently reading from the card furnished him by the Indian Bureau, continues: "These restrictions are safeguards obtained by the Indians through treaty or agreement, as part compensation for the cession and surrender of vastly larger areas of land." That is not true. The restrictions were imposed upon the Indians by the general allotment act of 1887 and other statutes and had no connection with any land cessions. Section 5 of the Dawes or general allotment act reads: "That upon the approval of the allotments provided for in this act by the Secretary of the Interior, he shall cause patents to issue therefor in the name of the allottees, which patents shall be of the legal effect, and declare that the United States does and will hold the land thus allotted for the period of 25 years, in trust for the sole use and benefit of the Indian to whom such allotment shall have been made, or, in case of his decease, of his heirs according to the laws of the State or Territory where such land is located, and that at the expiration of said period the United States will convey the same by patent to said Indian, or his heirs as aforesaid, in fee, discharged of said trust and free of all charge or encumbrance whatsoever."

Finally Mr. Krug convicts himself and puts Bureau and Department self-interest above the authority of Congress when he says, "Under the act of May 8, 1906 (34 Stat. 182), the Secretary of the Interior has the authority to issue patents in fee for trust lands, provided that the applicants are competent to handle their affairs. For this reason additional legislation as proposed is not required."

So Krug admits he knew the law. He must have known that Peon was at least as competent as himself. Yet he denies both

law and justice to serve his Indian Bureau. The act which he correctly cites was passed by Congress to enable the Secretary of the Interior to modify the harsh effects of the general allotment act of 1887 in placing a 25-year trust period on the allotted lands of Indians and mixed bloods as the Indian Bureau had originally recommended. Under the law Krug could have granted patents in fee to Peon and other competent Indians by the thousands, but he chose to play the dog-in-the-manger act, doing nothing himself and denying to Congress the right to act in his default.

IV

Senator ECTON, for the Committee on Public Lands, having the Krug report on the Peon bill before him, reported, June 11, 1947, that "the land involved herein owned exclusively by Mr. Peon, * * * who is now and has since he reached the age of maturity been managing his own affairs. * * * The issuance of such a patent in fee would not complicate or interfere with other Indian holdings on the Flathead. * * * Would place said lands on the tax rolls of the county and State, thereby contributing its just share of responsibility which its possessor owes to the community. * * * Your committee is strongly of the opinion that to deny this Indian the right and privilege of managing his own property and the privilege of growing into a self-respecting and self-supporting citizen is to place an un-American stumbling block in his path of progress."

Congress passed the Peon bill on July 15, 1947, and sent it to the President for his action thereon.

The day before the scheduled recess of Congress the President sent the bill back with a veto message betraying his utter ignorance of the essential elements in the whole matter. Evidently he had accepted as his guide the Krug report and information from the Indian Bureau in place of the reasoned conclusions of Congress, but he could not refrain from adding his own impertinences which he had deduced from the misinformation he had received from his accepted sources, and which led him into making further blunders. Again it was evident that the balances of justice were weighted against a mere citizen in the person of Gideon Peon and in favor of the ruthless oppressors. Who would weigh this veto message against the facts, the conditions, and the legal conclusions in this simple matter involving the fundamental principles of law and justice may well question other veto decisions in matters affecting more complex matters and vastly greater numbers of citizens.

That the President was deceived by the information furnished either directly or indirectly, and mainly through Krug, by the Indian Bureau, does not excuse his action while any American citizens suffer through his gullability. The Indian Bureau did not hesitate to take advantage of his blunder. It was waiting with a news release on the veto which it had helped to condition.

Mr. ECTON. Mr. President, under date of February 6, 1948, I received the following information from Mr. Robert Yellowtail, who as I have previously said, was at one time superintendent of the Crow agency, and one of the leading Indians of the country:

Mr. J. J. Pickett, mentioned with Gideon Peon in the fake news item sent out by the Indian Bureau in connection with the Presidential veto of bills to give them patents to their own lands, is a veteran of World War I. He volunteered and served in the Navy on the U. S. S. *Covington* which was torpedoed off the coast of Ireland. Mr. Pickett was rescued after a long and perilous period in the icy waters of the Atlantic.

He served his country loyally and well through the perils of war and suffered untold hardships. As civilian employee in the Interior Department for many years, he was loyal and capable. Few citizens have a better record of Government service. But far from expressing any appreciation, the Government has denied his just and reasonable request for the right to handle and use his own land as other citizens do and as the law provides he may.

He certainly has received a raw deal, and the President of our great country should hang his head in shame for the part he has played in denying simple justice to one of the loyal soldiers and defenders of our country in time of national peril.

Mr. Pickett has been relieved of duty as fireman at the Crow Agency central heating plant because of heart trouble. He is in poor health, has a large family dependent upon him, and is hard put to feed them in these times of stress. He desperately needs the right to handle his land as other citizens handle theirs.

Lincoln Day Address by Hon. Robert A. Taft, of Ohio, at St. Paul, Minn.

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able address delivered by the senior Senator from Ohio [Mr. TAFT] at the Lincoln Day dinner at St. Paul, before the Lincoln Republican Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a great privilege to be invited to address the Lincoln Republican Club in St. Paul on this anniversary of the birth of Abraham Lincoln, a man who perhaps more than any other in the history of this country has expressed the ideals and the principles of the American Republic.

It is a pleasure to return the visit of courtesy which Harold Stassen paid us in Ohio in addressing the convention of the Ohio Republican Clubs in October. Subsequently I discussed with him in a very friendly meeting his proposed return to Ohio on a more serious mission, and tried to persuade him that it was against his own interest and that of the Republican Party. The contest in Ohio will be conducted on an entirely courteous basis, but by May 4 I think he will find that my advice was good.

I could not come to Minnesota without testifying to the voters of Minnesota with regard to the exceptional representation they have in the United States Senate. I have worked closely with JOE BALL on many problems and have the greatest admiration for his ability to think issues through to sound conclusions. ED THYE has been there a much shorter time, but he has acquired the sincere respect and affection of his colleagues. I am not in such close touch with the House of Representatives, but I know that the Minnesota delegation is one of the ablest and most influential in Republican councils. I can particularly congratulate the Twin Cities on having such able Representatives as ED DEVITT, WALTER JUDD, and GEORGE MACKINNON.

Lincoln's problems related primarily to the domestic field. He was the supreme advocate of liberty and equal opportunity. These are the principles on which I believe that progress can be made in the United States toward a people of stronger character, more self-reliance, and greater productivity. These are the bases, also, for further advancement in the field of material welfare, for while this country is the envy and example of the world, we have a long way to go before we reach the goals which we have set before us.

In the field of foreign relations, Lincoln simply extended his general principles of justice to our relations with other nations. The words of his second inaugural, which dealt primarily with the reconciliation between the North and the South, expressed his view of our relations also with the rest of the world:

"With malice toward none, with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in."

Today the problems of foreign policy are among the most difficult that we face, and no man can be certain that he is right in his approach to those problems because they involve knowledge of many facts for which he must rely primarily on others with preconceived opinions and prejudices, and often with a special interest.

I do think that we should realize first that foreign policy is not an end in itself. The Government of the United States is concerned with the welfare of the United States. It is concerned primarily with maintaining the liberty of its people, under conditions which will enable them freely to work out their own salvation. We are in favor of peace in the world primarily because we wish to protect our people against attack and threats of attack which probably would grow out of any war in the world today.

We are concerned with the over-all economic welfare of other nations because in a prosperous world we think it less likely that attacks will originate against our own security.

We Americans have always believed in charity for all. Our missionary enterprises and our philanthropies have reached into every continent. For more than a century American standards of health and well-being have been spread abroad by church effort, by welfare and relief groups, and by the Government on occasion. American aid went into Communist Russia in the days of Lenin, feeding the masses whom the Bolshevik leaders had liberated from depression to starvation. Other American help penetrated all of Europe after World War I. American aid was rushed to Tokyo on a large scale after the disastrous earthquake of 1923. The word "American" has come to mean "help" throughout the world. But such aid did not purport to solve the economic problems of these other nations. It was never in a volume which materially affected the permanent economy of other nations or constituted a strain on our own. We have been generous in the past because we have been rich, and could afford to be generous.

But aid on any such scale as is now proposed, imposing serious taxation on our people, and creating scarcity and high prices and economic unrest at home, is an entirely different matter. It becomes a question of foreign policy and can only be justified if it is for our own ultimate benefit. In aiding friendly nations we cannot do ourselves more harm than we can hope to achieve good from their improved condition. We should not aid totalitarian dictatorships at all. It can do us no good to encourage a world of totalitarian nations ruled by despots, whether they be kings or emperors or duces or so-called leaders of the proletariat. History shows that dictators are more likely to resort to war, and the stronger we make them the more likely they are to do so. We should adopt only those measures to aid other nations which may really tend to maintain freedom in the United States.

In the second place, I think we should realize our power to lead the world in the field of morals and political doctrine. Our power to lead the world is tremendous in the fields of morals, progressive thought and free government—a leadership which we have often asserted and rarely assumed. On the other hand, we greatly overestimate our economic power to influence the world through American dollars and American exports. After all, we are only 6 percent of the people of the world. We have less than 20 percent of the productive resources of the world.

Temporarily, we can aid and we can give economic assistance to others as now proposed in the Marshall plan. But in the long run the question whether other nations shall be Communist or anti-Communist, whether they shall be free or whether they shall be slaves, depends at least 90 percent on their own efforts and their own thinking, rather than on economic assistance from us.

We have strained ourselves to the utmost to give the economic aid which, at best, is partial and temporary. Up to this time we have failed to set an example for permanent peace and recovery by carrying out our own moral principles or the ideals which we have proclaimed.

In the Atlantic Charter we expressly stated that we respected the right of all people to choose the form of government under which they would live, and wished to see sovereign rights and self-government restored to those who had been forcibly deprived of them. But at Tehran and Yalta we gradually abandoned most of the ideals stated in the Atlantic Charter until today the attainment of many of them is impossible.

We have talked of justice, but we have shown no real interest in justice either in the United Nations Charter, in the drawing of boundaries and the assignment of territory, or in the Nuremberg trials in Germany where we enacted an ex post facto law and enforced it retroactively under the elaborate pretense of justice.

I have always believed that this Nation should associate itself with others to establish a rule of law, justice, and peace throughout the world. I supported the United Nations, and I believe our foreign policy should be built so far as possible around the United Nations, but I have substantial criticism of the Charter as it is now written. When the first draft was prepared at Dumbarton Oaks it certainly was not prepared by any men imbued with the principles of American history. Throughout the entire document there was no mention of the word "justice," there was no provision for the drafting of any law or the enforcement of any law. After Senator VANDENBERG was called into the picture he succeeded in changing the general spirit of the Charter by inserting in various places a reference to justice. But even today the action of the Security Council is an action of policy and expediency, and not of law. The Council is directed to take such measures as it sees fit to attain peace and security. It might well decree the destruction of some nation which had proved a center of dissension, regardless of the injustice involved to that particular nation. Fortunately, we can prevent with the veto power the adoption of any measure which is not in accord with the principles of justice as we see them.

The advocates of the United Nations itself have always laid tremendous stress on a strong police force. They have laid little stress on the law which the police are to enforce. It is like setting up a band of vigilantes without having written any criminal law. I feel very strongly that we should proceed to sit down with all of those nations who are willing to do so and write a law governing the relations of different nations with each other, and laying down a rule of conduct for nations, with particular reference to a definition of aggression. When that is done we should agree on an interpretation of that law by an impartial tribunal, and agree to abide by the decisions of that tribunal.

In 1911 my father negotiated two treaties with Great Britain and France which agreed to submit all justiciable disputes to arbitration, and also to submit the question whether or not a dispute was justiciable. The Senate unfortunately failed to ratify those treaties. The only hope of lasting peace in this world lies not so much in force as in the universal acceptance of the necessity of accepting decisions made by impartial courts set up to interpret a law of nations.

I believe that the United Nations charter can be rewritten to accomplish that result. I believe we can establish a world in which the great majority of nations will abide by a rule of law to which they have all agreed. I believe there can be established an international force backed by public opinion and the armed forces of individual states which will punish any violation of that law. It will take time, but it can be done. There are various plans proposed today by the American Legion and by others which promise substantial progress in that direction.

Up to date, however, we have paid little heed to the United Nations. We have bypassed it in Greece and we have by-passed it in the Marshall plan. We have shown little interest in international law, and none in international justice.

I am as much opposed to a world superstate as I am in favor of a sound association of nations, because I feel that it would defeat the very purpose of all foreign policy—the freedom of our own people. It is proposed that we set up such a state on the example of our own Federal Government, in which 13 colonies joined to make a single federal state. The analogy is completely false. The people of those colonies nearly all spoke the same language, they had the same governmental philosophy, they had approximately the same general standard of living, their interests were largely identical. The proposal now is to join together people who speak hundreds of different languages, and many of whom do not even understand how others of them begin to think. Their philosophy of life and of government is utterly and completely at variance. Probably the majority of those who would be inhabitants of such a state are utterly poverty-stricken, according to the standards of the more progressive nations. The difference in standards of living would produce continuous controversy and conflict. Finally, it is impossible for me to see how you can combine a democratic state with a totalitarian state, or a capitalist state with a Communist state.

Furthermore, if there were such a state, it would completely destroy the freedom of the people of the United States, which it is the very object of our foreign policy to protect. We would be in a small minority. The legislature of such a state could pass tax laws to take our wealth and distribute it elsewhere. It could destroy our industry and our trade. Its officers would direct our international commerce and control our airports and our seaports. Its army would be able at any time to destroy our cities and our people if they questioned the policies of an international legislature and an international executive.

I seriously question whether a state larger than the United States is today can be governed by its own people, whether it could be a government by the people and for the people. Perhaps the closest analogy is the British Empire, but that Empire has found it necessary to decentralize more and more because the people of each dominion have demanded freedom of action. It has no supreme executive and no supreme legislative power. Even in our own nation it is difficult to protect that local self-government so essential if a people is to remain free.

It is conceivable that the time may come when all the peoples of the world are sufficiently alike in language, philosophy and economic progress to make such a state possible, but today it is utterly dangerous, impractical, and ridiculous. It would not even promote peace, because it would fall to pieces whenever any important difference arose. In this country one difference relating to slavery almost wrecked the Union. There would be a dozen conflicts greater than the question of slavery in the problems of a world state. Civil war is just as possible and more destructive than international war. If we wish to attain peace in our time, we must adopt practical and realistic methods.

For the time being, at least, our tremendous interest in building up a practical association of nations has been subordinated by our concern about the policies adopted by the Union of Soviet Socialist Republics. That policy prevents the establishment of any kind of world-wide association of nations and makes any international association infinitely more difficult. The effort of the U. S. S. R. to spread communism throughout the world by propaganda and infiltration, and perhaps by force, has forced us into a series of defensive measures, culminating in the Marshall plan.

Probably no administration has ever pursued as inept and futile a policy toward communism that have the administrations of Roosevelt and Truman. Until Senator VANDENBERG entered the picture, our attitude toward Russia was one of virtual and complete surrender. We gave them billions of dollars of goods under lend-lease without a condition looking to their performance in the postwar world. President Roosevelt knew of the bargain made by Stalin with Hitler which brought about the Second World War and knew of the conspiracy to divide Poland. Yet he apparently felt that if Mr. Stalin received military aid and kind treatment from England and the United States he would be transformed into an angel of light and do all that we asked when the war was over. This was the attitude clearly shown in the President's interviews with Forrest Davis, published in the Saturday Evening Post, and since referred to as "The Great Design."

The President was deeply influenced by the strong pro-Russian attitude of Harry Hopkins. He seemed to feel that Stalin conferred a favor upon us by continuing the battle against Germany. He accepted Stalin's view of the military strategy and attack which gave him the Balkans with Tito as the recognized leader of Yugoslavia. Later we begged Russia to enter the Japanese war when it was unnecessary, and resulted only in turning over Manchuria to Russia. We recognized the right of the Russian Army to occupy the Balkans, and also Berlin and Vienna, which gives them today their powerful hold in Europe. We actually withdrew our troops from territory which we had occupied in battle with Germany—occupied by us partly because the Russians were so busy seizing all of southeastern Europe except Greece.

At Potsdam President Truman and General Marshall confirmed the agreements and the policy of Yalta. They in substance approved the Morgenthau plan, while denying that they had given it consideration. It was not even suggested that Lithuania, Latvia, and Estonia be given the sovereign rights of self-government assigned to them under the Atlantic Charter. Under feeble protests we agreed that a large part of Germany be turned over to Poland in order that Poland might be compensated for territory desired

by Russia, thus agreeing in effect to territorial changes contrary to the wishes of the people concerned, in violation of the Atlantic Charter. Thereafter, we practically abandoned Hungary, Bulgaria, Rumania, and large sections of other territory to the rule of a Communist minority.

All of this was no mere mistake. It was prompted by the basic New Deal philosophy which influenced the whole administration. Many New Dealers would not go along with Mr. Henry Wallace, who felt that communism was merely another form of democracy, and perhaps a little better form than our democracy; but there were a lot who did have that attitude. Others doubted, but yielded to the party philosophy. Remember how soft they were toward the admission of Communists into Government departments, and even into the Army. There are bureaus today where there are many Communist sympathizers. Certainly, there are even Communist Party members, or President Truman would not at long last have demanded their dismissal 2 years after VJ-day, and requested $50,000,000 to get rid of them. We can see now what a complete misconception of the whole character of communism was involved in concessions which we made, and in the failure to exact guaranties regarding the postwar world.

But even today there are those in the Government who do not admit they were wrong. Why on earth should we continue today our policy in China? From the beginning we have encouraged the Chinese Communists. Every Commie sympathizer in the United States has been damning Chiang Kai-shek, whom we were taught in the early years of the war to regard as the greatest patriot in the Far East and the greatest friend of the United States. He was the same man then, with the same faults that he has now, but forces in the State Department have encouraged the propaganda against him. Yet he is today the only hope to prevent the spread of communism in China. His armies in Manchuria are surrounded, and are unable to combat the Communists, for the reason that we have given his armies no ammunition for their American arms, while the Communists have been lavishly supplied by the Soviets with the Japanese arms they captured at the end of the war.

Unless action is taken immediately, all Manchuria will be lost to communism. It is not only a tremendous agricultural area, but one of the great industrial sections of China. If communism dominates Manchuria, how can we hope that in future years we will be able to keep it out of Japan? The practicability of rehabilitation for China and the value of relief is open to question, but certainly we can provide the Chinese Government with the arms and ammunition necessary to resist Communist force in Manchuria as we have undertaken to resist it in Greece.

I believe very strongly that the Far East is ultimately even more important to our future peace than is Europe. It is futile to expend billions on a doubtful economic project in Europe to resist communism while practically inviting them to take over western shores of the Pacific.

Another curious instance of the administration's inconsistent battle against communism lies in the loan being granted to the Polish Government by the International Bank, which is practically under American control and uses American funds. Sixty million dollars is to be given Poland in coal-mining machinery. The theory is that the Poles will ship some of this coal to western Europe. The fact is they will do with their coal exactly what Russia tells them they can do. Whether or not any is shipped to western Europe you can be certain that the majority of it will go to munitions plants at Skoda and other factories to build up the military strength of Soviet Russia. The truth is we have in our departments, both in the Commerce Department and the State Department, men at the intermediate levels who yearn for more economic planning, and others who still sympathize with Russia in spite of all that has happened.

Apparently the administration is pinning all of its anti-Communist hopes on the Marshall plan, on which it hopes to expend $8,000,000,000 during the next 15 months, while it neglects the Far East and allows machinery and other American assistance to strengthen Russia. It doesn't make sense.

I am very strongly in favor of extending aid to the countries of western Europe. I believe we can help them recover more rapidly their prewar production and restore a standard of living to their people which will make the spread of communism more difficult. We have been helping Europe for 2 years at the rate of some $5,000,000,000 a year. No nation has ever been so generous before in the history of the world. We can still be of real assistance; first, to make up the deficiency in absolutely essential foodstuffs, and second, to provide the raw materials and machinery required to get their industries going with reasonably expanded capacity.

I do believe, however, that our aid should be confined to specific needs and to fields where we can see that it will actually accomplish the purpose we want to achieve. I believe very strongly that too lavish distribution of Amerian dollars will do more harm than good. After all, we can hit only the high spots. Most of the economic recovery in these countries depends on the people themselves, on their willingness to work and on sound governmental policy. Only their own government can balance their budget, maintain a stable currency, and create the incentive to produce and export. All we can do is remove bottlenecks and prime the pump.

The threat of uncertain but potentially limitless American aid could deter all efforts of European businessmen, labor unions, and Government officials to rebuild on the basis of their own efforts. Why should they labor painfully to reconstruct this factory or that if a whole new factory may be given them, scot free from the United States, at some future date?

I object to the economic plan so characteristic of the New Deal, under which these countries are invited to add up their desired imports, subtract their possible exports, and hand us a bill for the difference. It is absolutely impossible to make any such calculation with any accuracy, because production depends entirely on the policies of their own governments.

We should not be in the position of deciding how high a standard of living each country shall have. If they are short of something, and we have it, we should help provide it. But let us not repeat the history of the British loan, where we gave $3,750,000,000 to be spent by the British for anything they wanted anywhere in the world. Many of the wisest Britons say that half of it was wasted, and only postponed the time when they had to face their essential problems.

After all, it is now nearly 3 years since VE-day. The productive facilities of many of these countries were hardly injured by the war, and yet they are still dependent on foreign aid. Is it our fault or theirs?

In giving aid to Europe, therefore, we should adopt at this time a practical and hard-boiled plan. We should set up an administration independent of the State Department and give away the money of American taxpayers only for those specific projects of which we can see the real value. In my experience the State Department is primarily concerned with pleasing foreign nations, without considering the cost to the American taxpayer or the American consumer. We should limit the amount of aid so that the Administrator will feel compelled to select only those projects of clear economic value to the European nation concerned. If any program does not produce results, it ought to be stopped.

As in all foreign aid of this magnitude, the only ultimate purpose should be to protect the freedom of the people of this country. It is utterly futile to strain our whole economy to the breaking point. By doing that we can easily destroy here at home that which it is the purpose of our foreign policy to protect. The distribution of American dollars abroad is at best an indirect means of protecting our country and may be wholly ineffective, and certainly it should be confined to a reasonable sum and projects whose values are clear.

The recent foreign policy of the United States is often described as a bipartisan foreign policy. I think this is incorrect. The Republican Party was invited to share, and did share, in some of the major foreign-policy decisions. Chief among these was the decision to write a United Nations Charter and to set up the United Nations Organization. It was only Senator VANDENBERG who finally turned President Truman and Secretary Byrnes to a stiff opposition to Russian demands. It was he who insisted on a new South American policy leading to the treaty made last summer at Rio, which may well prove the model for a larger effective association of nations.

But the other steps were not Republican steps. The appeasement of Stalin, the abandonment of constitutional Yugoslavia, the betrayal of the Polish patriots, the wild-goose chase for a Communist-Nationalist coalition in China—these, for example, were not Republican policies. The Republicans were invited to undo the mistakes of Tehran and Yalta, but they bear no responsibility for the original mistakes. The losing of the peace, thus far, has been a clear-cut Democratic responsibility.

Our foreign policy should be the expression of the interests and ideals of the American people. Its first concern should be with the peace of the world in order to protect our own peace. We should be willing to join with others in opposing aggression in order to preserve peace. We should insist upon the decision of questions according to fairness and justice. We should keep our promises when they are made.

In the meantime we should guide our domestic policies according to the principles of a free people and the rule of justice under law. We should not hesitate to assert throughout the world the benefits of a system of individual and economic freedom. Too long have the New Dealers apologized for that system. They have allowed it to be slandered and deprecated throughout the world because they themselves have been trying to change it. Only by our example can we hope to restore in the world the philosophy which can lead us toward peace and prosperity.

We cannot do better than apply Lincoln's words in his second inaugural quite literally to the present day. They proclaim a better peace policy than any now current in Washington:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; * * * to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Across the years these tremendous words ring true. You and I cannot improve on them; it is up to us only to live up to them.

The World Food and Market Situation

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix to the RECORD, a copy of an able address entitled "Taking Stock of the World Food and Market Situation," delivered by Secretary of Agriculture Clinton P. Anderson, at the National Press Club, Washington, D. C., February 18, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TAKING STOCK OF THE WORLD FOOD AND MARKET SITUATION

In these days when so many people have set themselves up as experts on the world food situation and on the market situation it wouldn't be surprising if you and the people you write for found it a little difficult to keep track of what's going on. I know I do.

The whole picture has been complicated by changes in the production prospects of countries that have to import grain and of countries that export grain. It has been complicated by the behavior of the grain market in this country. It has been confused by investigating committees, by private citizens, and by individuals who hope that they will cease to be private citizens next November.

One man called the Department and said that he was notifying the White House that I had been trying for a year to break the wheat market and that I had finally succeeded and had lost the 1948 election. This was at the time that Senator TAFT was trying to prove that I had pushed prices up, while Congressman ANDRESEN charged that I had pushed them down. Congressman ROBERTSON, of North Dakota, celebrated Lincoln's birthday by a speech in the House that said the commodity market crash was "the only time in our history that any administration has deliberately caused a panic, and I charge that this panic has been created for purely political reasons." But "Pappy" O'DANIEL chimed in, saying that the Secretary of Agriculture, and he alone, had built up the high prices. It's quite a trick to push prices up and down at the same time. I hadn't realized that I had become so versatile.

Despite the confusing and conflicting statements about what's going on, I think it is possible to get a good straight account of the situation out of the official reports of the Department of Agriculture. I want to talk to you a little about the subject matter of two of those reports, one of which is for release tomorrow and the other for Saturday. And then I want to show you a chart which is related to both the world situation and to the market situation in this country.

Most of what I have to say today will be the type of thing I have been talking about for a long time and you can refer back to previously published statements and reports for that. My comments on the forthcoming reports on the world food situation and the wheat situation will be related to previous statements and reports.

Some people apparently have been able to get a pretty clear picture of what was ahead by following these public statements and reports closely. E. T. Maynard is quoted in an interview in the New York Times as saying that he read what the newspapers reported of my Detroit speech and that he saw where I had made certain predictions about the grain market. I think it is worth while to recall here my exact words on this subject in my talk before the Detroit Economic Club back on December 7, 1947. In that statement I took our total 1947 crop, subtracted the amounts needed for domestic use and got a figure 100,000,000 bushels larger than our export program of 450,000,000 bushels, of course, I did not take into account 70,000,000 bushels taken out by a requirement that carry-over be boosted to 150,000,000 bushels because Congress added that later. So I made my subtractions and said: "That leaves an extra 100,000,000 bushels to export, and yet the price of wheat keeps moving up day by day. I say to you that the stubborn fact of that 100,000,000 bushels is going to catch up with the speculators some day."

Mr. Maynard put a million dollars on the line on the theory that the Department might be right—and at last reports, was doing all right.

How did we reach the present situation in a marketing year in which we have witnessed wheat selling above $3? The forthcoming Department of Agriculture reports, I think do a pretty good job of analyzing and bringing the situation up to date.

Last year, as you know, Europe was hard hit with a series of natural disasters—severe freezes and winter killing of fall-sown crops, followed by spring floods and summer drought. The result was bread-grain production in Europe, excluding Russia, almost as small as in 1945, and 300,000,000 bushels below 1946 production. Bread rations were lowered, extraction rates increased, more coarse grains were added to bread mixtures, and the nations of Europe turned to the outside world for help to offset the decline in domestic production. It appeared last fall that the total world exportable supply of cereals would not be much greater than the 28,400,000 long tons shipped from all surplus-producing areas in the 1946–47 crop year. As the season progressed, however, the situation improved. There was an unusually good crop in Australia, much better than average yields in Argentina, a larger rice crop than last year in Asia, and some savings by grain conservation in this country. Australia will produce the largest wheat crop in its history this year, now estimated at 226,000,000 bushels, 110,000,000 more than the poor crop last year. Although the acreage seeded to wheat in Argentina is the smallest since 1904, indications now are that the crop will be at least as large as the 206,000,000 bushels produced in 1947. It now appears probable that exportable supplies of cereals world-wide may reach 32,000,000 long tons.

The price of grain in this marketing year is affected not only by the current supply-and-demand situation, but also by the prospects for the marketing year ahead. And the prospects now are more favorable than a few months ago. Weather conditions in Europe have been generally favorable. Russia reports ample moisture with crops more advanced than normal at this time. Russia already has agreed to export considerably more grain than was thought likely at the beginning of the current marketing year. Winter crops of cereals in India and China are reported to be progressing favorably, and prospects for our own winter wheat crop are improved over last fall.

In considering the improved prospects in Europe it should be remembered that the acreage devoted to bread grains still is 10 percent below prewar and that the shortage of fertilizer has resulted in depicted soil fertility so that better than average conditions are required to obtain average yields.

In the world as a whole, production of all major food products still is below prewar with a world population now about 10 percent larger than it was 10 years ago and with per capita food consumption in general much lower than in prewar days. It will be important to continue conservation of grain in this country because there will be need for all we can spare in this marketing year. Nevertheless, the improvement in Australia, in Argentina, and in the growing conditions in Europe and in this country have helped to bring about an adjustment in grain prices.

There has been purchased all but about 73,000,000 bushels of the wheat needed to complete the export program of 450,000,000 bushels, the basis on which we are programming shipments. Actually, if we count March commercial allocations already made, the figure drops to 67,100,000 bushels. The Cabinet Food Committee has unanimously agreed that the program will remain at 450,000,000 bushels, at least, until the end of March, when we shall know more about our crops and world needs. So in my discussion today I am dealing with a wheat export program of 450,000,000 bushels. We add to that an additional 70,000,000 bushels of coarse grains which has been a part of the export program since the start of this crop year and which has all been procured. In fact, there has been bought all but 73,400,000 bushels for the program.

For the period from January 1 to June 30, 1948, we have this situation:

Of the 795,000,000 bushels on hand at the beginning of the year, we must deduct the 150,000,000 bushels minimum carry-over required by law. That leaves 645,000,000 bushels. Of this amount, we may expect to use about 245,000,000 bushels for food and about 25,000,000 for seed, leaving 375,000,000 bushels.

Of the 450,000,000-bushel export program, we shipped through the end of December 258,000,000 bushels, and that leaves us still 192,000,000 bushels to export. Subtracting that amount from the 375,000,000 bushels we had remaining after deducting food and seed, leaves 183,000,000 bushels available for feed during the last 6 months of this crop year ending June 30. We used only 65,000,000 bushels of wheat in the first half of this crop year for feed and we might expect that feed use in the second half would range between one hundred and twenty-five and one hundred and seventy-five million bushels. Now, if wheat feeding is on the low side of that range—namely, 125,000,000 bushels—that would leave ample grain to take care of all of our present domestic requirements and perhaps enable us to increase our export program to a total of 500,000,000 bushels. If wheat feeding should be on the high side of the indicated range, then we will not have the grain to increase our export program above the 450,000,000 bushels. It is just as simple as that.

Another figure that I want to comment on is the 150,000,000-bushel minimum carry-over required by the Interim Aid Appropriation Act. With the improvement in world crop conditions and with our own improved domestic situation following the drought of last fall in the southern Great Plains wheat area, I do not feel that a mandatory carry-over of 150,000,000 bushels is essential. After all, we have gotten along with a much smaller carry-over than that on several occasions. We went into this crop year with a carry-over of 84,000,000 bushels and got along all right, and we could do it again if we were prepared with the necessary boxcars to move grain out of the Southwest as soon as it is harvested. If crop conditions are right this spring, we could shrink that 150,000,000-bushel carry-over and pick up some additional grain for export if it seemed desirable to do so. When the Congress moved to write in the provision for a 150,000,000-bushel carry-over, I opposed it. There was much discussion by grain traders and others that the carry-over should be 200,000,000 bushels. Senator YOUNG, of North Dakota, fought it vigorously, pointing out that it was

not fair to the farmer to build up a large carry-over here at home, thus making the farmer take an extra gamble on what he would get for the next year's crop.

On the matter of wheat feeding we are not simply making an estimate of the probable range and assuming that we may end up on the high side of that estimate. Instead, we have been making a special effort through our grain conservation campaign which we hope will bring us out on the low side of the estimated feeding range. Through the land-grant colleges, which do a large part of the Department of Agriculture's educational work among farmers, we have for several months been trying to impress upon farmers the desirability of finishing cattle with less grain, even though the grade may not be the best. We have asked that hogs be fattened to somewhat lighter weights than is normally the practice. We feel that farmers have made a conscientious effort to cooperate in this program although recently hogs have been coming to market at more nearly normal weights for the season than they did last fall.

A second effort we are making to conserve grain is through appeals to various industrial users. We at the Department of Agriculture have had meetings with many of these groups. Some of these meetings have not been satisfactory. Each group is, of course, willing that other groups conserve grain, but comparatively few of these people were willing to undertake a conservation program of their own.

At one time we expected that 95 percent of the brewing industry would join us in a grain-conservation program. Now I understand that the percentage of brewers who do not want to join in this effort has increased. We have no way of knowing exactly how much grain will be used by the distillers during this month as compared with the 2,500,000 bushels that were allocated to them during January, but the information we have about their use of grain during the first half of the month indicates that they will use at a rate of about 6,500,000 bushels per month. We think that is too much. We think it is unnecessary to distill whisky at that rate to go into storage. In times like these we should make as much grain as possible available for export and build up our storage stocks of whisky at a time when there may be a surplus of grain.

In the conservation program an effort has been made to take some of the pressure off of the demand for meat and thereby relieve some of the pressure on prices. If meat prices are too favorable that encourages heavier grain feeding to livestock and at this time we would rather see the farmer sell his wheat as wheat rather than to feed heavily. The result of the unfavorable relationship between grain and livestock prices showed up last fall in marketings of hogs at weights from 15 to 20 pounds below the same period in the previous year.

One of the important parts of the conservation program is the war against rats which is being carried on in cooperation with the Department of the Interior. When you realize that there are probably as many rats as there are people in this country and that each one that can get to grain is capable of destroying a bushel of grain in a year, it is easy to see the importance of the work which the Interior Department can do in the rat campaign.

There are many factors that have an influence on grain supplies and, of course, upon grain prices. Some factors other than supply and demand seem to influence prices. Bernard Baruch, who is an authority on many things including commodity markets, has referred to the recent price break as an adjustment of the market that is probably a good thing. The farmer has been getting far above parity for wheat and during the recent break prices have approached parity.

I am glad to have this opportunity to discuss the world food and market situation with you in advance of the Department of Agriculture reports which I mentioned. I hope no one will see anything in these reports which they will interpret as being intended to boost prices or beat prices down, because we have endeavored simply to report facts. One of our difficulties now is that implications which we do not intend are sometimes attributed to facts which we report.

We are operating the grain purchase program now just as it was operated during the war and in years since the war. I rely upon the judgment of the people of the Department of Agriculture who have had long years of experience in grain market operations. If we had gone into the grain market last Saturday when it looked somewhat stable some person in public life would have said that I should have let the market go to the bottom. At the same time, others in public life, as well as farmers, have asked why we did not go into the market on Saturday and keep it from breaking further. All we can say is that the export program has not been used to keep prices up or to run them down. We have price-support programs that are designed to protect prices and we will use those programs when they are necessary, but when we are acting as buying agents for the Army or for foreign countries we try to buy with as little disturbance to the market as possible and try not to allow our purchases to touch off booms or declines in the market.

In this connection I want to call your attention to a chart showing commodity credit wheat purchases and the total volume of trading in wheat in relation to the price variations since the beginning of this marketing year, July 1, 1946. It shows the heaviest purchases by the Government in the early part of the last two marketing years with greatly reduced purchases in the periods when the market made sharp upswings. This is in contrast to the total volume of trading on the market.

When the Department of Agriculture has been criticized for its buying policies, I have suggested that it might be revealing to compare the cost to the Government of 400,000,000 bushels of wheat with the cost to millers for a like amount.

During the entire calendar year 1947, average price paid by the Government for wheat was $2.44 per bushel. From January to June 1947, it averaged $2.14 per bushel, and from July to December 1947 the average price paid was $2.56 per bushel.

January	$2.06
February	2.16
March	2.00
April	1.94
May	2.16
June	2.32
July	2.20
August	2.28
September	2.47
October	2.81
November	2.95
December	2.89

Weighted average $2.44 per bushel.

We had profited by our experience in the 1945–46 marketing year when we did not get adequate advance information from claimant agencies and foreign countries and were faced with the necessity of buying heavily late in the year. This year and last we bought heavily in the early months of heavy marketing by farmers. Last July, August, September, October we bought wheat and flour equivalent to nearly 200,000,000 bushels. And now, as I have pointed out, we have about 70,000,000 bushels still to buy, a part of which will be by commercial concerns, to complete the minimum export program of 450,000,000 bushels. In other words, we have made an effort to buy in a manner that would disturb the market as little as possible.

Hogs: Average weight of barrows and gilts, packer and shipper purchases, Chicago and seven markets, specified weeks, October to February 1946–48

Federal Control of Oil

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a telegram dated February 14, 1948, from H. R. Cullen, of Houston, Tex., addressed to a number of persons, and bearing on the oil situation.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

HOUSTON, TEX., *February 14, 1948.*

Hon. W. LEE O'DANIEL,
United States Senator from Texas,
Washington, D. C.:

The morning press states JOHN W. HESELTON, Republican Congressman from Massachusetts, drafting bill to put oil under Federal control. It is just hell when one has to continue to fight for freedom in this country. I sent you Harry Weiss' letter some time ago that showed that the oil production of this country has increased fourfold since 1920, while coal production has not increased any. Why do not the bureaucrats in Washington

jump on the coal business for a while and leave the oil men in peace? Bureaucracy working at its best held the price of oil down and put the price of coal up, with the consequence they are using fuel oil in the factories almost directly in the coal mines. This is an unhealthy condition and should be stopped by allowing the price of oil to rise high enough to force those industries in the coal States to use coal. Instead of putting in big headlines a shortage of supply they should stress an unprecedented demand aggravated by an unusually cold winter, plus a shortage of tankers, tank cars, and pipe lines due to war-created shortages. What are the facts? We are exporting around 163,000,000 barrels of petroleum a year.

Senator MOORE, of Oklahoma, called attention to the Senate Committee on May 27 of last year to the fact that in 20 months exports not of petroleum but of approximately 50,000 tons of piping, casings, and other tubular goods used by the petroleum industry had been shipped to the Russian Government under export licenses issued by our State Department. This, said Senator MOORE, meant that the American oil industry had been denied material for drilling about 1,500 wells, which should have produced for our own use over 135,000,000 barrels of new reserves. If this equipment had stayed here and not gone to Russia, there is little reason to believe that any fuel oil tanks would be empty in America today. It is time that some patriotic statesmen in Congress should state facts and save us from that condition recently presented by Under Secretary Archibald L. M. Wiggins to the leading bankers and businessmen of this country, who said: "And, surprisingly to me, about two-thirds of the things that happened in this country in the last 25 or 30 years fitted right into Harold Laski's theory of state socialism. So, it is not a matter of opinion, it is just a matter of putting the facts down side by side, and there it is." Copy sent to Hon. JOSEPH W. MARTIN, JR.

H. R. CULLEN.

The Federal Trade Commission—Minority Recommendations by Commissioner Mason

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD legislative recommendations made to the Congress by Commissioner Mason, of the Federal Trade Commission. I am certain these provocative recommendations will prove of interest to every Member of Congress, and to American business and industry as well.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

COMMISSIONER MASON'S STATEMENT IN SUPPORT OF HIS MINORITY RECOMMENDATION NO. 1

In my opinion, the Commission spends a disproportionate amount of time on the sanction of force through hit and miss prosecutions of individual complaints and does not make sufficient effort towards a mass understanding and acceptance of the law. Many of the complaints are only indicative of common bad business habits which continue to flourish industry-wide in spite of single individual prosecutions.

Cease and desist orders issued after lengthy and costly trials may have served as deterrents in some cases, but often they only place the respondent under a handicap not imposed on his competitors. In addition, looking at it from the consumer's point of view, a cease and desist order entered against one company rarely results in protection to the public if the banned practice is common to others in the same business.

The failure in all punitive procedures is that they attack individual symptoms without removing the general causes, and seldom serve to bring a common understanding and acceptance of the law by those not parties to the litigation.

The President has recognized the inequality and ineffectiveness of hit or miss prosecutions as a means of getting a reign of law in commerce. He takes cognizance of the fact that some infractions of mercantile law are best remedied through cooperative means rather than by lengthy litigation against single companies. In his special message to Congress of May 17, 1946, he indicated we can obtain this through stipulation agreements to cease and desist or through the establishment of trade practice rules.

Congress approved his proposal on this phase of Commission work in 1946 by appropriating supplemental funds to carry out such a program. Later the President, in his 1947 message, fortified this proposal in these words:

"The Antitrust Division will concentrate its efforts on major violations of the antitrust laws. The Federal Trade Commission will increase its effectiveness by operating on an industry-wide basis rather than through the slower procedure of individual complaints. It will also sponsor a larger number of industry conferences designed to locate and eliminate unfair trade practices through cooperative action."

COMMISSIONER MASON'S STATEMENT IN SUPPORT OF HIS MINORITY RECOMMENDATION NO. 2

With reference to my proposed amendment to the Federal Trade Commission Act, bearing on the appointment of an administrative officer, it should be pointed out that executive leadership in the Federal Trade Commission by joint action of the Commissioners is inadequate for the following reasons:

1. Direct, day-by-day supervision by the entire group of Commissioners imposes great burdens on them and interferes with their broader duties of rule-making, administrative adjudication, and policy determination. The present method is also relatively slow and tends toward procrastination or inaction through deadlock.
